Resolved, That Congress be urged to appropriate without further delay the funds necessary to complete solid Federal ownership within the present boundaries of existing national parks, national monuments, and wilderness areas of the national forests, including the vital roadless area of the Superior National Forest, which amount, approximately $25,000,000, can easily be saved many times over by desirable economies in the budget of certain bureaus whose activities are destructive to natural resources.

Resolution 12

Whereas the Bureau of Reclamation was created by act of Congress in 1902 for irrigating arid Federal land for settlement and it is an acknowledged fact that after 45 years of operation the economically sound projects for both public and private land, based upon irrigation alone, have already been authorized or constructed with the result that new projects are obliged to shift much of the actual cost to other fancied benefits under the misleading terminology of "multiple purpose" dams; and

Whereas the actual cost of irrigation projects is commonly far greater than the estimate on which they were authorized and numerous bills are presented to Congress to write off part or all of the principal, reduce the interest or extend the time of payment for the relief of this or that irrigation district; and

Whereas the personnel of the Bureau has progressively increased as the opportunity for additional sound irrigation projects has diminished to the vanishing point: Therefore be it

Resolved, That Congress be urged to make a thorough investigation of Government irrigation projects, which will show the cost per acre, the principal amounts defaulted and deferred, the loss to farmers through foreclosure because of inability to meet water costs, and other pertinent information determining future irrigation policy; and be it further

Resolved, That Congress be requested in the meantime to reduce drastically the personnel of the Bureau of Reclamation to the number actually needed, thereby eliminating the present necessity for surveying and promoting new projects in order to justify the great surplus of personnel on the pay roll, and that similar action be taken to reduce the great surplus of personnel in the civil branch of the Corps of Engineers for the same reasons, in the interest of sound conservation and sound national economy.

Resolution 17

Whereas the Soil Conservation Service has adequately demonstrated its worth in the conservation of our land and water resources; and

Whereas such conservation procedure has contributed directly and materially to the conservation and increased propagation of valuable wildlife as well as agricultural production; and

Whereas the entire Nation benefits from such a scientifically supervised program: Now, therefore, be it

Resolved, That the Izaak Walton League of America does emphatically urge the continuation and expansion of this all-embracing technical service and to that end assist in securing the necessary Federal appropriations.

Letter From Catholic Labor Guild

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Catholic Labor Guild of the archdiocese of Boston, dated May 6, 1947, recording itself against the Hartley bill, H. R. 3020, and the Taft bill, S. 1126:

CATHOLIC LABOR GUILD,
ARCHDIOCESE OF BOSTON,
Charlestown, Mass., May 6, 1947.

Hon. JOHN F. KENNEDY,
House Office Building,
Washington, D. C.

DEAR SIR: At the communion breakfast held May 4, following the third annual labor mass that was celebrated at the Cathedral of the Holy Cross, the following resolution was endorsed by the Catholic Labor Guild of the Archdiocese of Boston:

Whereas the Catholic Labor Guild of the Archdiocese of Boston is organized and committed to the proposition that labor unions are basically good and fulfill the means whereby the workingman can best discharge his obligation to his family, his church, and the State;

Whereas the proposed legislation, namely the Hartley bill, H. R. 3020, and the Senate Taft bill, S. 1126, will not lead to a proper solution of our labor-relation problems;

Whereas this legislation as presently proposed would destroy the workingman's associations, destroy peaceful collective bargaining, and drive the worker into the ranks of communism: Therefore be it

Resolved, That the Catholic Labor Guild of the Archdiocese of Boston be recorded as against the Taft and Hartley bills; and be it further

Resolved, That a thorough and impartial study be made of labor-management problems in an endeavor to secure legislation that is equitable and conducive to social justice; and finally, be it

Resolved, That copies of this resolution be forwarded to the President of the United States, to the Senators and Congressmen from Massachusetts, to the Speaker of the House of Representatives, and to the House minority leader.

Sincerely yours,

JOHN A. BLANEY,
Secretary.

Aid to Greece and Turkey

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. SMATHERS. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include herein two editorials from the Miami Daily News. Each of these editorials points out the realities and the fact surrounding President Truman's proposal of aid to Greece and Turkey. A mature and considered reading of these editorials will to a great extent eliminate the smoke screen which has to date been thrown up to conceal the facts and defeat the program.

While no one could accurately say just exactly where this program will lead, nevertheless when we first tried penicillin as a medicine, no one knew exactly just what it would cure and how effective it would be. However, the decision to use penicillin was affirmative action designed to combat disease. The action of President Truman is likewise an affirmative action designed to combat an evil. It is no more a question of what will happen if we follow this course, than that of what will happen if we do not. History has clearly shown the results of inaction—of isolationism and appeasement—in our foreign policy.

The editorials follow:

[From the Miami Daily News of March 16, 1947]

WE CAN DRIFT NO LONGER

The road which the American people have traveled to the present crisis in their world relations began at Yalta in the Crimea on February 12, 1945.

On that date, President Franklin D. Roosevelt, Prime Minister Winston Churchill, and Premier Josef Stalin pledged their three governments jointly to "assist the people in any European liberated state or former Axis satellite state in Europe where in their judgment conditions require: (A) to establish conditions of internal peace; (B) to carry out emergency measures for the relief of distressed peoples; (C) to form interim governmental authorities broadly representative of all democratic elements in the population, and pledged to the earliest possible establishment through free elections of governments responsive to the will of the people;

and (D) to facilitate where necessary the holding of such elections."

That pledge has not been carried out. It has been directly abrogated in the countries of eastern Europe with the open support of one of the nations making the pledge, Soviet Russia. The United States has made protest after protest, in President Truman's words to the Congress, "against coercion and intimidation, in violation of the Yalta agreement, in Poland, Rumania, and Bulgaria." Ten days ago we made a similar protest over Russian aid in the Hungarian Communists' efforts to overthrow the legitimately elected government of Hungary. The protest was rejected; even the news that it had been made was kept from the Hungarian people.

The decision before the American people since the President's message to Congress on Wednesday is this: Shall we act to check the indefinite expansion of the police states being imposed upon people after people around the world, or shall we drift and content ourselves with mere protests?

President Truman believes that we can wait no longer. "Totalitarian regimes," he told the Congress, "imposed on free peoples, by direct or indirect aggression, undermine the foundations of international peace, and hence the security of the United States."

That sober statement the President would have no difficulty in supporting out of the history of the past generation. There are few Americans who doubt its truth.

Wherever there is a vacuum, economic or political, in today's world, the people in that area face the threat of a totalitarian regime supported by a vigorous minority at home and a full-scale war of nerves from Moscow. Acting in the name of security—one of the cardinal aims of all men—the Communist minority ends by imposing a police-dominated state to insure it. One more spot in the world is lost to freedom. If the process were indefinitely continued, the greater part of those chaotic areas lying between the Soviet land mass and the Western Hemisphere would become state-controlled, totalitarian regimes hostile to democracy and the free institutions upon which it is based.

For 18 months after the end of World War II, the United States Government witnessed this process in half of Europe. It put its support behind its commitments under the United Nations Charter and attempted to insure that Russia would do the same. Twice, in Iran and over the Dardanelles issue, that insurance took the form of a determined display of power. But the expansion of Russian influence and the totalitarian seizures of power continued outside the functioning of the United Nations organization. There was too much hunger and misery and want in the world, and it bred the strife which allowed a vigorous and ruthless minority to act.

The decision the President has asked of Congress, if it is taken, will not mean that the United States has abandoned hope in the United Nations as an instrument of world politics and the potential creator of the climate of peace and security.

It will mean rather that while seeking a long-range accommodation with Russia through our continued support of the United Nations, we shall attempt to make our own foreign policy positive and forceful in the creation of the only kind of security we believe conducive to peace, the security of world cooperation among free nations.

We are not supporting Greece because we think the Greek Government is an ideal ally for a democratic power. We are supporting Greece because that country is strife-ridden and poverty-ridden and hence marked out as the natural victim of the police states surrounding it in eastern Europe. And if Greece falls today, Turkey will fall tomorrow, and the cordon of totalitarian states subservient to Russia will extend from the Baltic to the Persian Gulf.

If the Turkish Army should disappear, no state west of Communist Yugoslavia in Europe could defend itself except France, and France's defense would last for a matter of days. That is the significance of the President's words on Wednesday when he said: "Should we fail to aid Greece and Turkey in this fateful hour, the effect will be far reaching to the west as well as to the East."

The American people, blessed by fortune, have it in their power to offer freedom with a reasonable guaranty of security to the peoples of the rest of the world. That is infinitely more than Russia and world communism can offer them. But we cannot expect to see the rest of the world choose our way of life and cooperate with us if we offer them merely words.

The world demands freer trade, foreign loans, the chance to live in an economy and a society that is not rigidly controlled for purposes of security. By themselves Greece and Turkey today, and other nations tomorrow, have no choice. With our economic and political support a choice is possible. Have we the faith in our own institutions to submit them to the choice of other peoples?

Never has the United States stood upon such a pinnacle of world leadership. If our grasp upon it falters, if we give it not direction but aimlessness, we can bring ourselves and the world to ruin.

[From the Miami Daily News of March 23, 1947]

UNITED STATES ADDICTED TO EXTREMES?

The days since the President's message to Congress have been filled with shouts and murmurs of pained surprise. How long, it is asked, has the administration kept the situation in Greece from the people? Isn't this a new foreign policy we are being asked to support? And doesn't it mean war, if not now, at least surely in the future?

These questions—any question asked in good faith and for the enlightenment of the people—the Government can and must answer. But all of them, as they have poured out on Capitol Hill and other forums throughout the country, raise a question equally basic and a question the question raisers themselves can help to answer: Can the people of the United States formulate a national policy for the majority only in an atmosphere of crises in which one extreme view vies with another?

The answer to that question is vital, for the policy the Truman administration has developed can be twisted and wrecked if it must be carried out in a broadside, all-or-nothing manner which obscures its whole inception and confounds its very purpose.

Under Secretary Acheson restored a measure of perspective to debate on the President's request in response to Congressman VORYS question whether the State Department had known about the situation in Greece for only 3 weeks. Twenty years would be a more accurate statement, Acheson said. He performed the same function when he told Congressman SMITH that the plan presented for our aid to Greece might not be duplicated in plans for other countries.

Men understand what is easily grasped, what can be dramatized. But it will take more than this simple all-or-nothing, black-and-white understanding to support American foreign policy over the next generation.

The world emerged from the war with a most delicate and tenuous balance of power, for it was a balance actually between only two poles, the United States and Russia. European centers of power were destroyed or bankrupt. Japan, the only country in Asia with an expanding economy, was no longer a power.

Between the United States and Russia were great European and Asiatic vacuums where the people were in want or enabled barely to survive by the strictest control of their economic resources. Of the two great powers which survived, only the United States possessed surpluses of capital and goods which could help fill the vacuums. And unless they were filled, the United States itself could not continue in her traditional paths. Without a market for her continuously expanding industrial and agricultural production, without multilateral trade. America's national income and employment could not be maintained. Reconstruction of the economies of other countries was dictated not only by humanitarian feeling but by sheer self-interest.

But that was not the whole story. So long as other nations faced only more and more shortages, they faced inevitably more and more controls upon their people. And the more controls they were forced to submit to, the less free the governments would become. Representative government, the necessary climate for a world in which the United States might survive, could not exist where first the people's economic life and soon their political life had to be regimented. The process has already gone pretty far, as President Truman analyzed in his Waco, Tex., speech on the necessity of reciprocal trade.

Everywhere since the end of the war two basic aims have animated the people who were its victims—freedom and security. They wanted both; they would, if forced, choose security over freedom. But their chief desire was freedom with a fair guaranty of security. That goal a majority of a people experience today only in the United States. It cannot be attained in other countries without a representative form of government, reconstruction, and world trade. The security of the United States depends upon the attainment of those things in at least the greater part of the world.

Russia, the other center of world power, ended the war in no position to export capital and goods to other nations, her own fixed capital reduced by 25 to 30 percent between 1941 and 1945, her only strength as a world power is her dominant position in Eurasia and the relatively more impoverished neighbors on her western borders.

What she could export was her form of government, the police state made possible by the need for the tightest kind of control over the economic lives of depressed peoples. It was not to Russia's advantage to place in the vacuums representative governments and expanding economies, even had she been able to do so. It was to her advantage if a cordon of Communist-dominated regimes could be built in Europe and the Middle East. In that climate, according to the Russian Communists' line, Russia's security would be enhanced and the attractions of democracy lessened.

The course of Russian-American relations, both in the United Nations organization and in the negotiations of the Big Four victors of the war, has been the impact of two opposing aims—the United States seeking to insure reconstruction and free elections; Russia seeking to bolster the Communist minorities who were imposing upon war-ravaged peoples police states indifferent to the consent of the governed.

The Yalta agreement made the American goal the official goal of the Big Three. But Russia's domination of her eastern European neighbors permitted her to frustrate the Yalta provisions almost at will. Free elections, except in Czechoslovakia, were not held or were subverted by native Communists with Russia's open aid. And relief goods coming into those countries often were used to support the Communists' power. Greece and Turkey became the only two nations in eastern Europe where Russian control was not dominant.

The Greek crisis, then, is but a crisis in the development of America's foreign eco-

nomic policy. The other crisis—the political—stems directly from the agreement made at Yalta; it has been involved in three hearings before the United Nations Security Council. It is not a question of 3 weeks ago or 3 months ago. It is no more likely to lead to war than the Iranian crisis last year, and that crisis, be it noted, developed entirely through the medium of the United Nations.

With the policy of containing Russian military expansion, as in the Iranian case, the Government has concurrently developed a foreign economic policy. It is the only source of our positive action, for it is the one hope of giving other peoples time to solve their problems of reconstruction without going totalitarian.

That policy will cost us great expenditures in money and goods and technical personnel, though it is our best long-range investment through maintaining our export trade and the full employment permitted by it. It will cost not $400,000,000 but an unknown number of billions before we are through. It is for this reason that President Truman went to Congress with an explanation of the course he recommends and a request for the funds with which to launch it.

That course we cannot turn back from. It will require the most intelligent kind of support and the most intelligent kind of planning. Neither can be achieved if we but veer from one extreme to the other in our grasp upon world events.

Flood Damage in Randolph County, Ill.

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. TWYMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I submit House Joint Resolution 30, adopted by the Illinois General Assembly:

House Joint Resolution 30

Whereas once again floods have inflicted heavy damage along the east bank of the Mississippi River, and particularly in Randolph County; and

Whereas this damage to crops could have been prevented had levees been constructed and completed according to the original plans of United States engineers: Therefore be it

Resolved by the House of Representatives of the Sixty-fifth General Assembly of the State of Illinois (the Senate concurring herein), That we do hereby petition and memorialize the Congress of the United States of America to provide for and require the construction and completion of the planned levee system so that future damage to crops and other property in this area will be prevented; that copies of this preamble and resolution be forwarded by the Secretary of State immediately to every Illinois Member of Congress.

Adopted by the house April 29, 1947.

HUGH GREEN,
Speaker of the House.
FRED W. RUEGG,
Clerk of the House.

Concurred in by the senate May 7, 1947.

HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Representation Without Taxation

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on Representation Without Taxation, by Paul R. Alwine, of Vestal, N. Y., rural delivery 2, which is very timely if we expect to permit the free-enterprise system in America to continue to function:

REPRESENTATION WITHOUT TAXATION

A bitter war was fought in the early days of this Nation, the home of the free enterprise system. The battleground was before Lexington and Concord; the oppressor was the mother country and the oppressed were the colonists, businessmen directly, but indirectly all the pioneers. "Taxation without representation" was the battle cry. Freedom from oppression and equality of opportunity were the promises held forth by victory.

Another bitter war is in the making. The battleground this time will be in the legislative halls of the "home of the free enterprise system." The oppressor is the Congress and the Treasury Department; the oppressed, again, is the American businessman directly—indirectly the people, all taxpayers. "Representation without taxation" is the new battle cry. Freedom from Government-subsidized tax-free competitors and equality of taxes between all engaged in the same line of business is the new promise of victory.

All taxpayers should be concerned about these "tax-free riders," for as they expand their operations and absorb more and more of the volume of the Nation's production and distribution; buy or crowd out more and more taxpaying businesses, the load on the remaining few gets greater and greater—the tax load, if you please, on farmers, wage earners, so-called white-collar workers, businessmen, corporations—all taxpayers alike.

Cooperatives, mutuals, and Government-owned businesses are the beneficiaries of tax-freedom under present Federal and many State income-tax laws. The special privileges granted them other than Federal and State tax laws are myriad and the results of all these favoritisms promise soon the destruction of the very profit motive that has made this "home of the free enterprise system" the greatest nation on earth. Cooperatives are the fastest growing of these free-tax riders and their tax-free earnings constitute the greatest immediate threat to all taxpayers, in or out of business.

Farmer cooperatives were first granted exemption from Federal income taxes by Congress in 1916 as an aid to agriculture. The income tax on corporations was at that time only 2 percent. This exemption has been continued and expanded to include all cooperatives by Treasury rulings and court decisions, although none are actually mentioned in the law except "farmers' and fruit growers' purchasing and marketing associations." Taxpayers, business and individual, have had their income-tax rates increased steadily between World War I and World War II, with excess-profits-business-tax rates ranging as high as 85 percent and today assessed at a maximum of 38 percent. While all taxpayers were paying for the war and are now trying to buy the peace, cooperatives are growing fat by reinvesting their tax-free earnings in new plants and equipment and buying out their tax-loaded competitors.

This legal tax dodging covers all kinds, sizes, and shapes of co-ops: little ones and multimillion dollar big ones, wholly exempt and nonexempt farmer co-ops, city consumer co-op grocery and department stores and gas stations, manufacturing co-ops, wholesale co-ops, former taxpayers that have shifted to co-op status for the sole purpose of evading income taxes, co-op holding companies and subsidiaries, REA's, and countless other varieties.

The economic results of this widespread income-tax freedom are twofold—(1) other companies—corporations, partnerships, and individual proprietorships—which have found no legal way of avoiding their share of the national tax burden, are put to an unconscionable competitive disadvantage; (2) the Federal Treasury loses millions of dollars of tax revenue which can be retrieved only by assessing higher rates against all—yes; all taxpayers.

In their efforts to retain the income-tax exemption that is now permitting them to grow at jet-propulsion speed, the co-ops have dragged some mighty peculiar red herrings across the trail of common sense.

They say—hoping, I suppose, to fool the taxpayers—that only a small fraction of all co-ops are exempt from payment of Federal income taxes.

That's just double talk. There are seven different kinds of co-ops in the United States, but all seven of them have certain characteristics and principles in common, whether they are farmer or city-consumer owned, whether they are legally exempt or nonexempt, whether they are engaged in marketing, retailing, wholesaling, manufacturing, or servicing, whether they are corporations or unincorporated associations, whether they are big or little, holding companies, subsidiaries, sub-subsidiaries, or whatnot.

They are all business operations, aiming to make money for someone.

They distribute their net earnings, which they call "savings" or "net margins" or "over-deposits," in so-called patronage dividends, sometimes in cash money, but more often in stock or other evidence of equity, while they shrewdly add the cash to capital and reserves for expansion.

And they are able to escape all or substantially all Federal income tax on earnings either by specific authority of law, as in the case of the exempt farmers' marketing and purchasing co-ops, or by Treasury approval of their own estimate of the tiny amounts they are willing to pay tax on.

That's silly. The fact that specifically exempt co-ops pay no income taxes, while nonexempt farmers' co-ops and city-consumer co-ops do pay a fractional tax, is of little importance either in the competitive situation or in the computation of Treasury revenues.

Businessmen are not opposed to co-ops as competitors, they only ask equal treatment under the law between all competitors engaged in the same lines of business enterprise.

The demand of competing taxpayers is that all cooperatives shall be required to pay income tax on all earnings, whatever those earnings may be called, and however those earnings may be distributed. That is the way other businesses are taxed, whether they are corporations, partnerships, or individual proprietorships. That is what I mean by tax equality.

In the now famous words of Justice Felix Frankfurter:

"You may carry out your own notations of social policy in engaging in what is called business, but you must pay your share in having a Nation which enables you to pursue your policy."

Certainly the fact that cooperatives have been able not only to maintain but also to expand their tax privileges as well as countless other privileges under the law, proves

that they have strong representation in Government—why are they unwilling to bear their fair share of the cost of that Government?

All Europe Suffering From a Diet Deficiency

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. HOPE. Mr. Speaker, in the New York Times for Sunday, May 11, there appeared a dispatch from London, entitled "All Europe Suffering From a Diet Deficiency" by Charles E. Egan.

This article brings the present European food situation up to date in an accurate and concise way. Under permission granted me by unanimous consent, I include the same herewith:

ALL EUROPE SUFFERING FROM A DIET DEFICIENCY—FOOD IMPORTS NECESSARY TO MAINTAIN EVEN PRESENT LOW STANDARDS

(By Charles E. Egan)

LONDON, May 10.—An unusually severe winter that killed early crops and flooded wide areas of arable land has left Europe in a precarious position, so far as food supplies are concerned.

And an eminent British doctor's statement this week that Britain was a nation "dying of starvation" probably did more to dramatize the food situation in the British Isles, as well as in Europe as a whole, than reams of dry statistical studies reeled off governmental mimeograph machines here and in the United States over the last 6 months.

The British physician, having the advantage of being a recognized expert on nutrition, touched off a heated controversy in Britain by his observations. Regardless of their merits, the contentions publicized by Dr. Franklin Bicknell in an article in Medical Press were proving highly unpalatable medicine to those in Britain's Government entrusted with supplying foodstuffs and guarding the health of the average Briton.

Dr. Bicknell said that the average man requires a minimum of 3,000 calories a day to enable him to do a way's work and maintain his health. The figure, he said, was one decided upon by the British Medical Association in 1933 and was also endorsed by the United States National Research Council in 1940.

ALL EUROPE UNDER PAR

On the basis of the doctor's statement, there is not a country in Europe where the daily caloric intake of the average citizen meets the minimum requirements at present. According to the forecasts of world food authorities in recent weeks, there is scarcely a nation on the continent where the daily ration for the coming 2 or 3 months will not decline substantially because of the severities of the previous winter.

In Britain, according to Dr. Bicknell, the present calorific consumption provided through foods on rations of one sort or another provides a total of approximately 1,600 calories a day. Foods available off the ration, in industrial canteens and restaurants, afford (except for the very wealthy who can afford to consume most of their meals in restaurants) an additional 400 to 500 calories a day. This gives a grand total of about 2,100 calories for each citizen a day.

Is it any wonder, he asks, that British workmen are incapable of producing on a scale that would be considered normal before the war? As a matter of fact, Dr. Bicknell says that a fully employed worker in Britain at present gets less to eat by some 300 to 400 calories than did the unemployed worker living on the breadlines or off the dole during the depth of the depression of the nineteen thirties.

SERIOUS SITUATION

Taking Britain and the Continent as a whole it is a fact recognized by authorities here and elsewhere that the food situation is serious. According to some authorities, including members of a special economic committee of the United Nations, conditions are every bit as menacing as they were a year ago. The United States will remember that it was just about this time last year that the Government and the United Nations Relief and Rehabilitation Administration were conducting a Nation-wide drive to get the average American to "forego that extra slice of bread," to find substitutes for breakfast cereals, and in other ways to conserve bread grains so that large areas of Europe and the Far East would not face famine.

The campaign was effective and famine was averted in Europe and large areas of the Far East. That the food crisis did not end with 1946, so far as Europe was concerned, was no fault of the authorities, but was due to the vagaries of the weather.

From Britain alone demands are sure to be heavy compared with a year ago. The nation has only 5 to 7 weeks' stocks of wheat and flour on hand and must build up a safety cushion against the approaching winter.

In addition, the severe winter and resulting floods have killed off one-third of her population of sheep and more than 50,000 head of cattle ready for slaughter.

LOSS OF FRENCH WHEAT

In France, for example, a large part of that nation's winter wheat was wiped out by one of the most severe winters in more than half a century. The cold weather descended upon acres planted to staple before a blanket of snow could protect the seed. For the second year in succession France must look about not only for replanting, she must look to outside sources for large quantities of grain to supplement her own supplies.

The story of France is that of the Low Countries as well.

Rumania, according to food authorities, is the worst hit of all the nations in Europe. Drought caused the failure of her corn crop last year and brought famine to Moldavia and to some other areas of the country.

The crop prospects there are not encouraging, according to agricultural authorities, but whether the outlook is good or not the nation faces a crucial period of 2 months or more before her harvests can be expected to alleviate the situation.

Official reports also state that food shortages are most acute in Austria, Germany, and Italy. In Italy even last fall the food supplies available to the nonfarm population were less than 2,000 calories a day.

In the British and American zones of Germany the official ration was around 1,550 calories a day, supplemented by supplies made available to the inhabitants through the black market and other means. The total, however, is said to have fallen below 2,200 calories.

AUSTRIAN DIFFICULTIES

Austria went through a severe food crisis last summer and in early fall, during which her average ration was well below 1,550 calories a day.

According to a recent survey of the food situation in other countries, nonfarm (farmers always seem to fare better than their urban fellows and therefore are not considered representative) consumption in Poland, Hungary, and Portugal, and, until recently, in Spain, was below 2,000 calories a day.

The average caloric intake of the inhabitants of Greece, Yugoslavia, and Bulgaria has ranged between 2,100 and 2,400 a day.

In Switzerland, Belgium, and the Netherlands diets have shrunk slightly and the average citizen gets along on 2,400 to 2,500 calories a day.

Denmark boasts an average daily caloric intake of 2,900 for her inhabitants. Czechoslovakia has an average of 2,600 calories for its citizens. Norway, Swede, and Finland also report about the same level of diet for their citizens.

Conditions in Rusia are still obscure. According to unofficial observers, conditions there are still "tight" but what foods are available are distributed fairly through the country.

Acording to official opinion, prospects of maintaining the consumption levels of foodstuffs in Europe during the remainder of this year depend largely upon imports.

A Permanent Farm Program

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Carl H. Wilson, economic analyst, Raw Materials National Council, Sioux City, Iowa, before the House Committee on Agriculture, May 8, 1947, Washington, D. C.:

Mr. Chairman, members of the committee, I am very happy to have this opportunity to outline for you a sound and permanent program for agriculture. It happens that I have spent the last 10 years in an independent study of our national economy and I believe that we have carried on the most complete survey of any research organization. Our approach has been impartial and I am here to give you the facts as we find them. Therefore I hope that the committee will realize that the facts will stand regardless of politics or the wishes of selfish groups who feel that they ought to have a preference in different types of legislation.

This matter of a sound farm program is tremendously important. Agriculture as an industry has approximately 25 percent of all the capital invested in farms, mines, factories, transportation, service industries, homes, etc. It has approximately 65 percent of the capital investment in productive enterprise. As a result our entire national economy revolves with an almost mathematical precision around the production and price of farm products which determine farm income. A sound farm program will almost automatically give us a sound national economy.

In addition the course of human events has made the United States the governing factor in world economy. Even though we have only 6 percent of the population of the world, we do approximately 47 percent of the world's dollar business and consume 25 percent of the total production of goods. In the light of these facts this committee, in considering a sound and permanent farm

program, is in reality considering the foundation of the economy of all the world.

Without a sound farm program all the dreams of future prosperity and world peace will end in chaos and confusion.

Many of the members of this committee have spent many hours attending hearings and discussing the so-called farm problem. As you all know many theories have been advanced as to this and that phase of our farm economy and yet we are here today because it is still an unsolved problem. I feel that some people h .ve even reached the conclusion that there is no solution. I know that it can be solved and that the record of our own national economy points the way if we will but use it.

We have failed to solve the farm problem because we have not made a thorough analysis of the facts and the relationship that exists between agriculture and other segments of our economy. Our approach has been too general. We have spent too much time scratching the surface. We have been handicapped because so many theories were in reality untrue and not based on facts or simple common-sense arithmetic.

The farm problem is ages old because a selfish public has always wanted cheap farm products, not realizing that they could not eat properly unless they paid their board bill. Low farm prices and the neglect of agriculture has destroyed nation after nation, and the price of farm products will determine the future of our present civilization.

It happens that there is no reason for confusion. The record of the United States if properly analyzed gives us the answer. It is my purpose to analyze the record for you and in this connection I wish to say that the various graphs and conclusions have been checked by the Country Gentleman. In December 1944 they carried an article entitled "The Key to Prosperity." In this article they called attention to our research work and pointed out that we had evidently found the answer by uncovering certain laws of exchange between the different parts of our economy.

In spite of all the legislation passed by Congress in regard to agriculture, labor, etc., these laws of exchange have permitted little change in the relative position of the different parts of the whole. For example, all the farm and labor legislation did not materially change the pefcent of the national income going to each group.

In my analysis I wish to point out first some of the fallacies that exist; second, to analyze our economy; and, third, to outline a program which will end any depression in 6 to 12 months.

Our present farm program was the result of the severe depression which followed the break-down of our national economy in the latter part of 1929. Since that time we have enacted a lot of legislation and amended this and that. All told, we have enough legislation now to solve the farm problem if it were efficiently correlated and administered. But, again, theories and some of the things we are doing are not based on fact. The result is confusion instead of a proper solution of our problems. In the words of a certain humorist, our troubles result not so much from what we know but because we know so much that isn't true.

For example, on one hand we have legislation to maintain a floor under farm prices at 90 percent of parity and, on the other hand, we are putting through a program to reduce tariffs and in turn our own price level. Again, on one hand we think of curtailing production while on the other hand we ought to realize that the only way to create more income and a higher standard of living is through more production. Curtailment of production to obtain price if it were a sound philosophy would mean that if none of us worked we could all become wealthy.

In regard to our theories to become rich through the medium of foreign trade, we should remember the words of Benjamin Franklin. Mr. Franklin stated "that to become wealthy through trade we must exploit someone." This statement is essentially correct and we should, in this connection, remember the words of Lincoln who stated: "If we produce something ourselves we will have both the goods and the money." In other words, the source of wealth is production, and trade is merely the result of production.

In the early thirties one of the first fallacies, the surplus complex, started us on the wrong road in arriving at a solution. We blamed the low farm prices on our surplus of production. The record proves, however, that we did not have a surplus. We merely had low prices and a shortage of income to consume what was in reality a normal supply.

In this connection a careful study of the record of our Nation and that of the world will reveal that we have never had a severe depression without a drop in farm prices prior to the depression. The reason is quite simple. The income of the United States and that of the world is determined by farm production and farm prices. Low farm income means a low national income and a high farm income means high national income. National incomes follow farm incomes up and down at an interval of 6 to 12 months with almost mathematical precision.

THE RECORD

I would like to use the record of 2 years of the past to prove that we did not have a surplus except that resulting from low prices and underconsumption. I will use the 2 years 1928 and 1932:

Production of corn, oats, wheat, barley, rye, and flax

	Bushels
1928	5,333,000,000
1932	5,253,000,000

Production of beef, pork, mutton, and veal

	Pounds
1928	17,000,000,000
1932	16,800,000,000

In other words, even though our population from 1928 to 1932 increased about 4,000,000, we actually had about 1 percent less production for them to consume. On the same per capita basis there just wasn't any surplus in 1932. Yet in 1928 we had prosperity and in 1932 we had a depression with ten to fifteen million unemployed.

Others say the tariff destroyed our export market. The record proves that this is also a fallacy. For example, in 1932 we exported 8,418,000 bales of cotton, our principal exportable surplus, out of a total crop of 13,000,000 bales, while in 1928 we exported 8,038,000 bales out of a crop totaling 14,447,000 bales. The world price however in 1932 was low so that our exports did not create much income.

The real reason for the depression was a drop in the price of all raw materials starting in 1925 and culminating with the rapid drop after 1929. In the period 1925–29, because of a fixed tariff which prevented adjustment to keep pace with this drop in world prices, we had a net import of farm products totaling $1,750,000,000. This continuous net import finally broke down our own price structure, sending our entire economy into a tailspin.

Many of our economists are continually expressing the theory that as we have a surplus, prices must come down so that the people can buy. They forget that lower price levels mean lower incomes and it is just another one of those things which we know that isn't true. As farm prices drop the percentage of national income spent for food goes up and in terms of per capita income food costs rise. For example in 1932 we spent 30.0 percent of the national income for food and in 1945, the last year for which the Department of Commerce had figures available, a few days ago, we spent 18.8 percent. It is a matter of record that during 1942, 1943, 1944, 1945, and 1946, the Nation had a lower living cost on the basis of per capita income than in the depression years.

This factor is very important because it proves the necessity of maintaining proper farm prices if we wish to consume our production. By permitting farm prices to drop we add the surplus of underconsumption to the seasonal surplus that weather conditions sometimes give us.

A careful study of the record indicates very clearly that the reason for the depression was nothing more than too low a price for farm products. The cause of the low price in my opinion is expressed quite clearly by Christopher Hollis, an English economist, in his book The Break-down of Money. Mr. Hollis was an exchange professor in economics at our own University of Notre Dame in the twenties. He sets forth the reason for the depression as follows:

"A money-lending country must be a free-trade country, and the purpose of the money-lending power has been to impose free trade upon the United States. It has not been a purpose easy of achievement. For in the days when labor in the United States was scanty and valuable the American workingman succeeded in obtaining for himself a very much higher wage than the workingman of Europe. It has been generally, and rightly, recognized in the United States, that under conditions of free trade, American manufacturers would only be able to compete against European manufacturers if the American wage was reduced to something like the European level—to say nothing of the menace of the still cheaper labor of Japan. Though American free trade is just as necessary to the money lender today as was English free trade to the money lender of the last century, yet the problem is a very different one, and to solve the different problem, merely academic discourses upon the beauties of low tariffs were of little effect.

"In opposition to the sermonizings of the old-fashioned Democrats had been the financiers' policy. Their belief is that the only chance of getting the tariff down has been so to reduce the purchasing power of the American people that they can no longer even approximately consume their own products. As long as that purchasing power was adequate, the American manufacturer was indifferent to foreign markets. But with domestic purchasing power reduced, foreign markets become essential to him. And the more that he can be persuaded to look abroad for his markets, the easier it will be to change his whole attitude toward wages. At present he is in favor of high tariffs and high wages, for he looks upon the workingman as his customer. But if he can be induced to look abroad for his markets, then wages become merely an item of costs and it is to the manufacturers' interest to reduce them as low as possible. If they are reduced—and the odium for reducing them, of course, allowed to fall on the manufacturer—then American industry becomes at once a much more profitable investment for the financier, while the foreign goods can flow into free-trade America to pay the interests on foreign loans."

Mr. Hollis' book was published in the United States in 1935. It is not available at book stores but there are copies in the University Library at Notre Dame. In the light of our inability to consume our normal production in 1932, the propaganda for free trade, and so forth, it might be well that we stop, look, and listen.

The fact that we did lose our income and purchasing power is clearly revealed in a

comparison of the incomes for agriculture, factory workers, and the Nation as a whole in 1928 and 1932:

	Income		
	Gross farm	Factory pay rolls	National income
1928	$11,700,000,000	$11,400,000,000	$82,000,000,000
1932	5,300,000,000	5,200,000,000	39,900,000,000
Loss	6,400,000,000	6,200,000,000	42,100,000,000

You will notice that our farm income in 1932 had fallen off $6,400,000,000. Everyone felt sorry for the farmers and our business economists did not realize what had happened all through our economy. You will notice that factory pay rolls also dropped in proportion to the farm income and that the national income, instead of being $6,400,000,000 less than in 1928—the amount of loss in farm income—had dropped $42,100,000,000.

Even today our economists are preaching lower farm prices, not realizing that lower farm prices will shut off a similar percentage in income for all the major segments of our economy. It is interesting to note the hue and cry at the present time for lower prices. It is a rather dangerous pastime and we can talk ourselves into having a depression. In fact it would be very easy for us to lose $35,000,000,000 of national income if the present psychology for lower prices continues.

It is rather an indictment of our economic leadership to have such a hue and cry for lower prices when at the present time, we are in a position for the first time since 1930 to have full employment, a balanced budget and on the per capita basis the greatest consumption of food and other goods in our history. Why, for example, should we wish to have lower prices, a lower national income, unemployment, and bankruptcy by returning to 1940 price levels. Especially so, when the records reveal that we are consuming 23,000,000,000 pounds of meat instead of the average of 17,000,000,000 pounds from 1934–41, and using ten to eleven million bales of cotton instead of 7,000,000 bales. It seems as if we are afraid of prices which will give us prosperity.

Coming back now to the tabulation of income, you will note that gross farm income, factory pay rolls, and national income were approximately in a ratio of 1–1–7 or seven dollars of national income and a dollar of factory pay rolls for each dollar of farm income. If the committee will check the record for the years 1921–45, you will find that ratio on the average was approximately constant in the proportion of 1–1–7 during the past 25 years. It is very easy therefore to create a depression by lower farm prices and the pyramiding of the loss in farm income by seven times.

I have tabulated the comparison of gross farm income and national income for the period 1929–42:

	Gross farm	National
1929	$11,900	$83,300
1930	9,500	68,800
1931	7,000	54,400
1932	5,300	39,900
1933	6,400	42,300
1934	7,300	49,400
1935	8,500	55,700
1936	9,500	64,900
1937	10,600	71,500
1938	9,400	64,200
1939	9,900	70,800
1940	10,400	77,800
1941	13,800	95,600
1942	16,200	121,500
Total	135,700	956,100

I have used this period because both 1929 and 1942 were the end years from full employment through the depression and back to full employment. The price level in both 1929 and 1942 for all practical purposes were at parity with the 5-year period 1925–29 of farm prices and the price of finished goods. For all practical purposes the price levels in the 2 years were the same.

Many of our economists, Brookings Institution included, will argue that this ratio does not exist and that it hardly ever is exactly a seven times turn. I feel that they are evading the real question. If they really understood our economy they would realize that our gross farm income precedes our national income going up and down by approximately 6 months, therefore it is impossible for the ratio to be exactly seven times on an annual basis. Yet the average since 1921 has been approximately a seven times turn of gross farm income into national income. A careful check of the tabulation will reveal that in 1929 we had an actual seven times turn. From 1930 to 1933 farm income dropped faster than the national income and the turn was a little less, while in the recovery period it was a little over a seven times turn as farm income led the way back. The dislocation in 1942 was the result of our entry into war and the spending of national deficits for war materials.

A few days ago Brookings Institution tabulated national income and farm income for Congressman KNUTSON, chairman of the Ways and Means Committee. They tried to point out that the seven times turn did not exist.

But, they used net farm income and of course had no relationship. We have continually stated that the gross farm income establishes the relationship.

Brookings Institution ought to know better.

The over-all average for the 14 years is 7.04. The gross farm income for 1929–32 may be different than you will find it in the present figures put out by the Department of Agriculture. They were taken out of the Agricultural Yearbook 1935. For some reason or other the Department saw fit to go back into the records and change the figures. Maybe they were using this method to try to disprove the quite positive ratio which the record reveals.

I would like to say further that the seven times turn of the farm income is an efficiency ratio which increased gradually from a turn of a little over one in 1775 up to approximately seven times turn in 1921. Under full operation of our economy in the next few years it may advance to a 7.5 times turn. It is in reality a reflection of the fairly efficient farm workers to our total labor force.

The seven times turn of gross farm income could be of very practical use to the Members of Congress. Mr. Charles B. Ray, an employee of Sears, Roebuck & Co., has worked out the progressive ratio and in the last 8 years has predicted the national income for his company 6 months in advance of the United States Department of Commerce with an accuracy of over 98 percent. In the process he finds it unnecessary to total up the record of any corporation. It is valuable to his company because their sales volume in turn will run approximately 1 percent of the national income, whatever it may be.

As an example of accuracy in 1945, the departments of Government and many private economists were predicting $140,000,000,000 of income for 1946 and 8,000,000 unemployed. Mr. Ray, using the formula, projected a national income of $163,000,000,000 and no unemployment. The actual result was approximately $166,000,000,000 and no unemployment. Instead of the economists trying to point out the inaccuracy of the ratio, I think they ought to use it so that Congress can have an accurate picture of what may happen. There is no excuse for an underestimation of our national income in the amount of $25,000,000,000 per year.

Going back to the tabulation, if you will take the trouble to use 1929 and 1942 as the end years of the period and take the mean of the two, you will find the average annual national income we should and could have had from 1930 to 1941 if we had maintained farm prices at parity. Our failure to do so caused our farmers to suffer a loss of approximately $68,000,000,000 and the Nation to suffer a loss of $475,000,000,000. From 1929 to 1946 our national income has fluctuated from a low of $40,000,0000,000 in 1932 to $166,000,000,000 in 1946. Such an operation is cockeyed and if permitted to continue we must admit that we have had malpractice of economics.

The Members of Congress and the economists who are worrying about the cost of maintaining proper farm prices had better start wondering about the loss we will take if we don't. For example, if we permit farm prices to drop back to 1940 levels we would lose approximately $13,000,000,000 of gross farm income and $90,000,000,000 of national income and as surely as two times two makes four. With $260,000,000,000 of national debt, we can't afford to lose it.

In this connection I might point out that no matter how much you have been misled by the surplus fallacy we must forget it and maintain farm prices as the first step in solving our economic problems and, if we do, most of the surplus will vanish into the stomachs of the American people.

DEFICIENT PRODUCTION

There is more danger that we will not have enough production than having too much. In January this year I prepared a survey for the Bureau of Reclamation in which I outlined the facts as they exist. They paid me for it but, as far as I know, it hasn't been made available to Members of Congress. I would suggest, Mr. Chairman, that it be made a part of my testimony. It would be helpful to the committee.

In this report I analyze the growth of the United States, pointing out that from 1850 to 1920 we brought in 5,000,000 acres of improved farm land per year to develop our economy. Further, that by 1920 we had reached the end of our natural development and that at the present time we do not have any more harvested crop acres than we had in 1920 or 1929. Also that we do not have any more beef cattle than in 1918 and that our hog numbers were approximately the same as in 1918. (Approximately 40,000,000 beef cattle and 62,000,000 hogs in 1918 and January 1, 1947.)

Of course the human race is rather egotistical and many of us get the idea that we govern things and forget about old-man weather. With the same number of harvested acres we can very easily fall back to the crop production of 1925–29 and 1930–39. The 75-year average for corn per acre, for example, is approximately 26 bushels per acre. The average in the last 25 years is approximately the same as the average for the past 75 years.

I am merely giving you this for something to think about when you get swept away by the surplus propaganda, most of which, in my opinion, is being advanced by those who wish to import farm products to pay for manufactured goods which are to be exported. In this connection, and I want you to throw politics aside, I want to point out that the South and Middlewest, through the trade agreements, were taken for a real buggy ride. And, you are still riding.

The agricultural areas were told that the trade agreements were to promote exports of farm products. This propaganda was in reality an insult to the intelligence of our farm leadership, if they had stopped to analyze the facts. But, they didn't and we had the program.

In our own economy 65 percent of our raw materials come from the farms and it is safe to assume that 85 percent of the economy of the rest of the world is agricultural. Therefore, any expansion of foreign trade above basic needs must be obtained by giving goods away or bringing in farm products and other raw materials to pay for them. It ought to be self-evident that if they are to pay for exports they must do so with farm products and raw materials.

During the period 1934–39 we exported $6,000,000,000 of farm products and imported $10,000,000,000. At the same time we exported $10,000,000,000 of manufactured goods and imported approximately $3,000,000,000. The displacement in terms of acreage from 1934–41 was a net import of approximately 50,000,000 acres annually. Instead of helping to export farm products the trade agreements increased the imports.

Some of the experts in the Department of Agriculture and State Department may deny this, so let us use a little arithmetic. We have $1,060,000,000 acres of improved and unimproved farm land in the United States. In 1941 we had a gross farm income of $13,600,000,000 or approximately $13 per acre. We had net imports of approximately $1,200,000,000 of farm products. Dividing by $13 we had a net displacement of approximately 90,000,000 acres on an over-all basis.

Taking specific items, 2,000,000,000 pounds of fats and oils displaced approximately 12,000,000 acres. A billion pounds of jute displaced 5,000,000 acres of cotton, etc.

The increase in our national debt during the thirties and the curtailment of our farm production, by paying the farmer not to produce, merely created a market for foreign producers of farm products. The rest of the world has been short of food for many years. Our policy of curtailing our own production and buying farm products from the rest of the world helped create and foster hunger and starvation, a fertile field for communism, which we are now trying to head off with loans to nations in need.

The best move which we can make to head off communism is to maintain our farm price levels and then help the rest of the world in using our price level as a yardstick. Then other nations can earn their income from production and natural prosperity will break up the communistic ideology. If we persist in permitting our own farm price levels to be reduced to the level at which the rest of the world can buy we will lead the world into eventual chaos and economic confusion.

THE RELATIONSHIP OF FARM INCOME TO OTHER GROUPS

As I have pointed out, our economy operates on a basic ratio of approximately $1 of gross farm income—$1 of factory pay rolls and $7 of national income. Other segments have the same rather constant relationship. Our mineral production and transportation incomes will each ratio approximately 50 percent of the gross farm income. Retail sales will run approximately $4.20 for each dollar of farm income and 60 percent of the national income in volume. As an example, in 1929 retail sales were approximately 60 percent of $83,300,000,000; in 1932 they were 60 percent of $40,000,000,000, and at the present time approximately 60 percent of $175,000,000,000. The 60 percent is total volume of sales and should not be confused with income from retail trade. In like manner, the income of our service industries, manufacturing, construction, etc., are in direct ratio to gross agricultural income.

One of the reasons for our failure to arrive at the answer to our economic problems is that most economists think of agriculture as just a way of life rather than the generating force in our entire economy. Therefore, they are dealing with the result rather than the cause. If they will realize that agriculture, as a direct industry, has 10 times the capital investment and employs 10 times as many men as the steel and automobile industries combined, they will have a foundation for getting at the real facts. If, in addition, they will realize that our livestock industry, just a part of agriculture, is a factory that processes more tonnage of raw materials than all of American industry added together, then they will stop trying to wiggle the tail of our economic dog. Until our economists recognize that the agricultural production and income determine the number of jobs and wages in all segments of our economy, and also that of the world, they will continue in their guessing contest and economic confusion.

PERMANENT FARM PROGRAM

As a result of our research work by the Raw Materials National Council and that of Mr. Charles B. Ray and Dr. John Lee Coulter, the National Association of Commissioners, Secretaries and Directors of Agriculture have for the past 3 years advocated a seven-point program:

"1. Commodity loans as a floor price on seven basic crops—cotton, corn, wheat, oats, barley, soybeans, and flax—as a foundation for our national economy. Such loans should be at a minimum of 90 percent of parity and made callable at not less than parity. They can be made through the Production Credit Associations or the Commodity Credit Corporation. With permanent legislation of this kind most of the loans would be made by the local banks.

"2. Provisions should be made to carry adequate reserves to take up seasonal surpluses and to level off our production cycle resulting from weather conditions. We should at all times carry a reserve of at least 35 percent of 1 year's normal production of each basic crop. Loans on these reserves can be secured by the Government and carried as close to the source of supply as possible until demand or disposal decides their final sale.

"3. Import duties geared to the same commodity index which is used in determining parity prices for farm products should be made a part of our national economic policy. The duties collected should protect manufactured goods and raw materials at the same level and should be flexible so as to reflect the difference in our parity level and the landed costs of imported products. This is for the purpose of protecting our American standard of living and giving us the greatest normal income and purchasing power for needed imports.

"4. Provision should be made for surplus disposal in the following manner:

"(a) By sale into the world market at the world price level with a provision for a drawback from import duties to absorb the price differentials in the domestic and world levels. By proper licensing of importers, proper controls could be exercised without regimentation or excessive Government control.

"(b) By disposal of surpluses for relief purposes.

"(c) By providing for discounts on surplus products as an aid to new industries which may be developed to utilize them in the expansion of our domestic economy.

"5. Provisions should be made that any surplus funds accumulating from import duties shall revert to the Treasury of the United States, and that any deficit be considered as the Nation's cost of insurance for full employment and sustained national income.

"6. A permanent parity formula should be provided, using preferably the most recent 1925–29 period of price balance as a base, and using the General Commodity Index of the Department of Labor for the year 1926 as 100 in adjusting farm parity.

"7. Provision should be made for the handling of perishable commodities and minor crops by marketing agreements with producers of such products."

In summarizing the seven points we now have provisions for commodity loans at 90 percent of parity through the Commodity Credit Corporation. We can easily set aside reserves of 35 percent if and when they again are available. We have under the Tariff Act of 1930 a provision to adjust tariffs on the basis of differences of cost at home and abroad. Under the trade agreements the tariffs can be increased 50 percent under the administration of the act. We have provisions to use some of the import duties for surplus disposal in the world market in present farm legislation.

A permanent parity formula can be established in the bill for permanent farm legislation. I would suggest that a simple formula of prices paid by the farmer as compared to prices received in the base period be used. It will reflect many of the various cost factors, such as interest, taxes, labor, etc., automatically through the prices of finished goods. The use of this formula would give the farmer approximately 7 percent more than the present formula.

I would like to point out that there may be some dislocation of the price of a commodity even in a 5-year period. But, the over-all parity equation is quite accurate. For example, the percentage of parity for farm products determines the employment in the factory. During the 10-year period 1930–39, with farm prices at 82 percent of parity, factory employment was 81 percent (1929—as 100). If our social reformers really want full employment, then all they need to do is have farm prices at parity. Full employment is the automatic result. In this connection, I might point out that no matter what legislation Congress may pass, farm production and the percentage of farm parity will determine the employment in the United States.

The cost of such a program to the Treasury would be nothing. A study of the record from 1922 up to the present time indicates that a tariff at the parity level would have collected enough in import duties to liquidate all our surpluses at the world price level.

The sale of American farm products at the world price level should not be considered as a subsidy to the farmer but as a price correction. The amount of exchange created by the sale at the world price level will be sufficient to buy an equal amount of goods at world price levels as the exchange at the American level. For example, to trade in the United States on the basis of a pound of cotton for a pound of fats and oils, and then to go out in the world and expect 2 to 3 pounds of fats for a pound of cotton would mean that we were exploiting the world by underpayment for their products. The different nations all have a different parity level created by their own particular economy, and each nation will, from economic necessity, protect its own level. This differential must be adjusted if we are to have real reciprocity.

We must maintain parity for agriculture if we wish to remain a solvent nation. We cannot maintain an American parity without a tariff at that level. Our tariff should be flexible so that if and when world prices are at our parity level then we can be on a free-trade basis. Even then, we must realize that because of our efficiency other nations will still have to have tariffs to protect their own producer. And in spite of theory they are going to do so. The Geneva Conference is nothing more than a horse trade in which the American farmer is being traded off so that international capital can market its product, produced with exploited labor, in the United States.

Of the seven points set out in a permanent farm program, the tariff is the most important. With a tariff at the parity level and our present income level, there would be little need for price support. The price support would merely establish the value of the dollar in terms of our basic production as intended

by the Constitution which gives Congress the right to regulate the value of the dollar.

In closing, I wish to make this simple statement. Our farm problem and depressions are almost entirely monetary or a matter of price for farm products. Our failure to solve the farm problem wa due to our failure to restore full parity for agriculture. If in 1933 we had added a parity tariff to our other attempts we would have ended the depression in less than 12 months.

In regard to the potential surplus there is no danger if we maintain parity. An increase in our production will result in increased income and increased consumption and a higher standard of living. Parity prices for agriculture will mean a progressive economy and less than parity will mean a decadent economy and eventual bankruptcy.

We should welcome surpluses for the following reasons:

1. We need surpluses if we are to have world trade.

2. We need surpluses for the expansion of our economy. In the case of agriculture we need the equivalent of 4,000,000 acres of improved farm land annually.

3. We need surplus production to increase our annual income and to employ the labor which has been displaced by efficiency.

4. We need surplus production so that our economic cycle can operate to the fullest extent and continually add to our standard of living.

5. Each $1 for surplus production will mean an increase of $7 of national income.

6. Surplus farm products are the best form of national defense.

7. We need our present farm production of approximately 40 percent above 1930–39 production to employ our labor.

The growth of our efficiency and population requires our present farm production to fully employ our labor force. The rate of this growth is far greater than most people realize. For example, the increase in population since 1932, at present per capita income levels is a dollar market three times as great as our total export market in 1940.

Our farm surplus has swindled down to several hundred million dollars worth of wheat and cotton. With a sustained buying power in the United States we can easily trade these surpluses for such farm products as we need and don't produce enough of.

The tariff duties collected from these imports would pay the cost of price adjustment to foreign levels on exports of surplus products.

Finally, the end result of our economy is that farm products and other raw materials are the annual profit of our economic cycle. The capital worth of the United States will ratio to the raw-material income and a depression is nothing more than a capital adjustment to the annual profit, the income from new-wealth productio from the soil.

Parity prices for farm products assure enough annual national income to consume our annual production or its equivalent.

For society to pay less than parity for farm products means to reduce the profits of our national economy.

United States Marine Corps

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. TWYMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I submit House Joint Resolution 27, adopted by the Illinois General Assembly, with reference to the United States Marine Corps:

House Joint Resolution 27

Whereas the United States Marine Corps has protected and defended American interests in all parts of the globe ever since its inception; and

Whereas in every military venture which the United States has undertaken the achievements of the Marine Corps have always typified the ultimate in heroism and self-sacrifice; and

Whereas it would be a shocking travesty for the people of the United States to sound the death knell of an institution which has served them so nobly; and

Whereas legislation pending before the Congress of the United States, if enacted as presently constituted, would bring to an end the existence of the Marine Corps as an independent unit: Therefore be it

Resolved by the House of Representatives of the Sixty-fifth General Assembly of the State of Illinois (the senate concurring herein), That we urge the Congress of the United States not to approve any legislation unifying or merging the armed forces unless there is contained therein assurance that the Marine Corps will be retained in its present form; and be it further

Resolved, That copies of this resolution be prepared and forwarded by the secretary of state to the President pro tempore of the United States Senate, the Speaker of the House of Representatives, and to each Member of Congress from the State of Illinois.

Adopted by the house April 29, 1947.

HUGH GREEN,
Speaker of the House.
FRED. W. RUECG,
Clerk of the House.

Concurred in by the senate May 7, 1947.

HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Air Power at Stake

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following editorial from the New York Times of May 10, 1947, entitled "Air Power at Stake":

AIR POWER AT STAKE

The argument that air power is the spearhead of security today does not need to be elaborated. It is admitted on all sides. Last year the Air Coordinating Committee declared, after a careful study, that we should procure not less than 3,000 military airplanes annually if the state of the world's peace was settled, not less than 5,180 such aircraft if settlement was still postponed. The actual procurement for 1946, however, was 1,330 military aircraft of all types.

Aircraft procurement cannot rest on an uneven basis, with peaks and valleys from fiscal year to fiscal year. To insure the minimum industry which can be expanded in case of need, procurement must be put on a basis which will encourage continuous development of new and better types. All the combat aircraft which took part in the Second World War are obsolete today. Time is a vital necessity in which to develop new aircraft. It is perhaps not generally realized that not a single military plane which saw combat service in the war was designed during the war. This fact alone should be ample answer to the loose thinking which asks why we should build military airplanes when many thousands still are in existence and technically in possession of our Air Force.

Practically every responsible leader in Army and naval aviation has emphasized the hazards of the complacent assurance that we have achieved the era of push-button warfare and that strong forces of the most modern possible aircraft flown by men no longer are needed. It is the duty of Congress to cut unnecessary budget costs. But the penalty of false economy for the air arm is to imperil not only our own future as a free nation but our ability to work for a just and democratic peace.

The Amazing History of Our National Reclamation Program

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday May 12, 1947

Mr. MURDOCK. Mr. Speaker, on May 2 the Secretary of the Interior, J. A. Krug, addressed the National Rivers and Harbors Congress on Our National Reclamation-Irrigation Program. It was a brief but enlightening account of the growth of this wealth-creating activity during the 45 years of its existence. So revealing is this address and so needed for the information of the public at this critical time that I have asked and obtained permission to extend my remarks and include it in the RECORD today.

Throughout the years America has engaged upon one enterprise after another in successive waves of development as our Nation grew toward maturity. For the most part our Government has followed a policy of encouraging western development through one form or another of internal improvement, and although the benefits seem to be conferred upon a few of our citizens, the total resulting benefits have extended to all of our citizens. Whether it was a matter of transportation by water or by rail, or still later, transportation by good highways and automotive power, and still more recently by air transport; or whether it was encouragement of agriculture through liberal homestead laws or by some other kind of business or prosperity, no program has yielded relatively so much per given dollar of investment as has the reclamation program.

Secretary Krug in the following address indicates the wealth-creating power of reclamation by showing that the production of irrigated land in Federal reclamation projects, which cost less than a billion dollars to reclaim from the desert, produced in the last 12 months a half billion dollars in value. Of course, every dollar invested in reclamation projects by the Federal Government is repayable to the Federal Government over a stated period of years, but

it may come as a surprise to many that such a capital investment in 12 months' time can possibly produce values equaling half of that capital investment. The Secretary's address is as follows:

OUR NATIONAL RECLAMATION-IRRIGATION PROGRAM

The National Reclamation Act is one of the great legislative achievements of President Roosevelt's term as Chief Executive of the Nation. I mean President Theodore Roosevelt, not Franklin. Few Americans today realize that the reclamation program was authorized by Congress in 1902 in substantially the form in which it is being administered today. This 45-year-old congressional authorization has evolved into one of the most effective and far-reaching activities for conservation and use of American natural resources in the history of this country.

It has brought irrigation water to 21,000,000 acres of once arid western soil. It has built 168 dams and 15,000 miles of canals. As a profitable byproduct for the Federal Government, it has constructed 33 power plants with a capacity of about 2,500,000 kilowatts. Some $5,000,000,000 worth of crops has been taken from reclamation lands, and last year alone the value was half a billion.

More important than these inanimate monuments are the homes, businesses, and communities which have grown up on the wealth produced by reclamation.

More than 250,000 fine American citizens live on the 68,000 federally irrigated farms and a million others live in the 322 towns on or tributary to reclamation projects. These citizens have found in the reclamation regions a good livelihood and a chance to raise their families in the American tradition. It is they who have proved the value of the congressional action of 1902.

Now our reclamation program is going through a trying period and before I conclude I shall touch on its current hardships because I think they will interest you who will be directly affected when your river- and harbor-development programs are considered. First, however, I want to touch on some of the successful reclamation activities of the past year.

I think we have been particularly fortunate in our progress on coordinated planning of river-basin developments. The Bureau of Reclamation has assembled a small staff of experts and has had the advice of many more. It has worked out a great deal of the badly needed over-all planning of reclamation and irrigation in the Missouri River Basin and in the Colorado River Basin as well as in the Columbia River Valley.

This planning is being integrated with that of other departments through the Federal Interagency River Basin Committee which has members also from the War, Agriculture, and Commerce Departments and the Federal Power Commission. This committee has made an excellent start and I have great confidence that it will resolve the present conflicts for the maximum benefit to all users of the rivers and their waters.

In the past 2 years this Government started the most extensive construction program ever proposed for the Bureau of Reclamation. In the 5-year period ending in 1951 it was hoped to create more than 45,000 family-sized irrigated farms on about 4,000,000 acres of productive land. It was planned to increase the 2,500,000 kilowatts of installed power capacity to over 4,000,000 kilowatts at existing projects and with the addition of new power projects which have been authorized, to approximately 7,000,000 kilowatts

By whatever standard be chosen, the national reclamation program which began at the turn of the century has been an outstanding success. In periods of crisis such as the war years it has been responsible for absolutely essential electric power and agricultural products. It has been self-evident proof of the value to the American people of Federal investment in useful public works.

The Rivers and Harbors Congress is one of the principal private organizations which has concerned itself effectively with the study and encouragement of Federal investment in useful public works. Its aim "to promote the sound and orderly development of our national water and land resources" could well be used as a motto by the Interior Department. There are many areas of broad joint interest between us. Reclamation is, of course, the principal one.

One of the first studies in the planning of a reclamation dam is its usefulness for flood control. Some of the capacity of virtually every reclamation dam is allotted to controlling floods. Silt protection is a joint problem. Each reclamation dam provides some capacity for collecting silt.

Many of the dams built and planned by the Corps of Engineers have hydroelectric features. The Flood Control Act of 1944 assigned the Secretary of the Interior responsibility for marketing surplus power from these projects. That responsibility will require the closest understanding and cooperation.

There has been extensive discussion in recent years of some differences in the repayment features of Reclamation and Engineer Corps dams. There need be no controversy. The Federal policy is clear, and, I think, sound. Direct beneficiaries of a particular dam who use its water and its power can be easily determined. They pay for these direct benefits on both kinds of dams. The indirect beneficiaries of the flood control and navigation improvement are legion and it is impossible to assess the cost of those features to any but the entire people.

I feel that the controversy over this repayment problem has been unnecessary and the result of misunderstanding. I feel the same way about the present controversy over appropriations for the reclamation program for the next fiscal year.

There appears to be a feeling that money spent on reclamation is a sort of charity to the Western States because they are poor relations and don't have as much in the way of industry and agriculture as the rest of the country.

Nothing could be more of a misrepresentation nor less popular with the people of the Western States. Appropriations for reclamation projects are investments of the people's money and these investments pay off. Earlier this year I was handed a check for $15,000 by the calloused hand of a reclamation farmer in the State of Washington as the final payment for constrction costs on the Tieton division of the Yakima project. The fruit growers of that prosperous valley have paid off $3,400,000 in the last 37 years, the complete cost of project construction to the water users.

When I say the controversy over the reclamation appropriation is over a misunderstanding I do not want to minimize its importance. It affects a significant, if not the most important, part of our problem of adequate resources development in the crucial years of thinning domestic supplies of important and strategic materials.

A week ago today the House of Representatives voted an Interior Department appropriation bill which cut the President's budget nearly half and cut reclamation allowances more than half. When that bill was reported from committee I took public issue with the committee's recommendations because I felt they were harmful to the development and economic welfare of the entire country.

Resources development is not a partisan issue; it is a great national issue. Next to the high cost of living, it is probably the most important single domestic issue facing the American people. Those Congressmen who voted a week ago today to retard western river and land and mineral development did so out of belief that the modest investment of Federal funds required to continue construction of reclamation projects at an economical rate was unwarranted. Those who voted to retain the modest commitment of the President's budget did so out of a conviction that such investment was necessary to the prosperity of this country.

During every day that our river development program is stifled, this issue will grow and grow. This is particularly true of the development of our western rivers which is so essential to an expanding American economy. A determined effort to hold back resource development and utilization west of the Mississippi would eventually split the American people just as prohibition did. These cuts in promised, scheduled, and partially finished river-development projects cannot be airily explained by saying, as did the House Appropriations Committee, that this helps materially "in meeting the promises made in the fall of 1946 to the taxpayers of the Nation." The people of the Western States, whether their votes were influenced by this gaily irresponsible tax cut "promise" or not, did not expect a congressional tourniquet on their economic bloodstream.

I have traveled extensively through these western river-basin areas. I've had meeting after meeting with the businessmen and farmers of the reclamation communities and the surrounding towns and cities. The members of western chambers of commerce and Rotary clubs, the leading merchants and bankers, all of them men who desire tax cuts as much as or more than most, unanimously favor continued Federal investment in river development. They feel that drastic curtailment of this program is reckless and false economy and is subversive of the best interests of the American people.

Western resource development is too important to the economy of the entire Nation to remain in neutral or low gear. It must stay in high gear or it will go into reverse. The United States is a successful Nation and a prosperous Nation because it has been and is a growing Nation. There has been a constant outlet for new savings, new ideas, and new activities in our western frontier areas.

The Governor of California, who is highly regarded by the business community of the country and is a successful leader of both major political parties in his great State, urged the House of Representatives to double the allowance for construction of the Central Valley project. He asked that the $20,000,000 proposed in the President's budget be made $40,000,000. The answer was a cut—or rather, an amputation—to the sum of $6,900,000.

At the rate of appropriation established by the bill which passed the House, the Central Valley project in California would take 40 years to complete. A number of other projects would take even longer. For the Palisades project in Idaho, the time schedule would be 33 years. The Hungry Horse project in Montana would take 30 years; the Gila project in Arizona 31 years. The rate established by this appropriation bill generally moves back the reaping of the benefits in water, power, and revenues for a period of three to four times as long as originally planned. The eventual total cost will certainly be much more. The economic and financial returns will be less by just the amount of the delay.

Several instances of misunderstanding are clear in the committee report. It assumed that reclamation was in general competition with private business for construction materials. By far the largest part of the reclamation expenditure would be on labor, which is not in short supply in the Western States. Where there was to be competition for commodities it was chiefly for such items as transmission lines and substations needed to

service existing and new businesses in areas where electric power is in short supply.

The committee refers to some $85,000,000 for unexpended reclamation construction funds as available for construction during the next fiscal year. However, as the committee itself noted, more than $35,000,000,000 of this will have been obligated by June 30 and therefore actually spent, even if not paid out, and an additional $7,000,000 is earmarked by Congress so it is not available in 1948.

The reclamation expenditures were carefully prepared by a planning staff, which incidentally was completely eliminated by the House so that we can no longer exercise economy by intelligent, advance planning of projects and construction. They were minutely examined by the Budget Bureau, which was faithfully and ably carrying out the orders of the President to pass only essential expenditures. They were broken down and justified by reference to specific locations and to types of construction.

The committee did an able job of its hearings and investigations. It is thorough and well informed. In fact, it was so well informed when it met to mark up the bill that, in the words of Congressman ROONEY, of New York, "the figures had apparently already been decided upon in advance. For instance, we proceeded to mark up as the first item the Bureau of Mines. Every item of appropriation in connection with the Bureau of Mines had been previously agreed upon with somebody, and was written out on a white sheet. There was, therefore, not much sense in discussing the items. Our problem was very simple—the minority states that they disagreed in every instance with the work of the majority of the committee unless we definitely signified our assent."

This well-informed committee was like a small boy with a sickle. It chopped left and right. Some grass was skimmed and some cut to the roots. Every reclamation project suffered. If a project included a power feature to help pay its cost and service the farms and communities with labor-saving electric current, its funds were cut even more drastically than the others.

The situation today in western reclamation and river development is not unlike the housewife's present job of serving balanced meals at reasonable costs. After much study, she arrives at an economical but nutritious menu. Then the master of the house arbitrarily removes all the potatoes, half the green vegetables, and two-thirds of the soup and forbids her to read the meal-planning section of her cookbook. That man will not be adequately nourished and he may get sick. When the economy of our river-basin States is treated the same way, the national economy is sure to get sick and everyone will suffer.

As a partial excuse for this congressional work stoppage, the House committee advanced the specious aim of returning the Department of the Interior to its 1938 size and weight—a bit of wishful thinking which recalls the verse:

"Backward, turn backward, O Time, in your flight,
Make me a child again just for tonight."

This flight of fancy ignores what happened from 1939 to 1945. It ignores the fact that we have increased our American productive plant by one-third, have added 7,000,000 persons to our total work force, and have increased our total annual income from $64,000,000,000 to $165,000,000,000. It ignores 9 years of change and growth in an area of 1,800,000 square miles. It ignores an estimated population increase of over 2,000,000 persons. It ignores the thousands of small and large factories, mills, and shops which were located during the war so as to make use of the power and raw materials and crops of these Western States.

How long would any of us remain healthy if we spent only as much on food and clothing as we spent in 1938?

The 45-year record of achievement in Federal reclamation encourages me to believe that these troubles are temporary. The American people will not permit their resource development to go into reverse.

It has been a pleasure to be with you today and to be able to discuss some of our joint problems. I sincerely hope that I can meet with you in the future at a time when our joint interests are not faced with the present disregard for the long-term interests of the American people.

Higher Prices of Food Stem From World Need

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. HOPE. Mr. Speaker, the question of food prices is a matter of the greatest public interest at this time. In recent weeks the press has carried a veritable flood of misinformation on this subject. This misinformation is mostly contained in editorial comment or articles by commentators on public affairs, although some of it has appeared in news columns.

For this reason, it was a pleasure to read an article appearing in the New York Times for Sunday, May 11, by Walter H. Waggoner, entitled "Higher Prices of Food Stem From World Need." This article discusses the situation accurately and objectively. I commend its reading to anyone interested in this important question:

HIGHER PRICES OF FOOD STEM FROM WORLD NEED—LARGE EXPORTS TO HUNGRY EUROPE ARE REFLECTED IN AMERICAN MARKETS

(By Walter H. Waggoner)

WASHINGTON, May 10.—The grim reports of the food situation in Europe were a reminder this week of America's plenty. They bore a suggestion, too, that United States foodstuffs would probably be costly for a long time to come.

It is an unpleasant fact that one country's want is another's profit. It is thus to American farmers, who have struggled to fill the world's need for food throughout the war and its aftermath—and have profited handsomely from it. But to the American consumer high food prices are just another pain in the pocketbook.

Actually, food as a component of the cost of living has varied proportionately very little in the last several years. From 1935 through 1946 average expenditures for food have not risen, on an annual basis, above 23 percent of total income, or fallen below 21 percent of it. This would indicate that the chances for bringing food costs down substantially, without bringing everything else, including income, down with them, would run against the pattern of history.

NO DROP IN PRICES

At the present time food prices on primary markets hover at an altitude about 60 percent higher than the 1926 level, and about 45 percent above their level of a year ago. To the great body of consumers whose wages and salaries have not been correspondingly raised—this includes a substantial number of middle-class, white-collar workers, and those on fixed incomes—the rise has been painful.

Producers and merchants of food have, like all other businessmen, recently been the objects of an intense appeal by President Truman to cut prices. Their response in many cases has been, Why should we reduce prices when it is the Government's responsibility that they are so high?

TWO FACTORS

The spokesmen for this point of view have two thoughts in mind. First, they are aware of the Government's program for feeding the hungry of Europe and Asia. Food prices are as responsive to foreign needs as they are to the demand of the consumer up the street. Second, they are thinking of the Agriculture Department's price-support policy of protecting farmers against a collapse.

When the price of wheat recently hit a history-making high as a consequence of Herbert Hoover's report on the acute need of grain abroad, the first influence was being felt. This week cotton prices advanced, partly on the basis of purchases by UNRRA, and grain prices rose in response to indications of poor crops. In each case traders were simply reacting to what is described as the law of supply and demand.

A basis for the other argument that the Government is causing high food prices—the price-support program—is less evident, if, indeed, it can be found at all. Officially, the Department of Agriculture has support programs for about 25 farm products or groups of products.

The list ranges from such basic food items as corn, wheat, hogs, and eggs to flaxseed and hairy vetch, a variety of hay. In most cases the Government guarantees farmers that their prices will not fall below about 90 percent of parity, which is the price they must receive to remain in balance with the prices of goods they buy.

GOVERNMENT BUYING

If the market price should fall below this 90-percent level because of a vastly bigger crop than the market could stand, or because of a sudden drop in demand for some reason, the Government, through its Commodity Credit Corporation, would buy the crop at the agreed-on level.

Today, however, the market price is so considerably above the support or guaranteed price that the latter has no effect at all on the former. Potatoes are the only exception. They are so plentiful they are being destroyed by the hundreds of carloads at the support price.

Dry milk and heavy turkeys are also "supported," but they are of small consequence in the cost of living.

Prices of other agricultural products are in little danger of falling below the guaranteed level. The support price of wheat is $1.82 a bushel, while current market prices are above $2.50. The Government promises not to let the price of hogs fall below $14.94 per 100 pounds. In the market, producers are getting in the neighborhood of $25.

To many analysts, it is important to retain the Federal price support program as an assurance to farmers they will not be victims of a slump in prices similar to that which caught them in the twenties. President Truman, on April 21, said:

"Without the support program, farmers, mindful of the disastrous farm collapse shortly after World War I, would not have planted their tremendous recent crops. The consequences would have been smaller acreage, greater excess of demand over supply, and prices much higher than they are now. Because of the support program, the consumer is better off and the world situation is more manageable."

Clinton P. Anderson, Secretary of Agriculture, argues that the administration's program is "holding prices rather than forcing increases."

HOLD PRICES DOWN

"Most of the expenditures of the Commodity Credit Corporation during the last few

years were designed to hold consumer prices down and keep production up," he said recently.

Until recently farm and food prices were considered the likeliest area for a slump. With the troops home and demobilized, with UNRRA ending its buying, with Europe gradually regaining its own productive capacity, American agriculture seemed to be in for some retrenchment.

So far the slump has not appeared. Although some of the causes of one have already appeared, prices are still high. Army buying is a fraction of what it was and UNRRA is out of the market.

European agriculture, however, has been set back by a crippling winter and demand for American crops is still great. England is already hard put financially, and with its United States loan shrinking rapidly, it may have to spend more of the precious fund for foodstuffs than it had planned to do originally. France, rumored as a possible recipient of a World Bank loan, might also be in the market for American farm products.

The drop in food prices here, if not put off indefinitely, is at least postponed by hunger in the rest of the world. For American consumers it is the price of abundance.

Job of GOP Congress Seen as Remarkable Despite Press Critics

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1947

Mr. REED of New York. Mr. Speaker, out of the welter of New Deal criticism comes the voice of a columnist who deals in realities. I am inserting, under leave to extend my remarks, the article by David Lawrence which appeared in the Evening Star of May 12, 1947:

JOB OF GOP CONGRESS SEEN AS REMARKABLE DESPITE PRESS CRITICS

(By David Lawrence)

The Republican Congress actually has made a remarkable record to date insofar as expeditious handling of public business is concerned, but the left-wing press has managed nevertheless to spread the opposite impression.

Not since the reform days of 1913, when a Democratic Congress and administration took over from the Republicans, has there been so comprehensive a job done on organizing the work of Congress and preparing major legislation.

Before the end of June, the Republican Congress will have put through a bill liberalizing and readjusting the unbalanced provisions of the Wagner Labor Relations Act, strengthening the Mediation Service, and providing machinery for the settlement of strikes; a bill reducing income taxes, a bill to outlaw the portal-to-portal racket, and extortion, and appropriation bills making the first substantial reduction in Federal expenses in nearly 14 years.

NO HURRY IN LEGISLATING

These accomplishments by themselves would be enough to take 6 months, but other important bills will have been enacted by July. Legislation has not been completed in a hurry, either. Exhaustive hearings lasting 6 weeks were held on the labor bills and plenty of time has been afforded for both sides in the debates in the Senate. The tax bill also has required considerable time for hearings and debate.

So far as time is concerned, several Democrats have been responsible for consuming no small part of it. It was a Democrat, Senator MCKELLAR, of Tennessee, who precipitated the controversy of several weeks over the confirmation of David Lilienthal; and it was the leadership of two Republicans, Senators HICKENLOOPER, of Iowa, and VANDENBERG, of Michigan, which pulled that difficult chestnut out of the fire for the administration.

Likewise it was the Truman administration which properly enough introduced into the situation the Greek-Turkish legislation which was of a highly controversial character and also the European relief bills. Several Democrats in both houses, some of them New Dealers, did all they could to take up time and sabotage that legislation.

As for the budget-cutting process, never in all congressional history has there been such a concerted effort by persons in the executive departments to block legislation. President Truman has sat idly by while lobbies of his own personnel in the Government departments have used public funds unlawfully to try to defeat economy measures. When the whole story comes out, Mr. Truman's record will be vulnerable, for it was within his power to stop the intrigue and lobbying that was carried on in an attempt to hold appropriations at high levels.

REORGANIZATION WAS PROBLEM

Most perplexing from a time-consuming angle has been the reorganization law passed in the previous session by the Democratic majority. This measure has much merit, but it took the Republican Congress several weeks to adjust itself to the new committee system. This would have happened if the Democrats had been in power. Delays of this kind were inevitable and had nothing to do with the capacity of the Republican Party to govern.

The story that the Republicans have been dawdling or muddling is one that emanates primarily from Democratic political sources and the left wing generally. Anything to smear the majority party is considered good tactics and perhaps there are Republicans now who regret that they did not indulge more in that sort of thing themselves when they were the minority; but, unfortunately for them from a political standpoint, the war was on and the call to patriotism then had priority.

The Republican majority is making a meritorious record, but it could not possibly pass the labor and tax bills or cut the budget if it were not for the help of that stanch group of patriotic and courageous Senators from the Democratic Party of the South. These men, also the targets of abuse and ridicule by the left wing on the radio and in the press, are not allowing party politics or petty calls for so-called party regularity to interfere with performance of their duty.

What America has today in reality is not just a Republican Congress but a coalition Congress in which Republicans and Democrats are combining in an effort to rid the Government of graft and favoritism in the spending of public money and to eradicate special privilege from governmental boards and the courts.

A Resolution

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following resolution passed by the Central Oregon Potato Growers Association relative to H. R. 166:

Whereas there is a definite need for the industry to obtain, through any fair means, a program for research; and

Whereas there is already a potato-flour program contemplated, and a need for potato flour through baked goods, such as bread, rolls, cakes, doughnuts, sweet food mixes, and filler for food products and family flour, a factor that will tend to increase the consumption of potatoes; and

Whereas the flavor and vitamin contents of such products will make healthier Americans already proven by scientific tests; and

Whereas such program will cut down on taxes, now being used in the form of subsidies to the farmers, for all taxpayers: Therefore be it

Resolved, That the board of directors of the Central Oregon Potato Growers' Association have approved of House Resolution No. 166 and do urgently request that it be passed by the House Committee on Agriculture and by the United States Congress or the establishment of such authority, to investigate, and institute studies and hold hearings to determine the feasibility of a program designed to do away with the potato surplus in the United States of America, and to report such findings to the United States Department of Agriculture.

BEN DAVIDSON,
Executive Secretary.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. JOSEPH H. BALL
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Monday, April 21), 1947

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I gave last Monday night at 8:15 p. m. over the American Broadcasting Co. network on the subject of the labor bill (S. 1126).

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been reading with much interest, as you probably have, the full-page advertisements against labor legislation which are being run in our newspapers by the labor unions. I have also listened to their talks on the radio and read their union publications, in which they charge that the pending bills will "destroy unions."

Most of my time for the past year and a half has been devoted to study of labor legislation. Our Senate committee held 6 weeks of hearings and several weeks of executive sessions before it reported a bill. I could almost recite by heart the provisions of the pending Senate bill. But I must confess that I would never recognize it from the descriptions of it by union leaders. I would not for a moment accuse these gentlemen of deliberate falsehood. But certainly their statements as to what the legislation provides are only remotely related to the facts as I know them.

I cannot help but be reminded of the same kind of ridiculous charges made by union leaders in my home state of Minnesota in 1939 when the legislature passed a mild little labor relations bill requiring 10 days of conciliation before a strike. The leaders then

called it a slave act and freely predicted that it would destroy unions and force workers to involuntary servitude, the same charges they are making now about the bills in Congress. Of course the Minnesota law did no such thing. Unions have grown steadily there as elsewhere, although we have had a little more industrial peace.

But the best answer to this kind of distortion is the actual provisions of Senate 1126, the bill which the Senate will pass this week. You undoubtedly have heard the charge that this is an employer's bill, that it will give employers many advantages over their employees they do not now have. The facts are just the reverse.

Most of the bill's provisions are for the protection of employees, the men and women who work. The bill writes additional safeguards on their rights as against employers, union leaders, or biased decisions of the National Labor Relations Board. There are some provisions aimed at protecting the public generally, and a few to place employers on a basis of equality under the law in collective bargaining, but the bulk of the bill safeguards the right of employees to full freedom in their choice of occupation and bargaining agent.

There are two provisions aimed primarily at protecting the public, which is always a secondary sufferer in industrial strife and, in the case of industry-wide or union-wide strikes such as those we experienced in 1946, a major victim. One of these is the mediation section requiring 2 months' notice of termination of existing contracts between employers and unions, with 1 month for mediation in case collective bargaining fails to settle the dispute over renewal. Does that destroy any rights of labor or is it just sound, sane procedure?

A second public-protection provision authorizes the Attorney General to enjoin and stop industry-wide strikes which threaten the national health or safety, for a period of not to exceed 80 days. During that time, Federal mediators would attempt a settlement. If mediation failed, the NLRB would conduct a secret election among the employees to determine whether they wanted to accept the best offer of the employers or strike. If they so voted, they would then be free to strike.

This is the only provision in the Senate bill dealing with industry-wide bargaining and strikes, which all agree is one of our major problems. The Senate rejected an amendment to give local unions autonomy and stop internationals from dictating the terms of collective bargaining agreements on the grounds further study was needed. As it is, the 80-day mediation period applies only to industry-wide strikes, and unions always can avoid its application completely by bargaining on a local or community basis.

There are a few more provisions which protect the rights of employers. Of course those who believe that employers should have only duties and no rights in labor relations bitterly oppose these sections. But if you believe as I do that one sure way to totalitarianism in America is to place employers completely at the mercy of an all-powerful oligarchy of union leaders, then you will agree that, for both unions and employers, duties and rights must go hand in hand.

Employers, for instance, are given the right to petition the NLRB for an election among their employees to choose a bargaining agent whenever one or more unions demand recognition from them. This not only gives the employer some chance when he is caught in a jurisdictional squabble, but gives him the right to make sure, by a democratic election, that a union really represents his employees before he negotiates a contract with it.

Another provision removes bona fide foremen from the definition of employees in the National Labor Relations Act, thereby removing the compulsion on the employer of bargaining with a union of foremen. This is necessary because of divided opinions of the NLRB and Supreme Court. Foremen are an integral part of management and are so regarded now in the law. But the NLRB has also held that they can at the same time be subject to the discipline of the unions of employees they supervise, which just doesn't make sense.

Unions are made suable as legal entities for breach of contract. They are suable now, but in many jurisdictions every member must be served with notice and every member is liable for any damages awarded, which makes suits almost impossible. Individual members are protected from liability in this section, which aims at making unions responsible for their contracts.

Another provision makes it an unfair practice for unions to refuse to bargain collectively in good faith. This doesn't mean much to the big corporations, but it will be a help to the small employer who all too often has had a contract laid on his desk by a powerful union with a "take it or else" ultimatum. Certainly unions should have the same obligation as employers to bargain in good faith.

Finally, one provision helpful to both employers and employees is that dealing with secondary boycotts and jurisdictional strikes. In their essence, these boycotts and strikes are an attempt by the employees of one employer through their union to dictate the terms and conditions and the union under which the employees of another employer shall work, regardless of the wishes of the employees themselves. Very often, an A. F. of L. union will boycott and refuse to work on goods manufactured in a plant where a CIO union has a contract and has been certified by the NLRB. The employer in such cases is a helpless secondary victim. He cannot comply with the boycotting union's demands without violating the National Labor Relations Act. But he is a secondary victim. The primary aim of most secondary boycotts and jurisdictional strikes is to gain control of the workers who are the primary victims.

The pending bill makes such boycotts and strikes unfair labor practices, directs the NLRB to go into court and obtain injunctions stopping them, and gives the injured parties the right to sue for damages actually sustained. True, this provision, if it works, will weaken the strangling power of those unions which depend for their power and revenue on this kind of racketeering practices. But it is essential if employees are to choose their own union, a right which the law now supposedly guarantees to them.

Including the secondary boycott, there are nine major provisions in the Senate bill protecting the rights and freedoms of employees, and I will have time for only a brief recital of them. Some are opposed by unions, quite understandably, because they will decrease the power of unions to order around and control individual employees regardless of their own desires. I think we must decide in America whether we want an all-powerful labor movement controlling every employee's job and work through ruthless use of economic force, or whether we want a labor movement reflecting the wishes and needs of free American workers who have voluntarily chosen their own unions. For my part, I am convinced that only the latter alternative fits our concept of freedom.

Next to the secondary boycott, the most important provision safeguarding employees' freedom is that dealing with the so-called closed shop in all its forms: closed shop, preferential hiring, union shop, and maintenance of membership. All such clauses make union membership a condition of employment. In other words, the union, instead of the worker himself, decides whether or not he may work in any particular job or occupation. Where there is both a closed shop and closed union, we have one of the tightest monopolies in existence.

It is my own conviction that this kind of shabby bread-and-butter control over a worker's right to earn a living is not only a fundamental violation of individual freedom, but a disgrace to the American labor movement. Unions enjoy many privileges and immunities in law on the grounds they are "voluntary associations." But what is voluntary about compulsory membership? I sought to outlaw all forms of compulsory membership in the Senate but the amendment was defeated.

However, both the House and Senate bills correct the worst abuses. The closed shop is outlawed completely. The union shop, under which employees must join the union within 30 days, and maintenance-of-membership clauses are left valid, but can be bargained for only after approved in a secret election by a majority of all the employees affected. Even then, no employee can be fired by an employer if he is denied membership in or expelled from a union for any reason other than nonpayment of regular dues and initiation fees.

Union leaders of course oppose this provision. It will decrease their arbitrary control over employees. They will not be able to compel employees to join unless a majority of them vote to do so, and they cannot have an employee fired from his job merely because he talked up in meeting or refused to buy a raffle ticket, as happened recently to two veterans in Missouri.

The Senate bill does not prohibit so-called welfare funds, but does require that they be trust funds, with the benefits to which employees are entitled spelled out in the agreement so that any employee denied his rights can go into court to protect them. Far too many of these funds which, after all, represent money earned by the employees, are controlled by union leaders under such loose standards that they are free to give or withhold benefits at their pleasure. Again, all we are doing is protecting the rights of the employees whose toil creates these welfare funds.

Another provision makes it an unfair practice for unions or their agents to coerce or restrain employees in their free choice of bargaining representatives. Again, the only purpose is to protect the rights of employees, to free them from the coercion of goon squads and other strong-arm organizing techniques which a few unions use today.

Section 9 of the National Labor Relations Act, which deals with election of bargaining representatives, is completely rewritten in the pending bill, with every change, except that giving an employer from whom a union demands recognition the right to petition for an election, designed to assure to employees, not employers, their full rights and freedoms.

Briefly, those changes (1) give genuine professional and craft workers the right to a separate count to determine whether they want to be represented by a plant-wide union or want a separate unit of their own; (2) provide that in a run-off election, the run-off shall be between the two highest choices in the first count; (3) requiring the NLRB to give the same treatment to all election petitions whether filed by a union seeking certification, a group of employees seeking decertification, or by an employer; (4) requiring the NLRB, in deciding what unions should go on the ballot and in considering company-domination charges, to treat independent unions and those affiliated with national unions exactly alike—at present the Board has two rules, a mild one for affiliated unions and a much harsher one for independent unions; and

(5) providing that when an election is held during a strike, only employees working or entitled to reinstatement may vote. The Board at present permits strikers who have been replaced and have no legal right to reinstatement to vote, and in effect, block the free choice of the real employees.

In view of some of the wild statements being made, it might be well also to emphasize the fact that not a single change is made in the present list of unfair labor practices for employers in the National Labor Relations Act. They are all there and one has been added, making it an unfair practice for an employer to violate terms of a collective-bargaining contract.

This, in brief, is the bill which the union leaders are charging will destroy their unions and enslave labor. Ladies and gentlemen, you are the final judges. Your decision as to whether this legislation will enslave labor or whether it will increase the freedom of the men and women who work will determine the outcome.

I thank you.

The High Cost of Dying

REMARKS
OF
HON. EMORY H. PRICE
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 12, 1947

Mr. PRICE of Florida. Mr. Speaker, much has been said on this floor lately about the high cost of living. I guess you could entitle my remarks "The High Cost of Dying," especially in Cuba. I know that every Member of the House is interested in promoting our maritime activities, but I want you to know some of the things our shippers are contending with who run boats between the United States and Cuba.

The stevedores' union, a Communist-controlled union in Cuba, recently charged a company $141.37 for loading a corpse on one of the boats operated into Cuba.

I wish to read this whole bill for your information. They charged for 12 stevedores, $64.27; 1 foreman, $5.32; 1 check, $3.64; and 12 dock laborers, $44.36, a total of $117.59. To the custom house they paid for 4 inspectors at $5, $20; and a 2.75 percent Cuban tax of $3.78, which makes the total, $141.37, that these stevedores charged this company to load one corpse on the boat in Cuba.

I have asked the State Department to take this matter up with the Government of Cuba.

Appropriations for Reclamation and Power Development

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1947

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a newspaper article with reference to a meeting of eight western governors and the representatives of three others—both Republicans and Democrats—in Seattle, Wash., on May 7, 1947, in a campaign for congressional restoration of drastic cuts in the funds for reclamation, irrigation, and power development in their respective States.

This, Mr. Speaker, is the first gun in a campaign on the part of the 11 Western States in protest against the appropriation bill recently passed by Congress which cut to the very bone appropriations needed for the completion of irrigation, reclamation, conservation, and hydroelectric power projects essential to the very life of the West.

It is an undisputed fact that every dollar advanced by the Government to develop and complete these publicly owned projects will be returned to the Federal Treasury with interest.

The article follows:

GOVERNORS JOIN TO RESTORE CUT IN RECLAMATION

SEATTLE, May 7.—Eight Western Governors and the representatives of two others—both Republicans and Democrats—united today on a campaign for congressional restoration of drastic cuts in the reclamation and power development program and decided to carry their fight personally to the national capital.

They decided to appear in force, if possible for all of them to get to Washington, before the Senate Subcommittee on Appropriations. They will carry an appeal for restoration of appropriations which the economy-determined House cut by more than 60 percent.

In a formal declaration of policy, the Governors asserted "we sincerely believe that the continued development of such wealth-producing and self-liquidating projects is not inconsistent with the commendable aim of the Congress to effect economy in government."

ESSENTIAL DEVELOPMENT

At conclusion of the all-day conference, the Governors described the continued development of the West's reclamation and power projects as "essential to the Nation's welfare beyond any partisan consideration" and contended that failure to make full and adequate provision for the development of these projects would stifle industrial growth of the West.

The declaration was signed by eight Governors: Earl Warren, of California; C. A. Robins, of Idaho; Sam C. Ford, of Montana; and Earl Snell, of Oregon (all Republicans); William Lee Knous, of Colorado; Herbert B. Maw, of Utah (both Democrats). Charles A. Carson joined in the declaration as the representative of Gov. Sidney Osborn, of Arizona, and Alfred M. Smith joined in it as a representative of Gov. Vail Pittman, of Nevada.

Governor Warren, who will fly East this week as the first of the group to carry the fight to Congress, said California, already hard-pressed for water and power, would face "a crisis" if the huge Central Valley project is delayed, "and I know each of the other States has projects which are as vital to them as this project is to us."

LACK OF KNOWLEDGE

Warren attributed main responsibility for the House cuts to easterners' "lack of knowledge" of the operations and benefits of Western reclamation and hydroelectric power development.

Warren described it as "gross ignorance by many in the East as to the real importance of Government investments in the West by the Reclamation Bureau."

He said the House was not only cutting appropriations but has recommended a complete change in the future financing of reclamation projects.

"The House recommendation is that no more appropriations be made from general funds," he said, "but only from the reclamation fund, which is sharply limited."

Governor Maw charged private power supporters are opposing the Government-financed projects, as a phase of the "public versus private power controversy," as strongly as are eastern interests.

All governors in attendance said they would go in force to Washington to press their demands "if at all possible."

Gov. Sam Ford, of Montana, chairman of the Missouri River States committee, had already planned to appear before the committee May 16 in behalf of central-western reclamation development.

Also attending the emergency conference were Govs. Earl Warren, California; Lester Hunt, Wyoming; Herbert Maw, Utah; Lee Knous, Colorado; Earl Snell, Oregon, and C. A. Robins, Idaho.

Govs. Sidney Osborn, of Arizona, and Vail Pittman, of Nevada, were represented by State officials, while Gov. Thomas Mabry, of New Mexico, telegraphed his full endorsement of conference decisions.

IGNORANCE BLAMED

Earlier Governor Warren keynoted the conference by placing the blame on the "gross ignorance" of eastern Congressmen for proposed cuts in western reclamation appropriations.

The 12-point policy statement:

1. Conservation and development of the Nation's water resources for reclamation, power development, flood control, and navigation are vital to the Nation's economy.

2. Resource conservation and development are matters of established national policy in legislation over the past 45 years.

INVESTMENTS REPAID

3. Reclamation and power projects constitute wise investments which are repaid in full to the Federal Treasury.

4. Repayment of funds cannot be made until the projects are completed.

5. Such projects create new opportunities for productive labor in industry, commerce, and agriculture, and augment the national wealth in goods and services; and also create a source of new tax revenue for State and Nation.

6. The development program for these projects should be carried forward in an expeditious and orderly manner, after delay by war and the reconversion period.

COSTLY AND WASTEFUL

7. Drastic reductions in funds would be costly and wasteful disruption of project work already initiated.

8. Failure to make adequate provision for development of the projects would deprive veterans of needed farm land and farming opportunities.

9. Such failure would also stifle industrial growth of the West by preventing the generation and transmission of additional hydroelectric power.

10. Failure to provide funds would also interrupt studies of the feasibility of projects, for water surveys, topographical mapping, and steam gaging; and preclude the orderly development of the Nation's river basins.

CONSISTENT PROGRAM

11. Continued development of such wealth-producing and self-liquidating projects is not inconsistent with the aim of Congress to effect economy in Government.

12. Because the development of these projects is essential to the Nation's welfare beyond any partisan consideration, the governors pledged themselves to a united stand in behalf of the development and urged Congress to make adequate provision to that end.

Hon. J. J. Mansfield

EXTENSION OF REMARKS
OF
HON. JOHN E. LYLE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1947

Mr. LYLE. Mr. Speaker, I am sure that the Members will rejoice to know that there is every indication that our beloved colleague the Honorable J. J. MANSFIELD, of Texas, will soon be out of the hospital and back at the work he has loved so dearly and to which he has given so much. I speak out of the heart of each of you, I know, in saying that Judge MANSFIELD has no equal in this body, measured by the love, affection, and respect that the membership has for him. We have missed him very much, personally and professionally, and anxiously await his return.

We are not alone in our regard for him, as evidenced by the following resolution adopted unanimously by the Thirty-seventh Convention of the National Rivers and Harbors Congress at a meeting held this month in Washington. The resolution was offered by Dale Miller, regional director of the southwestern region, and reads as follows:

The National Rivers and Harbors Congress is regretfully aware of the absence from this convention of its distinguished and beloved friend Congressman J. J. MANSFIELD, of Texas. This eminent gentleman, who served as chairman of the Rivers and Harbors Committee of the House of Representatives for a longer period than any predecessor in the history of the Congress of the United States, is now ill in the Naval Hospital at Bethesda. We bespeak the thoughts of his legions of friends and admirers everywhere in sending him on this occasion our affectionate regards and our prayerful wish for his early and complete recovery.

Two Hundred and Fifty Thousand Detroit Workers Protest Against the Hartley Antilabor Bill

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1947

Mr. SADOWSKI. Mr. Speaker, we hear a great deal of talk about the public demanding that unions be restricted. It is very rare that we have this term "public" defined. We are often led to believe that people cease being members of the public when they join unions. But, Mr. Speaker, they still pay taxes. They still go to church. The advertisements still appeal to their pocketbooks. In short, they are the public. The 60,000,000 wage earners and their families, organized and unorganized, make up the great American public.

I submit a newspaper article from the New York Times of April 25, 1947, showing some of this public. The New York Times estimates that 250,000 people in Detroit quit work as an expression of their fear about antilabor legislation. Over 100,000 people, young and old, male and female, marched to Cadillac Square in Detroit. I am told that this was the greatest demonstration held in the city of Detroit. Similar demonstrations were held in Des Moines, Iowa, and cities throughout the land.

What made these people come out? We are told, of course, that the union leaders are the only ones protesting this legislation. But no one forced these workers to come out. These workers are conscious of the part trade-unions play in their everyday existence and the dangers to themselves, their families, and their communities if the trade-union movement is suppressed.

The remarkable growth of the American trade-union movement from less than 3,000,000 to over 14,000,000 members could not have taken place unless the workingman felt the need for organization and voluntarily joined such organization.

I ask you to ponder, gentlemen, on the meaning of the Cadillac Square demonstration, the Iowa demonstration, and the meetings being held all over the land.

The article follows:

TWO HUNDRED AND FIFTY THOUSAND DETROIT WORKERS QUIT FACTORIES TO PROTEST ANTI-LABOR BILLS AT RALLY

DETROIT, April 24.—More than 250,000 Detroit automobile and allied workers left their jobs here this afternoon in response to a call from the United Automobile Workers, Congress of Industrial Organizations, to attend a union mass meeting in Cadillac Square in front of the city hall to protest pending labor legislation.

While most of the large plants were affected and some of them closed completely, a crowd estimated at 60,000 persons filled the square to listen to union officials criticize congressional and State officials. Besides those in the square, another 15,000 or 20,000 filled near-by streets, causing one of this city's worst traffic jams in recent years.

The rally began about 3:30 p. m. and broke up at 5 p. m. The exodus from the plants began at 2 p. m. and thousands of the unionists joined parades that converged on the downtown part of the city from three directions.

Ford Motor Co. officials said that more than 35,000 of its day-shift employees quit and that as a result nearly all operations were suspended. Chrysler Corp., Briggs Manufacturing Co., Hudson Motors and Packard also reported that practically all production was stopped.

General Motors, which at the time of the rally was negotiating a pay rise with the union, suffered the least from production interference. Workers stayed at their jobs in four plants, and only the Chevrolet Gear and Axle and the Fleetwood divisions were closed.

Joining the UAW, which sponsored the rally, were representatives of telephone workers' unions, the United Steel workers, CIO, the Mechanics Educational Society of America, the Brotherhood of Railway Trainmen and the Foremen's Association of America.

George F. Addes, UAW secretary-treasurer, told the crowd that Congress was using "every union-busting device that has been conceived by the most vicious of antilabor corporate executives" in framing the Hartley labor bill.

R. J. Thomas, union vice president, charged that "giant monopolies of industry" are seeking to destroy the labor movement, "which stands first and foremost in opposition to destruction of American living standards."

Intelligence Service of the State Department

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1947

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Providence (R. I.) Journal of May 9, 1947:

SUICIDAL STUPIDITY

If anyone is giving out prizes for shortsightedness and stupidity in the current congressional economy drive, we nominate for the blue ribbon the members of the House Appropriations Committee who sliced in half funds for the State Department's intelligence activities.

Only recently has the effort to put American peacetime intelligence work on a rational, effective basis been making headway. A few months ago, the various phases of the job—which is simply that of acquiring and analyzing information about the rest of the world—were distributed in such a way as to avoid overlapping and duplication of effort. The State Department, logically, was assigned to concentrate on political and economic developments abroad.

Further, to strengthen the set-up, George Marshall, in one of his first moves as Secretary of State, brought together all the intelligence units scattered through the Department into two central agencies—the Office of Intelligence Collection and Dissemination and the Office of Intelligence Research.

"The intelligence program," Mr. Marshall subsequently explained to the House Appropriations Committee, "provides a centralized service within the Department to acquire and analyze objectively all foreign political and economic information. We cannot afford to be without full and accurate intelligence. Only when we are fully informed of the acts and intentions of others can we avoid fatal miscalculations of their future policies and objectives."

In the present state of the world, nothing could be more self-evident. The United States is embarking on an epochal course of world leadership, involving heavy expenditures, delicate decisions, and grave risks. To the average citizen, adequate knowledge about what the rest of the world is up to would seem a minimum essential for such a policy.

But not to the House Appropriations Committee. Blithely disregarding Secretary Marshall's sober reasoning, that group has voted to slash the State Department's intelligence funds 50 percent from the budget figure, and a full third below the amount being spent this year. If it sticks, this move will compel dismissal of one-third of the Department's intelligence staff, and in the opinion of objective Washington observers will cripple a program for which the need has never been more desperate.

To be sure, the committee acted in the holy name of economy. Consider the size of the achievement. The sum asked was about $5,000,000. The saving would be about two and one-half millions—roughly 0.00006

percent of President Truman's $37,500,000,000 budget.

These newspapers believe firmly in Federal economy. We consider it not only desirable but essential for Congress to cut, and cut drastically, in the many spots where waste, duplication, and profligacy mark governmental operations.

But to hamstring the infant intelligence service at a time like this, to choke off our information about the outside world just when we need it most, for the sake of saving a couple of million dollars is not, we submit, economy at all. It is rank, suicidal stupidity.

The Place of the United States in International Affairs

EXTENSION OF REMARKS
OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Monday, April 21), 1947

Mr. HOEY. Mr. President, the distinguished senior Senator from New Mexico [Mr. HATCH] delivered a magnificent address before the International Relations Club of the University of North Carolina, on May 8, 1947. I feel that the Senators and the public will read his interesting remarks with both pleasure and profit. I ask unanimous consent to have this address inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, when I accepted your invitation to speak to you this evening, I did so with pleasure. It is always an interesting experience to address any group of American citizens concerned with world affairs. I know this is your concern and all of you keenly appreciate how vitally significant our relations with other nations are today. There was a time when we could and did isolate ourselves and proceed along a solitary way.

I shall not take your time tonight to stress the point that such isolationism is gone forever, regardless of our wishes. Neither shall I discuss how small our world is nor how, with each new advance in energy, power, transportation, and communication, it is continually shrinking. However, in this connection it may be of some interest to mention a trip I made with some other Members of Congress only last month.

Ten of us left Washington late one night to attend the Interparliamentary Union at Cairo. Due to weather conditions, we were forced to spend an entire day in Bermuda. After some time in French Morocco Saturday, all of the next day, Easter Sunday, was spent in Jerusalem visiting the holy places. We stayed 5½ days in Cairo attending the sessions of the Union. Thereafter in rapid succession, but having time in each place to visit with many high officials of government, we visited Ankara, Istanbul, Athens, Rome, and Paris, finally taking off for the return trip across the Atlantic from Shannon, Ireland. From the time we left Washington until the day of our return, including all time spent in travel, we had been away from Washington only 13 days.

Recently the late Mr. Willkie coined the expression, "One World." How much more true that expression will be tomorrow when all the vast potentialities of nuclear fission are applied to everyday life, as they will be, and perhaps sooner than we expect.

No man can foretell today what tomorrow will be. We are limited in our forecast of the future only by the limitations of our own minds and imaginations.

While tremendous advances have been made along so many lines, the almost terrifying thought comes that the nations of the world have not similarly progressed in their political relations with each other.

This was more than confirmed by nearly everything I heard and saw on the trip just mentioned. In Turkey and Greece, so prominent in public mind now, conditions exist which have prevailed almost since the world began. In that area of the world I found beyond any possibility of doubt the age-old ambition of a strong and powerful nation to expand and impose upon weaker and smaller nations its power, influence, and even its philosophy of government. In those small nations there also exists the same age-old determination to resist outside domination and the will to maintain their independence.

In Turkey we met a sturdy people. It is a nation that has made great progress in the past 25 years; one which is determined to protect its sovereignty and to maintain its own integrity. Notwithstanding the strength of that nation, for it is the strongest small nation in that part of the world, it was clearly apparent that to maintain her sovereignty and independence, Turkey does unquestionably require the assistance she has asked us to extend.

It is a matter of common knowledge that the aid requested is largely of military equipment. In a narrow sense this is true. It is military aid. In the broader and better aspects the aid extended will be of great assistance to the economic life of that nation.

During the war Turkey, a nation of less than 20,000,000 people, was compelled to maintain a huge standing army. It numbered anywhere from 500,000 to 1,000,000 men. After the war, when demobilization should naturally have occurred, demands, refusal to renew a former friendship pact, propaganda, threats, direct and indirect, literally forced Turkey to continue maintaining a military establishment far beyond her means to support. Men who are badly needed in productive efforts of every kind are in the army. Not only are their labors lost in fields of production, but they themselves must be supported in their nonproductive military activities. This, with other factors, has produced a heavy drain upon the resources of the country. If such condition prevails very long and no assistance or help is given, economic regression, perhaps collapse and disaster, inevitably await. From an economic standpoint, earnestly I declared the situation in Turkey is grave and it is serious. For, in economic collapse lies, in my judgment, Turkey's danger. In that fertile field the seeds of communism so well sown will bring forth their bitter fruit. If the assistance requested is given and her army is mechanized and modernized, Turkey will thereby be able to continue a strong armed position, if necessary, with far less manpower. It is believed by this procedure thousands of men can be released from the army and returned to agriculture, industry, and other productive, peaceful pursuits where they are so badly needed to support and expand the economic life of the nation. To maintain her economic stability and security is the chief aim of Turkey and such is her strength. While it may be an indirect approach, our aid to Turkey will have its chief value in assisting her to preserve her economy and the government she wants free from outside force or influence. This is what Turkey asks of us. We cannot refuse her request.

In Greece the situation is different. It is far worse. Having gone through an unfortunate dictatorship in years preceding the war, then the war itself, and finally five long years of enemy occupation of a most vicious kind, the situation in that brave little country is most deplorable. Her economy destroyed, her people demoralized, civil strife within and constant pressure from without, Greece cannot, in my judgment, maintain her sovereignty or independence as a nation without most substantial aid and assistance from us.

It was almost pitiable to see the complete reliance Greece places in us. Her confidence is great; her hope is strong. Sublime is her faith in America. She does not doubt that the aid she so greatly needs will be given. If we expect to exercise any degree of influence whatever in world affairs in the future, we dare not betray nor deny the almost simple, childlike faith and trust Greece and her people place in the United States. We must not fail her and we must not fail Turkey. If we do, what may we expect?

If Turkey goes down and if Greece likewise falls, the inevitable results will be swift and sure. The expansion of the Soviet Union and the spread of communistic influence which already has overwhelmed so many of the nations of Europe will continue its onward course into Iraq, Iran, Afghanistan, ultimately India, China, and all of Asia. Perhaps what little is now left in Europe of free peoples and nations will likewise succumb and fall.

To aid Greece and Turkey in maintaining their sovereignty, to choose for themselves the type of government they want without domination from the outside, I supported the present program in the committee and on the floor of the Senate. It is my earnest hope tonight that the aid both countries so desperately need will very soon be theirs.

In my remarks about the expansion of the Soviet Union and the spread of communism, I do not want to be misunderstood. We have no quarrel with Russia nor with her theory of government. She has the same right to whatever form of government she desires as we have to our own. Any nation which voluntarily chooses communism or any other form of government has the perfect right to do so and no nation in the world has any right to object. I go further and say there is ample room in the world for both capitalistic and communistic nations to live together, even as friends and neighbors.

It is this fundamental belief in the right of self-determination in all nations that causes my strong opposition to the expansion of any doctrine or state by extending boundaries or theories of government upon or into any other nation by force, conquest, infiltration, propaganda or by any means whatsoever. In this opposition to the domination of weak nations by the strong, in supporting the right of self-determination for all nations, we but adhere to principles for which, with others, we engaged in two world wars, in which we gave most generously, even lavishly, of our money and of the lives of our men. To do less than we propose to do now would be to abandon the principles for which we fought and for which many of our sons laid down their brave young lives. Surely, in times of so-called peace we can exercise some small part of that bravery and generosity which our country always magnificently exhibits in times of war.

But it is currently charged that the path we choose will lead to war, that it is a dangerous course, and that it is imperialistic in nature and design.

That it is a dangerous path I do not dispute. I know of no course that is not fraught with danger today. The world in which we live is a dangerous world. The dangers of

misunderstandings, of discord, division, distrust, and suspicion are so great that any step taken may conceivably lead to war. Great military leaders have recently and often pointed out that mere stupidity can provoke war. So grave are conditions everywhere no person can be sure or certain about the consequence which may follow any step that is taken.

Recently I said in the Senate, and I repeat it here, of these things we must not be afraid. Risks will be inherent in any course we pursue. There is but one thing for us to determine and of which we must be certain. Let us first determine what is right. Having determined what is right, nothing else matters. This, then, must be our guidepost and our sign. Risks may be taken, dangers may be confronted, but so long as we are right we will not be afraid.

It is unfortunate that the charge of imperialistic ambition has been laid against our country. It is extremely unfortunate that a great and good man has allowed himself to be drawn into opposition to present policies and that he has seen fit to repeat here and abroad charges that ours is a dangerous course, one which will lead to war, and especially that we pursue an imperialistic program. For these are the same charges which are being broadcast against us by the propaganda agents of Russia daily and directly into those countries we seek to aid. But regardless of deliberate propaganda or of ill-advised statements by anyone, the history of America, her past and present conduct, stoutly dispute and deny every implication that we have any imperialistic design whatsoever.

It was not imperialism that caused us to fight a war over Cuba and then, after victory was ours, to grant Cuba full independence.

It was not imperialism which caused us, after we had won the Philippines by conquest, to pay Spain $20,000,000 and later give independence to the Philippines.

It was not imperialism which caused us to enter two world wars and, after emerging from both of them victorious, to lend our Allies and others billions of dollars; to support, as we are now supporting, at great expense, vanquished peoples, and all without asking or receiving one foot of territory or one dollar in reparations.

It was not thus, says that arch critic of American foreign policy, Mr. Norman Thomas, in a recent article in Harper's magazine, that empires were built. It was not in this fashion that imperialist Rome ruled the world, nor was it in this manner that the great British or other empires grew and expanded.

It was not imperialistic ambition which caused us to offer to turn the most deadly weapon ever devised by man, the atomic bomb, over to an international authority, asking only that all nations, including our own, be made secure against its use by any nation against any other.

It is not imperialism which causes us today not to follow the example of the Soviet Union, which has forcibly made smaller and weaker nations her satellities and mere puppet states, and demands billions in reparations.

It is not imperialism that causes us today to grant assistance to Turkey and Greece, asking in return therefor only that they be permitted to pursue their own way of life, free from domination and influence of other nations, including ourselves.

In all the history of men, and notwithstanding one or two minor lapses, of which I am fully aware, no nation in all the world can show such a completely unselfish, humanitarian and nonimperialistic record as is written on the clean pages of American history.

Whatever may be our country's faults or errors, and we have made many costly mistakes in our dealings with other nations, imperialism is not one of them, and it ill becomes any American to add to present world suspicion and distrust by laying that charge at his country's door.

But let us now lay aside and forget charges and countercharges. Let us even pass by immediate situations in a more or less gloomy world and think together for a little while about more permanent, lasting, and, I sincerely hope, better things to come.

After the last war we made a valiant start on the road toward an organization which would forever free the world from the folly, stupidity, and curse of war. For reasons unnecessary to recount, we abandoned that child of which we were the lawful parents, the League of Nations, and left it an orphan and outcast on the doorsteps of the war-torn nations of the Old World. No wonder it never grew to that strength and stature for which it was originally created.

However, we did not mean to abandon the world. We did not intend to forsake distressed and suffering peoples. We resolved upon a course, after refusing membership in the League, of giving financial aid and assistance where it was needed. We made loans and even gifts. In such ways, we tried to sustain other nations and to relieve the suffering of other peoples. By giving financial aid, we thought we could make them strong, that by such methods peace would result. Our intentions were good, but we were mistaken. The same mistakes must not be repeated.

On the surface, it seems that we are not committing those old errors. We have joined the United Nations, which we did not do before. We have adhered to the International Court, which we refused in other years. We have agreed to the principle of an international military force. In many other ways we have indicated a willingness to strive earnestly and strongly for a world of order and for permanent peace among all nations.

While such activities do appear on the surface, that is what disturbs me. Are they only superficial steps we and the other nations are taking? Are the nations truly searching for some method which can guarantee peace? If so, it can be found.

In the disordered world in which we live there are many things to be done if any degree of safety is to be had for any of us.

First of all—and this I regret to say—for the time being we must maintain our own strong Military Establishment. Until the strength of the United Nations is fully assured, force will continue to be the one power recognized by some nations.

Likewise, we must keep our own country in a strong financial position. Right now widespread depression in the United States would bring despair and disaster to the entire world.

Fair, just reciprocal trade relations with other nations is an essential step in establishing order thoughout the world. Barriers to trade and commerce will just as surely result in disaster as they did when we pursued that course in the twenties and early thirties. Make no mistake about this, the selfish tendency for greed and gain which abides in all of us to a more or less extent is extremely hard to guard against, and may well prove to be our weakest and most vulnerable spot.

These are but the preliminary matters, for the one thing we must do and in which we must have complete cooperation of other nations is in finding and putting into effect the way to settle disputes and differences according to principles of law and justice and not by the rule of force and might.

Last summer I witnessed the explosion of two atomic bombs at Bikini. If I had seen nothing else, if I knew nothing more than what I saw and learned at Bikini, this would have been sufficient to prove most conclusively that no nation is strong enough to combat or resist forces of total destruction.

Civilization cannot survive an age of wholesale, mass destruction. Even as we now have no choice except to maintain present military strength, so actual realities give no choice as to the long-range program.

The tragedy and folly of the past has been that, notwithstanding his great advance in every field of human endeavor, man has settled disputes among nations exactly as did the barbarians of the most crude and cruel stages of human development. With all his progress and knowledge, he has steadfastly failed to adopt any adequate substitute for war.

I cannot explain what I mean better than to quote from the recent work The Anatomy of Peace, by Mr. Emery Reves, wherein it is said:

"If from the Second World War we emerge with another treaty or covenant, the next war may be taken for granted. If we have the foresight, and decide to make that fundamental and revolutionary change in human history, to try to introduce law into the regulation of international relations, then, and not until then, shall we approach an order which may be called peace. * * *

"Up to now, peace between nations has always been a static conception. We have always tried to determine some sort of status quo, to seal it meticulously in a treaty, and to make any change in that status quo impossible except through war.

"This is a grotesque misconception of peace. After having tried it a few thousand times, it may be wise to remember what Francis Bacon said three centuries ago, that 'it would be an unsound fancy and self-contradictory to expect that things which have never yet been done can be done except by means which have never yet been tried.'"

In this forceful language, Mr. Reves has pointed the way to the one method by which permanent peace can be achieved.

The rule of law must be substituted for the rule of force. To this end the jurisdiction of the United Nations must be greatly expanded. A code of international law must be agreed upon and subscribed to by all nations.

In addition to a code of law, the International Court of Justice must have jurisdiction to construe and apply these principles of law, and all nations must be required to submit their disputes to the Court of Justice. This calls for compulsory jurisdiction in that court.

The United Nations must have a strong international military force, not a police force, but, as my colleague Senator ELBERT THOMAS, of Utah, describes it, "an international peace force."

To prevent war between the several States, the founding fathers of the Republic wisely determined that each State should surrender its separate right to make war, and such power should rest exclusively in the central government. Internationally, we must follow that same pattern.

The right to declare war must be surrendered by every nation in the world. The central organization alone should have the right to maintain any army or make war.

This necessarily includes the complete disarmament of all the separate nations. No nation should be permitted to maintain a separate military establishment. Military power must rest in the United Nations alone. Such plan must include the international control of atomic energy.

The few points I have outlined are not revolutionary. They embrace the experi-

ence of the past and pave the way for a peaceful future.

Let me summarize the simple suggestions I have made.

First. Temporary maintenance of military establishments at whatever level is necessary.

Second. Complete cooperation and reciprocity in trade relations.

Third. Adoption of a code of international law and the substitution of law as the final word in all relations among disputing nations.

Fourth. Enlarging the jurisdiction of the international courts of justice and making that jurisdiction compulsory.

Fifth. The immediate establishment of an international military force.

Sixth. The complete delegation of the international authority of the right to declare war, with each nation surrendering its present, separate right to declare or wage war.

These suggestions all add up to a strong and effective United Nations. Through the organization which is already set up we must proceed to those accomplishments and achievements which can come solely with united action. Through these methods and means, law can be substituted for war and war can be driven from the world of men.

Inadequate as may be present machinery, that must not be too discouraging. The road toward a permanent, effective world organization is neither short nor easy. Evils which have existed since the birth of civilization will not be cured by brief or faltering efforts. Our task is to use the tools we have on hand, improving them as we can, and with determination, faith, and good will continue without faltering until the great objective is achieved. In thus substituting law as the ruling power instead of force we follow the thought of Francis Bacon, and do endeavor to adopt means which have not as yet been fully tried.

But to all of this there must be added another vital factor which also has never before been fully tried and the possibilities of which are inexhaustible. Perhaps this should come from worthier men than I, but, nevertheless, I dare to say that all of our fine ideals and ambitions for a world of justice and right, a world of peace, rest upon something stronger than military might, or even of law itself. The world is sick; some of its members and parts are dying. Evils of many kinds have crept insidiously into many countries. No man can tell how far such evil tendencies may go.

In all the history of men, the forces of evil have never been successfully combated except by the forces of righteousness. Soldier that he was, Napoleon recognized and said there were but two great forces in the world—one the sword, the other the spirit, and, of the two, the spirit was the stronger. Today we must acknowledge this eternal truth. Even though the moral and spiritual fiber of man may have been weakened by war and distress, until the pessimist believes there is no hope, we can hold no such thought. Notwithstanding lapses into dark ages which have occurred throughout the history of different civilizations, I choose to believe that the ultimate destiny of man is to progress and go forward. Trite as it may be to say it, "truth crushed to earth will rise again." Out of the gloom and darkness of war and desperate world affairs, awakened moral and spiritual values will rise to carry mankind forward to that destiny which must be his. As surely as a rising sun drives the darkness of night away, so will the forces of righteousness drive the darkness of evil, injustice, and war from the world of men.

To this faith, to this hope, and to this belief our lives must be dedicated and our souls consecrated. Then, and not until then, may men dare entertain hope for security, justice, or peace.

Prohibition of Alcoholic Beverage Advertisements

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Monday, April 21), 1947

Mr. CAPPER. Mr. President, Dr. Clinton N. Howard, general superintendent of the International Reform Federation, made a very able statement before the Senate Committee on Interstate and Foreign Commerce this morning in support of the bill S. 265, introduced by me, which would prohibit the transportation in interstate commerce of advertisements of alcoholic beverages, and for other purposes. I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Chairman and gentlemen of the committee, Patrick Henry said he knew no way of judging the future but by the past. Abraham Lincoln said, "If we could first show where we are and whither we are tending, we could then judge what to do and how to do it." Applying these two principles to the discussion we wish first of all to analyze the Capper bill, S. 265.

I wish to congratulate Senator CAPPER on its clarity and its brevity. Like the Lord's Prayer it goes straight to the mark, and no time need be lost in definitives, derivatives, or definitions. It requires only one reading to learn that it is a prohibition bill pure and simple. It states what it wants, how to obtain it, and provides stringent penalties to insure its enforcement.

Quoting its first paragraph it reads, "A bill to prohibit the transportation in interstate commerce of advertisements of alcoholic beverages, and other purposes," the other purposes being their broadcasting over the radio. They correlate and each are essential to the success of the other. It is prohibition plus prohibition, plus prohibition.

Section two says, "It shall be unlawful, etc." Section 3 says, "It shall be unlawful." Section 4 says, "It shall be unlawful." Sections 5 and 6 state explicitly what is unlawful, and section 7 provides an adequate penalty by fine or imprisonment or both for its violation.

DIVINE PROHIBITIONS

There remains nothing to discuss except the plan and purpose of the act. The plan is in harmony with the divine law from the beginning of time. It aims to prohibit what it conceives to be a public wrong, to the individual and to society at large. In that respect it is a paraphrase of the Ten Commandments, which were engraven with the finger of God on tables of stone as recorded in the book of Exodus. "And He gave unto Moses after that He had made an end of communing with him two tables of testimony, tables of stone, written with the finger of God, and the tables were the work of God and the writing was the writing of God, graven on the tables." The principle of prohibition is of divine origin.

Civil government is a divine institution. The first constitution was written with the finger of God on tables of stone, and 7 of the 10 articles are prohibition. God not only wrote them, but He spoke them. God spake all these words:

"Thou shalt not make unto thee any graven image. * * * Thou shalt not bow down to serve them." Prohibition. "Thou shalt not take the name of the Lord thy God in vain." Prohibition.

"Thou shalt not kill." Prohibition.

"Thou shalt not commit adultery." Prohibition.

"Thou shalt not steal." Prohibition.

"Thou shalt not bear false witness." Prohibition.

"Thou shalt not covet thy neighbor's wife, house, goods, or anything that is thy neighbor's." Prohibition.

In the Ten Commandments there are 10 prohibitions. "Thou shalt not" is the beginning of seven of them, and in the First Commandment three times it is written, "Thou shalt not." They have been nullified throughout the centuries. But they have never been modified; they have never been revised; they have never been repealed; and the nations that have disregarded them have perished from the face of the earth.

THE CORNERSTONE OF LIBERTY

Crossing the centuries, American prohibition had its rise in Independence Hall in the cradle of American liberty, when the Liberty Bell was rung and freedom's triumph was sung; and the old bell pealed to the world that the reign of oppression had ceased, and the banner of freedom was unfurled.

When taxation without representation was prohibited, when importation without tariff and taxation was prohibited, when forceful entry without a warrant was prohibited, when titles of nobility from any king, prince, or foreign state were prohibited, when the right of States to keep armed troops or ships or engage in war without the consent of Congress was prohibited; when the election of a foreigner as President of the United States was prohibited; when any religious test shall be required as a qualification to any office or public trust under the United States was prohibited; when private property, papers, or effects can be seized without due process of condemnation and compensation was prohibited; when the citizen can be imprisoned without trial by jury, held on excessive bail, or inflicted by cruel or unusual punishment was prohibited; when by the adoption of the thirteenth amendment slavery or involuntary servitude was prohibited; when the right of suffrage based upon sex was prohibited. Prohibition. Prohibition. More than three-quarters of the laws of the land are prohibitory. The Declaration of Independence and the Constitution not only impose prohibition upon foreign nations, but they impose prohibitions upon the States and the United States.

POWER RESIDES IN PEOPLE

Every power conferred by the Constitution upon the Federal Government is a prohibition upon the rights of the State and every right reserved to the States is a prohibition upon the Federal Government. The most priceless privileges that we enjoy under the Constitution, "The Five Freedoms" emphasized so frequenttly by the late President for which we fought World War I and World War II for ourselves and for the world, the right of free speech, free press, freedom of religion, freedom of assembly, the right of petition and to vote, and freedom of information, eight freedoms in all are prohibitions imposed on the Federal Government by the people when they ratified the Constitution and the first ten amendments, called the Bill of Rights, including their right to amend their constitutional law. That is the charter of our freedom, the palladium of our liberties, the arch of our American Government for which our fathers gave their lives, their fortunes, and their sacred honor.

The Capper bill (S. 265) is but the extension of that right to prohibit the invasion of our homes by either advertisements in the daily press, or magazines and on the radio of intoxicating liquors, whether spirits, wine, or beer.

If those liquid commodities are a good creature of God, then this bill should be defeated; if, on the other hand, they have been condemned throughout the ages by secular and holy writ, this proposed enactment should be favorably reported and speedily enacted into law for the public health, the public safety, the public peace, the public order, and the public morals. That is what Gladstone meant when he said, "It is the object of Government to make it easy to do right and difficult to do wrong."

THE LAW OF NATURE

The Son of Man said, "Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles? Even so, every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit. A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. Therefore, by their fruits ye shall know them."

A tree is known by its fruits, and a business is known by the character of what it produces.

Whatever increases the value, usefulness, and character of the raw material with which it works is a good business; whatever decreases the value, usefulness, and character of the raw material with which it works, is a bad business. For example, if it goes in as cotton and comes out cloth, and goes in cloth and comes out as garments; if it goes in as clay and comes out bricks, and goes in bricks and comes out homes, buildings, churches, public institutions; if it goes in as logs and comes out lumber, and goes in lumber and comes out furniture; if it goes in as coal and comes out comfort; if it goes in as rags and comes out paper, and goes in as paper and comes out books, a Post, a Star, a Herald, a New York Times, a Congressional Library; if it goes in as fodder and comes out cattle; if it goes in as grain and comes out flour, and goes in as flour and comes out bread; if it goes in as sand and comes out glass in a thousand forms of usefulness, adornment, and beauty, and if it goes in as ore and comes out iron, goes in as iron and comes out steel, goes in as gold and comes out money, and so on ad infinitum, it is a good business, and if it goes in as advertising and results in increased sales, good.

A LEGAL OUTLAW

How about the liquor business? Does it increase the value, usefulness, and character of the raw material with which it works? It goes in clean and comes out dirty, it goes in pure and comes out defiled, it goes in healthy and comes out diseased, it goes in broadcloth and comes out rags. It goes in sober and it comes out drunk, it goes in a boy and comes out a bum, a drunkard, a pauper, a slave, a criminal, a lunatic, a lost week end, a lost life. It goes in a home and comes out a hell.

Has it improved the value, usefulness, and character of the raw material with which it works? I leave that to the sober judgment of the committee. If it does, advertise it and thereby increase its sale; if it does not, pass the Capper bill, S. 265, and prohibit its being advertised for sale in the public press, the magazines with their millions of circulation, and over the radio, coming unbidden and unwelcome into our homes, every hour on the hour, interrupting, at the beginning, in the middle, and at the end of almost every newscast, concert, symphony, and ball game from 6 a. m. until midnight, and worst of all undoing the teaching, the example, the preaching, and the prayers of millions of fathers and mothers at the evening fireside.

We appeal to you, gentlemen of the committee, protect our homes, and our children, our shut-ins and our sick who cannot spring to the radio dial in time to shut out the sound of Senate beer, with its sparkling bubble carbonation, that holds its head high in any company, and calls its corporate name by that name which is above every name. I plead with you Senators to protect your own good name from being dragged down into the worm of the vat and the slough of the still.

THE SUPREME COURT CONFIRMS

Gentlemen of the committee, let me confirm my testimony by a unanimous decision of the Supreme Court—*Crowley* v. *Christiansen* (136 U. S. 86):

"By the general concurrence of opinion of every civilized and Christian community there are few sources of crime and misery to society equal to the dram shop. The statistics of every State show a greater amount of crime and misery attributable to the use of ardent spirits obtained at these retail liquor saloons than any other source. It is a business attended with danger to the community. It is not necessary to array the appalling statistics of misery, pauperism, and crime which have their origin in the use and abuse of ardent spirits.

"Liquor in its nature is dangerous to the morals, good order, health and safety of the people, and is not to be placed in the category with the ordinary commodities of life. We do not suppose there is a more important factor in keeping up the necessity for asylums, penitentiaries, and jails and in producing immorality and crime throughout the entire country than liquor."

THE SUPREME JUDGE WARNS

Having heard from the Supreme Court, let us hear from the Judge of all the earth, as spoken by His prophet of the ancient time: "I will stand upon my watch, and I will set me upon the tower thereof, and I will wait to hear what the Lord my God shall speak * * * and the Lord answered me and said, Write the vision, make it plain that he that runneth may read; for the stone shall cry out of the wall, and the beam out of the timber shall answer it: woe to him that buildeth a town with blood, and stablisheth a city by iniquity; woe to him that giveth his neighbor drink, that putteth thy bottle to him and maketh him drunken."

Mr. Chairman and gentlemen of the committee, we do not believe that such a business ought to be allowed to advertise its wares in the public press or broadcast them into the homes of what the Supreme Court has by a unanimous decision declared to be a Christian Nation.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "For the Sake of Peace and Safety," published in the Chicago Herald-American of May 5, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR THE SAKE OF PEACE AND SAFETY

The Congress of the United States is confronted with the necessity of performing the essential and urgent duty of securing the peace and safety of the Nation by passing, and immediately enacting into law, a practical and efficient system of universal military training.

The lessons of the past few tragic years, the turbulent and ominous state of world affairs, and the insistent demand that arises from patriotic organizations and persons high in the councils of national affairs, demand that this be done.

Factual arguments in favor of the measure are numerous.

The most important may thus be summarized:

World affairs today are conditioned by tension between two forces: One, of which the United States is dominant, composed of democratic societies anxious to liquidate the conflicts of both World Wars and by equitable agreement enlist all peoples into the work of peace;

Another, of which communistic Russia is the leader, determined to forestall peace and find, in the consequent dissension, the opportunity to impose its dominion over all others.

This can be done by war alone.

Sudden, ruthless, total war.

Modern warfare has so compressed time and space, so fearfully augmented the power of weapons, that an unprepared nation, no matter how potentially strong, cannot hope to weather attack any longer than a few days or weeks.

Formal declarations of war, intervals permitting training and mobilization, protracted maneuvers, and gradual conversions of industry are things of the past.

A nation like the United States, with its vast wealth and technology composing the only substantial obstacle that remains in the path of arrogantly ambitious, inexhaustibly greedy communism, is compelled to maintain its defenses at the highest possible degree of efficiency.

For the United States to be less than ready to repel attack, less than able to strike back with devastating promptness, is to invite aggression, disaster, and extinction.

It is therefore the duty, the obligation, and the best individual and collective insurance for Americans to establish and support a state of constant military preparedness.

A system of universal training for our youth is the first step, but only one step, in this direction.

Modern warfare is total warfare.

It is fought by farmers, artisans, housewives, technicians, scientists, businessmen, and, of course, also highly trained and specialized soldiers.

Each must fit into a vast, coordinated plan.

Every one of them will find himself in what was once a front line reserved for riflemen only.

In effect, what does military training mean to the young man?

Physical fitness, mental quickness; close contact with lads of other States, classes, and conditions, and thus a school in social democracy, knowledge of skills and arts up to then unknown, lessons in command and in obedience, discovery and test of abilities otherwise dormant throughout life, appreciation of patriotic principles and processes.

Would a year or two in this atmosphere make him a militarist?

Well, has it ever?

Has America ever become militarist, even after 1865, 1918, and 1945?

Militarism is a national psychosis which often produces armies and incites wars.

Adequate defense in itself seldom, if ever, produces militarism.

The tiny nation of Switzerland, where every man is a soldier from boyhood to past middle age, with an army often able to whip its bigger neighbors, democratic, peace-loving, and industrious, is not militaristic.

But it has always been safe, because the price of defeating its 450,000 men, in a population of 4,000,000, has always been too high.

The aggressive imperialists of communism would, of course, pay a much higher price to defeat America.

For once America ceases to exist, and every one of us with it, the globe becomes communism's property and plaything.

That is why the cost of eliminating America must be high, exorbitant, and prohibitive.

It must be such a price as any of us can conceive for life and liberty. A price representing fatal consequences to the bidder.

And that is why the Congress of the United States must listen to the warnings and facts which the American Legion and American people have presented spontaneously and through their responsible leaders.

We stand practically alone in an uncertain and threatening world. Time is running out, space is no longer a defense.

Let us train our manhood, for the sake of peace, safety, and civilization.

The State Department's Broadcast to Russia

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with the State Department's broadcast to Russia, published in the New York Herald Tribune of May 9.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RADIO IN REVIEW—THE HENRY WALLACE AFFAIR

(By John Crosby)

The interest abroad, in American culture—its books, its plays, its art—is intense, far more intense than most Americans realize. When the Office of War Information followed American troops into Italy with boatloads of American books they were eagerly snapped up by Italians who had been cut off from American thought for years.

The State Department's overseas broadcasts quite sensibly cater to this hunger for American culture by broadcasting dramatizations of books, plays, and short stories. It also broadcasts weekly book reviews of leading American books. Representative TABER has stirred up an unreasonable fuss over the broadcast of one of these reviews on the Wallaces of Iowa, by Russell Lord. At the time, Henry Wallace was in Europe sabotaging President Truman's foreign policies and Representative TABER roared that the Department was praising a man who was trying to wreck its own policies.

This is gross misrepresentation. In the first place the review of the book on Wallace was transcribed weeks before Wallace went to Europe. In the second place, the review was highly critical of the Wallace family statesmanship while it praised the family's contributions to agriculture. Besides, the State Department had quite a good case for broadcasting the review even though the Wallace controversy was at its height at the time.

The Wallaces of Iowa has been reviewed on the front page of the New York Herald Tribune book section, the New York Times book section, and many other book sections of leading newspapers. It was without doubt the leading book of its week. It is the policy of the State Department to present a fair and impartial picture of American literature, whether it praised or damned American life. The omission of the Wallace book, certainly the most discussed book of the week, would automatically lay the Department open to charges that it was presenting only the favorable and withholding the unfavorable. This would be directly contrary to the United States information policies developed during the war and followed by the State Department ever since.

The drama and cultural aspects of the State Department's overseas broadcasts certainly should not stand or fall on the Wallace book review, which has been blown up out of all proportion to the facts. About 6 percent of the overseas broadcasts are devoted to drama and culture. One of the best of these programs is called America Speaks. This is a program of dramatizations of outstanding books, plays, and short stories. Here are a few of the titles recently broadcast: Arrowsmith, by Sinclair Lewis; A Farewell to Arms, by Ernest Hemingway; Moby Dick, by Herman Melville; Abe Lincoln in Illinois, by Robert E. Sherwood; A Diamond as Big as the Ritz, by F. Scott Fitzgerald; and the Magnificent Ambersons, by Booth Tarkington.

A variety of techniques are used in these broadcasts. A Farewell to Arms, for instance, was simply read in condensed form by alternating voices, a simple device which is extremely effective when the story is good enough to carry it. In that case it was. Fitzgerald's fantastic short story A Diamond as Big as the Ritz was given a full-scale dramatization, which by American domestic standards was a little thin in spots. Here again the story was so effective that it didn't matter. While the State Department can't afford to hire a galaxy of film stars, the acting in general is good to excellent and once in awhile a name player lends his services to these dramas.

One of the most popular broadcasts to South America is Radio Theater, another series of dramatizations of famous American books. Among this series was Huckleberry Finn, by Mark Twain, Ah, Wilderness, by Eugene O'Neill, Penrod, by Booth Tarkington, Look Homeward, Angel, by Thomas Wolfe, The Scarlet Letter, by Nathaniel Hawthorne, and The Turn of the Screw, by Henry James. It sounds like a weighty list—in fact, you can't find anything comparable in American commercial broadcasting—but it must be remembered that interest abroad in American literature is at its peak and that the audience for short-wave broadcasts is intellectually higher than average. If there is any better way of presenting America in all its colors than through the works of our greatest writers, I don't know what it is.

Interest in American art is surprisingly high in Europe. This has forced the State Department to broadcast a weekly program called "America in the World of Art." There is no tougher subject to put on the air. In fact our own broadcasters have never succeeded in doing it very well. The State Department, it seems to me, demonstrated conspicuous ingenuity in this series by dramatizing the aspects of the artist's life which made him paint as he did. The only one of these I have heard was an intense and bitter dramatization of the life of George Grosz—a rather unhappy choice since he was born and did his greatest work in Germany. The tragic aspects of Grosz's early life provided a grim and only too adequate explanation of the savage satire in Grosz's paintings and drawings. At the end of the story Grosz finds contentment and security in a Long Island suburb, in glaring contrast to his stormy life in Germany. It is, if you like, propaganda for this country; it is also quite true.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "St. Lawrence Seaway," from the Union, Manchester, N. H.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ST. LAWRENCE SEAWAY

Prospect of completion of the St. Lawrence seaway and hydroelectric-power development has been strengthened by the self-liquidation plan advanced by Senator VANDENBERG. Canada has accepted this plan, and it is expected that a bipartisan bill will soon be introduced in the Senate with State Department backing that will win prompt approval.

The prospect of the final carrying through of this project is highly gratifying. The St. Lawrence seaway and power development proposal has been under discussion for more than a decade. A treaty signed between Canada and the United States authorizing the project was presented to the United States Senate in 1934, but failed to obtain the necessary endorsement. Seven years later, the Roosevelt administration substituted an agreement for the treaty in the belief that a majority vote of the Houses could be obtained easier than the two-thirds vote in the Senate required for treaty confirmation, but once more the attempt failed.

The discussion seemed to be waiting for some self-liquidation program that would make the cost of the enterprise easier. That program, now being presented, seems likely to win support in the Senate sufficient to put the project over. Under this plan a schedule of tolls, power allotment rates, and other self-liquidation features would be worked out to make the seaway self-sustaining.

The advantages of the St. Lawrence development are now quite apparent. The power phase of the development contemplates a generating capacity of 2,200,000 horsepower to be divided equally between the United States and Canada. This supply of electric energy will furnish a vast new source of cheap power for industrialists desirous of coming into northern New York and northern New England that will increase the industrial capacity of the whole northeastern section of the country and raise the level of prosperity accordingly. Cheap power also will be made available to householders throughout this area, and for running the manifold aids now available to farmers that depend on electric energy for propulsion.

The deep-sea waterway moreover will open up to the American Middle West a broad waterway to the outside world which will

effect a great saving in carrying their exports and imports. Consumers within the range of the waterway throughout the East also will profit by cheaper prices for grain and other commodities coming from the Middle West, and by the increased purchases of products from the East made possible in Middle West markets.

The North American Continent has been waiting for centuries for a generation with vision enough to develop the gigantic possibilities inherent in this phenomenal waterway of rivers and great lakes that stretch into its very heart. Timid souls will raise objections, but men of vision will see the benefits that nature has put within our grasp and will reach out to use them. It is hoped that the prediction that the new self-liquidation approach to the project will assure prompt congressional approval is correct.

Appropriations Should Not Be Cut for Protection of Vitally Needed Forests—Statement Before the House Appropriations Subcommittee on Agriculture

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. MORRISON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement on forestry made by me before the Committee on Agriculture:

Mr. Chairman, the people of my State have expressed deep concern regarding the possibility of cuts in forestry appropriations.

As you know, considerable progress has been made in forestry, both by private timberland owners and on the national forests. Southern timberlands made an important contribution in the recent war when construction timber at home and abroad were in heavy demand for boxes, crates, etc. Huge quantities of southern pine timber went into kraft paper and container board for packaging. During this emergency, the State of Louisiana and her sister States produced 39 percent of the Nation's output of lumber and 48 percent of its pulpwood. Unfortunately, a large part of the normal cut, as well as most of the increased cut required for the war, was produced by operations that destroyed the future crop, leaving the land to be taken over by scrub species or with so little growing stock that the crop of new trees will be very small for many years in the future. Therefore, a new crop must be started by artificial planting. Forests are no less vital to the Nation's welfare in the postwar period than in the time of war.

Tree planting, timber-stand improvement, wildlife, and recreational development work remained at a standstill during the war emergency. Roads and improvements were maintained only at a minimum standard. Funds must now be provided to carry on all these things if we are to prevent the deterioration of our forests and protect our resources. Not alone the myriad uses of wood, but the contribution of the forest range to the Nation's supply, the watersheds that the forests protect, the rest, relaxation, and sport that people find in the forest—all are integral parts of a well-balanced peacetime economy. If the forests are to make their contributions to the Nation's welfare, it will be necessary to provide far better care and management than they have thus far received, and I respectfully urge that no reduction be made in appropriations for forestry work.

Slums on Wheels

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. BENNETT of Missouri. Mr. Speaker, I am taking this time today to speak briefly about safety of railroad transportation. I have introduced a resolution authorizing and directing the Committee on Interstate and Foreign Commerce of the House of Representatives to begin a full and complete investigation of the causes of and feasible methods of preventing accidents of all kinds occurring in the operation of carriers by railroad, subject to the Interstate Commerce Act.

This investigation, should it be authorized, would include but not be limited to ascertainment of the causes of accidents resulting in death or injury to employees in all classes of service, or to passengers, or damage to property, the determination of what improvements are feasible through the utilization of safer installations and equipment, and the adoption of better safety practices and the formulation of proposals for additional legislation designed to reduce accidents and the risk of accidents.

I am not pointing a finger of suspicion at anybody in particular. My only interest is in promoting safety and in finding out the answers to some questions in the public interest.

The other day I noticed an interesting paragraph in the American Aviation Daily, of May 6, 1947. It read as follows:

AIR-LINE TRAVEL INCREASES 86 PERCENT WHILE RAILROAD TRAVEL DROPS 20 PERCENT

Scheduled domestic air lines increased their passenger-carrying record in January for the forty-fourth consecutive month, according to a tabulation by the Air Transport Association. "This constant improvement in volume and mileage has not been paralleled by the railroads," ATA said. Scheduled air lines' revenue passenger miles equaled 28.76 percent of the total Pullman revenue passenger miles in 1946, compared to 12.8 percent in 1945. This percentage had increased to 44.1 percent for the month of December. Revenue passenger miles showed an increase of 54,578,445 in January and number of passengers increased 105,875.

In 1946 the number of passengers carried by the domestic scheduled air lines increased by 5,662,552, a gain of 86.11 percent over 1945. During the same period, the class I railroads of the United States showed a decrease of 79,393,625 passengers, a loss of 20.6 percent as compared with 1945, according to Interstate Commerce Commission figures cited by ATA.

I am led to wonder to what extent the epidemic of train wrecks is reflected in the foregoing figures?

I have been reading some of the reports of the Interstate Commerce Commission. They reveal startling information. The tragedies disclosed by these dry statistics add up to a monumental total.

Since 1936 an average of about 5,000 people have been killed annually in railroad acccidents of all kinds. Here are the figures for some more recent years:

	Killed	*Injured*
1940	4,612	29,590
1941	5,086	37,811
1942	5,233	48,108
1943	4,942	60,317
1944	4,781	61,227
1945	4,691	61,481

Complete casualty figures are not available yet for 1946. We do know that of those railroad accidents investigated by the Interstate Commerce Commission in 1946, and in which 5 or more persons were killed or 10 or more persons injured, there was a total of 43 accidents, with 123 killed and 2,682 injured.

So far in 1947, the Commission has investigated 15 accidents falling within the limitations of this classification. In these accidents 58 were killed and 746 injured. It is interesting to note, however, that in addition to these accidents this year there have been 14 other accidents, involving 21 deaths and 290 injured, on which the Commission has not issued a report of investigation. It is pertinent to inquire why the Commission is about 2 months behind in this work this year and why it is that 188 accidents, involving 2 killed and 656 injured, in 1946 were reported to the ICC but not investigated.

Accident Bulletin No. 114, of the calendar year 1945, by the ICC, reveals, on page 4, that casualties of employees in railway accidents have been on the increase from 1940 to 1944, and states as follows:

Although the number of total employee injuries declined slightly in 1945 from the 1944 total, the problem is far more serious than the totals seem to indicate.

On page 13 the same bulletin states:

The number of train accidents of all classes has increased steadily since 1938.

I am not unmindful of the fact that the railroads performed a great public service, under severe handicaps, during the war. Tax and other Government policies made it impossible for them to replace worn-out equipment. To hold the good will won by this wartime performance and prewar safety prestige, the railroads have a big job to do. I understand from the American Association of Railroads that they have over 2,000 passenger cars now on order which they cannot get because of the steel shortage. They have on order over 87,000 freight cars, and would be happy to get them at a rate of 10,000 per month, but are unable to do so. In the meantime, however, accidents continue to mount, and some of the causes are apparent to the naked eye.

Three years ago the Interstate Commerce Commission warned about the rising rate of accidents and urged carriers more stringently to enforce operating rules. Defects in equipment, improper track maintenance, and negligence of employees were cited by the Commission as causing the greatest increase in wrecks. High speed is also a factor.

The 1946 report of the Director of the Bureau of Safety to the ICC shows that last year 38,565 or 3.2 percent of the

freight cars inspected were defective from the safety standpoint. One thousand one hundred and fourteen passenger train cars or 4 percent were defective and 731 locomotives or 5.4 percent had defective safety appliances. Two hundred and twelve railroads reported a total of 70,355 instances of classes of excess service by employees. This strain and fatigue contributes to accidents and the vast annual slaughter of our citizens in these accidents.

We hear a great deal about new streamlined trains and all kinds of new and fancy gadgets to make the rail traveler think he is taking a journey on a flying carpet in some dream of Arabian nights. Some trains travel very fast, perhaps too fast, considering all of the elements involved, particularly the aged condition of equipment. Beautiful new trains, few though they are in number, are quite an improvement over matchbox cars of wood. Yet, someone ought to put in a word for the traveler who is not going across the country but is making a short trip and must still put up with poor accommodations. Aged railroad equipment is, since the war, being run faster in many cases than during the war. This, too, is a safety hazard.

If anyone wants to get a glimpse of life in a railway express car he has only to read an article on the subject in the May 1947 issue of the Railway Clerk, official magazine of the Brotherhood of Railway Clerks, largest railroad labor organization. This article makes the following charges supported by evidence: First, almost a third of all express cars are partly or entirely built of wood; second, half of the cars lack adequate lighting; third, half of the cars lack proper vestibuling which would make it safe to go from one car to another; fourth, three-fourths of the cars do not have safety kits accessible and a fifth have defective signal equipment; fifth, doors of over half the cars open with extreme difficulty; sixth, there are no ventilators in a fifth of the cars; where cars do have ventilators they are defective or insufficient in a third of the cases; seventh, half the cars in the country have inadequate drainage; eighth, more than half the cars have no water containers, and drinking water where supplied is unfit for use in a third of the cases; and ninth, over half the cars have no toilets, toilets where found are not enclosed in 75 percent of the cases, and most are too dirty for use in any case, and so forth. Inquiry, on my part, of the American Association of Railroads and of the Railway Express Agency reveals a blanket denial of these charges and no information about the number of new and improved express cars on order. The railroads, of course, furnish these "slums on wheels" and not the express agency. A request is pending before the Interstate Commerce Commission to investigate the express car situation.

Indeed, this whole situation needs investigating with reference to the effect it has on safety in rail transportation. My resolution would make such investigation possible. House Resolution 153 which will be taken up by the House this week is a broader resolution with no specific reference to rail transportation but to the transportation industry generally. That resolution comes from my committee and I support it too. I hope for favorable action on one of these resolutions very soon. We have spent a lot of time and money on safety in air navigation. But, railroad safety is also important and is a matter of urgency to vast numbers of people who must depend on this means of transportation and livelihood.

Direct Election of President and Vice President

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 13 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Boston Herald, dealing with the amendment which I have offered, to eliminate the electoral college.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Boston Herald of May 12, 1947]

PEOPLE'S PRESIDENTS

Senator LODGE proposes the scrapping of that ridiculous anachronism, the electoral college. He would substitute direct popular vote, without regard to States. For the reformation of a long-outmoded practice, his proposed constitutional amendment is wise; but there are implications.

The founding fathers intended the electoral college to be a group of elder statesmen better fitted to choose a President than either the people as a whole or the Congress. But after only three elections, the college ceased to be an exalted repository of independent judgment, and become instead a mere registering machine of party selections. Today we quadrennially go through the ponderous ceremony of electing electors who, long after everyone knows the results, go to their State capitols and cast, like automatons, their stipulated votes for President and Vice President.

Apart from the silly retention of a meaningless process, the system has various flaws. The States vote as a unit. If Massachusetts plumps for candidate A, then all who voted for candidate B are virtually disfranchised in the national election. It is quite possible, and has happened several times, that a candidate with a majority of the popular vote of the country will lose to a candidate with a majority of the electoral vote. In also happens that one vote in South Carolina is equal to 12 votes in Illinois or 10 in Massachusetts.

Under the Lodge plan, the States would report the vote for each candidate, and the Congress would count the totals and award the office to the one with the most votes. As simple as that.

But such an amendment may not be easily adopted. The small States, like South Carolina, gain too much by the unit system. And the vestiges of federalism remain strong even in other States, which may want to cling to this symbol of State rights.

Even more important is the effect of the form of voting on the presidency itself. We know pretty certainly that if the Constitution had placed the selection of the President in the Congress, the executive branch would have remained subordinate to the legislative, as it has in Switzerland. Instead, in the interesting rivalry for power, as recently recounted by Wilfred E. Binkley in President and Congress, the Executive, as more representative of the whole people, has increasingly come out tops over the legislative branch.

Now the Lodge proposal is to make the President even more completely representative of the whole people. No more would a Democratic President be able to slight the popular wishes of the solid South, knowing that the unit rule would keep it solid. He would have to recognize that every American citizen had a vote for him.

That would make him even more of a people's President, and would strengthen him in any rivalry with a sectionally minded Congress. That might be either good or bad. But it is an easily overlooked implication in the Lodge measure. Obviously, the founding fathers didn't want it that way.

Fifth Anniversary of the WAC

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast on May 11, 1947:

ANNOUNCER. On May 14, the members of the Women's Army Corps will observe their fifth anniversary. In the span of 5 years the WAC has proved that women have a definite place in the pattern for national security. Five years is a short time in our military history but the part that women have played in that history is significant and worthy of review. Five years ago the Hitler machine was rolling over Europe. Island after island, in the Pacific, had fallen into the Jap plan of war. Manpower and material were the only means to stem the tide that threatened to engulf the world. In the emergency of the times the Women's Army Corps was born. The legislation was presented to Congress by Mrs. EDITH NOURSE ROGERS, veteran Congresswoman from Massachusetts. And folks, when I say "veteran Congresswoman," I think how appropriate the term is, for Mrs. ROGERS has served her State and Nation for 22 years and throughout her period of service, her deep, unchanging interest has been with the "veteran." Mrs. ROGERS' interest in the veteran has extended over World War I and II and will go on and on. Today she is chairman of the Veterans' Committee in the House of Representatives; and veterans know that they will never be forgotten heroes to her, but men and women who in the crisis saved the American way. Yes; the veterans truly have a staunch friend in Congresswoman ROGERS. Her untiring work in that field is another story, one that merits a time all its own. Today, I'd like to have Mrs. ROGERS tell us about the Women's Army Corps.

Mrs. ROGERS, just how did you happen to introduce the Women's Army Corps?

Mrs. ROGERS. First, let me thank you for telling about my work for the veterans. I think it is most important that veterans know that America is more than grateful for all that they have done and are doing today; that our appreciation is not mere lip service but an alert activity that will be permanent. Let's get back now to this other great interest of mine, the Women's Army Corps.

My interest in having a corps of women in noncombatant jobs was the result of first-hand experience. You see during World War I, I served overseas. There in the grim days of World War I, I saw the great need for manpower. During my time there I saw thousands of British women serving with the British armed forces. I found that American headquarters were borrowing British Wacs to meet their shortages of skilled technicians and clerical workers. I thought then that it would have been much better to have had American women for administrative channels and other noncombatant work. For things are very different in Allied armies. I realized then, even as I prayed that war would never come again, that if it did we would have to draw on every available skill to keep our manpower reservoir from being completely drained. I knew that womanpower was our only untapped source of personnel. The idea was born as I watched and served in World War I in England and France.

ANNOUNCER. Then, Mrs. Rogers, drawing on your exeperience, you drew up the bill creating the Women's Army Corps when it was needed.

Mrs. ROGERS. Yes; immediately after Pearl Harbor, I introduced a bill to the House and on May 14, 1942, the bill was signed and the WAAC came into being.

ANNOUNCER. I notice that you say WAAC. I recall that the first step was the Women's Auxiliary Army Corps, which was later changed to the Women's Army Corps. Can you tell us something of the cause for this change?

Mrs. ROGERS. It took about a year for the Army to realize that economy in personnel and administration would result if the Corps were actually in the Army, rather than an organization working with the Army. So, on July 1, 1943, Public Law 110 was signed by the President and the Auxiliary part of its name was dropped and the Women's Army Corps acquired greater responsibilities and certainly greater effectiveness.

ANNOUNCER. Mrs. ROGERS, we know that you have followed the WAC closely through its splendid history. I also know that you visited WAC installations during World War II, in Europe. Can you give us a highlight of your trip over there?

Mrs. ROGERS. During the height of the war, I visited Wacs in Europe and I want to emphasize how much these women helped in the victory that then seemed so far off. I was very much impressed with the fine way they were representing the American women. Eighteen percent of the Wacs had overseas service and did a fine job. In Italy I saw Wacs hard at work with the Fifth Army. From north Africa to the Italian surrender in the shadow of the Alps, these Wacs had followed the Fifth Army. One group, here, had charge of a mobile switchboard set up in a trailer. Through the mud of Italy they moved up bit by bit. They seemed mighty happy whenever moving day came for it meant another rung on the victory ladder.

ANNOUNCER. I've heard of the group of Fifth Army Wacs in Italy. Tell us, Mrs. ROGERS, of some of the other WAC installations you visited.

Mrs. ROGERS. During October of 1944 I visited the Wacs in France and Belgium. In Paris I saw the largest military message center and it was completely Wac staffed. The only trouble seemed to be that they did not have enough WAC personnel. Every place I visited had the same continuing request, "Send us more Wacs." WAC companies crossed the channel into France on D-day plus 38. These women never faltered; they worked side by side with the soldiers.

ANNOUNCER. But, Mrs. ROGERS, don't tell me they didn't gripe.

Mrs. ROGERS. Gripe? They certainly did, for they were real soldiers. And its an old Army custom for all good soldiers to gripe. But their one perpetual gripe, according to their officers, was, "Why don't they send us closer to the front?"

ANNOUNCER. I know that you visited many Wacs serving in the States. How about telling us something of this group of Wacs?

Mrs. ROGERS. I would like to say something about the equally fine work that the Wacs performed here at home. You know my great interest in Army hospitals and I want to mention here that 22,223 Wacs were recruited, trained and assigned to Army hospitals to supplement the work of the great Army medical department. Why, even today, almost 1,200 of these Wacs are still doing duty with Army general hospitals. You know their job didn't end with the VJ-day celebrations.

ANNOUNCER. Mrs. ROGERS, you have been most generous in giving us this time. Is there anything that you would like to say about the Wacs? I know that the Wacs in this area are tuned in to hear you and I'm sure there's no one they would rather hear give a birthday greeting than their good friend, EDITH NOURSE ROGERS.

Mrs. ROGERS. Thank you. Every year I have had the joy of wishing the WAC a happy birthday. On this, their fifth birthday, I want to tell Colonel Hallaren and her 9,517 Wacs, who are still serving, how proud we all are of the work they have done during the past year. While the great bond of fighting a war made all anxious to have a part in that grim business, the women who are serving today are doing a job equally important, they are guaranteeing that the sacrifices of Bataan, Iwo Jima, Anzio, and Normandy were not in vain. I salute you, and a happy birthday to every one—those who have served and those who are serving.

ANNOUNCER. Thank you, Mrs. ROGERS. On this day, Mother's Day, I am sure everyone will agree with me that you may truly be called the Wac Mother.

For the Wacs I would like to render you a musical salute, a salute from all our wonderful women soldiers, to one who is truly another fine soldier: Morton Gould's American Salute.

(Transcription, American Salute, up to end.)

ANNOUNCER. I'm sure, that like the rest of us, every Wac is today thinking of a person that is closest in her heart, this being Mother's Day. I wanted to have a number here that would fit the day; and after going over and over all the musical scores that I could acquire, here is the score I finally selected—I hope you agree with me—for Sgt. Norman Clayton and the soldiers' chorus really do render it beautifully. It's the Lost Chord.

(Transcription, Lost Chord, up to end.)

ANNOUNCER. How about one of you fine looking Wacs stepping over this way? I'd like to have a word or two with you. O. K., how about you, Sergeant Richman. Folks, Staff Sgt. Jane Richman has been a Wac since the first day that training started at Fort Des Moines, Iowa. That was way back in July 1942. She comes all the way from Los Angeles, Calif. Jane, how about telling us something of your 5 years in the WAC?

Staff Sergeant RICHMAN. I was sent along with over 300 other women to Des Moines for the first Wac basic training for enlisted women. It's sure hot in Des Moines in July, and we were a wilted bunch of women when the Regular Army men assigned to train us met us at the train. I had a sad start in my army life, for I sprained my ankle and had to stop training for 2 weeks. This broke my heart; hot or not, I wanted to be in there marching.

ANNOUNCER. Well, apparently, sergeant, both your ankle and heart have healed. What duty did you do after you finished basic?

Staff Sergeant RICHMAN. I've sure seen a lot of America in the 5 years that I have worn this uniform. From basic, I went to Daytona Beach; here I trained Wacs in the art of swimming. In fact, I trained many hundred who were en route for overseas duty. It was quite important that these Wacs be good swimmers. Yes, sir; I trained hundreds of overseas Wacs but never got over myself. After I was transferred from Daytona I became a weather observer in Georgia.

ANNOUNCER. What are you doing now, sergeant? To what kind of a job do they have you assigned?

Staff Sergeant RICHMAN. A most interesting job. I'm a facsimile operator for the Air Weather Service. All the weather reports from all over the world come into our bureau here. In this way we have a world-wide weather picture. From the reports we receive, a master guide goes out so that flyers know the over-all weather picture; sort of a liaison with old Mother Nature herself.

ANNOUNCER. That surely must be an interesting job. Keeping track of the weather. How's things, today, in, let's say, Frankfurt, Germany?

Staff Sergeant RICHMAN. There's where I just can't let you catch me. This is my day off, but you may be sure that the Air Weather Service knows just how the clouds are stacking up over Frankfurt.

ANNOUNCER. Sergeant, you have been a Wac from the very beginning, can you tell us something about the future of the Women's Army Corps?

Staff Sergeant RICHMAN. Congress has been presented a bill asking that the Women's Army Corps be made a component of the Regular Army. It also will allow women to become members of the Organized Reserve Corps. If the bill receives approval I want to be a number one again. I want to be a member of the Regular Army. I sure like my job and I sure like the Army.

ANNOUNCER. Thanks a lot, Sergeant Richman. Let's get another of you fine Wacs up here. Come on, Corporal Hollis, let me have a few words with you. Folks, we had a bit of past Wac history. Let's see what Corp. Alice Hollis can tell us of the work of the Wacs today. Alice just returned from duty in Germany, where over 2,000 Wacs are on duty with the occupational forces. Just listen to her fine Southern drawl; she hails from Alabama and even after all the time spent in Europe—Italy and Germany, I believe—she still has her drawl. Must have done duty in southern Italy and Germany. Alice, can you tell us something of the Wacs in Germany today?

Corporal HOLLIS. Sure can * * * there are 17 installations in Germany and Austria where Wacs are on duty. The largest installation is at Frankfurt where more than 600 are assigned. Most of these Wacs are in key administrative jobs. They have all been * * * Army * * * for at least 2 years * * * most have longer records of service than that. They all know Army channels and do contribute much to the job of occupation.

ANNOUNCER. I've heard of the Wacs' work in the German youth movement * * * the steps taken to erase the deep-seated ideas of the teachings of Hitler and what they are doing to teach democracy to the young people of Germany. I suppose you have helped in this work?

Corporal HOLLIS. Yes; I have. There is quite a bit of this kind of work. It's not a WAC project but a project sponsored by the American women who are now in Germany. The American Women's Club opened a clubhouse for German girls between the ages of 10 and 18. Over 200 girls take courses in handcrafts, English, and discussion groups in the club I attended. There Americans' wives have the day classes and Wacs teach the night classes except on Wednesday night when the War Department civilian employees take over the responsibility. The whole project is to teach all German women through the young German women the benefits of the

American way. All through Germany similar projects are going full force. These gatherings resemble the typical Army talkfest where political and economic questions are discussed. Of course—since it's an all-woman discussion—clothes, movies, household gadgets, and even recipes get as much time, or more, than the questions of a social and cultural type.

ANNOUNCER. What's your duty station now, Corporal?

Corporal HOLLIS. I work in the Pentagon now—in the Military Personnel Procurement Division.

ANNOUNCER. Corporal, are you interested in becoming a member of the Regular Army? I mean if the Corps is made a permanent part of the Army.

Corporal HOLLIS. I'm more than interested. I was out of the Army for about 6 months and when the reentry program opened I was one of the first to return. If there is a Regular Army Women's Army Corps, I want to be a part of it.

ANNOUNCER. Thank you, Corporal Hollis, we salute you and all the Wacs for your fine patriotic feeling. We sincerely hope you all have a long, long military career.

Concerning Speech at Western High School, May 6, 1947

EXTENSION OF REMARKS
OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. DIRKSEN. Mr. Speaker, in view of the wide interest manifested recently in the remarks of Mrs. Shura Lewis on May 6 before a group of students at Western High School in the Nation's Capital which occasioned considerable controversy and was ventilated at length in the several Washington newspapers, I believe Congress is entitled to such information as has come to the attention of the District of Columbia Committee in response to an inquiry which I directed to the Superintendent of Schools, Dr. Hobart M. Corning, on May 7, 1947, and his reply of May 8, 1947.

The following two newspaper clippings from the Evening Star of May 8 and the Times-Herald of May 11 are explanatory:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON THE
DISTRICT OF COLUMBIA,
Washington, D. C., May 7, 1947.

Dr. HOBART M. CORNING,
Superintendent of Schools,
Washington, D. C.

DEAR DR. CORNING: Will you kindly submit a full statement covering the happenings at the Western High School yesterday?

Sincerely yours,
EVERETT M. DIRKSEN,
Chairman.

SUPERINTENDENT OF SCHOOLS,
Washington, D. C., May 8, 1947.

Hon. EVERETT M. DIRKSEN,
Chairman, Committee on the District of Columbia of the United States House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN DIRKSEN: It is quite natural that you should be interested in the very unfortunate occurrence at Western High School this week. I note by the press that you are directing a letter to me asking for an explanation. An explanation is certainly in order, and I am very happy to anticipate your request. The entire affair has shocked the whole school system. The reported utterances of the speaker at the Western High School assembly are repugnant to all who are working with youth in the Washington schools, and the unfortunate train of circumstances which brought about her appearance before students in that school is sincerely regretted by all of us. The entire affair was wholly contrary to the philosophy of education under which we operate.

Perhaps the most shocked and regretful person connected with the schools is the principal of Western High School, who made the arrangements for the appearance of Mrs. Lewis, but who had taken the precaution to advise her that she must not speak on political ideologies and issues. The sincere regret which Mr. Danowsky, principal of Western High School, feels is characteristic of and in tune with his 10 years of very faithful and loyal service in our schools. His was an error of judgment, for which he has been criticized by this office, but any censure of him is directed toward his mistaken judgment.

At the meeting of the Board of Education held yesterday I submitted a report to the Board of Education on this affair. I believe you will be interested in that statement, and for that reason I am sending you a copy herewith.

I shall, of course, be very glad to forward to you any additional information which I may gather as we proceed with a further study of this matter, and I shall be very glad to answer any inquiries concerning it which you may desire to make.

Sincerely yours,
HOBART M. CORNING,
Superintendent of Schools.

SUPERINTENDENT OF SCHOOLS,
Washington, D. C., May 7, 1947.

To the Board of Education of the District of Columbia.

LADIES AND GENTLEMEN: At about 10 o'clock yesterday morning we received a telephone complaint from the mother of a student at the Western High School in which she reported that her daughter and two other girls had left the school assembly without permission because they had been displeased with the statements of the speaker which they said were unfavorable to the United States.

Mr. Danowsky, the principal of the school, in response to a request for an immediate report, stated that in January of this year he had heard Mrs. Shura Vozilova Lewis speak at a Saturday institute at the Wilson Teachers College on the subject I Lived in Russia. Because it seemed to him that her talk would be interesting to students in his school he invited her to appear at an assembly program to discuss the educational system under which she was brought up in Russia. The engagement was made for yesterday morning, and in her talk Mrs. Lewis shifted from a discussion of her personal experiences to a comparison of life in the Soviet with that in the United States, to the disparagement of the latter. She described the following areas in which she claimed conditions in Russia were favorable to those in the United States: Education, medical care, vacation privileges, entertainment, attitude of the press, religion and morals, security of employment, retirement privileges.

She also defended the Russian demands for reparations for war damages and stated in response to a question that the Russians are so busy with reconstruction that they do not want war. Mr. Danowsky, the two assistant principals, and eight teachers prepared and submitted a written report, summarizing their statements as follows:

"The speech may be construed as propaganda in favor of the Russian system pitched in terms such as would be expected of a person brought up under that system."

Mr. Danowsky stated orally that there was no disorder during the assembly program although it was obvious that the students resented the statements that were being made. During the morning and during the lunch period there was some demonstration including the carrying of hastily prepared placards against Russia. During the afternoon Mr. Danowsky prepared the following statement which was read to all students and all teachers in the school:

"I regret exceedingly that the speaker whom we invited to this morning's assembly digressed from her stated topic as previously announced in the bulletin to inject political issues which are at variance with the best American traditions.

"I wish to congratulate all Westerners however for their loyalty and fine spirit of cooperation in an exceedingly embarassing situation."

This statement was transmitted to the newspapers, to the press associations, and to the local radio stations by the central office. The following brief comment of my own endorsing Mr. Danowsky's statement was similarly distributed:

"I concur in Mr. Danowsky's statement because I consider the entire incident very regrettable, and I do think the students and faculty deserve great credit for their understanding and cooperative spirit in a very embarrassing situation."

The institute to which Mr. Danowsky referred was held at the Wilson Teachers College on Saturday, January 11, under the joint sponsorship of the Wilson Teachers College and the American Council, Institute of Pacific Relations, Inc., on the subject, "What Teachers Should Know About Pacific Relations." Several of the speakers, including Mrs. Lewis, were arranged for by the Institute. Dr. Hager stated yesterday that at that meeting Mrs. Lewis confined her discussion to her own life in Russia, experiences with Russian people, and descriptions of the kinds of people that are in the country. She refused to answer any questions having political significance. The fact that she refused to discuss political matters then, but that with a younger audience yesterday engaged in definite propaganda, undeniably admits the conjecture that she may deliberately have taken advantage of an audience of more impressionable age.

The philosophy of education worked out by the teachers and officers of the Washington public schools presents as the ultimate aim an individual "who as a responsible citizen is ready for the enjoyments and duties of home, family, and community life, with an understanding and an appreciation of American ideals, principles, and purposes that will promote the progress of our own democracy and carry over into world citizenship." We believe that this aim is a direct responsibility of school personnel and that it is being strictly observed by them.

The assembly programs in the schools play an important part in our instructional program which they are intended to supplement and intensify. In the present instance the attempt to supplement the efforts of the school was unfortunate and undoubtedly should have been avoided. The regret of the principal is very deep and is in keeping with the fine record which he has established through 10 years of effective service in the schools of the District of Columbia. I am convinced that the error was one in judgment.

It must be borne in mind that hundreds of assembly programs are held in the schools at all levels each year and that for many of them outside speakers are engaged. The principals of the schools have chosen these speakers carefully, this being the first instance in many years of an objectionable

program. However, because of this happening, I am instructing each school principal hereafter to submit for the advance approval of this office any programs whch include outside speakers.

The Superintendent of Schools assures the Board and the public that the fine record of patriotic service, loyalty, and fundamental teaching of the American traditions will continue and that this unfortunate circumstance will tend to intensify our already well-established program of patriotic endeavor in the schools. We recognize it as our official duty and our great opportunity to teach and to lead youth along the lines of a very positive and active patriotism.

Respectfully submitted.

HOBART M. CORNING,
Superintendent of Schools.

[From the Washington Times-Herald of May 11, 1947]

WHAT SHE SAID

(By Frank C. Waldrop)

Would you like to know exactly what that Russian propagandist said the other day to the students of Western High School? Would you like to read the full text of her remarks and make up your own mind as to her skill and purpose?

The Times-Herald is in possession of the full transcript of her speech, and furthermore of the original stenographic record.

You don't have to take anybody's word or opinion but your own, therefore, as to whether she is just a misguided little woman—and mighty pretty—or very well guided indeed.

Just write in and ask for a copy of the text, or call by. It will be sent you, free.

If you are the parent of a student who heard the lady and really want to go into the facts of the case with your youngster, here is another tip:

Write the office of Chairman DIRKSEN, of the House District of Columbia Committee, for a copy of Communism in Action.

That is the famous Government Printing Office best-seller on Russia prepared by the Library of Congress.

It sets forth the details in fully documented fashion, stating sources of information and even the reasons for accepting these sources.

In it you can get what you need to help judge how fairly the lady above mentioned was dealing with your child.

The lady, incidentally, is Mrs. Aleksandra Pavlovna Lewis, Russian wife of a student-veteran at George Washington University, who married her while he was a United States Embassy code clerk at Moscow and for that was asked to get out of the diplomatic service.

She is something of a beauty, also a very vocal Henry Wallace fan.

When Wallace made his celebrated speech at Madison Square Garden in New York that got him kicked out of the Truman Cabinet, Aleksandra Pavlovna hit the ceiling because most newspapers neglected to carry the full text. She waved her pretty hands and said:

"That's freedom of the press for you."

In that, at least, she was right. What she has not got through her blond head—or maybe she has—is this:

In America the press is free to print or not to print as it chooses.

In Russia the press is free to print as the Communist organization chooses.

No doubt any Communist would have chosen that Wallace's full text be printed the country over, for it was a speech giving real aid and comfort to Communists only.

But in the United States where people are free to pick and choose what they care to hear and care to print, Henry got only so much attention as individuals of their own will felt they wanted to give him.

Weird, no doubt, to anybody brought up under Communist influence.

Mrs. Lewis sounded off on another occasion in a very interesting way. On January 10, 1947, she made one of her little talks to the student body of the Franklin and Marshall College, Lancaster, Pa.

In that talk she praised the Communist revolution of 1918 for having "killed only the right people," said that Russia of today is "perfect" and that all the people there lived in good homes before the war.

You may compare her ideas of perfection and good homes with what you will find in the above-mentioned Library of Congress report.

For a simple housewife who just wants to bring up her children, Mrs. Lewis is a busy little bee if there ever was one. For instance, the two speeches above mentioned were samples of the circuit-riding job she does for the East-West Association, whatever that is.

For each performance of which she gets a fee in loathesome United States capitalistic money.

She has spoken not only all around Washington since 1945, but in New York and generally around the East.

She teaches Russian at the Good Neighbor School, 922 Seventeenth Street NW., and in February of this year applied for and received an offer of a $6,000-a-year job with the United Nations organization.

What has delayed her taking that one?

It is worth knowing also that this demure little mother is a regular attendant at meetings of the Russian-American Club here, has frequent discussions of world affairs with Lawrence Todd, the Washington correspondent of Tass, the official Soviet news agency, and that her brother is or was a colonel in the Red Army.

A busy and talented lady, though not yet a citizen of the United States. Also, one whose comings and goings it is in the genuine public interest to know and record.

For by her actions she has moved herself out of the class of a private person and into that of public propagandist and agent in a highly controversial field of foreign affairs.

Let's all keep track of her.

[From the Washington Evening Star of May 8, 1947]

MRS. LEWIS, DISTURBED BY "FUSS OVER NOTHING," DENIES ANY GUILT—HIGH-SCHOOL SPEAKER CLAIMS LOVE FOR UNITED STATES AND RUSSIA

(By Miriam Ottenberg)

In a living room with American toys sprawled on the floor and a Russian doll perched atop a bookcase, Mrs. Shura Lewis pictured herself today as a woman who loved both her native and her adopted land.

The youthful-looking mother of two children, whose speech on Russia at Western High School has precipitated two congressional inquiries, said:

"I don't feel myself guilty at all. I am what I always was. I am upset only because it is not very good for both countries to make a fuss out of nothing."

But Mrs. Lewis was near tears when the telephone rang and a voice at the other end told Mrs. Lewis what the caller thought of Russian women.

"People are horrible," she shuddered.

SENDS BOYS TO DAY-CARE CENTERS

She excused herself long enough to button Eric, 5, and Raul, 3, into their coats and send them off to the public day-care center, for which the parents pay according to income and the District Government pays the rest. Then she answered questions readily enough.

No; she had not been a member of the Communist Party in Russia, she said. She was not a party member in this country. In fact, she didn't know any Communists, had never written for a Communist publication, and had never knowingly spoken for a Communist group.

She pulled from a desk drawer the outline of the speech she had given at Western. The outline began:

"In the Russia of today, there are no landlords or businessmen living on rents or on profits. The whole land is public property. The whole of industry is publicly owned and controlled. Every family must live on the earnings from work."

DISCUSSED COLLECTIVE FARMING

The outline, typewritten on a single sheet, went on to discuss collective farms, the elimination of unemployment through planning, equal rights for each nationality among the Soviet states, the emancipation of women, and planning not only for production but to increase the health and cultural level of the people.

Mrs. Lewis said she had used the same outline for more than a dozen speeches but always before there were "good relations" between audience and speaker. "I liked the people and they liked me."

She said she knew nothing about the Institute of Pacific Relations except that she had received a letter from the group asking her to speak to a group of teachers at Wilson Teachers College. The institute has been described by Representative MUNDT, acting chairman of the House Un-American Activities Committee, as a "very active pressure group in the field of foreign relations."

MADE SAME SPEECH AT WILSON

Mrs. Lewis made the speech at Wilson High School and there she met Nathaniel A. Danowsky, principal of Western. According to her story, Mr. Danowsky told her:

"The speech was very interesting because we never hear things like that. You really took us inside Russia."

Mr. Danowsky, according to Mrs. Lewis, asked her to make the same speech at Western. Mr. Danowsky subsequently has said he asked her to steer clear of political aspects, but Mrs. Lewis said she had never received such a request.

She said she had told him she had no permanent job and would want to be paid for the speech. The principal, she said, replied that he couldn't pay her much but offered $20. The payment, she said, came from a "friend of the school" and took the form of a cashier's check which she cashed in New York.

DID NOT MEAN TO GLORIFY RUSSIA

The speech she gave at Western, she said, was the same one she had given at Wilson.

"I kept close to personal opinion," she explained. "I didn't mean to glorify Russia."

Did she tell the Western students she never appreciated the life in Russia until she lived here?

"I told them I never realized before how every Russian citizen is taken care of by the Government," she replied. "I studied America in school but we never paid much attention that in a free enterprise everybody has to take care of himself."

Describing the speech afterward, Mr. Danowsky said Mrs. Lewis spoke favorably of the Russian system of planned economy, declared there was no insecurity there and stated a worker could retire at half pay after 25 years' service in the Government.

The principal quoted Mrs. Lewis as saying that in Russia right now people do not worry about today or tomorrow and never think they may lose their jobs suddenly.

SAW THREE GIRLS LEAVING

Mrs. Lewis said she noticed three girls leaving a few minutes before the end of her speech but paid no particular attention to their exit. After that, she was busy answering students' questions.

She recalled that one student asked if she believed friendship was possible between Russia and America. She said she told them "we all have to fight for peace."

Another student, she said, asked her if medical care really was free to everybody in Russia. She told them everyone got the same free medical care.

"It's true," she said. "It's not an exaggeration."

Mrs. Lewis said she was born in the Ural Mountains on the edge of Siberia and began to teach when she was 15.

"When I was 19 I went to Moscow to study," she said. "I said at the high school it didn't cost me a penny and that was true. If you work hard, the Government gives scholarships."

WANTS TO BECOME CITIZEN

She was married in 1939 and came to this country with her husband and young Eric in 1943. Since then, she has been making occasional speeches for the East and West Association, headed by Pearl Buck; teaching Russian at home and at classes in the Good Neighbor School.

Now stateless because she had to renounce her Russian citizenship, she wants to become an American citizen. She wants her sons to be American citizens.

Before she could continue, the telephone rang again. She listened and listened. Finally, she said into the telephone in a tired voice:

"We should get along and like each other—Russia and America—in spite of our shortcomings. The Russians don't want our system and we don't want theirs."

She listened another moment. Then she said:

"I just want peace, because I have two little boys. I don't want them killed in a war."

Equalization of Freight Rates

REMARKS
OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. RANKIN. Mr. Speaker, on yesterday the Supreme Court of the United States rendered a decision which marks the first step to give anything like a semblance of justice in freight rates to the people of the South and West.

Of all the dishonest discriminations to which the people south of the Ohio and the Potomac Rivers and west of the Mississippi have been subjected, it has been the discriminatory freight rate they have been compelled to pay.

This legalized robbery of the South and West has been going on for half a century or more. We now have about half the membership of the House and practically two-thirds of the Members of the Senate living in the punished area; and for the first time in history we have the President of the United States living in one of the States punished with these dishonest discriminations.

We are entitled to full and complete relief. This change is good as far as it goes, but it does not go far enough. The people of the South and West want these unjust discriminations entirely eliminated.

If the members of the Interstate Commerce Commission are not willing to follow through and wipe out all of these vicious discriminations, then they ought to be removed and men put in their place who will do it.

Under the permission granted me to extend my remarks, I am inserting the opinion of the Supreme Court upholding the order of the Interstate Commerce Commission granting partial relief from these discriminations. Anyone reading this opinion can readily see that the Court would have upheld this order just as willingly if it had wiped these dishonest discriminations out entirely.

The matter referred to follows:

[Supreme Court of the United States. Nos. 343, 344, and 345, October term, 1946. No. 343, *State of New York, State of Delaware, State of Indiana, et al., appellants,* v. *The United States of America, Interstate Commerce Commission, State of Alabama, et al.* No. 344, *State of Maine, State of New Hampshire, State of Vermont, et al., appellants,* v. *The United States of America, Interstate Commerce Commission et al.* No. 345, *The Atchison, Topeka and Santa Fe Railway Company, Beaver, Meade and Englewood Railroad Company, Chicago, Burlington & Quincy Railroad Company, et al., appellants,* v. *The United States of America, Interstate Commerce Commission, State of Alabama, et al.* Appeals from the District Court of the United States for the Northern District of New York.]

[May 12, 1947]

Mr. Justice Douglas delivered the opinion of the Court.

The orders of the Interstate Commerce Commission, which appellants seek to have set aside, resulted from two separate investigations instituted by the Commission on its own motion in 1939 to inquire into the lawfulness or unlawfulness of most of the then existing rate-making standards for interstate railroad class freight rates in the United States. One investigation related to classifications [1] under which commodities move by rail freight. The other related to class rates.[2] The two investigations were consolidated and were covered by one report, as the problems of classification and of class rates [3] are closely interrelated. The findings of the Commission as to classifications are not directly involved here. For the orders of the Commission under attack are interim orders which affect only class rates, increasing them in some areas and decreasing them in others. But a review and summary of the Commission's findings both on classifications and on class rates are essential for an understanding of the problem.

While there are three major classification territories, there are five major rate territories.[4] Official Territory, roughly speaking, lies east of the Mississippi and north of the Ohio and Potomac Rivers; it includes most of Virginia. Southern Territory lies south of Official Territory and east of the Mississippi. Western Trunk-Line Territory is located approximately between Official Territory and the Rocky Mountains. Southwestern Territory lies south of Western Trunk-Line Territory and west of the Mississippi and includes Arkansas, Texas, Oklahoma, and part of Louisiana. Mountain-Pacific Territory includes Montana and New Mexico and all territory west of the Rockies. Only Mountain-Pacific Territory is not involved in these cases.

The three major classifications are Official, Southern, and Western.[5] But there is great lack of uniformity in the classifications. The problem is one with which the Commission has long wrestled.[6] But prior to the present investigation its chief accomplishment in this field had been to establish classification uniformity within the separate territories. National classification uniformity was still in the main lacking. Many differences between classifications on a particular rating are matters of substance; others are matters of nomenclature. Moreover, there has been a tendency among carriers to work against the evolution of uniform classifications by making exceptions which remove commodities from the classifications for rate-making purposes.

Section 1 (4) of the Interstate Commerce Act, as amended (24 Stat. 379, 54 Stat. 899, 900, 49 U. S. C. § 1 (4)), provides that it shall be the duty of common carriers to establish just and reasonable classifications applicable to through freight rates and charges. Section 1 (6) prohibits every unjust and unreasonable classification. Section 3 (1) prohibits discrimination. And section 15 (1) empowers the Commission to prescribe just, fair, and reasonable classifications, after a

[1] Commodities are grouped into classes, those commodities in each class paying the same freight rate per 100 pounds. Frequently a commodity is in several classes depending upon whether carload or less-than-carload lots are involved, and upon the method of packaging. One class is called first-class or class 100 and each other class has been fixed as a percentage, or multiple, of first-class. Thus the freight classifications involved in these cases consist of lists containing descriptions of every commodity moving by freight and the class or classes to which it is assigned, i. e., its classification rating or ratings. See 262 I. C. C., pp. 465–472.

[2] The class rates are in the form of a schedule which shows the price per 100 pounds for moving first-class freight every possible distance it may be moved. The cost of shipment for a given commodity is determined by ascertaining its classification rating, the first-class rate per 100 pounds for the haul involved, and the percentage of the first-class rate to which the classification rating in question is subject. See 262 I. C. C., pp. 515–519.

[3] There are three other kinds of rates:

Exception rates are rates resulting from the transfer of a commodity out of its regularly assigned class in the classification and into another class.

Commodity rates are special rates established for particular commodities. For purposes of these rates a commodity is not given a classification rating; the result is that the commodity rates have no fixed percentage relationships to first-class rates.

Column rates are fixed as definite percentages of first-class rates but like commodity rates they apply only to particular commodities and are assigned no regular class.

See 262 I. C. C., p. 562.

[4] Some rate territories have subdivisions in which rate differentials are applicable which vary the class rates within the territory in question.

[5] The Official Classification applies within Official Territory and from Western Trunk-Line Territory to Official. The Southern Classification applies within Southern Territory, between Official and Southern, and from Western Trunk-Line to Southern. Western Classification includes Western Trunk-Line, Southwestern and Mountain Pacific rate territories. It applies within those three territories, between Southwestern and Official, between Southwestern and Southern, from Official to Western Trunk-Line, between Mountain Pacific and Official, from Southern to Western Trunk-Line, and between Mountain-Pacific and Southern.

[6] Western Classification, 25 I. C. C. 442; Consolidated Classification, 54 I. C. C. 1; Southern Class Rate Investigation, 100 I. C. C. 513; Consolidated Southwestern, 123 I. C. C. 203; Western Trunk-Line Class Rates, 164 I. C. C. 1; Eastern Class Rate Investigation, 164 I. C. C. 314.

finding that existing classifications are unlawful. The Commission found that the existing classifications are unlawful and will continue to be unlawful until there is national uniformity of classification. It found that differences in the applicable classifications affect the levels of the class rates as much as or more, in some instances, than the differences in the levels of the class rate scales themselves. It found that shippers in one territory pay more than shippers in another territory on the same article because of classification differences; that territorial boundaries separating classification territories are artificial and cause serious complications; that where geographic conditions produce divergent costs, revenue requirements, or other conditions requiring rate adjustments, the adjustments should be made not in the basic classification itself but in the rate levels or by the creation of legitimate exceptions to the classification; that amongst the classifications there was no real uniformity of classification ratings although the same classification principles are applicable throughout the Nation. It concluded that without such uniformity it is impossible to maintain just and reasonable relationships between class rates for competing commodities; that it is feasible for the carriers to establish a uniform classification. The Commission gave the railroads the opportunity to take the initiative in preparing the new uniform classification—an invitation which, we are advised, has been accepted.

Prior to this proceeding the Commission made four major class-rate investigations—one for each of the rate territories except Mountain-Pacific.[7] These established class-rate structures on a regional basis, i. e., they established some degree of uniformity in class rates within each territory or subdivision of a territory. But they did not deal with interterritorial class rates by harmonizing regional rate adjustments one with the other. As a result there are separate interterritorial rate structures applicable to freight traffic moving from one territory into another.

These territorial class-rate structures are exceedingly complicated. There is no basic uniformity amongst them, and they are computed by varying formulae.

The Commission found that class rates within Southern, Southwestern, and Western Trunk-Line Territories, and from those territories to Official Territory, were generally much higher, article for article, than the rates within Official Territory. It found that higher class rates have impeded the development and movement of class-rate freight within Southern, Southwestern, and Western Trunk-Line territories and from those territories to Official Territory. It concluded that neither the comparative costs of transportation service nor variations in the consists[8] and volume of traffic within the territories justified those differences in the class rates. The Commission also determined that equalization of class rates is not dependent on equalization of nonclass rates and that interterritorial rate problems can be solved only by establishing substantial uniformity in class ratings and rates.

Section 1 (4) and (5) (a) of the act require rates and charges to be just and reasonable. The Commission found that the intraterritorial class rates applicable to the territories in question and the interterritorial class rates between the territories violate those provisions.

Section 3 (1) of the act outlaws undue or unreasonable preferences or advantages to any region, district, or territory. The Commission found that the relation between the interterritorial class rates to Official Territory from the other territories in question and the intraterritorial class rates within official territory results in an unreasonable preference to Official Territory as a whole, and to shippers and receivers of freight located there, in violation of section 3 (1). The Commission, acting pursuant to its authority under section 15 (1) of the act, prescribed reasonable and nondiscriminatory class rates to cure the preference found to exist, the new rates to become applicable simultaneously with the new revised classification which, as we have noted, the Commission ordered to be established.

But time will be required to formulate a uniform classification. And the Commission concluded that pending completion of that undertaking certain interim readjustments in the existing basis of class rates, based on existing classifications, could be made—readjustments which would be just and reasonable, and which would reduce to a minimum the preferences and prejudices which the Commission found to be unlawful in the existing system. It determined that the several intraterritorial freight-rate structures should be brought closer to the same level and be constructed on the same pattern or scheme. It concluded that as many differences as possible between the interterritorial rates and the intraterritorial rates should be eliminated. It accordingly ordered that existing interstate class rates[9] applicable to freight traffic moving at the classification ratings within Southern, Southwestern, and Western Trunk-Line territories interterritorially between those territories, and interterritorially between each of those territories and Official Territory, be reduced 10 percent subject to qualifications not important here. It also ordered that interstate class rates for freight traffic moving at classification ratings within Official Territory be increased 10 percent, subject to qualifications not relevant to our problem. It found the new interim class rates just and reasonable (262 I. C. C. 447, supplemental report, 264 I. C. C. 41).

The new interim rates were ordered to become effective January 1, 1946. Prior to that date, New York and other Northern States, appellants in No. 343, filed their petition in the District Court to set aside the orders of the Commission. A statutory three judge court was convened and a temporary injunction was issued preventing the orders from going into effect (38 Stat. 208, 220, 28 U. S. C. § 47). The Governors of the six New England States (three of whose successors in office have been substituted as appellants in No. 344, 330 U. S. —) intervened on the side of the plaintiffs, as did most of the appellants in No. 345. The Commission and others[10] intervened on the side of the United States. Appellants in No. 345, including most of the western railroads, also filed their petition in the District Court seeking substantially the same relief as appellants in No. 343. The cases were consolidated and tried together, the District Court receiving additional evidence offered by the western railroads. The court sustained the orders of the Commission in all respects 65 F. Supp. 856), but continued the injunction pending appeal to this court.[11] Judicial Code § 210 (28 U. S. C. § 47 (a)).

First. The principal evil at which the Interstate Commerce Act was aimed was discrimination in its various manifestations. *Louisville & N. R. Co.* v. *United States*, (282 U. S. 740, 749–750). Until 1935, section 3 (1) of the act prohibited discrimination only against a "person, company, firm, corporation, or locality, or any particular description of traffic," (24 Stat. 379, 380). The question arose whether locality included a port insofar as the port was not a point of origin or destination but a gateway through which shipments were made. The Court held by a closely divided vote, and contrary to the ruling of the Commission, that it did not. *Texas & Pacific R. Co.* v. *United States* (289 U. S. 627). Thereafter Congress amended section 3 (1) so as to extend the prohibition against discrimination to include a "port, port district, gateway, transit point" (49 Stat. 607). And see *Albany Port District Commission* v. *Ahnapie & W. R. Co.*, (219 I. C. C. 151). That was in 1935. In 1940 Congress went further. By section 5 (b) of the Transportation Act of 1940 (54 Stat. 899, 902), known as the Ramspeck resolution, it authorized and directed the Commission to institute an investigation into rates on commodities between points in one classification territory and points in another territory and into like rates within territories for the purpose of determining whether those rates were "unjust and unreasonable or unlawful in any other respect in and of themselves or in their relation to each other, and to enter such orders as may be appropriate for the removal of any unlawfulness which may be found to exist * * *."[12] Congress also extended the prohibition against discriminations by adding to section 3 (1) the words region, district, territory.[13]

It is now asserted that the Commission has misunderstood its duties under these 1940 amendments. It is said that the Commission has construed this mandate of Congress

[8] The consist of freight in a given territory is the totality of commodities carried in that territory.

[9] No change in intrastate class rates was made. Nor was any change made in existing exception, column or commodity rates. See note 3, supra.

[10] Alabama, Arkansas, Florida, Georgia, Kansas, Louisiana, Mississippi, Minnesota, Nebraska, North Carolina, North Dakota, Oklahoma, South Carolina, South Dakota, Tennessee, Texas, the State Commissions of a number of these States, the Southern Governors' Conference, and the Southeastern Association of Railroad and Utilities Commissioners.

[11] We denied the motion of the United States to dissolve the injunction. 328 U. S. 824. See Fed. R. Civ. P. 62 (g).

[12] The Commission advised Congress that its investigations instituted in 1939 (the basis of the orders challenged in the present cases) would be carried out pursuant to this mandate. See 262 I. C. C., p. 689.

[13] Sec. 3 (1) now reads:

"It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

to mean that identical rates, mile for mile, should be established everywhere in the country, in face of a long standing practice of rate-making (which the legislative history of the 1940 amendments shows was not intended to be changed) that allowed differences in rates which were based on differences in the length of haul, character of the terrain, density of traffic, and other elements of the cost of service. Thus it is argued that the Commission runs afoul of *Ann Arbor R. Co.* v. *United States* (281 U. S. 658), which involved the construction of a joint resolution of Congress directing the Commission to make an investigation to determine whether existing rates and charges were unjust, unreasonable, or unjustly discriminatory so as to give undue advantage "as between the various localities and parts of the country * * *." (43 Stat. 801, 802). The Commission, relying on that mandate, condemned certain existing rates between California and eastern points. The Court set aside the order of the Commission, holding that the joint resolution did not purport to change the existing law but left the validity of rates to be determined by that law.

But the Commission in the present cases did not proceed on the assumption that the Ramspeck resolution changed the substantive law. As we read its report, the Commission took the resolution only as a directive to investigate and correct violations of substantive law as it deemed that law broadened by the amendment to section 3 (1). It said:

"By the amendment to the substantive antidiscrimination provisions of section 3 (1) all discriminations in the form of undue or unreasonable preference or advantage, or undue or unreasonable prejudice or disadvantage, as between regions, districts, or territories, viewed as separate entities, were brought directly within the purview of the act along with all the other inhibitions previously included. We were then authorized and directed by the other provisions mentioned to remove any such discriminations found to exist in a proper proceeding. This means that such discriminations as those mentioned which result from differences in the methods of distributing the general rate burden in the several rate-making territories, or from any other cause, if not justified upon proper consideration of recognized elements of rate making applied in the light of the amended law are unlawful and should be corrected" (262 I. C. C., p. 692).

From this statement it is apparent that the Commission concluded that the 1940 amendment to section 3 (1) enlarged the scope of the section. The Commission, indeed, stated that "it is clear that the main purpose which Congress had in mind was to bring about a greater degree of equalization, harmony, and uniformity in the different regional or territorial rate structures of the country." Id. page 692. And see id. pages 688-691. But it is suggested that discriminations based on geographic factors were outlawed prior to the 1940 amendment to section 3 (1), as evidenced by its long-standing condemnation of "undue or unreasonable prejudice or disadvantage" to any "locality" and, since 1935, to any "port, port district, gateway or transit point." [14]

[14] It is pointed out in this connection that *Texas & Pacific R. Co.* v. *United States, supra,* while holding that a port was not a "locality" when it was only a gateway through which shipments were made, recognized that a port was a "locality" when it was a point of origin or destination. (289 U. S., p. 638.)

It is, moreover, suggested that even the prohibition of discriminations against shippers was broad enough all along to ban discriminations based on the geographic location of the shippers. The contention is that without a change in the law the present orders were unwarranted; it is pointed out that the class rates now condemned had been found by the Commission itself to be just and reasonable in recent years. And it is asserted that the Commission did not take its present action on a showing of changed circumstances since those times. The conclusion, therefore, is that the present orders are not warranted by section 3 (1).

We need not determine whether, prior to the 1940 amendment, section 3 (1), by its ban on unlawful discriminations against a "locality," would have permitted the Commission to eradicate regional discriminations in class rates. For whatever doubt may have existed in the law was removed by the 1940 amendment which made abundantly clear that Congress thought that the problem of regional discriminations had been neglected and that if any such discriminations were found to be present, they should be eradicated.[15] But, as the Commission concedes, the addition of "region, district, territory" to section 3 (1) did not change the law respecting discrimination by authorizing uniform freight rates mile for mile, without regard to differing costs of the service. Congress, by adding those words, made plain the duty of the Commission in determining whether discriminatory practices exist to consider the interests of regions, districts, and territories, and to eliminate territorial rate differences which are not justified by differences in territorial conditions. In other words Congress did not introduce a new standard of discrimination by its amendment to section 3 (1); it merely made clear its purpose that regions, districts, and territories should be the beneficiaries of the law against discrimination.

Second. It is argued, however, that the finding of the Commission concerning regional discriminations in class rates are not supported by substantial evidence.

The great differences between territorial class rate levels are shown by the following table. It gives a comparison (in cents per 100 pounds) between the first-class rate scale within Official Territory and that within each of the other territories:

Distance	Eastern scale rate	Southern scale		Western trunk-line scale					
				Zone I		Zone II		Zone III	
		Rate	Percentage of Eastern	Rate	Percentage of Eastern	Rate	Percentage of Eastern	Rate	Percentage of Eastern
50 miles	47	57	-----	53	-----	61	-----	65	-----
100 miles	62	79	-----	73	-----	83	-----	90	-----
150 miles	73	96	-----	86	-----	98	-----	107	-----
200 miles	80	112	-----	97	-----	111	-----	123	-----
300 miles	90	134	-----	117	-----	134	-----	147	-----
400 miles	109	156	-----	136	-----	156	-----	172	-----
500 miles	122	173	-----	156	-----	178	-----	196	-----
600 miles	135	189	-----	176	-----	200	-----	220	-----
700 miles	149	206	-----	196	-----	222	-----	244	-----
800 miles	160	222	-----	210	-----	239	-----	263	-----
900 miles	171	235	-----	226	-----	256	-----	282	-----
1,000 miles	182	249	-----	240	-----	273	-----	300	-----
Average	----	----	137.7	----	129.6	----	144.4	----	159.4

These first-class intraterritorial rates are used as bases in formulating rates on other classes of freight in the respective territories.[16]

The following tables compiled by Government counsel show the first-class rates for interterritorial movements to Official Territory from each of the other territories as compared with intraterritorial movements for approximately equal distances within Official Territory:

SOUTHERN VERSUS OFFICIAL

From—	To—	Miles	First-class rates	Disadvantage of Southern Territory shipper compared with Official Territory shipper	
				In cents	In percent

[15] Senator Wheeler, who had charge of the bill on the floor of the Senate, stated concerning the amendment to § 3 (1): "The previous provision with regard to 'discrimination' simply referred to discrimination as to 'locality, port, port district, gateway, transit point' without specifying the region, district, or territory. So we felt that by broadening the language we would at least take away that excuse, and we would provide expressly that the Commission should not discriminate in its rate structures." (84 CONGRESSIONAL RECORD, p. 5889.)

[16] See note 2, supra.

WESTERN TRUNK LINE VERSUS OFFICIAL

From—	To—	Miles	First-class rates	Disadvantage of Southern Territory shipper compared with Official Territory shipper	
				In cents	In percent
Des Moines, Iowa	Toledo, Ohio	558	142		
Official Territory Point	do	558	118	24	20
St. Paul, Minn	South Bend, Ind	491	138		
Official Territory Point	do	491	111	27	24
Lincoln, Nebr	Evansville, Ind	612	169		
Official Territory Point	do	612	125	44	35
Denver, Colo	Cleveland, Ohio	1,329	289		
Official Territory Point	do	1,329	200	89	45

The disadvantage to the southern or western shipper who attempts to market his product in Official Territory is obvious. Thus the first of these tables show that a Nashville shipper pays 39 cents more on each 100 pounds of freight moving to Indianapolis, Ind., than one who ships from Indianapolis to a point of substantially equal distance away (Kent, Ohio) in Official Territory. Similar disadvantages suffered by southern and western shippers are revealed in the other comparable interterritorial freight movements set forth in the tables.

That disadvantage is emphasized if the effects of classification differences on rates for identical commodities are considered. A comparison of rates in cents per 100 pounds for 200 miles shows that even though shippers in the South and West have the same or lower classification ratings for identical commodities they nevertheless on the whole pay higher charges than the shippers in Official Territory for equivalent service. Thus there are in class 100 (first class) for less-than-carload lots 2,092 items common to the 3 classifications. In Official classification all of these move at a rate of 80 cents per 100 pounds for a haul of 200 miles. In Southern, 2,076 of these items are classified 100 and move at a rate of $1.12. Of the remaining 17 items 5 are classified in Southern in class 85 with a rate of 95, 2 in class 7 with a rate of 78, 7 in class 55 with a rate of 62, 2 in class 45 with a rate of 50, 1 in class 40 with a rate of 45. In Western Trunk-Line Zone I, 2,076 of the 2,092 items are classified 100 with a rate of 97, 4 in 85 with a rate of 82, 10 in 70 with a rate of 68, 2 in 55 with a rate of 53.

In class 100 for carload lots there are 213 common items. In Official classification all of these move at a rate of 80 cents for a haul of 200 miles. In Southern, 199 of these items are classified 100 and move at a rate of $1.12 for 200 miles. Of the remaining 14, 7 are classified in Southern in class 85 with a rate of 95, 2 in 75 with a rate of 84, 5 in 70 with a rate of 78. In Western Trunk-Line Zone I, 202 of the 213 items are classified 100 with a rate of 97, 7 in 85 with a rate of 82, 3 in 70 with a rate of 67, 1 in 55 with a rate of 53. Additional illustrations are too numerous and detailed to include in this opinion. But the ones given are representative of the rest and show how disparities in the rate levels are aggravated when the effects of classification differences on rates are considered.

There is rather voluminous evidence in the record tendered to show the effect in concrete competitive situations of these class-rate inequalities. The instances were in the main reviewed by the Commission. They are attacked here on various grounds—that some of them involved rates other than class rates, that others were testified to by shippers who made no complaint of class rates, that others showed shippers paying higher rates yet maintaining their competitive positions and prospering. We do not stop to analyze them or discuss them beyond saying that some of the specific instances support what is plainly to be inferred from the figures we have summarized—that class rates within Southern, Southwestern, and Western Territories, and from those territories to Official Territory, are generally much higher, article for article, than the rates within Official Territory. That was the basic finding of the Commission; and it is abundantly supported by the evidence.

Thus discrimination in class rates in favor of Official Territory and against the Southern, Southwestern, and Western Trunk Line territories is established. But that is not the end of the matter. For "mere discrimination does not render a rate illegal under section 3." (*United States* v. *Illinois Central R. Co.* (263 U. S. 515, 521).) Section 3 condemns "any undue or unreasonable preference or advantage" and "any undue or unreasonable prejudice or disadvantage" to any territory. And, as we have said, the 1940 amendment to section 3, by its addition of "region, district, territory," did not change the prevailing rules respecting unlawful discrimination; it merely enlarged the reach of section 3. Hence we must determine from the pre-existing law whether a discrimination against a territory is obnoxious to section 3. The rule is stated in *United States* v. *Illinois Central R. Co., supra,* page 524, as follows:

"To bring a difference in rates within the prohibition of section 3, it must be shown that the discrimination practiced is unjust when measured by the transportation standard. In other words, the difference in rates cannot be held illegal, unless it is shown that it is not justified by the cost of the respective services, by their values, or by other transportation conditions."

It is on this principle that the findings of the Commission under section 3 are both defended and attacked.

Third. The Commission's findings under section 3 (1) are first challenged on the ground that there is no finding that the corresponding class rates are actually charged to or demanded of competing shippers in the several territories. That is to say, no unlawful discrimination in favor of a shipper in Official Territory and against a shipper in Southern Territory can be said to exist unless it is shown that the southern competitor is actually required to pay the higher interterritorial class rates. It is contended that the record negatives the existence of facts which could support such a finding and that no such finding was made. Reliance is placed on two circumstances. In the first place, reference is made to the effect of classification ratings on class rates which we briefly summarized above. It is noted, for example, that the southern shipper in some instances actually pays less for the shipment of the same commodity than the shipper in Official Territory, e. g., where the Southern Classification carries the commodity in a lower class, which in turn exacts a rate less than that required of the higher classification granted by Official. It is apparent from the illustrations we have given that such is true in some cases. But that is not the dominant pattern. In the vast majority of the instances the classification ratings, like the class rate structure, work to the benefit of Official Territory and against the others. But the greater reliance is placed on the second circumstance—that only a minor portion of freight moves by class rates and of that a greater percentage moves in Official Territory than in the others. This point requires a more extended answer.

The Commission, indeed, found that by reason of nonuse the class rates have become obsolete and no longer serve the purposes for which they were designed. They move a relatively small amount of freight. The following table indicates the percentages of carload traffic carried at class rates within and between territories in 1942:

From—	To—			
	Official	Southern	Southwestern	Western trunk-line
Official	5.8	12.6	22.5	12.3
Southern	.9	1.8	6.1	1.5
Southwestern	1.5	1.2	2.4	2.0
Western trunk-line	3.1	6.1	13.0	.6

In September 1940, for example, less-than-carload ratings on about 3,000 commodities were removed from the Southern Classification by classification exceptions. The great bulk of the freight moves on exception rates and commodity rates.[17] This trend, according to the Commission, has been the result of competitive forces. The creation of the exceptions has "shorn the ratings in the classifications of much of their usefulness and proper function" (262 I. C. C., p. 504). The record is replete with evidence supporting this finding of the Commission. And appellants seize on it as supporting their claim that since class rates have largely become paper rates, they are not the source of injury to shippers from the South and the West; that if the latter are prejudiced by the rate structure, the injury must flow from the exception rates and commodity rates not involved in this proceeding; and that in any event the case of unlawful discriminations in favor of Official Territory and against the other territories has not been founded on the actual use of disadvantageous class rates by shippers in the Southern, Southwestern, and Western Trunk-Line Territories.

But that takes too narrow a view of the problem confronting the Commission. We start, of course, with some showing of actual discrimination against shippers by reason of their use of class rates. But the main case of discrimination made out by the record is one against regions and territories. We assume that a case of unlawful discrimination against shippers by reason of their geographic location would be an unlawful discrimination against the regions where the shipments originate. But an unlawful discrimination against regions or territories is not dependent on such a showing. As we stated in *Georgia* v. *Pennsylvania R. Co.* (324 U. S. 439, 450), "Discriminatory rates are but one form of trade barriers." Their effect is not only to impede established industries but to prevent the establishment of new ones, to arrest the development of a State or region, to make it difficult for an agricultural economy to evolve into an industrial one. Nondiscriminatory class rates remove that barrier by offering that equality which the law was designed to afford. They insure prospective shippers not only that the rates are just and reasonable per se but that they are properly related to those of their competitors. Shippers are then not dependent on their ability to get exception rates or commodity rates after their industries are established and their shipments are ready to move. They have a basis for planning ahead by relying on a coherent-rate structure reflecting competitive factors.

[17] See note 3, supra.

If a showing of discrimination against a territory or region were dependent on a showing of actual discrimination against shippers located in these sections, the case could never be made out where discriminatory rates had proved to be such effective trade barriers as to prevent the establishment of industries in those outlying regions. If that were the test, then the 1940 amendment to section 3 (1) would not have achieved its purpose. We cannot attribute such futility to the effort made by Congress to make regions, districts, and territories, as well as shippers, the beneficiaries of its antidiscrimination policy expressed in section 3 (1).

So far as the remedy is concerned, the present cases might, of course, be different if the Commission had no power to prescribe classifications. But section 15 (1) of the act grants it full power, on finding that a classification is unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, to determine and prescribe what classification will be just, fair, and reasonable. The Commission's over-all conclusion was that the classifications in force and the class rates computed from them harbor inequities which result in unlawful discriminations in favor of Official Territory and against the other territories. The fact that relatively small amounts of freight move by class rates proves, not that the regional and territorial discrimination is slight, but that the rate structure as constitued holds no promise of affording the various regions or territories that parity of treatment which territorial conditions warrant. The Commission in substance concluded that that result could not be achieved unless traffic was in the main moved on class rates. We will discuss later the appropriateness of the relief granted by the interim orders here challenged. It is sufficient here to note that the case of unlawful discrimination against these territories was chiefly founded on the absence of nondiscriminatory class rates and uniform classifications which would remove the features of existing rate structures prejudicial to Southern, Southwestern, and Western Trunk-Line Territories.

We are thus not primarily concerned with the adequacies of the Commission's findings showing discrimination against actual shippers located in a territory (cf. *Florida* v. *United States* (282 U. S. 194); *North Carolina* v. *United States* (325 U. S. 507); *Interstate Commerce Commission* v. *Mechling* (330 U. S. —)), but with prejudice to a territory as a whole.

Fourth. The inquiry of the Commission into the effect of class rates on the economic development of Southern, Southwestern, and Western Trunk-Line Territories took a wide range. It concluded that prejudice to the territories in question had been established. We think that finding is supported by substantial evidence.

It is, of course, obvious that the causal connection between rate discrimination and territorial injury is not always susceptible of conclusive proof. The extent of that causal relation cannot in any case be shown with mathematical exactness. It is a matter of inference from relevant data. The Commission recognized, for example, that the fact that the South has fewer industries than the East results from a complex of causes—that the industrial development of the East is due to many factors other than transportation services and costs, such as climate, soil, natural resources, available water power, supplies of natural gas and coal, and early settlements of population which antedated the building of the railroads (262 I. C. C. 619). It noted that in 1939 freight revenues on commodities in the manufactures and miscellaneous group were but 5.3 percent of the destination value of manufactured goods and that differences in freight charges resulting from differences in class-rate levels were only a small fraction of that figure. But it nevertheless concluded that "Nearness to markets and ability to ship to markets, on a basis fairly and reasonably related to the rates of competitors are nevertheless potent factors in the location of a manufacturing plant. In fact, rate relations are more important to the manufacturer and shipper than the levels of the rates" (262 I. C. C. 619–620).

The great advance in industrialization of Official Territory over the other territories need not be labored, for it is obvious. Some manifestations of that development may be illustrated by the following tables:

Territory	Land area, 1940	Gainful workers, 1930	Value of manufactured products, 1939	Value added by manufacture, 1939
Official	13.5	51.1	67.8	71.4
Southern	13.3	16.8	10.0	9.4
Western Trunk Line	20.9	13.5	9.9	8.7
Southwestern	14.2	9.3	4.5	3.3
Mountain Pacific	38.1	9.3	7.8	7.2
Total	100.0	100.0	100.0	100.0

Another measure of industrial growth is shown by the number of gainful workers and the manufacturing industries in the several territories:

Territory	Actual increase in total gainful workers from 1910 to 1930	Actual increase in value of products in all manufacturing industries from 1909 to 1939	Actual increase in value added by manufacture in all manufacturing industries from 1909 to 1939
Official	6,230,273	$23,561,190,000	$11,284,350,000
Southern	652,755	4,229,396,000	1,662,336,000
Western Trunk-Line	904,986	3,117,079,000	1,284,798,000
Southwestern	1,011,151	1,942,378,000	580,388,000
Mountain Pacific	1,863,419	3,320,930,000	1,341,785,000

The value added by manufacture in all industries from 1849 to 1939 is shown for all the territories by the chart on the following page (not printed).

From this chart it is apparent that Official Territory has maintained its commanding lead in spite of recent marked increases elsewhere, especially in the South. Similarly, for the period 1929 to 1939 the number of wage earners in manufacturing industries in the entire country decreased 11 percent; in Official Territory, 12 percent; while in the South there was an increase of 5 percent. For the same period, values of manufactured products increased 1 percent in the South, while they decreased 21 percent for the entire country and 25 percent in Official Territory. From 1930 to 1940, the number of gainfully occupied workers in manufacturing in Official Territory decreased from 70.5 percent to 69.4 percent of the Nation's total, while in the South there was an increase from 10 percent to 11.9 percent. A number of manufacturing activities have increased more rapidly in the South than in Official Territory, though the reverse has been true in other industries. But in spite of the growth in industrial activities in the South and West (which appellants stress heavily), the percentage comparisons are not particularly revealing because of the great disparity between the bases on which they are computed.

The fact remains that economic development in the South and West has lagged and still lags behind Official Territory. In 1940 the average annual dollar income per person employed in Official Territory was $1,988; in Southern, $940; in Southwestern, $1,177; in Western Trunk-line, $1,411. Official has 69 percent of all workers engaged in manufacturing in the United States and 29 percent of all workers in extractive industries. It has, for example, a high concentration in the manufacture of steel and copper products, though less than 4 percent of the iron ore reserves, and no reserves of metallic copper. The South and West furnish raw materials to Official and buy finished products back. They are also dependent to a great extent on the markets for their products in Official, which has over 48 percent of the population of the country, 76 percent of the national market for industrial machinery and raw materials, 64 percent for all goods and sources, 62 percent for consumer luxuries, and 53 percent for consumer necessities. Yet the South and West suffer rate handicaps when they seek to reach those markets.[18] One of the many illustrations will suffice. Cottonseed oil is a basic agricultural commodity. Class rates on it are 7 percent higher from Southern to Official Territory than they are within Official Territory. If the cottonseed oil is manufactured into oleomargarine, the rates from Southern to Official Territory are 35 percent higher than the rates within Official Territory.

It is said in reply, however, that the disparities which we have mentioned reflect only natural advantages which justify differences in rates. The great concentration of population in the East is said to show that its more favorable rates are justified by the fact that it has many more people to support the roads. The unfavorable income comparisons with the East are thought to establish one of the handicaps under which the roads in the South and West operate. It is pointed out that the heavy preponderance of the Nation's total natural resource of energy supply is located in Official Territory, 40 to 45 percent of the total bituminous and semibituminous coal supply, practically all of the anthracite resources; 60 percent of all electric energy originates there. It is said that Official Territory is the logical location for industries which use metals from other territories, since it has the natural supplies

[18] The Commission stated (262 I. C. C., pp. 695–696):

"Although manufacturing has grown in the South and Southwest and to a lesser extent in Western Trunk-Line Territory in the last decade, it is still vastly less in diversification and amount than in official territory. The increases in manufacturing in these territories has created a demand for rates which will at once permit the free movement of the manufactured articles, but because of the level of the intraterritorial and interterritorial class rates, such free movement has been impeded insofar as such commodities move at class rates. In most instances it has been necessary either to reduce the class-rate levels or to establish exception or commodity rates in order that the manufactured products may move freely, and this action has frequently been subject to long delays because of the failure of individual carriers or groups of carriers to agree upon a basis.

"Official Territory is the greatest consuming territory in the country, and is the market that nearly all manufacturers desire to reach, particularly where they have a surplus of their products to sell. In shipping to Official Territory, manufacturers in the other territories not only have the disadvantage of location, but are subjected to an additional burden in those instances where they must pay class rates on a much higher level than their competitors in Official Territory. This situation reacts to the disadvantage of manufacturers in the other territories, and to the advantage of those in Official Territory, tends to restrict the growth and expansion of the manufacturers in the other territories, and, to some extent, to prevent the establishment of new manufacturing plants in those territories."

of coal. It is also pointed out that the gross income from crops and livestock in Official Territory is the highest in the country, amounting to 31 percent of the total. From these and comparable data it is argued that the lower rates in Official Territory reflect only inherent advantages which the other territories do not enjoy. It is, therefore, argued that what the Commission has sought to do is to equalize economic advantages, to enter the field of economic planning, and to arrange a rate structure designed to relocate industries, cause a redistribution of population, and in other ways to offset the natural advantages which one territory has over another. It is asserted that such a program is unlawful under *Interstate Commerce Commission* v. *Diffenbaugh* (222 U. S. 42, 46), where the Court held that the act, in its condemnation of discrimination, does not attempt to equalize fortune, opportunities or abilities. And see *United States* v. *Illinois Central R. Co.* (*supra*, p. 524); *Texas & Pacific R. Co.* v. *United States* (*supra*, pp. 637-638).

We will revert to this matter when we come to consider whether territorial conditions justify the differences in rates. It is sufficient at this point to say that the record makes out a strong case for the inference that natural disadvantages alone are not responsible for the retarded development of the South and the West; that the discriminatory rate structure has also played a part. How much a part cannot be determined, for every effect is the result of many factors. But the inference of prejudice from the discriminatory rate structure is irresistible. If this discriminatory rate structure is not justified by territorial conditions, then its continued maintenance preserves not the natural advantages of one region but man-made trade barriers which have been imposed upon the country. Such a result cannot be reconciled with the great purposes of section 3 (1), as amended in 1940.

Fifth. The Commission found that conditions peculiar to the respective territories did not justify the differences in the territorial class-rate structures. In reaching that conclusion it first inquired whether the differences in the costs of furnishing the railroad service in the several rate territories justified the existing differences in the levels and patterns of the class-rate scales.[19] The basis of its inquiry was a cost study submitted by its staff. For cost-analysis purposes the United States is divided into areas roughly but not exactly approximating the classification territories. Thus, there are three districts—Eastern, Southern, and Western. Southern district is further divided into Pocahontas region and southern region. Eastern district plus Pocahontas region is substantially the equivalent of Official Territory.[20] In the cost study railroads were assigned to geographical areas; expenses for individual roads were divided into groups, each group being associated with appropriate service units, which included revenue car-miles, revenue gross-ton miles, and cars originated and terminated; unit costs were then obtained by dividing the aggregate of the territorial expenses in each group by the applicable territorial units; the costs of particular services were then built up from the unit costs. Costs were put into two classes—(1) out-of-pocket or variable expenses which vary directly with the kind of traffic handled; (2) constant or fixed costs not capable of assignment to particular kinds of tram costs[21] which normally must be borne by the various types of traffic in proportion to the ability of each to pay. The details of the cost study are too intricate and voluminous to relate here. They have been summarized by the Commission (262 I. C. C. 571-592). It should be noted, however, that allowances for return—computed at both 4 percent and 5¾ percent—were included among costs. The allowances for return were based on recommended rate-making values furnished by the Bureau of Valuation. The territorial cost comparisons were principally based on the 4-percent return figure, the Commission noting that the figure was relatively close to the return earned by the carriers in the year covered by the study, viz, 1939.

To summarize very briefly, the expenses of the carriers were first broken down and translated into territorial average unit costs of performing each of the kinds of services involved in moving a specific shipment or in furnishing a given amount of transportation service in each territory. These unit costs were then multiplied by the number of units of each of the services found to be employed in moving the specific shipment or furnishing the given amount of service in the territory. The process was repeated for a series of different shipments or services sufficient to make the result representative of territorial conditions. Once the average costs for each rate territory were computed, territorial average costs were compared. The principal comparisons were based on the year 1939, although supplementary studies were also made for the periods 1930-39, inclusive, 1937-41, inclusive, and 1941. The territorial cost comparisons showed, for example, the costs of hauling given weight loads in a certain type of car for given distances in each territory. They also showed the relative costs of handling the entire traffic consist of each territory. This was designed to eliminate the effects of any differences in consists of traffic between territories compared, by determining first the cost in the territory in which it actually moved and then the cost in each of the other territories. The cost study gave consideration to freight moving for various distances in all kinds of equipment—box, hopper, gondola, tank, stock, flat, and refrigerator cars. Costs were compared for identical loads hauled in the principal types of equipment. Standard loads were then taken. The average weight loads experienced in each territory for various types of equipment were also taken. The aim was to make adjustment for the different types of equipment used and the different average loads between territories. Likewise, comparisons were made of the cost of hauling the entire consist of the traffic of one territory, at the average loads and unit costs applicable in that territory, with the cost of hauling the identical traffic at the average loads and unit costs applicable to the other territories. Comparisons were also made (for the distances the traffic actually moved, by classes of equipment, and at actual average loads) of the relative cost of hauling the consist of traffic of the entire United States, and the costs of carrying the Eastern, Southern, and Western consists respectively in each of the several territories.

When it came to the Eastern district, computations were made which both excluded and included the Pocahontas region. That region, for purposes of the study, represented the operation of three railroads—Chesapeake & Ohio, Norfolk & Western, and the Virginian—about 84 percent of whose freight traffic is coal. For purposes of such a comparative study as this, the exclusion of Pocahontas is considered desirable, since its costs are low because of the very heavy coal tonnage.[22]

The Commission attached principal weight to the haul of 300 miles per shipment originated, as that distance most closely approximated the length of haul in each territory in 1939. Relative territorial[23] costs (fully distributed) for traffic moving that distance in boxcars and gondola cars were as follows:

[United States average=100]

	Boxcars		Gondola and hopper cars	
	Assumed 25-ton load	Actual average load	Assumed 50-ton load	Actual average load
Eastern (excluding Pocahontas)	102	103	100	100
Southern	96	97	99	102
Western	108	108	109	115

The Commission computed that on the foregoing analysis for 100, 300, and 500 miles, the fully distributed costs for the South are generally a little lower than for the East, Pocahontas excluded, while the fully distributed costs in the West exceed those of the East by from 6 to 15 percent. Similar cost comparisons were made for the several territories for stock-car, refrigerator-car, tank-car, and flatcar traffic. Based on the actual average loads experienced for each class of equipment, the Commission found the costs for the South lower than those for the East (Pocahontas excluded) for traffic moving in all those classes of equipment. The costs for the West are also lower than those for the East as to stock-car, refrigerator-car, and flatcar traffic, but higher for tank-car traffic.

A territorial comparison of fully distributed costs for carload traffic moving 300 miles in all classes of equipment shows the following:[24]

[United States average=100]

	Identical loads	Actual average loads
Eastern (excluding Pocahontas)	102	102
Pocahontas	67	67
Eastern including Pocahontas	95	95
Southern	98	101
Western	108	110

The fully distributed costs on identical loads in the South are 4 percent below those for

[19] In *Northern Pacific R. Co.* v. *North Dakota* (236 U. S. 585, 597), the Court stated, "The outlays that exclusively pertain to a given class of traffic must be assigned to that class, and the other expenses must be fairly apportioned. It may be difficult to make such an apportionment, but when conclusions are based on cost the entire cost must be taken into account."

[20] For description of exact boundaries, see 262 I. C. C. 605. For some cost purposes the United States is also divided into 11 cost territories, various combinations of which are equivalent to the rate territories. For definitions of these cost territories, and a collection of a substantial portion of the Commission's cost data, see S. Doc. No. 63, 78th Cong., 1st Sess.

[21] The sum of the out-of-pocket costs plus a pro rata distribution of the constant or fixed costs is referred to as fully distributed cost.

[22] 262 I. C. C., p. 578. Similar conditions call for the exclusion of Kentucky in considering figures for the Southern region. And see general commodity rate increases, 223 I. C. C. 657.

[23] Not including Pocahontas in eastern territory figures. Relative costs were not shown separately for Western Trunk-Line, Southwestern, and Mountain Pacific territories, the Commission noting that differences between costs for the total West and for each of those three rate territories were relatively small. 262 I. C. C., p. 578.

[24] Weighting given to the costs for each class of equipment was based on the volume of traffic handled in each type of equipment in the United States. Terminal costs for each class of equipment were weighted for the total United States traffic handled in each class of equipment as measured by tons originated plus tons terminated. Line-haul costs by classes of equipment were weighted for the ton-miles of traffic handled in each class of equipment.

the East, excluding Pocahontas. The same comparison shows the costs for the West 6 percent higher than those in the East, excluding Pocahontas. Costs in the South, based on the actual average loads are 1 percent below those for the East, excluding Pocahontas. In the West they are 8 percent higher than the latter.

Territorial comparisons based on average net ton-mile carload costs (1930–39) adjusted for differences in the length of haul and the consist of the traffic were made. They showed that the costs for the South are approximately 1 or 2 percent below those for the East, excluding Pocahontas. On the other hand, those costs for the West exceeded those of the East, excluding Pocahontas by from 5 to 7 percent.

Territorial comparisons of the less-than-carload costs were also prepared. They showed that those costs are lower in the South than in the East whether assumed identical loads or actual average loads are taken, and even if Pocahontas is included in the East. They are higher in the West than in the East. If Pocahontas is excluded from the East the following table shows the comparison for a 300-mile haul:

[United States average=100]

	Assumed identical load		Actual average load	
	Out of pocket	Out of pocket plus constant [1]	Out of pocket	Out of pocket plus constant [1]
Eastern (excluding Pocahontas)	105	101	94	93
Southern	89	87	88	86
Western	104	109	120	121

[1] Constant costs common to all traffic are not included

In all territories less-than-carload traffic (1939) was carried at a deficit, Southern making the best showing, Western the worst. That is revealed in the following table:

	Revenues	Costs [1]	Deficit
Eastern (excluding Pocahontas)	$107,155,756	$133,308,907	$26,153,151
Southern	46,635,725	47,451,184	815,459
Western	88,797,938	123,146,215	34,348,277

[1] Out-of-pocket cost plus total solely related expenses plus collection and delivery.

The Commission found that the difference in fully distributed costs for all traffic between the East and the West is largely in the constant or fixed expenses and the passenger and less-than-carload deficits. Out-of-pocket expenses in the South and West are freqeuntly as low as, or even lower than, the out-of-pocket costs in the East. The Commission further found that the increase in freight traffic volume received by the carriers subsequent to 1939 served to reduce the unit costs of transportation in the South and West in a proportionately greater degree than in the East. A somewhat larger percentage of out-of-pocket expenses in the East is variable with added traffic than is true of the South and West, due apparently to the fact that the East, with its higher traffic density, is closer to its maximum capacity than is true of the others. Thus the influence of added traffic in reducing average costs is greater in the West. On the other hand constant costs (proportionately larger in the South and West) do not increase with added traffic. As illustrative of those circumstances the Commission noted the effect of increases in 1941 of the ton-miles of revenue freight. They increased in 1941, as compared with 1939, 43 percent in the East, 27 percent in Pocahontas, 44 percent in southern, and 46 percent in western territory. The cost per revenue ton-mile decreased by only about 5 percent in the East and in Pocahontas, as compared with decreases in excess of 10 percent in the South and West.

The Commission summarized the results of the territorial cost comparisons as follows: There is little significant difference in the cost of furnishing transportation in the South as compared with the East, Pocahontas excluded. It is principally the low terminal costs in the South that account for its relatively low total costs. Based on the year 1939 and the period 1930–39, the costs in the South are equal to or a little lower than those in the East. Based on the period 1937–41, the costs in the South are substantially lower than those in the East.[25]

Based on the year 1939 and the period 1930–39, the cost of rendering transportation service in the West is between 5 and 10 percent higher than in the East, excluding Pocahontas. Based on 1941, that difference is reduced to 5 percent or less.[26]

The Commission recognized, of course, that carriers must obtain their revenue from the traffic which moves in their respective territories. Hence the revenue-producing or rate-bearing characteristics of the different commodities which compose the traffic of the several territories, i. e., the consists and volumes of traffic, are also important in determining whether territorial conditions justify differences in territorial rates.

The percentage distribution of total tons carried and revenue by commodity groups for 1939 is shown in the following table:

	Eastern district		Eastern (including Pocahontas)		Southern region		Western district	
	Percent of tonnage	Percent of revenue	Percent of tonnage	Percent of revenue	Percent of tonnage	Percent of revenue	Percent of tonnage	Percent of revenue
Group I: Products of agriculture	6.57	8.73	6.07	8.03	10.80	17.73	18.88	23.70
Group II: Animals and products	1.64	4.72	1.47	4.23	1.45	3.51	3.00	6.30
Group III: Products of mines	58.06	34.85	61.53	40.24	46.39	23.65	36.64	13.98
Group IV: Products of forests	2.43	2.74	2.43	2.69	11.40	9.45	10.59	9.31
Group V: Manufactures and miscellaneous	29.57	41.41	26.89	37.75	27.21	34.66	29.38	39.94
Total all carload traffic	98.27	92.45	98.39	92.94	97.25	89.00	98.49	93.23
All less-carload traffic	1.73	7.55	1.61	7.06	2.75	11.00	1.51	6.77

The Commission also considered the distribution of carload traffic based on revenue ton-miles for 1939 which it summarized as follows:

Item	Eastern district	Pocahontas region	Southern region	Western district
Products of agriculture	10.7	2.7	15.8	26.8
Animals and other products	3.8	.5	2.2	4.5
Products of mines	49.3	87.4	40.8	20.1
Products of forests	3.1	1.6	11.6	13.6
Manufactures and miscellaneous	33.1	7.8	29.6	35.0
Grand total, carload	100.0	100.0	100.0	100.0

And the contributions which the major classes of commodities (carload lots) make in excess of out-of-pocket costs (1939) appear as follows:

Item	Eastern district	Pocahontas region	Southern region	Western district	United States
Products of agriculture	4.2	3.1	15.8	18.0	10.8
Animals and products	1.5	1.1	3.4	4.3	2.7
Products of mines	38.0	73.4	21.2	13.9	29.7
Products of forests	2.8	2.8	9.4	8.1	5.7
Manufactures and miscellaneous	53.5	19.6	50.2	55.7	51.1
Grand total, carload	100.0	100.0	100.0	100.0	100.0

A large volume of all traffic moves across territorial boundaries and therefore becomes common to two or more territories. And as respects the balance, the Commission found striking similarity in the consists of the traffic so far as its revenue-producing characteristics are concerned. The manufactures and miscellaneous commodity group embraces traffic which moves at relatively high rates, i. e., rates which, ton-mile for ton-mile, make a substantially greater than average contribution to the constant costs. The percentages of the total tons carried in that group and the corresponding percentages for revenue produced by them are quite close to each other, particularly the East and the West.

The Commission stated that the revenue-producing qualities, or rate-bearing characteristics, of the commodities which compose the traffic in those several territories constituted "the governing factor" so far as the problem of the consists and volume of traffic was concerned (262 I. C. C. 694). It appraised the evidence we have related as meaning that "the differences that exist in the consists of traffic in these respective territories are not so substantial or of such character as to warrant the present differences in class rates" (id., p. 695).

The findings of the Commission both as to the consists of the freight and the costs of rendering the service in the respective territories are vigorously challenged, especially by the western roads.

As to the consists, it is said that the eastern roads have a much heavier percentage of freight of a kind that produces excess revenue to carry the general expenses. Findings of the Commission are relied upon as showing that the eastern roads' preponderance of high-grade traffic affords a greater source of revenue than does the high percentage of low-rate products carried by

[25] If Pocahontas is included in the East, the costs for the South, based on the year 1939, are between 3 and 6 percent above those for the East; for the years 1930–39, between 6 and 8 percent higher; for the years 1937–41, about the same.

[26] If Pocahontas is included in the East for 1930–39, the cost in the West is 18 percent higher; based on 1939, approximately 15 percent higher; based on 1941, about 10 percent higher.

the western roads.[27] These undisputed facts are said to disprove the Commission's finding that the consists of traffic in the respective territories do not warrant the present differences in class rates.

These facts, however, relate to density of traffic,[28] the effect of which is merged in the final cost figures. But the relation of the consist problem to the problem of rate structures is somewhat different. It is relevant in order to determine whether the consists of traffic are so different in the several territories that separate rate structures with different distributions of the transportation burden amongst commodities and classes of freight are necessary. It is apparent from the statistics which we have reviewed that, while there is a diversity in traffic moved in the several territories, the diversity largely disappears when commodity groups are considered. Then, also, the precentages of the total traffic in each territory which fall under the several commodity groups are not only very similar in the East, South, and West, but each group yields about the same percentage of the total revenues in each of the territories. The choice of groupings is plainly a specialized problem in transportation economics upon which the Commission is peculiarly competent to pass. Its judgment that the differences in consists between the territories do not justify the present differences in interterritorial class rates is indeed an expert judgment entitled to great weight. We could not disturb its findings on the facts of this record without invading the province reserved for the expert administrative body.

As to the cost study little need be said concerning the South. Once the integrity of the cost study is assumed,[29] the finding of the Commission that there is little significant difference in the cost of furnishing transportation in the South as compared with the East has support in the facts. Moreover, the data on rates of return and freight operating ratios, to which we will shortly refer, corroborate the conclusion reached from the cost study that the differences in class rates between the East and the South are not justified by territorial conditions. The finding that the discrimination against the South is unlawful under section 3 (1) is thus amply supported—a conclusion that the southern carriers do not challenge here.

The question is a closer one when we turn to the West. For, as we have seen, the costs in the West on the average run higher than those in the East. Based on the year 1939 and the period 1930–39, the cost of rendering transportation service in the West is between 5 and 10 percent higher than in the East, excluding Pocahontas. Based on 1941, that difference is reduced to 5 percent or less.

As we have seen, the class rate structure is discriminatory as between the East and the West. The level of class rates in the West is from 30 to 59 percent higher than that in the East. The problem of the Commission, therefore, was to determine whether that disparity is justified by territorial conditions. The Commission found that it was not so justified. The problem for us is whether the Commission had a basis for its conclusion.

While the western roads vigorously challenge the Commission's finding, their argument is in the main directed to the point that some disparity in rates between East and West is justified by differing territorial costs. No particular effort is made to prove that those costs are a fair measure of the existing rate differences.

We start, of course, from the premise that on a subject of transportation economics, such as this one, the Commission's judgment is entitled to great weight. The appraisal of cost figures is itself a task for experts, since these costs involve many estimates and assumptions and, unlike a problem in calculus, cannot be proved right or wrong. They are, indeed, only guides to judgment. Their weight and significance require expert appraisal.

The Commission has concluded that while cost studies are highly relevant to these rate problems they are not conclusive. It said in this case:

"Discretion and flexibility of judgment within reasonable limits have always attended the use of costs in the making of rates. Costs alone do not determine the maximum limits of rates. Neither do they control the contours of rate scales or fix the relations between rates or between rate scales. Other factors along with costs must be considered and given due weight in these aspects of rate making" (262 I. C. C. 693).

In appraising the cost figures relevant here, the Commission proceeded on the assumption that the 1941 traffic level is most likely to prevail in the postwar period. It, therefore, started with the assumption that the margin of difference between the costs in the West and those in the East was slight and not accurately measured by 1939 figures, and that if, as has been the fact,[30] the freight carried in the West increased above that level, the unit costs of transportation in the West would be reduced to a greater degree than those in the East, for reasons which we have already stated.

The Commission also had before it certain data relative to the financial condition of the various roads, data which we have not yet discussed. Thus comparative analyses of the rates of return of the roads in the several territories showed that while the western roads have had many lean years, the recent period has put them ahead of the roads in the East. The following table shows the rates of return in percentages based on the net railway operating income and the book investment, increased for cash, materials, and supplies:

	1936	1937	1938	1939	1940	1941	1942	1943
Eastern district	2.67	2.27	1.26	2.34	2.66	3.62	4.9	4.32
Southern region	2.52	2.35	1.9	2.5	2.57	4.24	6.51	5.73
Pocahontas region	7.58	6.61	4.54	5.89	6.21	6.67	5.29	5.22
Western district	1.88	1.71	1.09	1.65	2.06	3.36	5.8	5.22

The Commission also considered the territorial freight operating ratios—the percent of operating revenues from freight absorbed by operating expenses attributed to the freight.[31] They are shown in the following table:

	1936	1937	1938	1939	1940	1941	1942	1943
Eastern district	64.95	67.86	68.98	64.88	63.92	63.04	61.93	66.23
Southern region	65.38	67.77	66.73	64.99	65.34	61.07	56.84	59.41
Pocahontas region	47.04	50.63	53.59	50.71	49.77	48.12	49.62	52.86
Western district	65.07	66.93	67.13	65.01	63.63	60.98	55.79	59.47

In light of such data the Commission said: "Making due allowance for a substantial decline in traffic from the war peak and for the fact that in the decade preceding 1940 the earnings of the western rail respondents were relatively low, nevertheless, insofar as the prospects of traffic and revenues in the imemdiate future can be foreseen, there is no reason to conclude that the interim adjustment will have any serious effect upon those respondents" (264 I. C. C. 63–64).

The Commission went on to note that intrastate class rates generally in most of the Western States and many of the interstate class rates in western territory were already lower than those prescribed in the interim orders. It accordingly concluded that the territories were reconciled within a very close margin as appears from the following table:

Territory	Aggregate expenses, increased for a 4-percent return computed by applying costs to traffic handled (1939)	Actual expenses as reported by carriers increased for a 4-percent return (1939)	Ratio (percent) of computed expenses to actual expenses
Eastern	$1,426,950,260	$1,451,484,949	98.3
Pocahontas	183,076,590	185,387,990	98.8
Southern	450,448,155	449,001,663	100.3
Western	1,382,549,982	1,395,188,845	99.1
United States	3,443,024,987	3,481,063,447	98.9

The Commission stated, "Judging from the above table, whatever errors may exist in the * * * studies, they have not had the effect of overstating or understating the carriers' costs in the aggregate to any appreciable degree." 262 I. C. C. 587.

[27] It is pointed out, as the Commission found, that livestock is a commodity which cannot do more than pay its own way; that products of the forest are subject to freight rates below the higher brackets; that agricultural products carry a low rate. The western district roads originated 36.91 percent of the total tons of carload traffic originated in the United States (excluding Pocahontas) in 1941, while the eastern roads originated 47.40 percent. To that disparity is added the fact that of the total agricultural products originated in the country in 1941 the western district roads originated 68.82 percent as contrasted to 20.88 percent by the eastern carriers excluding Pocahontas. For manufacturers and miscellaneous tonnage the percentages were 28.06 percent and 60.66 percent, respectively. It is pointed out that while the difference between the percentage of agricultural products originated by the western carriers (68.82 percent) and the percentage of manufacturers and miscellaneous originated by the eastern carriers (60.66 percent) is only 8 percent, the eastern roads' tonnage of the latter group of commodities (which are high-grade traffic) is almost three times the tonnage of products of agriculture originated by the western carriers. Like comparisons are made between other groups of commodities carried by the eastern and western carriers, respectively. Of the total tons of animals and products originated in the country in 1941 (excluding Pocahontas), the western roads originated 63.03 percent, the eastern, 28.51 percent. Of the total tons of products of forests originated in 1941, the respective percentages were 58.73 percent and 7.52 percent. And for products of mines the percentages were 33.31 percent and 49.85 percent, respectively.

[28] The 1941 revenue ton-miles per mile of line were as follows:

Eastern district (excluding Pocahontas)	3,392,964
Pocahontas region	7,519,840
Western district	1,358,041

[29] Costs developed in the cost scales and the carriers' total known expenses by cost

[30] In the 12 months ended October 31, 1946, the revenue tons carried in the West were 26 percent higher than for the year 1941, and the revenue ton-miles were 43 percent higher than in 1941.

[31] See White, Analysis of Railroad Operations (1946) pp. 14–15, p. 69, et seq.; Locklin, Economics of Transportation (1938) p. 581; Miller, Inland Transportation (1933) pp. 500–502.

western roads "cannot consistently maintain these subnormal class rates and continue to maintain the relatively high basis of interstate class rates" (264 I. C. C. 64).

Moreover, as we have already noted, class rates have to a great extent fallen into disuse. This fact is relevant here in two respects. In the first place, the orders of the Commission affect class rates and class rates alone, the Commission not dealing with exception and commodity rates by the interim action which it has taken. So far as present freight movement is concerned, the orders affect a much smaller fraction of the traffic in the West than in the East. The Commission said:

"The record does not support the contention that the revenue needs of the western rail respondents with respect to their class-rate traffic are greater than those of the eastern rail respondents. From the carriers' reports to us for the years 1942, 1943, as shown in our original report, and 1944, it clearly appears that there is a greater need for revenue by rail carriers in the eastern district as compared with rail carriers in the western district or in the southern region. The report shows also that a much larger percentage of the total traffic in the eastern district moves on class rates than in the western district or in the southern region" (264 I. C. C. 64–65).

In the second place, the existing rate structure singles out the class rate traffic in the West for the payment of unusually high rates. The class rate traffic is largely that of small shippers, who do not have the ability to obtain the benefit of the lower exception or commodity rates.

We cannot, therefore, treat this case as if it were one where the Commission, in spite of a showing of some increased cost in the West, reduced all freight rates to a level of equality with the East. It is a case of determining whether the discrimination against one small class of traffic is warranted by the showing of some increased cost in the West. The earning power of the carriers, their freight operating ratios, their rates of return, the estimate of the volume of traffic in the future, the nature and amount of traffic presently involved in the class rate movements are all relevant to the finding of unlawful discrimination. We cannot say that these considerations do not counterbalance or outweigh the disparity in costs between East and West. The appraisal of these numerous factors is for transportation experts. They may err. But the error, if any, is not of the egregious type which is within our reach on judicial review

As we have noted, *Interstate Commerce Commission* v. *Diffenbaugh* (supra, p. 46) held that the act, in its condemnation of discrimination, does not attempt to equalize fortune, opportunities, or abilities. But the Commission made no such effort here. It eliminated inequalities in the class rates because it concluded that the differences in them were not warranted by territorial conditions. We think that the findings supporting that conclusion are based on adequate evidence.

It is argued that the comparison of rates of return and freight operating ratios overlooks the fact that both reflect the higher freight revenue level that prevails in the West. And it is urged that without the rate advantage which the western carriers now enjoy, any comparison which now appears to favor the western carriers would disappear. That argument assumes a constancy in freight traffic and on that assumption could be mathematically demonstrated. But we are dealing here with a problem of discrimination—a western rate structure which, as compared with the East, is not warranted by territorial conditions and which prejudices the growth and development of the West. It would be a large order to say that the removal of that trade barrier will have no effect in increasing traffic. The assumption on which the finding of prejudice is made, is indeed, to the contrary. Moreover, that argument would protect a discriminatory rate structure from the power of revision granted the Commission under section 3 (1) by the easy assumption that without discrimination the carriers would not thrive. But that flies in the face of history and is contrary to the Commission's expert judgment on these facts.

Sixth. An extended argument is made by the western roads, challenging the class-rate reduction on less-than-carload lots. The argument is twofold—first, that the case of unlawful discrimination has not been made out for this type of class-rate traffic; second, that the new less-than-carload class rates are confiscatory.

We have referred to some of the cost figures on less-than-carload lots. We have seen that those cost figures run higher in the West than in the East; that even when no constant costs common to all traffic are allocated to less-than-carload traffic, the deficit in the West is substantially higher than that in the East. The Commission noted that less-than-carload traffic as a whole is carried at a deficit in all territories, except possibly in the South. It also noted that in all territories it was not bearing its proper share of the costs of transportation; that, apart from wartime loading, it was not yielding, on the average, its out-of-pocket costs plus constant expenses solely related to less-than-carload traffic[32] plus the cost of collection and delivery, in any territory except possibly the southern (262 I. C. C. 697).

Little need be said concerning the argument that a case of unlawful discrimination has not been established in the case of less-than-carload traffic. The Commission concluded that if less-than-carload class rates were left unchanged while carload class rates in Southern, Southwestern and Western Trunk-Line Territories were reduced 10 percent, "the competitive relations between shippers shipping in less-than-carload quantities and those shipping in carloads" would be materially affected (264 I. C. C. 66). Less-than-carload traffic is less than 2 percent of total railroad freight tonnage, and much of that moves, not on class rates, but on exception rates and commodity rates. In Western Trunk-Line and Southwestern Territories many intrastate and interstate class rates are now voluntarily maintained on less-than-carload traffic which are lower than the corresponding reduced interstate class rates required by the interim orders. There are other circumstances, to which we will shortly advert, which reinforce the action of the Commission in reducing class rates on less-than-carload traffic. But the ones we have mentioned are adequate to support the Commission on the discrimination phase of the problem. The Commission was dealing not with discrimination against a particular commodity but with discrimination against entire regions. It was a complete rate structure that was subject to inquiry and revision. Once the Commission concluded that unlawful discrimination existed in the main features of that rate structure, it was justified in removing it. In eliminating the discrimination and establishing the uniformity required by the law, it was warranted in making minor collateral readjustments so that the Commission itself would not in turn create new discriminations. The adjustment of the less-than-carload class rates was permissible on that ground alone. The traffic affected was only a fraction of 2 percent of the total traffic. Without that readjustment that class of traffic would be prejudiced. With that readjustment the prejudice would be removed and the entire rate structure—intrastate and interstate—would be more nearly rationalized.

That does not, of course, answer the argument on confiscation. The latter requires more extended treatment.

The western roads in their petition for rehearing before the Commission raised the confiscation point. But in doing so they rested on the record before the Commission and tendered no additional evidence. In the district court, however, they presented further evidence which was received over objection and considered by that court.

This, therefore, is not a case like *Baltimore & Ohio R. Co.* v. *United States* (298 U. S. 349, 363, 371–372), where the Commission refused to receive evidence proffered on the point of confiscation. Here, as we have said, the Commission received all evidence that was offered; and when its order was announced and made known and the petition for rehearing was filed, the opportunity to tender additional evidence to bolster the confiscation point was not accepted. As stated in *Manufacturers R. Co.* v. *United States* (246 U. S. 457, 489–490), and in *St. Joseph Stock Yards Co.* v. *United States* (298 U. S. 38, 53–54), correct practice requires that, where the opportunity exists, all pertinent evidence bearing on the issues tendered the Commission should be submitted to it in the first instance and should not be received by the district court as though it were conducting a trial de novo. The reason is plain enough. These problems of transportation economics are complicated and involved. For example, the determination of transportation costs and their allocation among various types of traffic is not a mere mathematical exercise. Like other problems in cost accounting, it involves the exercise of judgment born of intimate knowledge of the particular activity and the making of adjustments and qualifications too subtle for the uninitiated.[33] Moreover, the impact of a particular order on revenues and the ability of the enterprise to thrive under it are matters for judgment on the part of those who know the conditions which create the revenues and the flexibility of managerial controls. For such reasons, we stated in *Board of Trade* v. *United States* (314 U. S. 534, 546):

"The process of rate making is essentially empiric. The stuff of the process is fluid and changing—the resultant of factors that must be valued as well as weighed. Congress has therefore delegated the enforcement of transportation policy to a permanent expert body and has charged it with the duty of being responsive to the dynamic character of transportation problems."

Thus we think that if the additional evidence was necessary to pass on the issue of confiscation, the cause should have been remanded to the Commission for a further preliminary appraisal of the facts which bear on that question. But we do not take that course here for reasons which will shortly appear.

The Commission explained its finding that less-than-carload traffic was being carried at large deficits and was not bearing its proper share of transportation costs. That finding was based on the operation of the roads in

[32] Constant costs solely related to less-than-carload traffic are those costs which do not vary with the volume of the traffic, but which could be eliminated if no less-than-carload traffic were handled.

[33] See Hamilton, Cost as a Standard for Price, 4 Law and Contemp. Prob., 321, 329:

"Now and then a hardy soul, equipped with simple faith and a calculating machine, essays the adventure of rates based upon the true costs of particular services. The feat is, of course, technically impossible, for value judgments or empirical rules are essential to the distribution of overhead. A calculation of the real cost of transporting cottonseed in less than carload lots from Lampasas, Tex., to Kankakee, Ill., is a stubborn exercise in imputation."

1939 when the average load per car of less-than-carload shipments amounted to only 4.3 tons in the West. Since 1939 there has been a substantial increase in the average loading of such shipments, which was brought about under wartime conditions and which has materially decreased the unit costs attributable to less-than-carload traffic. In the judgment of the Commission it was not shown that loadings in the immediate postwar period were likely to decline to 1939 levels. Moreover, the cost data on less-than-carload traffic related to such traffic as a whole and not solely to that moving on class rates. As we have noted, much of this traffic moves not on class rates but on exception rates and commodity rates. The class-rate traffic bears the highest rates. The past failure of this traffic, as a whole, to carry its proper share of the costs may well have been due in large measure to the maintenance of exception and commodity rates.

The western roads present elaborate analysis (based both on the Commission's cost figures and on costs as adjusted by the evidence introduced in the district court) which shows less-than-carload traffic largely carried at deficits irrespective of the class rate paid under the interim orders. They contend that the loading figure of 4.3 tons is the only reliable one to use in projecting the costs and revenues into the postwar period, since it was in fact the average loading prior to the war, and will be once more, as soon as the order of the Office of Defense Transportation which requires 10-ton loading is revoked. And computations are presented based on that figure which show deficits in less-than-carload traffic, deficits which are increased when the Commission's cost figures are adjusted to reflect cost increases to January 1, 1946. All of those computations include as constant costs only those which related to this traffic. And it is pointed out that if all constant costs were included, the computed deficits would substantially increase.

On the other hand the Commission shows that on the basis of the new interim rates this traffic in the West would produce revenues in excess of out-of-pocket expenses plus 4-percent return plus collection and delivery expenses plus loss and damage payments. That computation is based on a 10-ton loading figure. And on the basis of those types of costs, there is an excess of revenue even though the costs are increased to the January 1, 1946, level. The 1939 less-than-carload costs [34] in the West were 30 percent greater than revenues from all such traffic. If the class-rate portion of less-than-carload traffic is taken, the costs are 81 percent of the revenues, provided certain adjustments are made: (1) increased revenues from the increase in the minimum charge per shipment from 55 to 75 cents which the Commission authorized in this proceeding; (2) the elimination of less-than-carload traffic moving on exception, commodity, and intrastate rates; (3) a 10-ton load; and (4) a 2.47 percent rate of return, which was the actual rate of return of 1939.

We do not stop to analyze the various computations in order to ascertain the exact relation between revenues and costs of less-than-carload traffic. That, indeed, would not be feasible on this record. For even the Commission made no attempt to determine what share of all costs should fairly be allocated to less-than-carload traffic. Hence, if the Commission had spoken its final word, and if it were believed necessary as a matter of constitutional law, see *Northern Pacific R. Co.* v. *North Dakota* (236 U. S. 585); cf. *Federal Power Commission* v. *Hope Natural Gas Co.* (320 U. S. 591, 602), to fix a less-than-carload class rate which produced a fair return on that particular traffic, the case would have to be remanded to the Commission for appropriate findings on this phase. The difficulty of treating the issue on the present record is illustrated in another way. Less-than-carload traffic, more than carload traffic, carries costs which to a degree are dependent on the carrier. Heavy or light loadings, speed of service, ratio of empty return cars, methods of loading freight so as to reduce damage claims, substitution of auxiliary truck service and the like turn on competitive conditions. Certainly rates need not compensate carriers for the most expensive way of handling less-than-carload service. Yet the present findings do not illuminate that problem nor provide the standard in terms of service for measuring the compensatory character of the less-than-carload class rates. And on such a problem the Commission's highest expert judgment would be called into play.

But the Commission has not finished with this problem. In the first place, as we point out hereafter, the Commission, subsequent to the issuance of these interim orders, granted a Nation-wide increase in freight rates, including an increase on less-than-carload rates. The temporary injunction has prevented the interim orders reducing class rates in the West by 10 percent from going into effect. When, therefore, the interim orders do go into effect, the actual rates chargeable presumably will be increased from the level fixed by the interim orders to the level prescribed by the recent order increasing all freight rates. Thus no loss has been suffered by the 10-percent reduction on less-than-carload class rates; and any loss which would have been suffered by that rate reduction has probably been at least lessened, if not eliminated, by the general rate increase. Though it is argued that such is not the case, the showing is too speculative on this record for us to decide what the precise effect of the revised class rates on less-than-carload traffic will be. In the second place, as we have noted, the Commission made the present interim adjustment of class rates on less-than-carload traffic as a consequence of its reduction in carload class rates so that less-than-carload shippers would not suffer a disadvantage from the removal of the major discrimination in the class rate structure. The interim or temporary nature of the adjustment was recognized by the Commission when it admonished the carriers "to give careful consideration to the rates maintained by them on less-than-carload traffic with a view to making readjustments in ratings or rates, as promptly as possible, which will insure that the rates on such traffic are on a compensatory level" (264 I. C. C. 66–67). And it recognized but left untouched the problem of determining what would be the proper share of transportation costs to be borne by less-than-carload traffic.

The justification the Commission had for leaving the problem in that condition at this stage of the proceedings is apparent. The carriers are now preparing the new uniform classification. They have it within their power to follow the lead suggested by the Commission and to propose classification differences between carload and less-than-carload traffic which will obviate any issue of confiscation respecting less-than-carload rates. And it has likewise left open the question of readjustment of the class rates on less-than-carload traffic when the total program, of which these interim orders are but a part, is put into effect.

Where the result of a rate order is not clearly shown to be confiscatory but its precise effect must await operations under it, the court has refused to set it aside despite grave doubts as to its consequences. See *Knoxville* v. *Knoxville Water Co.* (212 U. S. 1, 17–18). And see *Willcox* v. *Consolidated Gas Co.* (212 U. S. 19, 54–55); *Darnell* v. *Edwards* (244 U. S. 564, 570); *Brush Electric Co.* v. *Galveston* (262 U. S. 443, 446); *St. Joseph Stock Yards Co.* v. *United States* (*supra*, p. 69). The reasons for following a like course are equally impelling here. The Commission has not placed the western roads in a straitjacket. It has made an interim reduction on less-than-carload class rates as an incident to its removal of discriminations in carload class rates. It has indicated the course to be followed by the carriers, as a part of the over-all classification and class-rate problem, to make certain that these rates are compensatory. We are thus dealing with a problem which is in flux, an interim order made necessary as a result of a comprehensive revision of entire rate structures. Moreover, the conclusion to be drawn from the recent general increase in freight rates is too uncertain and speculative on this record for us to pass on the confiscation issue. See *Brush Electric Co.* v. *Galveston* (*supra*). The district court amply protected appellants when it overruled their claim that the interim rates are confiscatory without prejudice to another suit to challenge the legality of those rates if, after a fair test, they prove to be below the lowest reaches of a reasonable minimum or if the permanent rates do not meet that standard. See *Darnell* v. *Edwards* (*supra*, p. 570).

Seventh. It was held in *Texas & Pacific R. Co.* v. *United States* (*supra*, p. 650) that where the Commission makes an order under section 3 to remove an unlawful discrimination, the carriers must be afforded the opportunity to "abate the discrimination by raising one rate, lowering the other, or altering both." But that ruling was qualified by the statement that the Commission need not follow that course in case it acts under section 15 (1) (id., p. 650, note 39). Section 1 (5) (a) of the act provides that all charges for the transportation of property "shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful." And see section 1 (4). Section 15 (1) provides that when the Commission finds that "any individual or joint rate, fare, or charge" of a common carrier is "unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial," the Commission may determine and prescribe "what will be the just and reasonable" rate. And see section 15 (3). The words "unjustly discriminatory or unduly preferential or prejudicial" plainly refer to practices condemned by section 3 (1). A proper finding of unlawful discrimination under section 3 (1) thus enables the Commission not only to direct the carriers to eliminate the practice but also, pursuant to section 15, to prescribe the alternative. See *Youngstown Sheet & Tube Co.* v. *United States* (295 U. S. 476). Thus the Commission in this type of situation, as in the case where intrastate commerce is involved, *Georgia Public Service Commission* v. *United States* (283 U. S. 765), may remove unlawful discriminations and prescribe new rates.

In *Texas & Pacific R. Co.* v. *United States* (*supra*, p. 650) it was also stated that, "A carrier or group of carriers must be the common source of the discrimination—must effectively participate in both rates—if an order for the correction of the disparity is to run against it or them." And it was held in *Central R. Co.* v. *United States* (257 U. S. 247, 259) that mere participation in joint rates does not make connecting carriers partners in discrimination; that they can be held responsible for unjust discrimination only if each carrier has participated in some way in the practice which causes the discrimination, "as where a lower joint rate is given to one locality than to another similarly situated." It is argued that the same rule applies in this case since, for example, the western carriers have no control of or participation in the lower Official intraterritorial rates, although they do participate in the joint or through interterritorial rates.

In reply it is said that carriers in Official Territory control rates within that area and

[34] Out-of-pocket costs plus solely related constant costs.

also control, jointly with the carriers in each of the other territories, the rates from each of them into Official. That common source of discrimination is said to be sufficient to sustain the Commission's action. See *St. Louis, Southwestern R. Co.* v. *United States* (245 U. S. 136); *Chicago I. & L. R. Co.* v. *United States* (270 U. S. 287). But we do not need to decide the question. For the principle announced in *Central R. Co.* v. *United States* and *Texas & Pacific R. Co.* v. *United States, supra,* is applicable only where the Commission is directing the carriers to remove the discrimination. Those cases hold that the Commission may not require carriers to do what they are powerless to perform. But the Court recognized in *Central R. Co.* v. *United States, supra,* page 257, that where the Commission acts pursuant to section 1 to require carriers to establish, in connection with through routes and joint rates, reasonable rules and regulations, that problem is not involved. For then the Commission corrects the unlawful discriminatory practice in the case of each carrier by prescribing the just and reasonable rate or practice. The same is true where, as here, the Commission in order to eliminate territorial discriminations proceeds under section 15 (1) to fix new reasonable rates. If the hands of the Commission are tied and it is powerless to protect regions and territories from discrimination unless all rates involved in the rate relationship are controlled by the same carriers, then the 1940 amendment to section 3 (1) fell far short of its goal. We do not believe Congress left the Commission so impotent.

It may not be said in this case, as it was held in *Texas & Pacific R. Co.* v. *United States, supra,* page 633, that there was no evidence of the unreasonableness of the rates, or that that question was not in issue. The Commission here found that the rates were unjust and unreasonable under section 1 and it proceeded to fix new rates under section 15 (1). The facts which establish that the differences in rates as between the several territories are not warranted by territorial conditions plainly sustain its findings under section 1.

As we have said, this proceeding pertains only to class rates, which move but a small percentage of the traffic. It is, therefore, argued that the Commission should not have made adjustments in those rates without bringing about some equalization of exception and commodity rates under which the bulk of the traffic is moved. But there is no reason in law why the Commission need tackle all evils in the rate structure or none. It may take one step at a time. Compare *United States* v. *Wabash R. Co.* (321 U. S. 403). The 10 percent interim rate order did not attempt to bring about complete elimination of the discriminatory features of the class rate structure. It was only an approximation of that result, the complete step awaiting the new uniform classification. But the reasons justifying that partial measure likewise support the action of the Commission in commencing with class rates when it tackled the problem of territorial discriminations.

Eighth. A different problem is presented when we turn to the 10-percent increase in class rates which the Commission prescribed for Official Territory. Appellants strenuously urge that this action of the Commission was unauthorized under the act, even if the other portions of its orders were justified.

The finding of the Commission on this phase of the case was that the present class rates in Official Territory were below a just and reasonable level and should be increased 10 percent as a part of the adjustment of the rate structure in order to remove the unlawfulness both as respects their unreasonable low level and their unduly preferential character (262 I. C. C. 700–701, 704–705; 264 I. C. C. 62). That finding is said to be without support in the record and to lack the preliminary findings necessary to support it.

It is argued that rates are not unreasonably low in violation of section 1 unless they are either noncompensatory or otherwise threaten harmful effects upon the revenues and transportation efficiency of the carriers in question or of their competitors. It is said, as is the fact, that no such findings were made by the Commission and that on this record there are no facts which could support such a finding.

If this were a case of determining whether existing rates passed below the lowest or above the highest reaches of reasonableness, the point might be well taken.[35] See *United States* v. *Chicago, M., St. P. & P. R. Co.* (294 U. S. 499, 506). But we do not have here such a revenue problem. This case presents problems in rate relationships; that is to say, problems of a discriminatory rate structure condemned by section 3 (1). The Commission may remove a discrimination effected by rates even when they are within the zone of reasonableness, if the discrimination is forbidden by section 3 (1). As Mr. Justice Brandeis stated in *United States* v. *Illinois Central R. Co., supra,* p. 524, the mere fact that one rate is "inherently reasonable and that the rate from competing points is not shown to be unreasonably low does not establish that the discrimination is just. Both rates may lie within the zone of reasonableness and yet result in undue prejudice." The Commission has the power to adjust the rates, upwards and downwards, within that zone, in order to eradicate the discrimination. That power is not unlimited; there are standards which control its exercise. But as we shall see, the Commission acted within permissible limits here.

Once the Commission has found rates to be "unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial," it is empowered to prescribe rates which are "just and reasonable" or "the maximum or minimum, or maximum and minimum, to be charged. * * *" Section 15 (1). In *Youngstown Sheet & Tube Co.* v. *United States, supra,* the Commission, acting under section 15 (1), increased rail rates by prescribing what it found to be reasonable minimum rates. There was no finding that the existing lower rates were not compensatory. The finding of reasonableness was premised on the grounds that "lower rates would create undue discrimination against shippers in origin districts who cannot use the water-rail route and would tend to disrupt the rate structure and to destroy the proper differentials between various producing districts on shipments to Ohio destinations." Page 479. The Commission relied not only on evidence bearing upon the character of the service and cost but also on a comparison of other rates in the same or adjacent territory. The Court sustained the order saying, "The existing rate structure furnished support for the finding of reasonableness." Page 480. In *Scandrett* v. *United States* (32 F. Supp. 995, 996; affirmed 312 U. S. 661), the Commission had found that proposed reduced rates were "compensatory, considering all costs" but that they were below a minimum reasonable level and therefore unlawful. It took that action to prevent destructive competition between rail, water, and motor carriers. The Court sustained the order. And see *Jefferson Island Salt Min. Co.* v. *United States* (6 F. 2d 315).

These cases, to be sure, recognize the power of the Commission so to fix minimum rates as to keep in competitive balance the various types of carriers and to prevent ruinous rate wars between them. That plainly is one of the objectives of the act, and one of the reasons why the Commission was granted the power to fix minimum rates by the Transportation Act of 1920. (See H. Rept. No. 456, 66th Cong., 1st sess., p. 19. Cf. *Mississippi Valley Barge Co.* v. *United States,* 292 U. S. 282.) But the elimination of discrimination occupies an equally high place in the statutory scheme. And, as we have said, the power granted the Commission under section 15 (1) includes the power to prescribe rates which will substitute lawful for discriminatory rate structures. If the Commission were powerless to increase rates to a reasonable minimum in order to eliminate an unlawful discrimination, unless existing rates were shown to be noncompensatory or unless ruinous competition would result, it would in some cases be powerless to prescribe the remedy for unlawful practices. The present case is a good illustration. A 10 percent reduction of rates in the South and West would remove only part of the discrimination. On this record it is most doubtful that a full reduction of those rates to the level of Official Territory would be warranted. Yet if the rates in Official Territory may not be increased unless the present ones are shown to be noncompensatory, discrimination against the South and West and in favor of Official Territory would continue to thrive. For shippers in official territory would still have a preferred rate, as compared with shippers from the South and West, in reaching the great markets of the East—a preference not shown to be warranted by territorial conditions. The raising of rates to a reasonable minimum was, therefore, as relevant here as it was in *Youngstown* v. *United States, supra,* to the Commission's task of providing a rational rate structure.

The authority of the Commission to increase rates in order to remove discrimination, even though existing rates may be compensatory, is not unlimited. Section 15a (2) of the act provides:

"In the exercise of its power to prescribe just and reasonable rates the Commission shall give due consideration, among other factors, to the effect of rates on the movement of traffic by the carrier or carriers for which the rates are prescribed; to the need, in the public interest, of adequate and efficient railway transportation service at the lowest cost consistent with the furnishing of such service; and to the need of revenues sufficient to enable the carriers, under honest, economical, and efficient management, to provide such service."

The balancing and weighing of these interests is a delicate task. "Whether a discrimination in rates or services of a carrier is undue or unreasonable has always been regarded as peculiarly a question committed to the judgment of the administrative body, based upon an appreciation of all the facts and circumstances affecting the traffic." *Swayne & Hoyt, Ltd.* v. *United States* (300 U. S. 297, 304). And see *United States* v. *Chicago Heights Trucking Co.* (310 U. S. 344, 352–353); *Barringer & Co.* v. *United States* (319 U. S. 1, 6–7). We may assume, however, that if the rates of return of the eastern carriers were substantially above that for the South and the West, an increase of the rates for the former would not be permissible, even in order to remove a discrimination. But, as we have seen, the rate of return in recent

[35] The point might also be well taken if this were a proceeding under sec. 13 (4) to determine whether intrastate traffic was producing its fair share of the earnings required to meet maintenance and operating costs and to yield a fair return on the property devoted to interstate and intrastate transportation. *Florida* v. *United States, supra; United States* v. *Louisiana* (290 U. S. 70); *North Carolina* v. *United States, supra.*

years[36] has favored the southern and western carriers, as have the freight operating ratios. The Commission took those factors, as well as the others we have reviewed, into consideration in determining that an increase in rates in Official Territory was warranted (264 I. C. C. 61–62).

Revenue needs like costs of rendering the transportation service, are germane to the question whether differences in territorial rate structures are justified by territorial conditions. They are amongst the standards written into section 15a; they reflect the totality of conditions under which the carriers in the respective territories operate. Should the Commission fail to consider them in determining whether the discrimination inherent in the rate structures was unwarranted it would have not completed its task. There may be differences of opinion concerning the weight to be given those factors, especially the weight to be given the rate of return in the current years as opposed to that in the preceding decade. But their significance is for the Commission to determine; and, though we had doubts, we would usurp the administrative function of the Commission if we overruled it and substituted our own appraisal of these factors.

Ninth. After the present interim orders were issued, the Commission granted a nation-wide increase in all freight rates.[37] It is argued that this rate increase has rendered the interim orders with which we are here concerned obsolete and unenforceable. It is said that in making the general rate increase, the Commission found greatly different conditions affecting transportation rates from those it found in these proceedings; that the greater increases allowed in Official Territory[38] undo the uniformity policy on which the interim orders are framed, and that the enforcement of the interim orders in light of these changed conditions would produce results plainly not contemplated.

This is not a case where by reason of changed conditions the record is stale. The changed circumstances do not affect the issues here. (Cf. *Interstate Commerce Commission* v. *Jersey City*, 322 U. S. 503, 515; *United States* v. *Pierce Auto Lines*, 327 U. S. 515, 535.) To repeat, this is a proceeding to eliminate territorial rate differences not justified by territorial conditions. The general rate increase recently granted by the Commission was a revenue proceeding. Revenue adjustments can be and are superimposed on such rate structures as exist. The fact that revenue adjustments may produce lack of uniformity in rates is not inconsistent with the decision in the present case. As we said earlier, section 3 (1) does not dictate a policy of national uniformity in rates; it only requires that the lack of uniformity in rates among and between territories be justified by territorial conditions. The finding of the Commission, if supported by evidence, that the revenue needs of carriers in one territory demand a lower or a higher rate in that territory is a justification for a difference in rates as between that territory and other territories. The order of the Commission granting the general rate increase is not before us and we intimate no opinion on it. It is sufficient for our present purposes to say that it emphasizes the distinction between revenue and rate relationship cases and in no way impairs the finding in the present case that the existing class-rate structure that has prevailed in the several territories stands condemned under section 3 (1). Nor is there any inherent inconsistency between the interim orders reducing class rates and the recent order increasing all rates. The latter was based on conditions in a period subsequent to the discrimination proceedings. Whether the general rate increase will require adjustments in the new permanent uniform scale which awaits the new uniform classification is a question for the Commission when the new classification is ready.[39]

Other issues raised by appellants need not be discussed. The injunction staying the orders of the Commission is vacated and the judgment of the district court dismissing the petitions is affirmed.

[36] As we point out hereafter, after the present interim orders were issued, the Commission granted a general freight-rate increase. See Ex parte No. 162, note 37, *infra*. In that case it reviewed the rates of return of the roads in the several territories based on the rates in effect at the time, which of course did not include the 10-percent increase in class rates for Official Territory authorized in this proceeding but stayed by the district court. What the Commission said in Ex parte No. 162 corroborates its finding in the present case concerning the greater relative revenue needs of the roads in Official Territory:

"On the basis of the interim rates in effect since July 1, 1946, the rate of return for the eastern district will be considerably less for 1946 than in the Pocahontas region, the southern region, or the western district, even though an additional increase of 5 percent in certain rates in Official Territory was authorized and has been in effect since July 1, 1946. It also appears that even on the basis of the increases sought in Ex parte No. 162 and the railroads' estimates of revenue, the rate of return in the eastern district for 1946 will be less than the rate of return in the Pocahontas region, the southern region, or the western district." 266 I. C. C. 548.

The latter estimates of the rate of return in percent are as follows:

Eastern district	2.06
Pocahontas region	6.26
Southern region	4.01
Western district	3.31

[37] Ex parte No. 162, interim report 264 I. C. C. 695, final report December 5, 1946, 266 I. C. C. 537. This increased most basic freight rates by 15 to 25 percent. Rates on articles under the general commodity grouping of Manufactures and Miscellaneous, class rates and rates on less-than-carload and any-quantity traffic were increased 25 percent in Official Territory, 20 percent within and between other territories, and 22.5 percent between Official Territory and points in other territories. Express rates were increased October 28, 1946. Ex parte No. 163, 266 I. C. C. 369.

[38] See note 37, supra.

[39] That the order granting the general freight rate increase did not affect the orders in the present proceeding is made clear by the following provision:

"That outstanding unexpired orders in other proceedings are hereby modified so as to permit the increases in freight rates and charges herein authorized to be established: *Provided, however*, That the provisions of this paragraph shall not be construed to suspend or supersede or modify or affect the findings and order entered in Class Rate Investigation, 1939, docket No. 28300, the operation of which is stayed by court order. * * *"

See Ex parte No. 162, supra, note 37.

Republican Savings

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article entitled "'Enemy' Arithmetic Says GOP's in Red," which appeared in the Washington Post, Washington, D. C., on May 11, 1947:

"ENEMY" ARITHMETIC SAYS GOP'S IN RED

(By Robert C. Albright)

That economy ax, which cut down a hornet's nest instead of a forest, has netted Republican economizers $1,272,000,000 in "savings."

If you use "official" Republican figures, that is.

If you use Democratic figures, the ax just went "swoosh." And there weren't any savings.

For Democrats are keeping their own tally.

The two tables are strangely at variance on the first four departmental bills. These represent nearly 45 percent of the President's $37,500,000,000 budget.

Democrats are prepared to claim that the Republicans not only haven't cut the budget $1,272,000,000 to date, but have actually upped costs nearly $400,000,000.

Tennessee's ALBERT GORE, Democratic scorekeeper on economies to date, figures this way:

Instead of $897,000,000 of savings on the Treasury-Post Office bill, GORE allows only $97,000,000. He says the $800,000,000 balance was arbitrarily sliced from tax-refund reserves that must be paid back to the taxpayer in any event.

Instead of $79,000,000 cut from Labor-Federal Security, GORE concedes at most $29,000,000. He disallows a fifty-million-dollar cut for hospital and construction activities. A buried authorization for up to $150,000,000 for hospital construction more than erases the cut.

GORE agrees a full $134,000,000 was saved on the House-passed Interior bill, and another $162,393,000 on the State, Justice, Commerce, and Judiciary bill just reported.

Thus on all four bills, GORE concedes a saving of just $422,893,000.

How does he show the Republicans nearly $400,000,000 in the red?

He simply turns to the House-passed Knutson bill, slashing taxes.

Under the Knutson bill, retroactive tax cuts for the first 6 months of this year would be refunded to taxpayers in 1948.

At rock-bottom, GORE figures these refunds would add another $757,000,000 to 1948 budget costs. Actually, they may run as high as $1,200,000,000.

If he's right that meat ax has a rubber blade.

Is Congress Antilabor?

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 13 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Is Congress Antilabor?" from the magazine America for April 19, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS CONGRESS ANTILABOR?

Some sincere people have an honest doubt about the intentions of the Republican-dominated Eightieth Congress with respect to labor unions. They are not sure whether the Congress aims to pass some corrective legislation, which they would favor, or whether it is intent on crippling organized labor. It may help such people to make up

their minds if they consider what the House of Representatives has just done to the Labor Department's budget for fiscal year 1948. The Department requested $103,000,000, of which $71,728,000 was earmarked for the State employment services. The total budget was slashed $13,000,000, but not a cent was cut from the $71,728,000 destined for State jobholders. The Bureau of Labor Statistics was cut 60 percent; the United States Conciliation Service lost 80 percent of its operating organization; the Wages and Hours Division was reduced 25 percent; the National Labor Relations Board, after a deep cut last year, was slashed another 10 percent. That last item is especially revelatory. The Wagner Act, which the NLRB administers, affords legal protection to the right of workers to organize for the purpose of collective bargaining. Its passage in 1935 indicated that the Congress was favorably disposed toward labor organizations and interested in strengthening them. In view of the fact that the Board has at the present time a backlog of more than 5,000 cases, that in January alone 1,145 new cases were presented to it, of which 72 percent were petitions for collective bargaining elections, any reduction now in its budget indicates that the Eightieth Congress is intent on reversing the stand of its predecessors; that, in short, it is unfavorably disposed toward labor unions and is determined to weaken them.

Reduction of Interior Department Budget

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include therein an editorial from the Tacoma Times on May 2, 1947:

CONGRESS NEEDS TO BE TOLD

The next few weeks of national legislative history as it is being written by the Eightieth Congress will tell the story of whether the Western States can compete with Greece and Turkey for Federal appropriations.

A House of Representatives determined to economize has hit the Western States a vicious blow in stripping down the Interior Department budget, and skeletonizing particularly those appropriations which most vitally concern the Pacific Northwest.

If there is hope for the Northwest region to regain the items most necessary to a continued forward development in population and industry, that hope must lie with the United States Senate.

The Senate expects to begin appropriation hearings within a week before its subcommittee; the West, especially the Northwest, will need every friend it can muster if the proper showing is to be made.

Worst feature of the whole situation lies in the fact that men who do not understand are at the controls. A few days ago the vice president of a great transcontinental railroad was in Tacoma and the power shortage was mentioned to him.

"I don't believe it." That was what he said; and that man has his office in Seattle, in the midst of the industrial region that supplies his railroad with vast quantities of freight—east and west hauls. The gentleman is uninformed. Perhaps we cannot too strongly condemn east coast Congressmen for ignorance of a situation that has so far failed to impress some of our most vitally concerned citizens right here at home.

The Northwest, seeking to expand its industrial economy, has for years urged the world to look at our unlimited hydroelectric power resources. We also have pointed with the other hand to our vast land reclamation possibilities. What we have not adequately shown even to ourselves is that reclamation and power development go hand in hand, throughout the Columbia River basin.

Neither have we adequately shown that power at this stage of regional development must come first, since reclamation is a slow process, and the power need is here now. Industry has moved in faster than agriculture.

But it needs to be understood both in Congress and at home that construction of dams and impounding of water for power purposes in big-scale projects is too costly unless other public service can be accomplished at the same time.

Congress has been given a picture of a vast program of land reclamation stretching over possibly another century; but the Lower House, at least, has not been impressed with the urgency of the present situation as an obligation of a Federal Government that has become the great bulk wholesaler of electric energy in this region.

Here lies our immediate task: To unite our own educational forces, set aside selfish economic and political interests and very speedily lay our regional case before the Senators.

There must be ample room in the over-fat Government machine for economies to be effected; but to stop the essential appropriations for Federal power service in this area, most damaging to private enterprise should be the last objective of any Congress bearing the responsibility.

Congress Should Continue Flood-Control Program

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. PRICE of Illinois. Mr. Speaker, once again this past spring, as it has been every spring in our memory, the great Mississippi Valley has been ravaged by floods and the effects of floods. This problem is of national scope in that its effective solution can only be accomplished by a bold, comprehensive attack from a national point of view. Within my own congressional district, great expanses of our Nation's richest agricultural and industrial development are annually subjected to the danger of complete destruction from the mightiest of all rivers.

Flood control to the residents of the Twenty-second Congressional District is far removed from the pat description of "pork barrel" that some of its opponents describe it. This program of harnessing the flood waters of the Mississippi is as real to the people of the Mississippi Basin as their very existence. Our great Nation cannot disregard its responsibility in assuring that this menace be curbed.

I insert herewith under leave to revise and extend my remarks an appeal from the Sixty-fifth General Assembly of the State of Illinois to the Congress to take action in this matter that is so important to the millions of people living in the Mississippi Valley.

The Illinois Assembly might well have included the counties of Madison, Monroe, and St. Clair.

House Joint Resolution 30

Whereas once again floods have inflicted heavy damage along the east bank of the Mississippi River, and particularly in Randolph County; and

Whereas this damage to crops could have been prevented had levees been constructed and completed according to the original plans of United States engineers: Therefore be it

Resolved by the House of Representatives of the Sixty-fifth General Assembly of the State of Illinois (the Senate concurring herein), That we do hereby petition and memorialize the Congress of the United States of America to provide for and require the construction and completion of the planned levee system so that future damage to crops and other property in this area will be prevented; that copies of this preamble and resolution be forwarded by the secretary of state immediately to every Illinois Member of Congress.

Adopted by the house, April 29, 1947.

HUGH GREEN,
Speaker of the House.
FRED W. RUEGG,
Clerk of the House.

Concurred in by the senate, May 7, 1947.

HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

South Dakota Editor Discusses GI Thinking

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I desire to insert in the RECORD at this point a copy of an editorial written by a friend of mine, Ellsworth J. Karrigan, associate editor of the Aberdeen American-News, published each day in Aberdeen, S. Dak. Mr. Karrigan had an honorable war record in World War II and his observations as a GI merit thoughtful consideration in these troubled times.

WHAT DOES DOUGHBOY THINK NOW?

Many a young American who survived the pain and horror of the 11 months of fighting in Europe from D-day until VE-day or who participated in any campaign of the deadly combat that reduced Hitler's war machine to a point of surrender was reflecting Thursday on his whereabouts and his thinking 2 years ago.

Whether he was patrolling the Elbe River on the alert for some gray-green-clad German soldier who had not learned the shooting was supposed to stop or whether he was herding Nazi prisoners of war in the Ruhr pocket, he was pretty certain that he and his country had things under control. He was pretty certain that the lessons he and his country had learned at the cost of thousands of lives and billions of dollars would assure steps toward a lasting peace.

This doughboy, elated that he had lived to see the end of the war in Europe and a

little proud too of the part he had played in keeping the world safe for democracy, vowed that the world would never get in another mess "as long as I have anything to say about it, and, believe me, I will have something to say about it."

He saw the breeding places of war in Europe, he realized the smallness of the world, and he put two and two together.

Unless these people in Europe can be shown the way toward peace, he knew, there would be one conflict after another and the United States couldn't help becoming involved.

This battle-weary doughboy who has seen so much wanton waste and destruction (that is war in its final analysis) was satisfied in his own mind that no cost would be too great in efforts to prevent another war and that the United States, safe, prosperous, and scar-free, would bear its share.

He thought sometimes out loud, "If only all our Congressmen and all Americans had seen what I have seen and knew what I know about war, a program for peace couldn't miss."

But even though America and the greater majority of her citizens didn't know what war was all about, this foot soldier, who had survived a thousand hells, was confident.

He said to himself and to his buddies who were of the same thought: "I will tell Americans, and they will believe me. I'll make them believe me. My son must never experience the things I have experienced."

What has happened to that doughboy these 2 years since he so sincerely and determinedly vowed that he would use his influence to see that America remembered the close call it had in World War II and the lessons it learned?

What has happened to that voice that on VE-day seemed so strong and confident?

Well, it may be sounding. Possibly it is sounding loud.

But too few persons hear it now or have heard it during these two short years.

Regardless of how loud that voice of the former doughboy is, expressing what (in the light of subsequent occurrences) must now seem a silly sentimentality, other sounds—louder ones—are drowning it out.

These other sounds fall generally in the classification of demands for greater profits, higher wages, lower taxes, and reduction of the armed forces.

And there are among the other sounds—and possibly louder—the veterans' demands about houses to live in and jobs that pay wages sufficient to raise families while buying furnishings and foods at inflationary prices.

The America that rolled up its sleeves, gave freely of its manpower, and spent billions of dollars to help win a war is now, despite an almost unanimous expression of belief in the "one world" theory, impressed by its self-sufficiency and swayed by the profit motive.

It is hedging on peace through the bickering of the leaders of its two major political parties.

They can't agree on needs for preparedness and defense. They differ over what should be our foreign policy.

They each try to embarrass the other on settlement of domestic issues.

Meanwhile that doughboy who knew war, that doughboy who 2 years ago had such great confidence in himself and in his country was wondering on the anniversary of VE-day what he could do to make his voice heard.

He was saying again, now in more of a spirit of hope than in confidence:

"If only all our Congressmen and all Americans had seen what I have seen and knew what I know about war."

Searches Without Warrants by Police Officers

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. BEALL. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial from the Cumberland News, Cumberland, Md., May 12, 1947:

ASTOUNDING DECISION BY THE UNITED STATES SUPREME COURT

A 5-to-4 decision by the Supreme Court of the United States holds that officers of the law arresting a man in his home may search it for instruments of a crime and may seize evidence to convict him of an entirely different crime if they happen to find it, regardless of the fact that they do not have a search warrant.

In support of this apparent license to rummage is the majority viewpoint that the search is justified as an incident to the arrest, that the evidence actually found showed a crime was being committed in the presence of the officers, and that it was immaterial that this evidence was unrelated to the arrest. Against this decision was that of the dissenters, who held that the ruling destroys the protection of the search-and-seizure provisions of the Constitution for any person arrested in his home and offers serious threats to basic liberties.

Article IV of the 10 original amendments, the so-called Bill of Rights, is entitled "Right of Search and Seizure Regulated" and reads as follows:

"That the right of the people to be secure in their persons, houses, papers and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized."

The Supreme Court, to our way of thinking, stuck its foot through that particular part of the Bill of Rights, in its Harris decision several days ago. It was another of those one margin decisions, concerning which there probably will be much ado until the high court reverses itself.

Harris, a small-bore crook in Oklahoma City, was arrested on a charge of trying to defraud an oil company by a check forgery. FBI agents had an arrest warrant, but no search warrant. Nevertheless, they took custody of the man in his apartment, and proceeded to search the premises. For 5 hours they ransacked the place. They were looking for a couple of canceled checks for evidence. While they didn't find what they wanted, they did find in the bottom of a dresser drawer an envelope containing a number of draft cards and registration forms, possession of which is illegal under the Selective Service Act. It was on this latter crime that Harris was tried, convicted, and sentenced. The case was carried to the Supreme Court on the question of whether the fourth amendment had been violated.

For the majority, Chief Justice Vinson ruled that the search was not "unreasonable," since it was confined to the premises where the arrest occurred; and that the evidence was valid, since it was discovered in the course of that search, although it related to a crime at the time unsuspected by the arresting officers.

The four minority Justices denounced that end-justifies-the-means line of reasoning—and most of us will agree that what they said makes sense. As Justice Frankfurter, one of the dissenters, points out, "The Court's decision achieves the novel and startling result of making the scope of search without warrant broader than an authorized search." That hardly could have been the intention of the framers of the article.

The gist of the opinions of the other dissenters was that the arresting officers, if they had good reason to believe incriminating evidence was hidden in the man's apartment, could have gone before a judge and obtained a search warrant "particularly describing the place to be searched, and * * * things to be seized."

Not circumscribed by such due process, any arresting officer might feel free to ransack from cellar to attic any home, or to rifle all the desks and safes and files of any office, whenever an arrest is made—even though the arresting officer would be largely free to choose the premises to be searched, among all the places where the accused person might be found.

It could happen to a respectable citizen, instead of a penny-ante criminal like Harris, and if it should, we are sure that the majority Justices—Vinson, Burton, Reed, Black, and Douglas—would hold the search unreasonable. But before any such other test case reaches them, much damage is likely to be done.

Interpretations of the Constitution is a matter on which many great legal minds have differed. But the closeness of the vote in this case raises strong doubt as to the soundness of the majority's interpretation, and whether any great legal minds are included among it.

Unification of the Armed Services

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the experience of World War II demonstrated that combined operations under unified command contributed greatly to the effectiveness of American and allied armed forces in all theaters; and

Whereas in consequence of combined operations under unified command, the United States will necessarily function in a single global theater of war as a single team, the effectiveness of which will depend on unity of command: Now, therefore, be it

Resolved by the Twenty-fifth National Convention of the Disabled American Veterans in session at Portland, Oreg., this 5th day of September 1946, That in the interest of national security, Congress be urged to unify the armed services under a single Department of Common Defense, in which the Army, Navy, and Air Forces would be coequal;

Resolved, That the unified Department of Common Defense be headed by a single civilian secretary who would be a member of the President's Cabinet, with a secretary for the Army, a secretary for the Navy, and a secretary for the Air Forces responsible to him;

Resolved, That a Council of Common Defense be created, responsible to the President, to coordinate all military and related activities essential to the national security, and to consist of the Secretary of Common Defense, the Secretary of State, the Secretaries for the Army, Navy, and Air Forces, and the Chairman of a National Resources Board;

Resolved, That under the Secretary of Common Defense, the three armed services be completely coordinated for planning, operations, research, intelligence, budgeting, and administration including personnel and supply, both for maximum effectiveness as a team and to prevent waste, duplication, overlapping of function, and unnecessary expenditure for the national security; and

Resolved, That every effort be made to obtain the enactment of a unification bill by the Eightieth Congress in conformity with this resolution.

What Russia Got—So Far

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. Samuel B. Pettengill, former Representative from Indiana:

WHAT RUSSIA GOT—SO FAR

Here are some of the things that Russia and her puppet states have gotten out of the war. No doubt more will be revealed when our Government finally decides to take us into its full confidence.

Treaty with Italy: $100,000,000 to be paid to Russia; $125,000,000 to Yugoslavia; two-thirds of the Province of Venezia Giulia to Yugoslavia; Trieste converted into a free territory with a government under the United Nations.

Treaty with Hungary: $200,000,000 to be paid to Russia; $50,000,000 to Yugoslavia; $50,000,000 to Czechoslovakia; northern Transylvania ceded to Rumania.

Treaty with Rumania: $300,000,000 to be paid to Russia; northern Bukowina and Bessarabia ceded to Russia; southern Dobrudja ceded to Bulgaria.

Treaty with Bulgaria: $25,000,000 to be paid to Yugoslavia.

Treaty with Finland: $300,000,000 to be paid to Russia; her chief port of Petsamo ceded to Russia.

The Yalta agreement (Stalin, Churchill, and Roosevelt): The southern half of the Island of Sakhalin and all adjacent islands ceded to Russia. Port Arthur given to Russia as a naval base; the port of Dairen internationalized with interests of Russia made dominant; the Chinese Eastern Railroad and the South Manchurian Railroad to be jointly operated by a Russian-Chinese company; the Kurile Islands ceded to Russia. China was not consulted in making this agreement, but the President of the United States undertook to force Chiang Kai-shek to yield.

The Potsdam agreement (Stalin, Attlee, and Truman): Poland partitioned without the consent of the Polish Government—previously recognized by the Allies—a Russian puppet Polish Government installed and recognized; Russia given a free hand to seize as reparations anything in the Russian zone in Germany. In addition, Russia given as reparations 15 percent of metallurgical, chemical, and machine manufacturing industries located in the western zone occupied by Britain, France, and the United States; 10 percent of all other industrial capital equipment in the western zones which were considered "unnecessary for the German peace economy" to maintain German living standards, not exceeding those of other European countries; Russia's boundaries moved westward. The city of Koenigsberg and adjacent territory to be ceded to Russia. Millions of Germans moved out of the territories given to Poland and Russia; Britain and the United States surrender all claims to German assets in east Germany, Bulgaria, Finland, Hungary, Rumania, and eastern Austria; Germany's merchant ships and fishing fleets to be divided, etc.

These are some of the things we have actually agreed to give Russia. In addition, Russia has seized territories with more than 80,000,000 people, and Mr. Roosevelt agreed that she could keep millions of German prisoners of war as slave laborers. Add, also, supplies by way of lend-lease totaling $11,260,343,603, much of which will be useful to Russia in peace as well as war.

It is true, of course, that Russia suffered more than any allied nation (although scarcely at all in her 1 week's war with Japan). However, if we were hard-headed and not soft-brained, we would recognize that Russia helped both Germany and Japan with nonaggression treaties—that Stalin and Molotov watched, with complete indifference, Hitler's conquest of western Europe, and probably would never have turned a hand if Hitler had not forced Stalin to fight.

SAMUEL B. PETTENGILL.

It's Up to Congress

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Washington News of May 12, 1947, which I think is quite appropriate at this time. Here it is:

IT'S UP TO CONGRESS

Unless this session of Congress acts on universal military training and Army-Navy unification, congressional lip service to the Truman-Vandenberg bipartisan foreign policy can be dismissed as so much eyewash.

We cannot have a strong foreign policy without the force to back it up. Brave talk alone will fool nobody but ourselves.

We neither have nor want a large professional Army. But the only adequate substitute is a trained civilian reserve which can be built up only by compulsory universal training.

Pearl Harbor demonstrated the mischief disunity can do in the armed services. We invite another such disaster by maintaining rival and jealous Army and Navy Establishments, each with its independent air force.

Congress is evading the training issue by waiting for the report of the President's advisory committee. The committee has been disappointingly slow. But that does not absolve Congress of its responsibility. It should face up to the issue now.

Even the excuse of a delayed committee report cannot be found for the reluctance to act on merger legislation. Exhaustive hearings have been held, and every Member of Congress has had time to familiarize himself with the provisions of the President's unification bill.

We have had enough talk. Let's have some action.

North Carolina College for Negroes

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks, I am attaching an article which appeared in the Durham Herald-Sun, Durham, N. C., on the North Carolina College for Negroes and its president, Dr. James E. Shepard:

(By Tom MacCaughelty)

In a country where even Negroes are divided into two camps over techniques of raising the status of America's minorities, the North Carolina College at Durham stands as a living monument to a Negro who preaches and practices the philosophy that the minority group should emphasize its duties more than its rights.

This is not to say that Dr. James E. Shepard, founder and president of the college, is fully satisfied with the attainment of his race in North Carolina, nor that he has closed his eyes to the claims of discriminations against his people. It is to say that Dr. Shepard puts little faith in the efficacy of racial feuds in courts or elsewhere and much faith in the friendlier processes of democracy, which he describes as "that audacious belief of our people that in the most ordinary men there are resident the more extraordinary possibilities, and that if we keep the doors of opportunity open to them, they will amaze us with their achievements."

Symbolic of that definition of democracy, the college has become an open door to opportunity for countless Negroes, and both a producer of and a working place for men of achievement, as the following facts show: (1) Together with great numbers of needed but less outstanding workers in a wide variety of pursuits, the college has produced such men at A. T. Spaulding, the only Negro insurance actuary in the country, H. M. Michaux, head of the Union Insurance and Realty Co. of Durham, R. L. McDougald, vice president of the Mechanics and Farmers Bank, and J. L. Tilley, president of the Florida Normal and Industrial School; (2) out of its 43 faculty members teaching in the undergraduate school, 12 hold Ph. D. degrees: (3) the college is one of only four Negro colleges in the country that is approved by the Association of American Universities.

The college's history and growth offers one of the best arguments for its founder's philosophy of race relationships. And since one man, Dr. Shepard, is largely responsible for its inception, success, and prestige, the story of the college begins properly with him.

SON OF MINISTER

He was born the son of a minister on November 3, 1875. He attended Shaw University in Raleigh, receiving a Ph. D. from the department of pharmacy in 1894. That same year he opened a drug store in Durham. In 1898, he became comparer of deeds in the recorder's office, Washington, D. C., and

from 1899 to 1905 was deputy collector of United States internal revenue in Raleigh. Between 1899 and 1905 he traveled the country as field superintendent for the International Sunday School Association.

While working in this capacity he became convinced of the need for trained Negro ministers to act as leaders for the race, and soon afterward set about raising money to establish a training school. (In 1907, he was the only Negro speaker at the World's Sunday School Convention in Rome.)

The school, known as the National Religious Training School and Chautauqua, was established in 1910 on a 25-acre tract, forming part of the present site. The land was a gift largely of the white people of Durham. By January 1912, 10 buildings had been erected; two of which, Avery Auditorium and Childley Hall, still stand on the campus.

Those early years were characterized by a wealth of enthusiasm but a dearth of money. Private donations and student fees were the institution's only support, and the latter had to be kept low. Board and room cost $7 per month; tuition $1 for the same period. A teacher or professor earned $500 to $1,000 a year.

Designed as a college, it was found necessary to include a high-school course; so the institution, at first, combined a high school, 4-year college, training school for country ministers, commercial school, and home economics school. What was to become, after 37 years and four changes of name, the North Carolina College, at Durham, with approximately 1,100 students and over 100 staff members, began with a staff of 21 persons and 109 students.

ADDED MORE DEGREES

Dr. Shepard struggled to raise necessary funds and at the same time added more degrees to his name—D. D., Muskingum College, Ohio, 1912; A. M., Selma University, Ala., 1913. Nonetheless, in 1915 the financial difficulties became so great that the school had to be sold and reorganized. In this second stage of its development, the institution was known as the National Training School. Mrs. Russell Sage, of New York, came to the rescue by giving enough money for the property to be bought back.

The school had begun to attract the attention of observers throughout the South, when the First World War dumped it into another financial depression. To insure the survival of the school, two plans were considered. One was to turn over the control of the school to one of several interested denominational boards. The other plan, which was adopted, was to give the property to the State as a public institution. Accordingly, in 1923, the National Training School became the Durham State Normal School.

In 1925 the school experienced two important events. A fire destroyed three important buildings—the administration building, the classroom building, and men's dormitory. These were immediately replaced; but of more importance that same year, Dr. Shepard, with a brand new D. Lit. from Howard University, and others were successful in a legislative campaign to make of the school the first State-supported Negro liberal arts college. The school became the North Carolina College for Negroes.

Then came expansion of the plant, with B. N. Duke contributing $42,000, the citizens of Durham $8,000, and the State $100,000.

But a new crisis arose in 1929, when the legislature considered the consolidation of the North Carolina College for Negroes with A. T. and T. College at Greensboro. Protests from citizens of Durham resulted in the appointment by Gov. Max Gardner of a fact-finding commission, whose unanimous recommendation that the college be continued at Durham was adopted.

NEW BUILDINGS ADDED

The world-wide depression in the years following 1929 checked college enrollment, but at the same time indirectly made possible Federal and State building projects which added a library, three dormitories, six cottages for faculty members, a gymnasium, a laundry, a science building, and an auditorium. Worthy of note, in this connection, is the fact that Dr. Shepard was instrumental in getting Federal and State grants from Democratic administrations, although he was and is an outspoken Republican.

Today the North Carolina College at Durham (so named by the last State legislature) not only offers 26 undergraduate courses in subjects from art to zoology, but also includes a graduate school of arts and sciences, a school of hygiene and public health, a school of public health education, a school of library science, and a school of law.

The student body, about 60 percent women, represents nearly every State in the Nation, with a majority from North Carolina. Students represent all economic brackets.

There are accommodations for only about half the students to live on campus, the others rooming or living with relatives in town. All facilities are crowded, dormitories particularly, with four students often living in rooms designed for two occupants. Nonetheless, rigid scholastic standards are maintained, and graduating students have no trouble in entering graduate schools.

Being a State school, the college can't be highly selective in accepting students, but can and does bounce those who don't make the grade, once they have entered.

Dr. Shepard's fondest hope is for the college to become a university in the fullest sense. As might be expected, he doesn't expect this to be accomplished overnight. He hopes that a school of public health nursing will be established this fall, and looks forward to the establishment of a school of social work that will lead eventually to a school of medicine.

Milk Prices in Agriculture's Pattern

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 14 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, last night the Honorable Clinton P. Anderson, Secretary of Agriculture, delivered an address before a testimonial dinner sponsored by the Schoharie County Democratic Committee, at Schoharie, N. Y. The address dealt with the very timely subject Milk Prices in Agriculture's Pattern. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am delighted to have this opportunity to come here. A long time ago I heard this region called the cradle of American agriculture, the breadbasket for the armies of George Washington. As at least a part-time farmer, I was immediately interested and I promised myself a visit with you some day.

Then, just a week or so ago, I heard another interesting fact about Schoharie County. This used to be a Democratic stronghold. In the election of 1896, Schoharie was the only rural county east of the Mississippi and north of the Mason-Dixon line to return a majority for the Great Commoner, William Jennings Bryan. I have an idea that next year this county may lead upState New York in a swing to the Democratic banner.

So as the Secretary of Agriculture, and as a Democrat, I am doubly glad to be here.

Looking around at this rich and beautiful countryside today, I could not help thinking of those early Schoharie farmers—those farmers who delivered wheat by oxcart, under the protection of American soldiers, to the continental armies. How proud they would be if they could see this section of New York State as it is in the spring of 1947. Here one senses a permanency of agriculture. I am told that some of your farms have been owned and tilled by the same families for seven or eight generations.

How good it feels to come again into an area of grasslands agriculture. Here there is a balance between what is taken from and what is put back into the soil. This type of balanced farming is not only well adapted to the needs of the land; it is also the kind of farming that produces the protective food our people especially require for a healthy diet—and best of all, it uses great quantities of a type of agricultural products—the cereals—that in the future might develop burdensome surpluses.

There are few signs here of the ravages of depression and war. Your herds grazing in the pastures are healthy and productive. Your fields are green. Your homes are well kept.

But was it always like this?

Has anyone forgotten how this county—like the whole country—a decade and a half ago passed through some of the most trying and sorrowful years in American history?

It is wise to remember those days, because only by remembering can we be reasonably sure not to repeat them.

There is an old saying: "Trouble is like hot weather. It sours milk and sweetens apples." Trouble mellowed Franklin Roosevelt at the same time that it called forth his magnificent courage. Trouble rallied farmers around the Democratic Party. But when the trouble clouds passed, some farmers forgot, and many agricultural States were the first in the Nation to turn politically against the best friend the farmer ever had.

Do you still remember that period from 1931 to 1933? Do you remember when milk was 90 cents a hundred? When chickens were 12 cents a pound? When eggs were a penny apiece?

I could recall for you some grim pictures. The slow-moving queues of homeless men outside the missions in the cities, waiting for a hand-out—a piece of bread, a bowl of soup. Out in the Middle West the smoke was rising from homes where farmers were burning corn for fuel. Everywhere farmers were losing their homes.

Back of that unhappy period was the struggle for the McNary-Haugen bill that was twice beaten in Congress before being passed in 1927. A Republican Congress passed it on the third try only after it was assured that President Coolidge would veto it.

Then came the Republican-sponsored Hawley-Smoot tariff bill which provided for a general increase in the tariff at a time when the farmer was desperately in need of restored foreign markets. Economists, consumers' organizations, and wise farm leaders joined in asking the President to veto it. But the bill became law and with it went the hopes of farmers for regaining lost foreign markets.

Do you remember those days?

In 1932 and early 1933, every 2 minutes on the average, day and night, 7 days a week, one American farm was knocked down on the auction block or signed over to a creditor. By January 1, 1933, the value of American farms had declined to about $36,000,000,000. But from March 4 on, the economic massacre of American agriculture was stopped, not by a fair-weather friend, but by one who was able in personal as well as political life to withstand the rigors of ad-

versity. Your State gave Franklin D. Roosevelt to the Nation, and the Nation will be forever grateful.

By January 1, 1942, the value of American farms had increased to forty-eight billions. In other words, for the first 9 years of the New Deal every time the sun set here in Schoharie County, the value of the Nation's farms went up $3,600,000.

And it kept on going up. From 1942 to January 1, 1947, the increase was even greater. I want you to remember how great it was, so I give it to you this way: In the 15 years of Democratic national control, day after day, good weather and bad, every time the sun has set on your rolling acres the value of American farms has risen that day almost $9,000,000—every day for 15 years. You farmers remember that.

Those are simple facts—facts to bring into the conversation when people talk about the farm record of political parties.

Tonight I want to talk about the record of political parties as it applies to the dairy situation of this section.

When I was invited to speak here—and to make part of my talk about milk—the voice of discretion warned, "A smart Secretary of Agriculture would stay out of the milk situation right now. That's a hot potato."

But another voice said, "Yes; that's a hot potato, but the way to handle it is to get it out where it will cool."

That's what I am going to do tonight—talk about the dairy situation as I see it. You may agree with me or you may disagree, according to your American privilege. But I believe that you want as a Secretary of Agriculture a man who respects you enough, who loves agriculture enough, to talk plainly to you and let the chips fall where they may.

Let's review some more history.

If we go back about 20 years to the period between 1925 and 1929, we find milk prices in New York relatively favorable. But in 1930 and 1931 they started on the toboggan and in 1932 they hit bottom with a sickening thud.

It was a terrifying situation. It demanded action. Under your Democratic administration, a State joint legislative committee made a comprehensive investigation and report on the New York milk industry. A State milk-control law was enacted. But no State in those days of world-wide depression could pull itself up by its own bootstraps. Some serious milk strikes developed not only here but in other sections of the country. We saw milk being poured out on highways in angry protest over low prices.

Sometimes tragedy does not seem very real when the moss of 15 years grows over it. Human memory coats over, too. So I want to quote from the testimony of one progressive dairy farmer in 1932. He operated a farm which had been in his family for nearly 60 years. He was a recognized authority, having been at one time a professor of soil investigations at the New York State College of Agriculture.

Here is part of what he told the legislative committee of this State in 1932:

"The dairy situation is deplorable." The average price "paid by the Dairymen's League Cooperative Association at Franklinville, New York * * * for the first 7 months of 1931 is 82 cents per hundredweight. My records, extending back to April 1901, show that the June price is the lowest I have received in 28 years with the single exception of a cheese factory check for April 1904.

"I know from recent conversations with neighbors," he went on, "that they do not know where the money for the payment of taxes will come from this year. I asked the chairman of the board of supervisors if 10 percent would be able to meet their taxes from this year's income. He said, 'No; less than that.'"

Then this progressive dairy farmer went on to tell the committee: "I could keep some 20 head of well-bred cattle in my herd, if I could buy some $360 worth of grain and retain the services of one man, now in my employ, at his present wages for the next 8 months. As it is, the feed man will miss that sale, one more man will be out of employment, and I shall regretfully part with young stock whose breeding has occupied 20 years of my time. I have already had to part with two men."

That's the record. That is one case history of what 1932 did to a highly intelligent and formerly prosperous dairy farmer. Multiply it by millions and then ask yourselves again whether you stand for the policies of the party in power during that period. You must answer that question and remember the answer if you are to keep the political record straight.

And then Franklin Roosevelt moved from the Governor's Mansion in Albany to the White House in Washington—the Franklin Roosevelt who had made some promises to farmers in a speech out in Topeka, Kans., on September 14, 1932. I want to refresh your memories on those promises.

"First," Mr. Roosevelt said, "I would reorganize the United States Department of Agriculture, looking toward the administrative machinery needed to build a program of national planning.

"Second, I favor a definite policy looking to the planned use of the land."

And with reference to another problem, Mr. Roosevelt said: "Within the past year many of our principal industrialists also have come to the conclusion that—since the great decline of our export trade—the chief hope for industrial rehabilitation lies in some workable and immediate method of dealing with farm surpluses."

But the real source of agriculture's troubles was the lack of parity. "If we would get to the root of the difficulty," Mr. Roosevelt said, "We shall find it in the present lack of equality for agriculture. Farming has not had an even break in our economic system. The things the farmers buy today cost 9 percent more than they did before the World War in 1914. The things they sell bring them 43 percent less than then."

Parity in prices and parity in income was thereby set up as a goal, and for the first time the Nation adopted a measure of economic equality for agriculture.

The Roosevelt administration got under way. Prices improved, but it was a long hard climb. In New York, State regulation of milk proved to be inadequate. It could not prevent cut-throat competition in milk moving from one State to another. Only Federal action covering a whole marketing area could to that. Therefore, under the Agricultural Adjustment Act of 1933 and its amendments, the issuance of marketing agreements and licenses was authorized to govern the handling of milk on an interstate basis.

Here, for the first time, the dairy industry had the means by which it could establish orderly marketing procedures.

But the friends of American agriculture—the leaders of the Democratic Party—were not content merely with the start that had been made. They sought further to strengthen the legislation which made this program possible and to safeguard it against legalistic attacks.

And so in 1937 the Agricultural Marketing Agreement Act was passed. Producers in the New York milkshed then requested consideration of a Federal marketing order under this legislation. They voted it in by an overwhelming majority, and the order became effective September 1, 1938. From that date to this, except for 5 months early in 1939, producers have operated under the Federal order, along with a complementary order under State law, as the means for fixing minimum prices for milk in the New York metropolitan area.

In that period of more than 9 years, milk producers in this region have prospered in a manner that would have seemed fantastic if anyone had ventured to predict it back in 1932.

The weighted average price for all milk in this area for the 12 months ending June 30 of this year is expected to be about $4.43 per hundredweight. For the 12 months ending June 30, 1946, the weighted average price was $4.07—a favorable difference this year of 36 cents. This is a comparison of 3.5 percent milk in the 200-mile zone from New York City and it includes dairy production payments made through June 1946 and general premiums over the order prices in the months of July, August, and October 1946. And right here I want to call your attention to the fact that the dairy industry itself rejected the idea of the subsidies which ended almost a year ago. Now returns to the farmer depend solely upon the price in the market.

In the light of all this, I am frankly puzzled about the criticism voiced by some dairy leaders concerning action fixing a class I price of $4.14 for May and June. This step measures up squarely with the provisions of the order voted in by the producers themselves and with the demands of sound long-range economics. It operates in the interest of the entire milk industry, and particularly of the producers.

During the war, we needed all the milk we could get. We took it whenever we could get it—and because production was so much cheaper in the spring, the disparity in the flow of milk between spring and fall got way out of line. But the war is over, and we cannot go on producing on the wartime pattern.

We must develop a new and balanced production pattern more in keeping with demand—else we shall have oceans of milk in the spring, with disastrous effects on producers—and severe shortages of milk in the fall, which would be equally serious for consumers.

Time and time again I have talked about a balanced pattern of production with dairy industry leaders. Always some say: "It's a good, sound idea. But this isn't the year for it. Let's not do it just yet."

We once had a line in our copybooks, "Never put off until tomorrow what you can do today."

Now is the time for readjustment. Now, when farmers have the money to make the change. Now, when the consuming public is in a mood to drink more milk than it ever drank before in peacetime.

If tomorrow means waiting for an emergency we don't want that kind of timing. We tried that once in this country with disastrous results.

Just as certainly as I stand before you tonight, the present high seasonal variation in production if continued long enough will break down milkshed lines by cut-throat competition for markets in flush periods, and the same kind of competition for supplies in periods of short production. And such a break-down could only be a menace to your valuable and hard-won marketing procedures and programs.

Look at it this way. In the war this country was engaged in a headlong race for survival. It was a case, as the Civil War general put it, of which side could "get there fustest with the mostest." That applied to meat and milk as well as men.

But now we are in another kind of race—a long-distance race in which the goal of national prosperity depends upon balance in every branch of the economy—balance between supply and demand.

Obviously, the most effective incentive for seasonally balanced production of milk is the price incentive. This was recognized by the producers in the formula for which they voted approval last fall. It is true that a somewhat abnormal situation developed this spring in the cost of feed and other commodities. We have taken account of that and have pegged the price higher than the formula provided.

Let me amplify that. You will recall that we had postponed until May 1 the seasonal drop of 1 cent due on April 1. Pegging the price at $4.14 for May saved the producers from taking another cent per quart reduction under the formula. Moreover, pegging the price for June at this same level should save producers a drop of one and a half cents in the price for that month. It seems to me that we in the Department of Agriculture have fully recognized current conditions in suspending the formula in favor of producers to the tune of 44 cents a hundredweight on class I milk in May and either 44 or 66 cents a hundredweight on class I milk in June. The suspension order saves producers more than $2,000,000, compared with what they would have gotten under the price formula in their milk marketing order.

As producers, surely you realize that the success of dairy operations does not depend upon showing a little profit every month, but upon having a substantial profit at the year's end. It could very well come about that $4.14 would be a low price in May, but a pretty good price in June, depending upon pasture conditions.

But I am well aware that all this to-do has not come from the rank and file of you producers. There are political overtones in this note of dissatisfaction that some people are sounding. A considerable political advantage might be brought to the State Republican administration if it could provide comparatively high prices in milksheds that operate solely under a State order. Temporarily, that might build up enough satisfaction in those milksheds, and enough discontent outside, to be reflected at the polls next year, even though, in the long run, it would surely kick back.

If I were operating the Federal milk marketing order for political purposes, I could find ways to match any Republican price. But we are not operating the Federal orders for political advantage. We are interested, wholly and completely, in the long-time welfare of farmers and consumers.

The time has come to say bluntly to the farmers of New York, no matter what their political affiliation, that there are always some people who will seize upon any straw in an endeavor to create unrest. It is mighty important to you milk producers to watch and weigh carefully, lest you find yourselves linked with interests that do not have the farmers' long-time advantage at heart.

New York producers demonstrated a sense of responsibility for the long-run considerations involved in selling milk during early days of the marketing agreement program when hearings on the Federal order were first begun in New York. At that time they pioneered in a proposal for formula prices based on the inescapable relationship between fluid and manufactured milk product prices. As a result, under the first order, the price of $2.45 per hundred paid farmers for fluid milk in September 1938, was arrived at through computation of the wholesale price of butter in New York City for a 60-day period. Thus New York producers are entitled to the credit for pioneering in this field but they also must take some responsibility for making it work.

I am proud of the fact that both of New York's milk marketing orders, State and Federal, were instituted under Democratic administrations. Time and time again the marketing orders have proved their worth. But I must protest against the brazen falsehood that the Government has cut milk prices for the producer. The type of regulation you now have came into existence only because it was voted in by more than two-thirds of the milk producers. It can be voted out by a simple majority.

I want to say very plainly that I resent the misrepresentations that have been printed in some of the rural papers of New York State. I resent editorials that say that in the effort to reduce prices the United States Department of Agriculture is starting with the dairy farmer and slashing his income. I resent the news stories that accuse the Department of Agriculture of ignoring evidence presented at the recent Utica and New York hearings and which say that the Government had already decided upon the $4.14 price for May and June.

I resent such stories because in the first place dairymen know that the hearings which the Department of Agriculture conducted were not for the purpose of settling the May and June price question, but rather to consider amendments to the existing order to go into effect July 1. Nevertheless, the evidence presented at those hearings was taken into consideration as shown by the fact that the scheduled price drop under the existing order did not take place in full.

The man who reported this so-called news must have known that, under the present formula, the establishment of a $4.14 price had no connection with the purpose of those hearings. It is dishonest journalism to tie them together in an attempt to fool the farmers of this State for political purposes.

To say that the Government slashed the price of milk to the producer is simply dishonest. The producers last fall voted the pricing plan that called for a cut in the price of milk effective this spring. Government, by suspending certain provisions of the order, prevented that cut from becoming fully effective. It is the producers who agree among themselves to establish a marketing agreement. The Federal Government enters in only when interstate milk is involved. In that case Government must administer the order to protect the public interest. Our presence is merely your convenience. You producers, by your own actions, by your own yardsticks, determine whether milk prices shall be raised or lowered. And how that is to be done is written into the order itself. Don't let some captive spokesman tell you otherwise.

The Department of Agriculture does not intend to encourage or promote any regulation in this milkshed contrary to your desire. But I would not be doing my duty if I did not remind you that there are many ways in which the New York orders operate to the advantage of producers. They provide for the quick adjustment of prices. They make possible a classified pricing plan and marketwide equalization through which all producers are paid the same minimum price for their milk regardless of the uses to which it is put by those who purchase it. Classified pricing and marketwide equalization are of inestimable worth in this greatest of all milksheds. I doubt if the orderly marketing of milk in New York could be achieved without them.

But some folks ask me: "If it was advisable to suspend part of the price drop why didn't you go the whole way and prevent any cut?" The answer is simply this: Because, in my best judgment—and I assure you it was not quickly arrived at—this would have injured your long-time interest. Edmund Burke, the English statesman, said many years ago that the people's representative owes them not only his industry but his judgment. I should betray, rather than serve you, if I did not seek to use that judgment in your final best interest.

This year should bring another huge grain harvest to add to the abundant supplies of last year. Wholesale prices of wheat feeds are now about $10 per ton below the peak prices reached the third week in March, and cottonseed and soybean oil meals are $15 and $20 per ton less. Labor should become more plentiful and supplies of feed supplements should increase.

Following the hearings held by the Department of Agriculture in this area this spring, amendments are being prepared which would bring operations under the order more nearly in line with our present needs. And I am happy to tell you tonight that present plans call for a seasonal upward revision of farm milk prices beginning July 1, and another upward revision beginning not later than October 1. These price adjustments are being planned to give more incentive for milk production during the months of normally short supply. The price increase for these months is just as important as the price decrease during the months of flush supply to encourage a more desirable pattern of production. It also encourages consumption when supplies are plentiful.

In recent weeks we have seen some fairly stiff attacks by press and radio upon farm prices, and upon governmental price-support policies. The cost of living, we are told, cannot be brought down because the Democratic administration is keeping food prices up. You know the maximum about people who live in glass houses. Those who stoned price control to death look ridiculous when they wring their hands and try to shift the blame for the rising cost of living.

But what about farm prices? Are they too high? First of all, the farmer receives only about half of the housewife's food dollar. It costs as much to bring the market basket to the table as it does to fill it on the farm.

Second, we are now supporting the prices of only three commodities: potatoes, eggs, and dried skim milk. Surely those three commodities do not add a great deal to the cost of living.

Third, if it were not for our price-support policy, which encourages abundant production, the food dollar would, in all probability, buy even less than in the wild inflation of 1919 and 1920.

We are producing food and fiber at a rate about one-third above peactime. We produced 15 percent more milk last year than in peacetime, 53 percent more eggs, 33 percent more beef, 40 percent more pork, 53 percent more chickens, 42 percent more corn, 52 percent more wheat. This year our production goals call for another all-out effort.

It is only because we have price support in the background that farmers dare produce the tremendous volume of food and fiber they are now turning out.

And finally, price protection to the American farmer is as much a cost of the war as the sums paid to manufacturers in settlement for contract terminations, or the carry-over tax refund to industry, or even certain of the veterans' benefits.

This attack upon farm prices is very much in keeping with the pattern after World War I. Then, too, the country was treated to a barrage of propaganda. Bring farm prices down. The farmer is doing too well. Cut food costs and everything else will follow.

And farm prices did come down—nearly 50 percent in the course of a few months. It all happened without the farmer having a chance to adjust to postwar conditions. And that was the start of the black clouds of depression and surpluses and tragically low prices which reached a climax in 1932. For 12 years the farmer was in the Republican doghouse.

To illustrate some facts about political parties and the farmers' interests, let's take a look at a fair-sized portion of American history. Parity starts with a 1910–14 base. So let us begin in 1910 and come right down to 1947. That should be fair. During those 37 years, the Republican Party had the political direction of the country for 15 years, and the Democratic Party for 22 years. The Republicans were in office during the normal period of 1910–12, during the boom years of the 1920's, and during the three early depression years.

The Democrats had a period of normalcy in 1912–14, and they had two war periods; but offsetting this were the seven long years of climbing back to prosperity from the depths of the Republican depression.

Under which party did the farmer attain parity? In the 15 years of Republican control, parity income would have given farmers $89,000,000,000. Actually, during these 15 years of Republican control, farm income was only $76,500,000,000. The deficit was $12,500,000,000—14 percent below parity.

But in the 22 years of Democratic control, parity income would have given farmers $136,000,000,000. Actually, they received one hundred and seventy-one billions. The surplus amounted to more than thirty-five billions—26 percent above parity.

You have in your programs the figures year by year. Take them home. Show them to your neighbor. Ask him what he thinks. Those are simply facts, without fanfare, without embellishment. But they are eloquent facts. Fourteen percent below parity on the one hand; 26 percent above parity on the other.

Here are additional facts. In 1932, a Republican year, the average farm operator had a net income from farming of 90 cents a day.

By 1941 the average farm operator's income had climbed to $3.30 a day. Last year it averaged $8.20 a day. You know what political party has been in power.

Interest in agriculture is not something new and different for the Democratic Party. The roots of our interest in the Nation's farms are deeply embedded in American history. Through adversity and prosperity alike, from Thomas Jefferson to Harry Truman, the importance of keeping the farmer solvent and productive has always been stressed in every Democratic administration.

Agriculture is prosperous today. It can retain its prosperity only by rigidly adhering to a policy of organized, sustained, and realistic abundance. Last fall I asked the Congress to begin hearings on long-range agricultural policy and programs. Hearings have started. I have presented my testimony. The Administration's position is on record. There is a rumor that the Republicans are not going to have a farm program until after the 1948 elections. But we are down in black and white. Before the Committee on Agriculture of the House of Representatives, I recommended a plan for continued agricultural progress. We need, it seems to me, to keep agriculture geared to developments in other segments of the economy. We need stability of prices at levels fair to producers and consumers. We need an over-all land program. We need to promote the social welfare of farm people, many of whom are still deprived of conveniences and comforts so necessary to twentieth century living. We need to push back even farther the frontiers of scientific knowledge about farming. And finally, we need a floor under consumption of farm products and a program to maintain stable supplies and prices across the peaks and valleys of the business chart.

In short, we need, and we are determined to have, agricultural abundance, because abundant production is the key to lasting prosperity.

We have built solidly these last 15 years. The foundation stones of a new agriculture have been laid in this country. The objective set forth a decade and a half ago by Franklin Delano Roosevelt, that men and women should have a chance to engage in farming at a decent return, is in sight. We shall not cease our efforts, whether in prosperity or in adversity, until that objective is finally and completely achieved.

Harry Truman stands behind that goal of farm prosperity. We must, he has told the Congress and the Nation, "assure the people on the farms a fair share of the national income." We must "encourage an agricultural production pattern that is best fitted to the Nation's needs. * * * What we seek ultimately is a high level of food production and consumption that will provide good nutrition for everyone."

Those are our President's words. I like Presidents like Franklin D. Roosevelt and Harry S. Truman—Presidents who demonstrate that agriculture has an understanding friend in the White House. Good days are ahead for the farmer, if he keeps a watchful eye on his enemy and has a warm spot in his heart for his friend.

Farmers prosper under Democratic administrations

PARITY INCOME AND ACTUAL INCOME TO PERSONS ON FARMS FROM FARMING UNDER REPUBLICAN AND DEMOCRATIC ADMINISTRATIONS, UNITED STATES, 1910–46

Year	Republican: Estimated parity income	Republican: Income to persons on farms from farming	Year	Democratic: Estimated parity income	Democratic: Income to persons on farms from farming
	Mil. dol.	*Mil. dol.*		*Mil. dol.*	*Mil. dol.*
1910	4,266	4,450	1913	4,647	4,387
1911	4,142	3,915	1914	4,299	4,516

			1943	9,171	13,930
			1944	9,264	14,039
			1945	8,968	14,740
			1946[1]	9,304	16,278
Total	89,102	76,619	Total	135,996	171,290
Net deficit, parity minus actual $12,483			Net surplus, actual minus parity $35,294		

Parity income per person on farms as defined by sec. 301 (2) of the Agricultural Adjustment Act of 1938 multiplied by farm population to obtain total parity income and net income to persons on farms from farming as estimated by Bureau of Agricultural Economics.

[1] Preliminary.

Special Privilege and the Press

EXTENSION OF REMARKS
OF
HON. ERNEST W. McFARLAND
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 14 (legislative day of Monday, April 21), 1947

Mr. McFARLAND. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial entitled "Special Privilege and the Press," published on May 6, 1947, in the Arizona Daily Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPECIAL PRIVILEGE AND THE PRESS

Ever since the Supreme Court of the United States held that the Associated Press was a monopoly and must amend its by-laws to admit all applicants for its service, Colonel McCormick, of the Chicago Tribune, has headed a movement of a group of Associated Press members to ask Congress for legislation exempting mutual news-gathering organizations from the antitrust laws. This movement has now grown to the point where 800 publishers are backing the Mason bill in Congress to accomplish this basic purpose.

Because it believes this proposal to ask Congress for legal exemption is both unfortunate and wrong, the Arizona Daily Star wants to go on record as opposing it and asking for its defeat. Such a plea is unfortunate because it puts the American press on record as asking for a legal exemption, asking for special privilege, at a time when much of the press is asking for Congress to deny special privilege to anyone, including labor. To justify such a legal exemption on the ground of the freedom of th press is pretty farfetched.

The Court's decision has in no way affected the freedom of the press. Just to the contrary, the growth in Associated Press membership, the freedom of new papers to get the service, has, if anything, enhanced the freedom of the press.

Under the old rule, the Star had a monopoly of Associated Press news in the morning field in Tucson. Under the Court's decision, that monopoly no longer exists. A new paper can get the service in Tucson as well as in all other cities. Under the Mason bill that monopoly would be legally restored. The Star refuses to be a party to begging its Government for any such special privilege.

The proposal in the Mason bill is wrong, because it proposes to grant to the press a privilege which the Congress has held to be adverse to public policy, for anyone other than public utilities, to have. That special privilege is monopoly. While it may, with much truth, be argued that the availability of other news services does not give the Associated Press a monopoly, the Supreme Court has held otherwise. Good citizenship, the Star believes, calls for respect for this decision.

The Star believes that increased competition in all fields of endeavor will make for progress. Our Nation has been built by competition. Increased competition in newspaper publishing will be beneficial and will not affect the freedom of the press.

For a portion of the American press to go to Washington and, hat in hand, beg Congress to grant it special business protection it does not need, and should not have, sets a most deplorable precedent. The American press should be the last part of American life to ask Congress for anything.

The Star asks for the defeat of the Mason bill and any other legislation granting special privilege to anyone.

Stop the Federal Bureaucracy

EXTENSION OF REMARKS
OF
HON. ERNEST W. McFARLAND
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 14 (legislative day of Monday, April 21), 1947

Mr. McFARLAND. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial which is complimentary of the distinguished Senator from Nevada [Mr. McCARRAN]. The editorial was published in a recent issue of the Chicago Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STOP THE FEDERAL BUREAUCRACY

Senator McCARRAN has introduced a bill that will be unpopular among Washington bureaucrats and in the ranks of those who are trying to make America a Socialist state. The Senator wants to call a halt on useless

Federal Government activities and to eliminate overlapping of Government functions.

Thoughtful citizens will applaud the aims of the McCarran bill. They have been disturbed for years over the tendency to concentrate power in Washington, leaving less and less for the State and local governments to do. The process is rapidly undermining the form of government established by the Constitution

Senator MCCARRAN proposes to eliminate overlapping functions of Federal agencies by defining which agency has jurisdiction when there is a conflict between two of them. He would also bar Federal agencies from taking jurisdiction in matters where States have undertaken active regulation.

The Senator concedes that the language of his bill may need modification or expansion. Certainly its provisions must be studied carefully by the Judiciary Committee. Hearings on the measure would serve to inform Americans on how far their Government already has gone on the road to statism.

Numerous duplications of activity by agencies of the National Government are symptoms of the trend. For example, regulation of alleged fraudulent practices is undertaken by the Federal Trade Commission, the Post Office Department, the Food and Drug Administration, and others. Enforcement of the antitrust laws is scattered among a dozen agencies.

Even more dangerous is the tendency of Congress to confer powers on a Federal agency, superseding the functions of State governments. Supreme Court decisions, since the New Deal arrived, have helped to complete the destruction of State government autonomy in many fields. Recently, for example, the Court held that the New York State labor board had no jurisdiction in a case that came before it because Congress was silent on the matter of such boards when it adopted the National Labor Relations Act.

"That means," said Senator MCCARRAN, "that we must either endow the National Labor Relations Board with sufficient funds to police the collective bargaining of the whole country, practically from top to bottom, or make some declaration that we do not intend to kill State functions when dealing with national problems."

Such a declaration would stop the shift of power from the States to the national bureaucracy. If the tendency is not stopped soon, the United States will be a Federal republic in name only.

Democracy in Degeneracy

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. KING. Mr. Speaker, last week, Mr. R. R. Young, chairman of the Federation for Railway Progress, addressed the National Press Club. In view of Mr. Young's appearance before the executive committee of the western caucus in connection with the hearings being held by that group on the inequitable distribution of box cars in the west, I have been requested by many people to place Mr. Young's Press Club speech in the CONGRESSIONAL RECORD. Pursuant to such requests I set the same forth herein in full.

Here in the Capital of the world's champion democracy you favored few are witnessing events that arrest the attention of the world.

Indeed these events you are witnessing may end the world. In our youth, for that we had to look to God. Today one has only to look to Washington for anything.

Now Mr. Lindley did not ask me here to talk on world affairs. Neither one of us then know how many Mexican pesos there could be in it.

Besides, world affairs are in good hands—the same hands that have defended us all the way from Santiago to Constantinople. I am a great believer in supporting a management that has achieved a lot of errors, for that is the surest way to get the errors covered up—with one thing or another. You do not need to worry about errors if you have unity.

I can do little about our foreign affairs; but there is a lot you and I can do about the railroad industry. It typifies what is going on in Britain and all parts of the world, the persistent encroachment of nonowners upon the property rights of others. There is only one freedom that the state can give us, the freedom to enjoy our property in peace. If the state fails us there it has failed us in everything.

After two thumping world victories in our generation against isms overseas, it is Pyrrhic to find the same old dangerous ism, banker-lawyerism, more firmly entrenched than ever in our own country. If only our far-gazing Don Quixotes would coalesce on that issue.

I have a compilation which shows that 611, or 70 percent, of directors of some 70 class I railroads own a record less than $3,000 each of stock in the properties they direct. Now these men are not beggars. From the advice they have been giving their clients for 20 years, presumably, their own investments are in the motors and the air lines.

This infestation of pessimists in the railroads is not due to neglect by the owners. There are tens of thousands of bona fide rail investors who believe in the railroads and who would make excellent directors—owners are always the best husbanders. But membership in the railroad directors' club is harder to break into than is the most exclusive club on Park Avenue.

Why is it these nonowner directors will leave their homes sometimes for 3 days at a time—all for a $20 director's fee? Well, there was a time when security financing was the main reason; but C. & O. broke that one up.

High up among other reasons is the direct banking patronage. It is estimated that the railroads have on deposit over $1,100,000,000, mostly in a few New York banks. This huge sum of other people's money invested in Government securities involves a lot of hard labor for their clerks in clipping coupons—but the right set still have time to supervise the operation and to stop in at the club before dinner.

In addition there are the banking fees: for trustees of equipment issues, agents for stock transfer, payment of bond coupons—the most sought after of all banking emoluments. Railroads pay out annually nearly $3,000,000 for these services, again mostly to a few New York banks.

Now these are only the plums which account for the exclusive set's avidity for horticulture in other men's gardens. There are melons as well. The railroads buy steel, equipment, paint, lumber, coal, and other supplies to the vast sum of $2,000,000,000 a year; thus accounting for one-third of the heavy industry of America.

But fat railroad orders at careless prices and indifferent specifications are not the only influence "the set" can exert in thousands of companies outside the railroad field. As our economy has grown older and voting power of you, me, and Aunt Jane in our large corporations has tended to drift more and more into trusts, banks, insurance companies, investment companies, brokers, charitable foundations, and schools and colleges—all infested by members of the same "club".

Corporation managements are actually sensitive to this concentration of voting power and are amenable to it. They know that directors favored by the set are easily appeased—by patronage. Owner-directors on the other hand are troublesome—insist upon progress. Hence, top officers of great publicly held corporations, too, prefer that their boards consist of plum hunters.

To give you some further idea of the ramifications on the railroad lobby, it employs some 1,800 outside lawyers. If every political lawyer in the Nation is not a railroad lawyer, it can be safely said that he aspires to be.

Just as the top eastern banks have their vast system of correspondent banks throughout the country, so do the top eastern law firms have their country correspondents. That is why I am amused when Mr. Truman—needled about New York domination of our railroads—advocates that railroad directors should be selected from along the line. Strangely, these politicians never advocate the only honest remedy consistent with principles of private property, that railroad directors should be limited to owners without conflict. I would rather have an owner from Timbuktu to represent me than a nonowner from St. Louis.

The top Morgan law firm, Davis-Polk, in collaboration with lesser lawyers along the line, has collected millions of dollars in legal fees from no less than 15 recent railroad bankrupts. Mr. Davis, you will remember, was once Democratic Presidential nominee.

Do not believe that political lightning cannot strike twice in the same place. Who is to be our next Republican Secretary of State? Why, Mr. Dulles, of Sullivan & Cromwell, counsel to Kuhn-Loeb, Dillon-Read, and numerous railroad bankrupts or alleged bankrupts, including B. & O.

In the December Atlantic Monthly I characterized our 37 recent railroad reorganizations as the greatest financial fraud in history; perpetrated under section 77, an act of Congress intended to bring relief to millions of small investors, but callously reversed by clever Wall Street lawyers with the help of the ICC and RFC to do exactly the opposite, to "gyp" them—all for voting trusts and the melons that grow out of them. And, if you prefer, you can spell mellon with two "l's."

Now, I am not questioning Mr. Dulles' integrity, for he is chairman of the Federal Council of Churches, a burden he unselfishly assumed in that critical year abroad, 1937, on top of his duties as counsel to such harried foreign Governments as Poland, Belgium, and Britain. A man with all those responsibilities, including numerous Democratic foreign assignments, can hardly be expected to know what his left hand doeth.

I said in the article that this railroad lobby is stronger than the Government; that it dictates foreign and domestic policy. In further proof, examine with me the Georgia rate case. There, the railroads averred to the Supreme Court in their music-hall chorus that there could be no rate discrimination because the ICC fixed the rates and was above suspicion. Then, when the ICC succumbed to pressure and reduced class rates 10 percent in the South and West, and increased them 10 percent in the North, thus admitting discrimination, what happened? Did the railroads still support the Commission? No. Promptly 32 western railroads and the great State of New York enjoined the decision—and discrimination persists. A strange alliance in the rate controversy, don't you think, 32 western railroads lined up with New York State?

We can only guess how much Mr. Dulles had to do with this lightninglike cooperation between New York State and New York banker Harriman's western domain of 32 roads which the latter organized into the

tightest noncompetitive secret combine in history away back in 1932—a combine so tight that the member roads, among many other normal freedoms, were forbidden to advertise in newspapers.

Mr. Dulles used this same pronged lightning injunction technique against my Chesapeake-Alleghany merger away back in 1937 when I first began to talk up competitive bidding. In my case, it was:

1. The University of Pennsylvania, presided over by Thomas S. Gates, the former Morgan partner;

2. The Morgan satellite firm, Tricontinental Corp.; and

3. Certain officials of General Motors, on whose board Morgan partners sat.

It was this trio, which Mr. Dulles organized almost overnight, which set me back on my heels just about 5 years—just about as far back as he has set the South and West in the rate controversy.

It was Mr. Dulles' client, Earle Bailie, of Tricontinental, and Senator Taft's "along the line" partner, John Hollister, of Cincinnati, who Morgan-Guaranty selected in the following year (1938) to undertake against us the hottest proxy fight in all history. That fight continued for five long, bitter years, first through Judge Manton's court and then down through the C. & O., the Cincinnati Union Terminal, the St. Louis Union Terminal, the Erie, the Pennsylvania, and other sensational competitive-bidding engagements, and led finally to the SEC's public-utility rule, and later, grudgingly, to the ICC rule. Later when Judge Manton was tried, who do you think appeared as his character witness? John W. Davis.

Now in 1942 we tired of Mr. Hollister's company, and his contirued hobnobbing with the bankers to the injury of our railroad, and replaced him on the C. & O. board. Whereupon, he hurried down here to the Commission and readily persuaded them to bring action against us for taking illegal control of the C. & O. lines.

Under the intentions of Congress there could be no illegal control of our three C. & O. carriers, for the Commission itself had specifically approved their joint operation, and Mr. Kirby's and my joint directorships; furthermore, if we were now recapturing control in 1942, then Morgan-Guaranty must have first taken it from us illegally in 1938.

Nevertheless, the Commission persecuted us with lengthy proceedings filling 40 rooms of the Carlton Hotel in wartime with witnesses, and, as anyone familiar with Commission flexibility could have predicted, produced an examiner's report finding us guilty. Now, if you know anything about justice in a great democracy, you know that any finding of fact by one of its bureaus becomes sacrosanct when it gets into court—quite irrespective of the evidence. So our goose was cooked. Instead of going down in history as a champion of through travelers over hogs, Morgan had finally got us; and we were to be forced out of C. & O.

But we have not been given to quitting when Morgan, or his along-the-line men had our nose in the dust. With your help and others, the Commission was forced to yield to public opinion, agreeing most reluctantly to let us stay in C. & O. if we would deposit the voting power of Alleghany's other railroad stock with an approved bank.

Let us see just how solicitous the Commission really is of the public interest, when it comes to these interlocking railroad interests. Remember, Congress intended that the Commission should not prevent joint director relations between carriers in the same natural merger grouping, such as C. & O., Nickel Plate, Pere Marquette—or such as C. & O. and New York Central will be—but that they should zealously guard against the influence of dual interests in competing carriers, where ultimate grouping is not contemplated.

If there is any classical example of competing carriers, it is the Frisco on the one hand and the Missouri Pacific on the other, both serving the Southwest out of St. Louis—Mr. Truman's and Mr. Prendergast's home State. There are two septuagenarian political lawyers out there, partners and brothers: Guy Thompson and Frank Thompson, who have seen to the appointment of many Federal judges. Away back in 1933 Guy was appointed trustee of the Missouri Pacific by a Federal judge, and in 1943 Frank was appointed trustee of the Frisco.

The Republicans out in Missouri expect to get votes against this kind of a Democratic powerhouse, but since they, too, are lawyers, they cannot raise the issue.

If there was ever a better example of two competing carriers operating out of a single back room, I do not know where you could find it. Here are the absolute czars of two great properties as irresponsible to the owners of those properties as the Commission is to the public welfare. Yet, through all the months of the Commission's persecution of us in wartime, over the flimsiest of technicalities, it ignored our every reference to this insult to the intentions of Congress, and gross breach of the law.

In May 1946, our troubles behind us, we found time to institute a proceeding before the ICC against the Thompson brothers for violation of the Interstate Commerce Act. In December, finding no support from Mr. Truman and having a better way to spend our money than in an idle pantomime, we dropped the case—and so did the Commission.

But there the Thompson brothers sit—just as Mr. Harriman sits, immune to prosecution—and our self-styled statesmen have the crust to display the scales of justice on our public buildings.

If our new labor laws get the same kind of enforcement that our old laws get, I would not be too sanguine for the future.

I can cite instance after instance of insincere findings, actions, and inactions by the Commission detrimental to the public interest, all to curry favor of the railroad lobby, but there is not time today. I am talking now about things that if I had done, instead of they, there would have been a patrol wagon clanging outside my door the next morning.

If the Nation and you gentlemen want an end to rate discrimination, to the car shortage, to bankruptcy frauds, and to stubbornly continued railroad policies that seem designed to force passengers onto the air lines and highways, then let us put an end to plum hunting.

You can no more expect integrity in Government or competition in industry from multicliented bankers and lawyers engrossed in self-perpetuation than you can expect world disarmament from the only other aristocracy left in the world, the military.

Here at home are such obvious errors, so easily corrected—luxuries we dare no longer afford in this meteoric age.

The war clouds may rise higher and higher over the isles of Greece as we approach the next election, but let us not entirely neglect the spots of grease here at home.

Democratic Tax Stalling Pure Politics

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. HERTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edson B. Smith, financial editor of the Boston Herald, in the May 1 issue of that newspaper:

REPUBLICANS SHOULD FOLLOW WISHES OF PEOPLE

If one thinks the Republican majority in the House and Senate have been dilatory in passing labor-reform and tax-reduction legislation, contrast their attitude with that of the Democratic President and the Democratic leaders in Congress.

The official attitude of the Democratic Party has been opposition to any worth-while labor reform, opposition to any tax reduction. Much concern is expressed in Congress over the possibility of a Presidential veto of the labor-reform and tax-reduction measures. There are some Republicans who hold that it is better to temporize with principle and pass wishy-washy measures in the hope that the President will sign, than to pass strong bills which may be vetoed and which it is feared cannot be repassed over a veto.

If we may offer advice to the Republicans in Congress, it is to vote for what the American people desire, and if Mr. Truman wants to use his veto power to thwart the wishes of the voters, and thus cut his own political throat and wreck the Democratic Party, let him.

We are far from sure when it comes to a show-down he will veto either the labor bill or the tax-reduction bill. He will have some advisers who will be able to point to the irreparable damage that he will do to the Democratic cause by so doing.

FINALLY MOVING IN RIGHT DIRECTION

There was no doubt in the minds of skilled political observers last November that the American people wanted an end of labor tyranny, reduced Government expenditures, and lower taxes. They voted Republican at the last election because they thought the Republican Party more likely to accomplish these things than the Democrats.

And there is just as little doubt in the minds of careful political observers that what the American people wanted last fall they want today. The Republican leadership in Congress has been subjected to considerable criticism because of its fumbling with these issues. May is almost here and as yet there is no labor reform bill and no tax cut.

It is to be observed, however, that while the Republicans may be slow they are moving steadily in the right direction. The House, which has vastly better organization and leadership than the Senate, has already passed satisfactory labor and tax-reduction bills. The Senate is now considering these measures and probably will pass them next month in forms not too different from the House versions. It looks now as though the Senate would take the House tax-reduction bill more or less as is. The Senate version of the labor reform bill will probably be somewhat less stiff than the House version.

DEMOCRATIC TAX STALLING PURE POLITICS

It is unfortunate but apparently true that income tax reduction has fallen into the field of politics. The opposition of the Democrats to lower taxes now must be viewed in the light of the 1948 election. So for that matter must be the Republican insistence of a tax cut in 1947. If taxes are cut this year the Republicans will get all the credit. If the tax cut can be deferred until 1948, the initiative can be taken by the Democratic Party.

Many voters will be influenced at next year's election by what is done about taxes and who did it.

From the above it is possible to draw certain deductions. The first is that the Republican Congress is certain to pass a tax-reduction law this year. A measure calling for lower taxes will be deposited on President Truman's desk within a few weeks.

TRUE EFFECTS OF TAX REDUCTION IGNORED

President Truman and Secretary of the Treasury Snyder get a little snarled up in their mental processes on the subject of lower taxes. Within the last few days both have asserted that reducing taxes is inflationary. They reason, doubtless, that if a man pays smaller taxes to the Federal Government he has more of his income left to spend on himself, which means that he can buy more goods, which in turn increases the over-all demand for goods.

This is all right as far as it goes, but it only goes halfway. The other half of the story is that a reduction in taxes implies, per se, a reduction in Government expenditures. If the reduction in taxes is of the same amount as the reduction in Government expenditures, the over-all spending by the country as a whole neither is increased nor decreased.

Cutting taxes means that people can spend more of their own money while the Government can spend less of our money. Furthermore, if Government expenses are reduced by more than the amount taxes are cut, the balance being used to retire Government debt, the implication is not only inflationary, but actually deflationary, insomuch as reducing the Government debt held by commercial banks decreases the money supply.

So You Can't Get a Doctor?

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mrs. DOUGLAS. Mr. Speaker, So You Can't Get a Doctor! an article by Albert Q. Maisel in the May 7 issue of Collier's magazine, deals with a problem which affects all of us, particularly those of us who do not live in large cities.

The article demonstrates clearly that we need more doctors in the United States, and that we must encourage them to go into small towns and rural areas so as to give the half of our population who live outside of cities the benefits of good medical care, of which many of them are now deprived.

To make doctors ready to go into rural areas, and to train more doctors so that we shall have enough of them, will need National as well as State action.

Bills have already been introduced in a number of States to provide scholarships for medical students on the condition that these young men, after graduation, shall locate for 3 to 5 years in rural areas; but there is no use in compelling a well-trained young doctor to start his practice in a rural area unless the people of that area are able to support him after he is there. The only way that this will be possible, it seems to me, is through a Nation-wide health insurance system to which urban and rural people, everybody in fact who has any income, shall contribute regularly. Out of the national insurance fund, allocated to the States and to local areas throughout the country, doctors and hospitals can be paid; and the doctors and the hospitals in rural areas will be assured of income in proportion to the medical needs of the people of their areas. The doctors will no longer feel it necessary to concentrate in the cities where they can compete with other doctors for the care of the well-to-do.

Under permission to revise and extend my remarks I include the article by Albert Q. Maisel:

SO YOU CAN'T GET A DOCTOR!

(By Albert Q. Maisel)

This country is up against a staggering shortage of physicians—a shortage which may jeopardize the health of every one of us for many years to come. Yet, though they have loudly warned us of this deficit, our medical colleges are now cutting down their production of physicians.

Instead of training more doctors than ever before, these colleges—and the American Medical Association which plays a major part in determining their policy—have embarked upon a cut-back program which can only increase our deficit of physicians and thus result in needless suffering, ill health, and often an all-too-early death for many Americans.

These are serious charges, and it is important that they be brought out into the open now, while there is still time to reverse and correct this disastrous policy. What is the basis for such charges?

The warnings of our growing deficit of physicians come not from alarmists and crackpots, but from the highest authorities of the American Medical Association. On May 1, 1945, Dr. Victor Johnson, secretary of the AMA council on medical education and hospitals, testified before he Senate Committee on Military Affairs:

"After the war we are going to require more physicians than before. * * * It is conservative to estimate we will need 35,000 more physicians. * * * We will graduate 40,000 men in a 6-year period, and in that period 24,000 physicians will die. The net result is that in 1948 we will have approximately 16,000 additional doctors in this country, and these 16,000 will have to provide for the estimated additional 35,000 that I have mentioned."

An editorial in the Journal of the American Medical Association of March 10, 1945, recognized the same set of facts and used it as an argument for the exemption of premedical students from the draft. Yet in the face of these warnings most of our medical schools have now clamped the lid down upon the doctor-training program.

With only a handful of exceptions, the 69 grade A medical schools approved by the American Medical Association have either dropped or are now dropping—for reasons that will be discussed—the accelerated program of medical education which during the war years provided us with 7,000 extra doctors.

DECREASES IN FRESHMAN CLASSES

The University of Indiana reduced its freshman class in a single year from 106 to 81. The University of Louisville dropped from 103 freshmen 2 years ago to 86 last year. The University of Maryland squeezed its enrollment down from 96 to 82. The University of Michigan dropped from 160 to 124. During the war, the University of Pennsylvania had classes as large as 137. Their next class, according to Dean Isaac Starr, will be down to 100.

These cold statistics strike home when we examine what the growing shortage of physicians actually means—already—in thousands of communities. Consider Kelleys Island, 4 miles off the shore of Lake Erie near Port Clinton, Ohio.

Kelleys Island had gone without a doctor all through the war. Then the islanders heard about all the returning physician-veterans. This was their chance, they though, to get some decent medical service. At meetings in the high school they worked out what they thought was a really sweet proposal. To any doctor who would join their community they would give a modern 9-room house—free and clear. To sugar the offer further, they would guarantee him $3,000 a year, above and beyond everything he collected in fees.

All last winter they pleaded futilely with State health officials, with the Red Cross, and the Ohio Medical Society. They got their Congressman, ALVIN F. WEICHEL, to pull wires in Washington. They told about the 6-year-old whose leg was fractured by a car—how the kid had suffered for three full days before they could get him across the frozen lake to a doctor.

They had old people on the island—and pregnant women—and babies. But they got no doctor. They could look across the short stretch of tumbled ice to the mainland. But when anyone fell ill—they were as isolated as any Eskimo village in Alaska.

SOUTH DAKOTA'S VANISHING MEDICOS

Kelleys Island is no unique exception. In South Dakota, for example, the number of physicians has fallen to only half what it was in 1910—while the population has grown. A survey recently completed by an official State health committee showed only 331 doctors in the entire State—and fully a third of these were over 65 years old. The average number of persons dependent upon each physician has risen from 913 in 1910 to 2,426 today.

Ten counties in South Dakota are today without a single physician. Eleven others have only 1 doctor per 5,000 or more residents.

From Campbell County comes this testimony: "We have been without a doctor for years. We have no hospital—no medical service at all. It is necessary to travel from 27 to 100 miles to secure proper treatment. In some instances it is almost a case of a patient getting well, being crippled, or dying all by himself."

And from Tripp County comes this sardonic comment: "We have a horse doctor in town. When a horse or hog is sick we telephone and he comes. But if a member of the family gets sick, we are just out of luck."

Nor is South Dakota unusual. In Nebraska there are four counties without a physician. In Florida there are five, in Virginia six. And in many another rural State the same vast blank spaces exist.

It has become the fashion among some medical society officials and medical school deans to discount these figures—to pretend that such conditions are the result of the war and are speedily being ended as doctors return from service. Yet the fact remains that in 1940—before the war—37 counties in the United States had not a single physician and 317 counties had more than 3,000 persons per active physician. One thousand persons per physician has been long considered by the American Medical Association and other authorities, a normal maximum patient-load.

Such shortages of physicians have prompted various explanations by medical educators. Typical is Dr. Willard C. Rappleye, dean of Columbia University's College of Physicians and Surgeons and chairman of the executive council of the Association of American Medical Colleges. "The problem associated with the supply of doctors for the country, Dr. Rappleye has stated, "is one not so much of initial supply as it is of distribution."

A quick glance at the statistics might seem to bear out this contention. It is true that there are more doctors, per thousand people, in cities than in the countryside. It is true that doctors have been migrating away from the wide-open spaces like South Dakota and clustering around the great population centers.

But is it true that city people generally have too many doctors? Or is it true—as the word "maldistribution" implies—that doctors can be redistributed by borrowing from the big cities to fill out the needs of the doctorless rural counties?

These questions were answered by the replies received to a wire addressed to the secretaries of the medical societies and to the health commissioners of the 15 largest cities in the country. Each was asked:

"Does your city have surplus physicians available for transfer elsewhere without substantial reduction of health standards?"

Not one affirmative answer was received. Dr. Herman Bundesen, president of Chicago's board of health, wired, "Do not believe Chicago has surplus physicians. Any appreciable reduction of physicians in Chicago would necessarily tend to reduce health standards."

Dr. Bruce H. Douglas, health commissioner of Detroit, wired, "No evidence of surplus physicians here." From Los Angeles, S. K. Cochems, executive secretary of the county medical society, telegraphed, "Our association knows of no surplus of doctors in this area." Frederic Fagler, of the Pittsburgh medical society, answered, "No evidence of maldistribution or surplus at present." James E. Bryan, of the medical society of New York County—where there is the greatest concentrations of physicians in the country—explained that, "These doctors serve large surrounding areas. Many also are engaged in research, teaching, and similar activities."

This is a far cry from the picture of cities crammed full of surplus, half-idle doctors. One has only to examine the statistics to discover how imaginary this city surplus actually is.

ANALYSIS OF AN ALLEGED SURPLUS

In Detroit there are 1,992 active physicians including those in military service. But 613 of these are full-time specialists; 762 more are part-time specialits; only 637 are general practitioners—the kind of doctors most people must rely on most of the time.

Swollen to nearly 2,000,000 population, Detroit is actually little better off than many a hard-pressed rural area. Each of its general practitioners and part-time specialists faces an average and overwhelming load of from 1,800 to 2,000 potential patients.

One effect of this growing shortage of physicians is to deny medical attention to those who need it most. We are developing great reservoirs of disease and infection that periodically overflow to spread contagion even to those of us who can afford and obtain all the doctoring we need. This is true over vast rural areas. With only a few, bright-spot exceptions, it applies to our Southern States as a whole. It can be seen at its very worst among our 13,000,000 Negroes.

The death rate among Negro babies is one and one-half times as high as that of white infants. In 1943, 51 Negro mothers out of every thousand died in childbirth—nearly two and one-half times the white rate. The general death rate among Negroes is 30 to 40 percent higher than among the whites.

Admittedly this state of all-pervading ill health has many causes. But no amount of talk about hereditary factors, lack of education or low economic status can offset the fact that in all the United States there are fewer than 4,000 Negro doctors. As against the wartime emergency ratio of 1 doctor for every 1,500 people, there is only 1 Negro physician for every 3,377 Negro individuals. In the South there is one Negro physician for every 4,913 colored people. In Mississippi there is one Negro physician for every 18,517 of the Negro population.

THE NORTH CAROLINA STORY

How tremendous can be the effect of even a small amount of medical attention—particularly of preventive medicine—has been demonstrated by the strange story of the North Carolina orphanages. This case came to light when Dr. Clarence Poe, chairman of the Governor's Commission on Hospital and Medical Care and editor of the Progressive Farmer, sent his youngest son off to Fort Bragg with a group of 53 other selectees. Thirty-five of these young men—about 66 percent—were turned down. Dr. Poe knew the background of this astoundingly high rejection rate for he and his commission had been confronted for months with the bitter facts of North Carolina's poverty of physicians and medical treatment facilities.

Then one day, Dr. I. G. Greer, director of a Baptist orphanage and member of the same Governor's commission, remarked to Dr. Poe, "We sent the Army 318 boys from our orphanage and we had only 3 rejections." Both men realized they had hit upon something. But they wanted to be certain. So they checked with all six of the orphanages in North Carolina and found:

A total of 1,138 young men who had spent their youth in these institutions had been accepted for service. Only 16 had been rejected—a mere 1.4 percent. And with 1,873 children in the 6 orphanages, there had been only 7 deaths in 5 years.

"These orphanages," Dr. Poe relates "are supported by poor people. The boys in them are not coddled, they are not given luxury But they are given reasonably adequate medical and hospital care. And what do we find? Whereas the State's percentage of Army rejections is 56.8 percent, a nonexpensive program for hospital and medical care provided for North Carolina's orphaned boys brings an Army acceptance of 98.6 percent. This proves what moderately good medical care could do to increase the health and efficiency of our people all over America."

North Carolina's aroused citizens, led by men like Dr. Poe and Kay Kyser, have not merely bewailed these conditions. Their legislature, responding to public pressure, has unanimously voted $48,000,000 for new hospitals and health facilities. But such new buildings will remain just brick and mortar unless the keymen—physicians—are available to operate them. And today, the doctor shortage is actually far greater than is apparent when one merely considers the number of practicing physicians.

The average age of all the doctors has been rising. These older physicians are naturally less active than more recent graduates. A study conducted by E. H. Pennell, of the United States Public Health Service, disclosed that physicians of 55 are capable of treating only 60 percent as many cases as men 20 years their junior. Men of 65—though they may be exceptionally experienced—can serve, on the average, little more than one-third as many patients as men in the 35-to-45 period of high productivity.

Yet these older men form an ever-increasing proportion of the remaining physicians in rural areas. Thus the Alabama State Planning Board discovered that, in one typical county, the number of physicians by 1940 had been reduced to only 58 percent of those in practice in 1920. When allowance was made for the increased age of the remaining physicians, the Planning Board found that their capacity to render service was only 37 percent of what the county had received 20 years before.

RISING TIDE OF SPECIALIZATION

Another cause of the increasing shortage of physicians is found in the mounting tendency for doctors to specialize. In 1940 there were 15,853 specialists in the United States certified by the approved Specialist Examining Boards. By 1946, certified specialists had risen in number to 26,108.

Of course, most of these specialists serve an extremely useful purpose. One good surgeon can free a dozen general practitioners for nonsurgical work, and do a far better job of surgery besides. But many of the specialists are in the luxury fields of medicine. The psychoanalyst who treats a single patient for 18 months or more may do an extremely worth-while job upon that one individual. But he can hardly be viewed as carrying his full weight in the task of preventing, or curing, the ill health of the vast number of sick people.

The growth of specialization has also served to aggravate the shortage of physicians in the medically depleted areas. Eye troubles, for example, are just as common in Kansas as in New York. But fully half of the Nation's certified ophthalmologists are located in five States: New York, Pennsylvania, Illinois, Ohio, and California. If these States have an adequate number of specialists in ophthalmology, it is obvious that most of the other States are far below par in this field. The same is the case with certified obstetricians. More than half of these have located in New York, Illinois, California, and Pennsylvania, while five other States have not a single certified obstetrical specialist.

The deans and the faculties of our great medical schools and the American Medical Association's council on medical education are all well aware of the conditions we have cited. They proved this when they repeatedly testified to the alarming shortage of physicians in the days during the war, when they feared that the drafting of premedical students might deplete their entering classes and even bankrupt some of their schools.

But now, when wartime pressures have been relieved and when the schools could expand, these same men—with a few exceptions—are cutting down the enrollment of their schools. Their explanations for this policy are many and various.

Dean Isaac Starr, of the Undergraduate Medical School of the University of Pennsylvania, for example, despite the testimony of such men as Dr. Victor Johnson, believes that "the alleged shortage exists only in country districts." Yet his fellow dean, Dr. William H. Perkins, of the Jefferson Medical College of Philadelphia, states that "even Philadelphia, with all its great medical resources, is none too well manned and has no surplus of physicians."

Unlike Dean Starr, most medical educators admit the existence of a shortage of physicians, but bring forth many reasons why they feel they cannot increase enrollments. One of the most common is an alleged "lack of qualified students."

"We can admit more students," they explain, "only by lowering our standards and taking in men who will not make first-rate doctors."

That raises the question whether our medical schools have always fully drained the pool of qualified applicants. Obviously, certain large groups of students, with high scholarship and ability, have been more or less excluded from consideration for reasons that have nothing to do with their potential quality as physicians.

One such group is the Negroes. Despite the tremendous need of our Negro citizens for medical care, our schools have been producing fewer and fewer Negro physicians. The reason for the shrinkage is easily found. There are two colleges—Howard University and Meharry Medical College—which are primarily for Negroes. Together they graduate between 80 and 110 doctors a year. Most of the 67 other medical schools bar Negroes entirely. This is true not only in the South. Many a northern and western college has not admitted a Negro student in more than a decade. Only 8 to 12 Negro students a year are admitted to all the medical colleges other than Howard and Meharry.

To a lesser degree, the same policy of discrimination has been applied by many of our best medical schools to other racial and religious groups. None of the colleges will admit that they so discriminate. Yet the record can hardly be misread. Some schools, which formerly admitted as high as 40 percent of Jewish students have—in recent years—reduced their proportion to as low as 5 or 7 percent of each entering class.

Most of our medical colleges have exercised a similar policy in regard to women. Over the years they have held down the enrollment of women students to approximately

5 percent of their total, graduating on the average only 250 women doctors a year.

To justify this policy the medical schools have a number of arguments. Dean Starr, for example, says, "We do not favor women in medicine because a large proportion do not practice very long and hence do not justify the investment involved in giving them a medical education." In this connection, however, Prof. Helen R. Downes, of Barnard College, last year published a study of the careers of women physicians who graduated in the 20 years before 1940. There were 100 from the University of Pennsylvania. In 1944, 93 of these women were still engaged in full-time medical work; 29 had qualified as specialists; 5 had become professors in medical schools.

THE CASE OF THE WOMAN STUDENT

American medical colleges also assert that very few women qualify for admission on a par with male graduates. That is best judged by examining a paragraph from the testimony of Col. Francis V. Keesling, Jr., chief liaison officer of the Selective Service System, before the Senate Committee on Military Affairs. Dr. Keesling testified:

"So far as the women are concerned, Dr. Willard C. Rappleye (of Columbia University's College of Physicians and Surgeons) stated that his school, with 115 places for the freshman class, had 366 applications from women, out of which they have already signed up 30. He told an officer in our headquarters personally over the phone that all these women had good credentials, and that 100 had such similarly good credentials that they could not distinguish among them and consequently had to put their names in a hat and draw out the 30."

Within the last 2 years there seems to have been some lowering of the bars against women. In 1946 women medical students constituted 8 percent of the total admitted. For the current year the figure is believed to have risen toward 12 percent. All this has discounted the protestations of the colleges about a scarcity of qualified women students but it also makes one wonder whether 12 percent of women is a "natural" limit or merely the measure of the present degree of discrimination.

Among other arguments to support the present reduction in medical school enrollments is the alleged lack of teaching beds. By this they mean they have only limited facilities in hospitals affiliated with their schools and hence could not provide first-class bedside training for an enlarged number of students. No doubt in the case of many a southern and western college this plea is a weighty one.

In large cities, however, where most of the larger medical schools are located, some schools have managed to find more than enough "teaching beds." Dr. William H. Perkins, dean of the Jefferson Medical College of Philadelphia, for example, has solved the problem by granting medical-school affiliation to 14 outlying Philadelphia hospitals in addition to the one attached directly to his school. This not only increases the number of "teaching beds" available to Jefferson's students but also greatly improves the quality of treatment afforded by these outlying hospitals which now have the services of many of the top-flight physicians on the staff of Jefferson College.

Significantly, Jefferson is one of the colleges that has not cut down its enrollment since the war. Like many another dean, Dr. Perkins has felt that the hurry-up features of the wartime accelerated program produced superficial instruction. Hence he has returned his school to the old 4-year pattern. But in doing so, he has managed to keep his enrollments up to the high wartime level, admitting 160 freshmen in 1946 and planning for an equal number for the coming fall term—15 percent above prewar figures.

MORE USE COULD BE MADE OF LABS

Lack of laboratory facilities is often given as another reason for cutting back enrollments to the prewar level. But an examination of the teaching schedules of many of these schools shows that laboratories are in use for teaching purposes for as few as 6 hours a day. In seeking to avoid the defects of the wartime accelerated program, most of the schools have abandoned its advantages as well. Going back to a 33-week teaching year, they are leaving their laboratories and other facilities virtually idle for at least one-fourth of the time.

Most interesting, however, is the fact that a few medical schools have not joined the cut-back parade. Dr. Wilburt C. Davison, dean of Duke University Medical School—one of the finest in the country—has refused to abandon the accelerated schedule used universally as a wartime expedient. Even before the war, Duke permitted its students to give up summer vacations if they desired and thus shorten their medical training by a full year. By pursuing this policy now Duke is keeping its facilities—laboratories and "teaching beds"—at work the year round.

The University of Minnesota is, for the next few years at least, also continuing its accelerated program. A few other schools, while abandoning the accelerated program and returning to the 4-year course, have kept their enrollments high as a recognition of their public duty. The deans of these schools claim that they are able to maintain the quality of teaching at a high level despite a 10- or 15-percent increase in the size of each year's class.

A "shortage of competent instructors" is sometimes given as a reason for cut-backs in enrollment. It is true that some older schools have lost instructors to the four new and four recently enlarged colleges. Yet such shifts could hardly account for the Nation-wide reduction in the total number of new students admitted. And many a school that has reduced its enrollment has actually regained numerous instructors and professors who were on military leave during the war.

There is a final important angle to be considered. Many of our medical schools say they are financially unable to expand their student bodies. They point out that tuition fees cover only a fraction of the cost of a medical education—that the rest must be met, in the private institutions, from endowments and in State universities from the public appropriations. The other side of the coin is that most of the cost of running a medical school is overhead, and additional students can be accommodated with hardly any increase in expense.

When all of these arguments are reviewed and analyzed, is it an inevitable conclusion that our medical schools are failing to face up to the critical facts of the physician shortage?

LARGER ENROLLMENTS ADVOCATED

Men, like Dean Perkins of Jefferson, Dean Davison of Duke, and Dean Harold S. Diehl of Minnesota, have shown that enrollments can be maintained at the wartime level without a reduction in the quality of training. Thus the first step toward relieving the doctor shortage must be an immediate expansion of medical-school enrollments.

Simultaneously with this temporary expansion, plans must be made for the long pull. Here there is little hope of counting—as we did in the past—upon large private endowments. Ever since 1929 private giving by foundations and wealthy philanthropists has been diminishing.

According to Dr. Alan Gregg, of the Rockefeller Foundation, the income from medical school endowments has fallen by one-third in the last 15 years.

Thus the major source of funds for the enlargement of medical-training facilities seems to lie in the Government. At present, more than one-third of our medical colleges—those of the great State universities—are maintained primarily by Government funds. Even privately endowed colleges receive large Government subventions in the form of scholarships and exemptions from taxation.

In the last session of Congress, Senators MURRAY, PEPPER, and MORSE joined in sponsoring an Education Development bill. In the current session, they have introduced a revised version of this measure, designed to provide substantial Federal aid to the States for the maintenance of educational institutions and for construction of new institutions and for scholarships and fellowships.

The American Medical Association has given the bill almost no support. Though desperate for new funds, the schools are afraid to buck the AMA, which controls their very right to existence, through its ability to withdraw recognition. And the AMA is afraid that Federal scholarships and Federal support may prove an entering wedge for Federal health insurance.

Yet, if they allow the doctor shortage to grow ever more acute, they may actually bring upon the medical schools and the AMA the very Federal control of medicine they fear the most. For the schools and the AMA are only the trustees of the public health. They must act as trustees in the interest of the public rather than as a medical chamber of commerce arbitrarily limiting medical education to a selected few.

The Oath at the Elbe

EXTENSION OF REMARKS
OF
HON. JAMES W. WADSWORTH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Our Town of April 19, 1947:

THE OATH AT THE ELBE

Two years ago, April 25, 1945—the day of the opening of the first session of the United Nations Conference in San Francisco—six American soldiers crossed the Elbe River in a small boat, signalizing the military junction of two great Allies of the Second World War: The United States and the Soviet Union. The six American soldiers, members of a 28-man infantry patrol under the leadership of Lt. Albert Kotzebue, of Houston, Tex., having left the forward American lines west of the Elbe the previous afternoon with the mission of finding a common meeting ground with the Russian Army, thrust through the 30-mile no-man's land between the Russian and American lines. At 11:30 in the morning, April 25, Lieutenant Kotzebue's patrol—followed later in the day by two other American patrols—successfully contacted the forward Russian lines on the east bank of the Elbe. A half hour later, at noon, the river crossing by the six American soldiers heralded the link-up of Gen. Courtney H. Hodges' United States First Army and Marshal Ivan S. Koniev's First Ukranian Army, successfully consummating a great common American and Russian endeavor and unity of purpose and interest.

April 25, 1945, the historic day of the military junction of the two great Allies in Europe, the day of the opening of the first session of the United Nations in San Francisco, marked a high point in American-Russian relations. The 2 years which have elapsed

have seen a precipitous deterioration of relations between the two great wartime Allies. The disappointments and misunderstandings of the past 2 years have charged the atmosphere with distrust and recrimination. The remembrance of a happier day when, as trusting wartime Allies, they met on a common field of battle, met with hope and enthusiasm at a common conference to help set up the postwar structure, has been almost forgotten.

Unless some great positive and wholehearted demonstration of conciliation, trust, and confidence takes place in the near future, the issues which separate the nations will become irreconcilable. A great primary act of enthusiasm and confidence which can ease the present tension and reverse the present ruinous trend must come from the remembrance, celebration, and regeneration of the spirit of a spring day in 1945 when they met, with high expectation, as brothers at the Elbe and in San Francisco.

We must, all of us—Americans, Russians, and all other peace-loving peoples of the world—ardently hope that April 25 will be set up as a day of friendship and conciliation among nations, and that it be celebrated by all men and women of good will in all countries and areas.

On April 25, 1945, addressing the delegates meeting in session at the first United Nations Conference in San Francisco, President Harry S. Truman of the United States said:

"We approach our task humbly, but with united resolution. The prayers of the people of the world are with us. They are spoken in many tongues and in the words of many creeds. But they are as one voice rising from the tragedy and suffering of war, in prayer for lasting peace.

"Thus fortified, and with the guidance of Almighty God, we must and shall fulfill the purposes for which we have come together."

Approaching their task humbly, but with united resolution, the American and Russian soldiers grouped at the Elbe on April 25, 1945, were also attempting to fulfill the purpose for which they had come together.

On the evening of April 22, 1945, a last German engineer platoon, retreating in panic westward, had blown the span over the Elbe at Strela. A half hour later, a civilian wagon-train of some 200 old men, women, and children, streaming westward, and stopped by the blown bridge had encamped for the night, huddled in a 200-yard radius semicircle about the bridgehead. At 1 in the morning, April 23, the advancing Russians saw lights flickering at the bridgehead from a 2-mile range. Believing German military units were engaged for a last stand, they heavily bombarded the bridgehead with artillery and mortars. At dawn, the Russians fanned out north and south of Strela to mop up German remnants.

At 11:30 in the morning, April 25—2 days later—Lieutenant Kotzebue's patrol reached the west bank of the Elbe at Strela. Upon being recognized by the Russians on the east bank of the Elbe, they prepared for a crossing. The span over the Elbe was, of course, blown. The only means available for the crossing was an old wooden boat moored to the shore. The Elbe, flooded by spring rains, was a swift-running river. In order to avoid being swept downstream when making their crossing, the Americans moved the boat some hundred yards up the stream in order to be swept by the river into a 50-yard remnant of the bridge jutting out from the east bank of the Elbe. Achieving their objective, the six American infantrymen raced over the remains of the span jutting out from the east bank, crossed the river at noon and were greeted by the Russians.

The greetings took place in the midst of some 200 corpses of old men, women, and children. After the preliminary greetings, they, all of them—Americans and Russians—looked down at the bodies and fragments of bodies—especially the body of a child with blue eyes and long brown hair clutching play crayons in one hand and a doll in the other.

At this historic moment of the meeting of nations, all of the soldiers present—Americans and Russians—solemnly swore that they would do everything in their power to prevent such things from ever happening in the world again, and that the nations of the world would and must live at peace.

The time has come for the nations of the world to reaffirm that solemn oath at the Elbe.

As one of the six American infantrymen to make the boat crossing over the Elbe 2 years ago, as one of the American and Russian soldiers to take the oath at the Elbe, I believe I voice something of the thoughts and feelings of all of us in this critical hour.

I therefore call upon the nations of the world for a new birth of conciliation and friendship, that the oath sworn on that hallowed blood-soaked historic ground shall not have been taken in vain.

JOSEPH P. POLOWSKY.

APRIL 15, 1947.

Devotion to Mother a Tradition

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minden (La.) Herald of May 9, 1947:

DEVOTION TO MOTHER A TRADITION

The prominence given in the news recently to President Truman's dramatic visits to see his mother calls attention to a heart-warming historic fact—that down through the years the majority of our Presidents have been extremely devoted sons.

When Martha Ellen Truman's son made the headlines by flying in bad weather in order to spend holidays with his mother, he was, in fact, continuing a tradition of paternal devotion first established by George Washington.

Washington made a similar, if not as spectacular, visit to see his mother. While en route to take part in his inauguration ceremonies in New York City, our first President made a point of stopping off at Ferry Farm, the family homestead at Fredericksburg, Va., to spend time with his mother, Mary Bell Washington.

Washington's thoughtfulness in taking time to see his mother on this occasion was especially fortunate since it proved to be the last time he saw her alive.

The first mother to realize the ambition of actually seeing her son inaugurated was Ella Ballau Garfield, a widow who raised four children. President Garfield was, according to one biographer, "the most affectionate and devoted of sons." When mortally wounded by an assassin's bullet in 1881, he showed his affection for his mother by immediately sending her a note in which he made light of his wound.

Lincoln's deep respect for his mother inspired his now famous remark: "All that I am or hope to be I owe to my angel mother." In 1818, when Lincoln was 9 years old, he was at his mother's bedside to hear her last request which was, prophetically, "Be something, Abe."

Nelly Conway Madison, mother of our fourth President, bore 12 children, the eldest, James, serving two terms as President during her lifetime. In order that his mother might spend her last years in comfort and be near him, Madison built a mansion on his Montpelier estate for her. She died there at the remarkable age of 97.

One mother who didn't want her son to become President was Nancy Allison McKinley. It is said her ambition was to have one of her sons become a bishop. According to her grandchildren, that would have made her happier than having a son President. The relationship between President McKinley and his mother was so ideal and so admired by the public that she was given the title "Mother" McKinley. At McKinley's inauguration his predecessor, Grover Cleveland, is said to have commented upon McKinley's good fortune in having his mother present at the ceremonies.

It was during Cleveland's first term, in 1887, that a Kentucky school teacher originated the idea of setting aside a particular day in the year on which to pay tribute to American motherhood. The teacher, Mary Towles Sasseen, conducted special exercises in her Henderson, Ky., schoolroom which included recitations on the subject of mother given before the children's parents.

In 1890 Miss Sasseen was successful in having her idea introduced into the schools of Springfield, Ohio. However, it wasn't until 1908 that the idea caught nationally, and then through the efforts of Anna M. Jarvis, of Philadelphia.

Two years earlier, on the anniversary of her mother's death, Miss Jarvis had invited a few friends to spend the day with her to share reminiscences. The following year, church services in Mrs. Jarvis' memory were conducted at the Andrews Methodist Church of Grafton, W. Va., where she had taught Sunday school for a number of years.

Miss Jarvis then brought her idea to the attention of church people in her home city, Philadelphia, and from there it was adopted by other sections of the country. In 1914 President Wilson signed a congressional resolution setting aside the second Sunday in May as Mother's Day and authorizing Federal display of the flag. In time, the idea spread to 43 countries.

The thirty-third national observance of Mother's Day, May 11, will find mothers throughout the Nation honored by church and civic groups and by their sons and daughters personally with gifts and Mother's Day greetings.

Alien Property Disposition

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 13, 1947

Mr. GEARHART. Mr. Speaker, though I have, during the last 4 years, repeatedly called the attention of the Congress to the vast properties of enemy aliens which have been seized by the Alien Property Custodian and Secretary of the Treasury under existing law and have pointed out over and over again the necessity of the Congress determining upon an American policy in respect to its disposition, the executive heads of the interested departments and agencies of the Government have repeatedly expressed their objection to the legislation I have offered, on the ground that, so they said, the time for legislative action had not yet arrived.

And in the intervening years, hundreds of American citizens who have suffered detriment as a consequence of enemy action remain to this late day uncompensated for their losses.

Two years or more have gone by since the Japanese, our one remaining foe, have laid down their arms—and still nothing has been done.

Billions upon billions of dollars of seized enemy property remains in the hands of our Government, hundreds of millions of dollars of enemy gold has been seized by our advancing troops, enemy properties of untold value have been surrendered to our arms and the country is still without a determined policy in respect to its disposition, and, manifestly, the Congress is making no effort to formulate one as thousands of innocent victims of ruthless enemy war action are left to shift for themselves, many pitifully impoverished to the point of starvation as the National Legislature, concerned with other problems, turns its back upon them.

Mr. Speaker, to prevent a repetition of the blunders which we were guilty of following World War I—blunders which let slip through our fingers hundreds of millions of dollars of seized enemy property as over a hundred million dollars of proven American claims went uncompensated—I have introduced a resolution which, if adopted by this Congress as a belated recognition of the urgency of this unhappy situation, will provide for the appointment of a joint subcommittee from the Ways and Means and Interstate and Foreign Commerce Committees of the House to make a thoroughgoing investigation of the entire subject matter; to determine upon and recommend an American policy in respect to the disposition of all of our seized alien properties and cash assets and to suggest appropriate legislation for the presentation, proof, and payment of the claims of innocent American victims of ruthless enemy war action.

It is high time that the Congress and the American people know the truth in respect to our seizure of these alien-enemy properties and cash assets. The time for the determination of an American policy in respect to seized alien-enemy properties and for the providing of a procedure for the liquidation of American claims arising out of enemy war action is long overdue. The adoption of my resolution would constitute an initial step toward the ultimate and complete solution of this problem which has been long crying for attention. A further procrastination would be unpardonable, indefensible, as American claimants stand by empty-handed. Mr. Speaker, cannot action on this resolution be expedited?

Mr. Speaker, for the enlightenment of the membership and in accordance with permission heretofore granted me, I hand a copy of my resolution to the Public Printer for inclusion in the CONGRESSIONAL RECORD immediately following my instant remarks.

The following, Mr. Speaker, is the resolution to which I have just referred:

Whereas the United States of America is vested with property and assets in large amounts, formerly belonging to enemy governments and their nationals, acquired by civil seizure and military capture; and

Whereas many thousands of American nationals have suffered private war losses through enemy action in all parts of the world, including American prisoners of war and internees, for whom as yet no protection, representation or compensation has been provided; and

Whereas many other thousands of American nationals are the holders of defaulted obligations of enemy governments, their political subdivisions and corporations created thereby, for whose protection the Congress of the United States created the Corporation of Foreign Security Holders by Public Law No. 22 of the Seventy-third Congress, and by other action enjoined the making of foreign loans; and

Whereas the Congress has been importuned for aid and relief by others than American nationals, who have come to our shores and whose property has been confiscated by enemy governments; and

Whereas since the beginning of our Republic we have refrained from exercising the right to confiscate the private property of enemy nationals; and

Whereas the future development of foreign trade and commerce may be materially affected by our policy as to enemy property in time of war and a sound policy may prove a deterrent as to future wars; and

Whereas the disposition of enemy assets now in our possession involves intricate decisions with our allies and nonbelligerent nations as to reparations and indemnities and may raise important issues in the making of treaties of peace and commerce and moreover, important questions under our own constitutional law as well as international law and the powers derived therefrom; and

Whereas the Congress is the sole arbiter on all these matters and as to all property and assets affected is a trustee for the safety and benefit of the United States of America and its nationals: Therefore be it

Resolved, That there is hereby created a select committee to be composed of 10 Members of the House of Representatives to be appointed by the Speaker, 5 of whom shall be selected from the Committee on Ways and Means and 5 from the Committee on Interstate and Foreign Commerce. In the case of each such committee not more than three of the Members selected from it shall be Members of the same political party. The Speaker shall designate one of the members of the committee as chairman. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.

The committee is authorized and directed to conduct a full and complete investigation and study—

(a) Of the amount, nature, present location, custody, and control of properties, sequestered, seized, or captured, formerly belonging to enemy governments and their nationals.

(b) Of the disposition made of any such property no longer in the possession or ownership of the United States.

(c) Of the names and identity of known claimants with respect to private war losses suffered through enemy action by (1) citizens of the United States, or (2) aliens who served in the military or naval forces of the United States on or after December 7, 1941, and prior to September 3, 1945, or (3) aliens who on December 7, 1941, and for at least three of the five preceding years, were bona fide and lawful residents of the United States; and of the amount and nature of the claims, or (4) such other persons as have or claim to have a right in the distribution of enemy assets and to recover for private war losses.

(d) Of the agreements and commitments made with other governments and private individuals affecting the disposition of all such properties.

(e) Of the costs and expenses of seizure, control, and custody.

(f) Of the activities and accomplishments of the Corporation of Foreign Security Holders since 1933.

(g) Of all additional information needful to enable the Congress to determine what should be the policy of the United States, and what legislation is necessary, with respect to—

(1) enemy assets seized and captured in war;

(2) compensation for private war losses suffered by American nationals and others as the result of enemy action;

(3) defaulted foreign loans and future loans to foreign governments, their political subdivisions and their corporations;

(4) the continuance of the Corporation of Foreign Security Holders; and

(5) the division and distribution of enemy assets now held for the common benefit of the United States and its allies.

The committee shall report to the House (or to the Clerk of the House if the House is not in session) on or before January 3, 1948, the results of its investigation and study, together with such recommendations as it deems advisable.

For the purpose of carrying out this resolution the committee, or any subcommittee thereof authorized by the committee to hold hearings, is authorized to sit and act during the present Congress at such times and places within or outside the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memoranda, papers, and documents, as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

Federal Aid to Schools Bill, One of Our Most Important Pieces of Must Legislation

---

EXTENSION OF REMARKS
OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 12, 1947

Mr. MORRISON. Mr. Speaker, with leave to extend my remarks, I wish to include a statement which I made before the Subcommittee on Education of the Education and Labor Committee in support of my bill, H. R. 2525, and of Federal aid to public elementary and high schools.

The statement follows:

Mr. Chairman, on March 12, 1947, I introduced H. R. 2525, a bill to authorize Federal aid for the purpose of helping the States more nearly to equalize educational opportunity in the public schools of the Nation.

Briefly the bill does the following things: (1) it safeguards State control of educational policies which relate to school administration, personnel, the curriculum, the materials of instruction, and the methods of instruction. (2) The bill authorizes appropriations which begin with $218,750,000 for the fiscal year ending June 30, 1948, and reach a maximum of $375,000,000 for the fiscal

year ending June 30, 1950. Thereafter the annual appropriation stabilizes at that figure. (3) It establishes a minimum level of education in the Nation equal to that which can be provided by an expenditure of not less than $50 per year per pupil in average daily attendance. (4) It apportions the money to the States on the basis of an objective formula in direct proportion to need and effort and in inverse ratio to the aggregate income of the citizens of each respective State. (5) The bill calls for a proper accounting of funds received for school support through audit by the State educational agency with annual reports on moneys received and how expended to the Congress. (6) The power of the State to define public education is specifically safeguarded. (7) Federal funds would be spent by the States according to the provisions of their own constitutions and statutes.

H. R. 2525 is in my judgment a sound measure. I have drawn freely upon the past experience of Federal Government in making grants to the States to supplement State and local support. I would like for the subcommittee to consider this bill in the course of its study of pending Federal aid bills. If it cannot be favorably reported by the subcommittee I express the hope that some similar measure such as H. R. 2953 will be recommended to the House for action.

The plight of our public schools today is without parallel in their history. Teachers have left their profession in vast numbers. The extent to which this has happened challenges comprehension. We have some 15,000 classrooms without teachers. There are some 60,000 other teaching positions that have been terminated because qualified instructors are not available. Beyond normal losses, more than 350,000 teachers quit the classrooms between Pearl Harbor and the beginning of the current school year last September. In lieu of qualified teachers we have filled thousands of classrooms—estimated at roughly 125,000—with men and women, some just out of high school, who cannot qualify for standard credentials. The training levels of the Nation's teachers has declined by one full year since World War II began.

I quote from a statement published in March 1946 by the Louisiana Teachers Association: "A recent survey by the Louisiana Teachers Association in 54 parish and city-school systems of this State reveals that 1,386 teachers quit the profession during the session 1943–44 as compared to 699 who quit during the session 1939–40. Of the 1,386 who left the profession during the session 1943–44, 532 left for a change of work. This same study reveals that the total number of students who completed their work at the teacher training institutions in this State in 1944 and who qualified themselves as teachers number 185. During the session 1939–40, 632 persons completed their work at our teacher training institutions and qualified themselves as teachers."

The conditions in my State of Louisiana do not result from any lack of interest in educating our children as thoroughly as we can. The fact of the matter is that Louisiana is not a State that relatively is well off. In 1943–44, for example, the Nation spent 1.5 percent of its income payments for public schools. Louisiana spent that year 1.6 percent of State income payments. That greater effort produced far less in school revenues per pupil than a much smaller effort in many of our wealthier States. In 1944–45 we spent $95.31 per pupil in average daily attendance as compared with $125.41 for the Nation, yet our effort exceeded that for the Nation.

It is lack of school revenues that, in the main, explains why we have 18.8 percent of our school-age children (5–17 years old, inclusive) out of school in Louisiana, as contrasted with 10.4 percent for the Nation. We lack the means to afford adequate school buildings, properly equipped. We do not have the means to enforce our compulsory school attendance program. The result is that a large proportion of our youth population is growing to adulthood without preparation for a constructive role in our society. Their economic competency is held at a minimum and their readiness to render national service in times of crisis is sacrificed.

The income per child (5–17 years old, inclusive) for Louisiana in 1945 was $3,167 as contrasted with $8,416 in New York and $7,403 in Nevada. Louisiana ranked fortieth from the top of the list of States in the order of income back of each child. New York ranked third, Nevada sixth. In percent of income used for schools, Louisiana's record was considerably better than the record of these two States. Despite that fact, half of the teachers in my State in 1945 received less than $1,515, as contrasted with a figure more than $400 higher for Nevada and more than $1,200 higher for New York. I cannot say whether Nevada and New York were spending as much for schools in 1945 as the importance of the education of their youth would have justified. I know that Louisiana was spending less than the importance of this enterprise would justify, yet Louisiana was making relatively a greater effort to provide good schools than the Nation at large.

Unless the Congress authorizes larger Federal expenditures to aid the States in financing our public schools, I am convinced that national preparedness will be to a significant degree inexcusably sacrificed. The primary strength of this Nation is not in its forests and streams and fields and its great mineral wealth but in its people. Our strength as a Nation will always be in some direct proportion to the extent to which the intelligence of our youth is cultivated. We are today living in an era when competition among the nations of the world depends upon a marshalling of the total rather than a fractional part of the resources of each nation. We will not ourselves be as successful as we ought to be if a large segment of our total population remains educationally handicapped.

The proposal that Federal Government should extend aid to the States to supplement State and local revenues for public schools is not new. We have had vocational aid since 1917 in our high schools. We have had aid on the level of higher education since 1862 when the land-grant college, or First Morrill Act, was passed. As a matter of fact, since 1802 Congress has been assisting the States in financing the education of our young people. I understand that Congress has enacted more than 150 Federal-aid-to-education measures. This means we have levied taxes for this purpose on the citizens of the United States and redistributed such revenues in order to assure benefits to the entire Nation which have been and are of national significance and for that reason justified. This is an old pattern or practice in our Federal Government and we know what market advantages have accrued from this practice in relation to highways, to airports, to agriculture, and to other areas of our national life. Federal funds for these purposes have not been apportioned to the States for the sole advantage of the States. They have been authorized and allotted in support of the general welfare. Our national interests required such action on the part of Congress. In the same way, the pressing need today is for Federal funds, to supplement State and local revenues, to be invested in the primary resource of our Republic, our children.

No generation of American youth has in the past faced problems as complex or more important than those we are passing on to our young people. Yet we are shamefully neglecting our young people at a time when the political and economic philosophies inimical to our way of life are being vigorously, even enthusiastically, strengthened to compete with, perhaps even to attempt to throw off balance and destroy, the principles upon which this Nation has grown great. The fact that some other powerful nations are reported to be spending relatively a great deal more for the education of their youth than we are for our own is a danger signal we would do well to heed. Every element in our national life must be cultivated to the highest possible degree, in terms of what we are all proud to call the American way of life, if our way of life is to have the powers of resistance to hostile faiths necessary to perpetuate and improve our own.

I know myself the objections that are raised to the purpose sought in the legislation before this committee. It is argued, for example, that Federal control inevitably follows Federal aid. History tells us that in the field of education this has not been true. It is argued that the States are capable of caring for their own educational needs without Federal assistance. This I know at least to my own satisfaction, is not in accord with the facts. There are other objections. These were raised, I understand, in practically every instance when the Congress considered legislation similar to the legislation now with your committee in the long sweep of more than 150 years. These arguments are no more valid today then they were when in 1787 the Northwest ordinance was enacted which set aside Federal lands for State school aid, or in 1833, and 1836, and 1841 when grants of Federal funds were made to the States. I want to urge most earnestly, Mr. Chairman, that you and the members of your subcommittee take note of the fact that while we spend time on old objections which have for a century and a half proved to be groundless the children of this country are suffering an educational depression that is without parallel, that is dangerous to our national well-being, and that cannot be wisely indulged. For that reason I express the hope that you will report a bill at the earliest possible moment, if not my own then your bill, Mr. Chairman, or some other measure that satisfies the subcommittee, in order that others of us in the House of Representatives may have a chance to register our support in defense of our country.

Voice of America

EXTENSION OF REMARKS
OF
HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 13, 1947

Mr. RICHARDS. Mr. Speaker, our program of aid for Greece and Turkey brings to mind the critical and growing need for an up-to-date information service on the part of the United States, particularly in the field of short-wave broadcasting. Along with the help we propose to send to Greece and Turkey, at much sacrifice to ourselves, it is necessary that the full story of what we are doing be not misunderstood.

It would be foolish for the United States to permit Russia to continue her short-wave propaganda campaign of distortion of our aims with no effort on our part to tell the people of the world our own motives. It seems to me that the only way to get the true story across is through short-wave broadcast.

I am distressed to learn that the House Appropriations Committee has cut out

the appropriations for broadcasting to foreign countries this year, at a time when it is more necessary than ever before that the Voice of America be heard and understood.

Right now the voice of communism by short-wave is being broadcast from Moscow to the far corners of the earth. This voice ridicules America and everything American. It is incumbent upon the United States, through our State Department, to combat the voice of Moscow.

On Friday, April 11, the United Press reported from Moscow the first official Soviet reaction to the short-wave broadcasts of the Department of State's Office of International Information and Cultural Affairs. Soviet journalist Ilya Ehrenburg, who visited the United States last year, condemned the Voice of the United States of America in an article appearing in the current issue of Cultur and Life—a publication of the Communist Party Propaganda Committee. Ehrenburg struck out at the OIC broadcasts as being "not the voice of the American people but an echo of reactionary voices."

The Soviet writer classed the OIC radio staff with Goering, Goebbels, Rosenberg, and Ribbentrop, and claimed that the State Department broadcasts "glorify two people—Washington and Ford." By presenting Washington as a Virginia landowner, Ehrenburg said, the broadcasts "make him sound more like a Kulak from the Middle West than a revolutionary leader."

Mr. Speaker, it is not my intention to answer this attack on the State Department and on the American people. The charges contained therein are, in themselves, a refutation of the writer's claims. Ehrenburg was freely admitted to this country. He was free to observe. He chose to see only those things which, in his opinion, warranted censure. He chose not to see those things which, to Americans, deserve praise. The warped picture he presents of this Republic reveals only his lack of objectivity as a reporter. Facts confound him.

What Ehrenburg wrote, therefore, was not important in itself. The implications of his article, however, are vital and far-reaching. Ehrenburg has been in the past a mouthpiece of official Soviet policy. The publication in which his article appeared is a creation of one of the most powerful organizations within the Communist Party. These are clear indications that the Voice of the United States of America is being heard in the Soviet Union.

There are clear indications that the Voice of the United States of America is being heard in many other parts of the world, including the Balkan countries dominated by the Soviet Union. One of the strongest audience reactions came from Marshal Tito, ruler of Yugoslavia, after the closing of the United States library in Belgrade last September. When Ambassador Patterson protested the closing Tito was reported to have remarked, "Well, you still have your short-wave broadcasts, don't you?" and added, "I understand my people listen."

Despite this strong evidence from Russia and Yugoslavia that the OIC is getting America's story over abroad, there has been a strong pressure movement on Congress not only to cripple OIC by drastically cutting its funds, but also to abolish the State Department's cultural and informational program completely. I am convinced that the OIC is in real peril as the result of this carefully planned and executed propaganda barrage aimed at Members of Congress.

To my knowledge, no Member of either House prefers to be led by the nose by pressure groups, whether those groups exist outside or inside the Government. Yet, that condition exists, here, now.

Let us critically examine this concerted campaign to destroy OIC.

For exhibit A let us turn to a form letter, an open letter to Members of Congress, copy to Washington correspondents, written on the stationery of the Committee for Constitutional Government and signed by Willford I. King, whose name also appears on the letterhead as Dr. Willford I. King, chairman of the committee. This letter is dated March 11, 1947. I quote the last two paragraphs of the letter:

> While I was in Washington a day or so ago, I was talking with a man attached to our State Department. He tells me that that Department is planning to spend this year $100,000,000 on foreign information service. One of their special endeavors is to send radio broadcasts to the people of Russia. It appears, however, that the Russians have very few radio sets. I wonder whether any of the sets, except those at official headquarters, are constructed to receive American broadcasts, after they are sent out. My guess would be that, if one were discovered having such reception, the owner promptly would find himself in a concentration camp.
>
> It seems to me that the whole idea of spending $100,000,000 on a project to spread our views throughout the world, is extremely dubious. It might be worth while to risk $100,000,000 on the project but I fear that the bulk of the one hundred million will be wasted. I hope, therefore, that you can find time to look into this matter and see whether it is not possible to save most of this money for the American taxpayer.

My own doubts have been raised as to whether the 30 individuals whose names appear on the Partial List of Advisory Board printed on the letterhead of the Committee for Constitutional Government, on which Dr. King's letter was written, were ever aware that such a letter was written or was to be written. I doubt if they knew that this letter was to be used to propagandize Congress. I seriously doubt that if they had known they would have permitted the use of their names to lend effectiveness to what, at the best, is a misstatement of facts and what, at the worst, is an attempt to mislead Congress through deliberate falsehood.

I refer to the thrice-repeated figure $100,000,000.

Mr. Speaker, it is common knowledge among the membership of both Houses of Congress that the Bureau of the Budget has recommended an appropriation of $25,000,000 for the fiscal year 1948 for OIC. That figure has been made known to the American public through more than a score of reputable national magazines and in news stories and editorials in many hundreds of reputable American newspapers.

Dr. King might have learned this had he read the budget recommendations conveyed to the Congress in the President's annual budget message which was released to the press. Dr. King might also have checked with the House Appropriations subcommittee in charge of State Department appropriations or with the Department itself. Needless to say, when the life of a useful governmental organization is at stake, any person concerned with that organization, whether he be for it or against it, should stick to the facts.

The attachment to Dr. King's form letter I shall label "Exhibit B."

Exhibit B is a reprint of a letter to the editor of the Wall Street Journal, under the date of March 12, 1947. It is signed by Clarence B. Hewes of Washington, D. C. I quote the last paragraph of the Hewes letter:

> I am opposed in principle to any form of organized governmental propaganda, which seems to me to be a worthless and undignified performance, not merely negative in its results but positively harmful to our national interests. After all, the United States of America is a tremendous fact in the world and speaks for itself with a power and eloquence beyond the capacity of professional propagandists to emulate.

It is pertinent to observe that the Hewes letter was a letter to the editor of the Wall Street Journal—and only a letter. In the American free press, the Hewes letter could very well have been published in a newspaper which held an editorial viewpoint contrary to the spirit and content of the letter itself. It must also be remembered, in this connection, that a substantial majority of reputable American newspapers and magazines have given their editorial support to the State Department's international information and cultural program.

The Hewes letter was inserted in the RECORD of March 17 by the gentlewoman from New York, Hon. KATHARINE ST. GEORGE.

Mr. Hewes deplores the methods of professional propagandists. He says the "United States of America speaks for itself." But, he does not carry his argument to its logical conclusion. He does not say how our country speaks. I contend that every citizen of this Republic speaks for his country. I contend the personnel of OIC are Americans and, as such, have the right and duty to speak for America.

My experience with professional propagandists leads me to believe that their usual method of procedure is, when they have determined to destroy a chosen objective, to strike at that objective when their propaganda would do the most damage. The professional propagandist tries to get his views widely circulated in the press. Then, he sees to it that the published material gets in the hands of those who have the power to destroy that which he wishes destroyed. Mr. Hewes deplores these methods. Yet, he uses them in his assault of OIC. He chose his time wisely. On March 12, the House Appropriations Subcommittee was just beginning its consideration of OIC's budgetary requests. He chose his newspaper wisely—a financial newspaper.

OIC's current problem was a financial one. A financial newspaper would carry weight. Finally, it is not conceivable that Mr. Hewes did not know well in advance that his letter would be used to propagandize Congress as an attachment to the letter of Dr. King which falsely stated that the State Department was asking Congress to appropriate $100,000,000 for "foreign information service."

Exhibit C in the powerful campaign to get Congress to wipe out OIC is a letter from Mr. E. F. McDonald, Jr., president of the Zenith Radio Corp., inserted in the RECORD of March 12 by the Senator from Illinois, Hon. C. WAYLAND BROOKS. I quote the last two paragraphs of the McDonald letter:

Both for the sake of economy and to give the rest of the world a true understanding of America, the State Department should be compelled to cease its present international broadcasting activities, and any proposal that the Government enter the broadcasting business should be defeated. The American broadcasting industry should be given an opportunity to expand in the field of commercial international broadcasting.

P. S.—So that there can be no misunderstanding of my position, I assure you that Zenith has no interest, direct or indirect, in any chain or international broadcasting station. The views I have expressed are based entirely on my lifetime experience in radio.

It is a high tribute to the sense of justice and fair dealing of the Senator from Illinois that he gave both sides, those who wished to preserve OIC, as well as those who were determined to destroy it, and equal hearing in the RECORD. In the RECORD of March 17, I read the following portions of an insertion by the Senator from Illinois:

Mr. BROOKS. Mr. President, a few days ago I asked unanimous consent to have printed in the Appendix of the RECORD a letter from Commander McDonald in which he took a position opposing the Government entering the broadcasting business. At the request of Mr. Peter W. Denzer, of the Broadcasting magazine, I ask unanimous consent to have printed a statement by Mr. William Benton, Assistant Secretary of State, in regard to the matter I had inserted in the RECORD.

The following is from the Benton statement:

I have known for years of Commander McDonald's lifetime experience in radio. I have supplemented my own experience in private broadcasting by conferring with others who have devoted much of their lives to broadcasting—the broadcasters to whom Commander McDonald refers as those who pioneered our international short-wave stations. These are the private licensees whose facilities are now under contract to the State Department.

Commander McDonald shows lack of familiarity with certain aspects of the problem when he compares int rnational broadcasting to newspapers and magazines, and states, "There is no more reason for the Government to own and operate broadcasting stations than there is to publish newspapers and magazines."

As a matter of fact, the Government does publish one magazine for distribution abroad, the magazine Amerika, in Russian. This is the only magazine from the United States which the Russian Government will allow to circulate in Russia. The other 10 or 12 magazines which were published by the OWI and the OIAA I discontinued shortly after I joined the Government.

If I had similarly discontinued international broadcasting by the State Department, there would have been very little international voice broadcasting from the United States—nothing remotely comparable to the needs. The impact of such broadcasting as would have received private support or sponsorship would have been totally inadequate. Commander McDonald will find, if he inquires, that this fact is generally admitted by those who have studied the problem and are best informed about it.

Alone, the McDonald letter is one man's expression of opinion. Taken with Hewes' letter and the King letter, it becomes part of a pattern to punish OIC through training the guns of a carefully planned and executed publicity campaign on Congress.

Dates are important. The King letter was dated March 11. The Hewes letter was dated March 12. The McDonald letter was inserted in the March 12 RECORD. The House Subcommittee on State Department Appropriations was beginning its hearings on OIC budget requests during the week of March 12. The same type of gross misinformation appears in all the letters involved in the "Get Congress to Kill OIC" campaign.

This does not mean that the OIC is sacrosanct; that the Department's international informational and cultural program is, like Caesar's wife, above reproach. Honest criticism can only have the effect of improving the Department's efforts in this field. But, honest criticism—in this, as in all other instances—means "informed" criticism.

The attitude of Congress toward OIC in the past has been a matter of great personal pride to me. The Congressional approach has been weighted heavily on the side of "informed criticism."

Opposition in Congress to OIC has, for the most part, been nonpartisan in nature, just as the strong support for OIC in Congress has also been nonpartisan. I am thoroughly convinced that this congressional position has been taken because of the widespread awareness that OIC is the major vehicle for explaining our foreign policy to the individual citizens of those countries in which OIC operates or toward which it beams its broadcasts. The Members of Congress know that OIC is the major vehicle for explaining our foreign policy and, as such, it is vital to the efficient functioning of the nonpartisan foreign policy now being followed by this Government.

Just how important OIC is to the task of keeping the people of foreign countries correctly and fully informed about our foreign policy—its meaning and its aims as it applies to them—has been well brought out by Secretary of State George Marshall. He says:

It seems to me absolutely essential that from somewhere—in this case, the United States—we endeavor to cover the earth with the truth, the unadulterated, pure truth without any twist or turn or implication in the midst of this riot of propaganda.

Secretary Marshall's firm advocacy of the State Department's cultural and informational program, his strict adherence to truth, stands in stark contrast to the ingenious half-truths, the deliberate falsehoods, employed by outside influences to bolster the movement within Congress to cripple or to do away entirely with OIC.

An article by Frank Kelley in the Washington Post of April 13 tells of the necessity for giving the peoples of foreign countries a full and fair picture of our nonpartisan foreign policy.

In writing of the situation in the Near East, Mr. Kelley states:

It—

The OIC—

will use "straight news" about world events and American policy to combat a campaign of calumniation and vilification by Russia of American motives in helping Greece and Turkey and in maintaining oil concessions among the Arabian sands.

Ever since the Truman doctrine of bulwarking Greece, Turkey, and other free peoples against Communist infiltration tactics was announced a month ago, the Moscow radio has outdone itself in outraged short-wave screams.

The Soviet shrieks of annoyance are mingled with abuse and slander of the United States Government and its officials and of the free American press and its principal writers.

* * * It all appears to be part of a carefully calculated centrally directed Russian policy of impugning the motives of a friendly foreign government. Truman, Acheson, Clayton, Vandenberg, Eaton—all the American officials who have explained the program to the world and to Congress—are systematically attacked.

Mr. Kelley goes on to report the Soviet broadcasts monitored by the Central Intelligence Group. Here are a few of his findings:

Moscow tells Austria that the new American policy is "a combination of dollar policy with the policy of the truncheon," borrowed from Hitler.

Moscow tells the British that "the dollar, with clear designs on Greek independence, is to take Greek fascism under its protection."

Moscow tells the Italians that American aid for Italy is "a worn-out banner * * * hoisted by all the pretenders to world domination."

Moscow tells Japan that American interest in rebuilding China has the goal of "trying to make China a colony of the United States."

Moscow tells Turkey that Truman intends to "control Turkey's economy and army." With American help, Moscow asserts, "Turkey will lose her sovereignty." Yet, Moscow tells Hungary that Turkey gave "active support to the Fascist coalition" during the war.

The OIC has been given the task of telling the truth about our nonpartisan foreign policy in the face of this formidable opposition. The necessity for OIC's existence is more obvious now than ever before. The OIC needs informed congressional criticism based equally on justice and understanding. It would be manifestly unfair to the men and women entrusted with defending the good name of our Republic to surrender to a planned propaganda campaign, based upon deliberate misinformation and intentional lack of understanding.

To abandon OIC at this time would be, in effect, to hand over to foreign propaganda organizations the job of explaining our nonpartisan foreign policy. OIC's program now rank second, third,

and even fourth in some of the world's danger areas, because it is operating on modest appropriations. For Congress to cripple or kill OIC would mean that other nations would immediately rush in to misinterpret our intentions. It would mean an international field day for the Ilya Ehrenburgs.

Washington Correspondent Robert W. Ruth gives a compact portrayal of what OIC is doing in the realm of international short-wave broadcasting in the Baltimore Sun of April 1.

Mr. Ruth writes in part:

In the international contest to spread culture by radio, Communist Russia is far outdistancing the United States in the time she devotes to cultivating her neighbors on her European borders and the pivotal states in the Balkans and Middle East.

* * * this country is now broadcasting less than 29 hours a week to the "iron curtain" countries of Yugoslavia, Rumania, Poland, and Bulgaria, while our principal competitor blankets them 41 hours a week.

And to the world's newest trouble spots—Greece, Turkey, Iran, and the areas speaking Arabic dialects—Radio Moscow sends a 32-hour-a-week stream of propaganda. By comparison the State Department broadcasts nothing to these regions, although William Benton, Assistant Secretary of State for Public Affairs, is planning programs in Greek, Turkish, and Arabic.

* * * the Russians broadcast three times daily for a total of 1 hour to the estimated 45,000 receiving sets in Greece. Greece is also the target of Turkish, British, French, Yugoslav, and Bulgarian programs, the latter two tinged strongly with a Moscow line.

Radio Moscow devotes from 1½ to 2 hours a day on approximately ten frequencies to the 180,000 Turkish receivers, of which more than half are capable of short-wave reception.

* * * But in programs broadcast into Poland, Radio Moscow leads * * * with 14½ hours a week compared with 10½ by the British and less than 13 hours a week by the United States.

We devote 25 minutes a day to Rumania, but Moscow averages an hour. In addition, press and radio work in Rumania is handled through Arlus, a Rumanian Communist organization. * * *

In Yugoslavia, the American programs make a better showing, about 10 hours to Russia's 8 hours and 45 minutes a week, but, as in Rumania, the native Yugoslavia radio is under Russian influence.

And to Bulgaria, our State Department broadcasting, consumes only 25 minutes a day contrasted to an hour and one-half of Radio Moscow "news" and music.

The men and women of OIC, charged with meeting the challenge to our national integrity all over the world, have earned just consideration from Congress. We should encourage careful examination of factual evidence in all legislation pertaining to the OIC. I am confident that OIC would welcome informed congressional criticism. On the other hand, we must take a firm stand and not give way before the determined propaganda campaign which has for its goal the killing of OIC. This campaign, like the Ehrenburg article, manufactures its own evidence, relies upon flagrantly propagandistic methods and does not stop with intentional misrepresentation of fact.

Congress must act independently and courageously on the OIC if it is to justify its inclusion in the definition of government included by George Washington in his Farewell Address:

This Government, the offspring of our own choice, uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers uniting security with energy, and containing within itself a provision for its own amendment, has a just claim to your confidence and support.

Expensive Penny-Pinching in Washington

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Richmond (Va.) Times-Dispatch on April 28, 1947, entitled "Expensive Penny-Pinching in Washington."

This editorial expresses much better than I was able to do the sentiments which I voiced on the floor of the House on yesterday in connection with the appropriation for the State Department.

The editorial follows:

EXPENSIVE PENNY-PINCHING IN WASHINGTON

The United States is about to embark on a program of global proportions, designed to halt the march of communism into new areas. One of the great weapons of the Soviet Union is propaganda, and vast sums are being spent by Moscow for the purpose. Yet at almost the very moment when our Senate was voting by approximately 3 to 1 to support the Truman plan for aid to Greece and Turkey, with all that this entails, a subcommittee of the House Appropriations Committee was quietly letting the economy ax fall on the State Department's Office of International Information and Cultural Affairs.

In other words, that subcommittee was trying to make it impossible for the Government of this country to answer the world-wide campaign of Communist propaganda with an intelligent and aggressive information service of our own. Thus, it handed the Kremlin the very advantage it most desires at this juncture. For the Soviet Union is in no position to fight this Nation now with guns and tanks and planes. It must be content to use the more subtle weapons at its disposal, chief among which is the weapon of propaganda.

Hence if action of the House subcommittee is allowed to stick, we shall be in the ludicrous position of having scrapped a $31,000,000 global-information program on behalf of democracy for reasons of economy while giving away hundreds of millions, if not billions, to Greece, Turkey, Korea, and other countries in an effort to further that same cause of democracy. The millions or billions will be given away in an effort to stop Soviet expansion, but we shall have no effective machinery with which to combat the ideological expansion which is today the most deadly, dangerous, and vital part of the Russian drive.

True, the State Department's Office of Information and Cultural Affairs has made mistakes, under its Director, William Benton, But it has been a helpful agency, on the whole, and it is needed far more right now than it has been needed since the war ended. This country simply must put its story across to the peoples of the world, many of whom get no news at all except the gross distortions which appear in their government-controlled newspapers.

The American programs broadcast via the Voice of America radio stations in Germany have obviously been reaching Russia lately in considerable volume, if one may judge from the howls emitted by Ilya Ehrenburg and the Kremlin's press officers. Are we to scrap this essential link between our civilization and the Soviet people at the very moment that it is being forged? Are we to abandon the effort to inform the Russian-dominated peoples of the Balkans, cut off, as they are, from news of the outside world? Shall we scrap the magazine Amerika, published in Russian and distributed in Russia by our State Department, in order to provide accurate news of this country's plans and intentions? We are selling 50,000 copies a month in Russia, and distributing 10,000 more free, with the Soviet Government's permission. It is estimated that each copy is read by 25 Russians.

All this will be brought to an end, if the House subcommittee has its way. It is incredible that this should be allowed to happen. The United States would be spending only a fraction of what Russia spends on propaganda if it doubled the proposed $31,000,000 appropriation, but some of our statesmen in Washington seem to think it makes sense to cut out the appropriation entirely. Just how such blind penny pinching can be made to harmonize with the evident willingness of Congress to embark on a multi-billion-dollar global program of bucking Russia remains to be explained.

Tax Laws Unfair to Lawyers

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John R. Nicholson, of the Chicago bar, in the American Bar Association Journal for April 1947:

PENSIONS FOR PARTNERS: TAX LAWS ARE UNFAIR TO LAWYERS AND FIRMS

(By John R. Nicholson, of the Chicago bar)

Let us imagine the hypothetical case of twin brothers—Henry and Charles. They are alike in every way; they have the same intelligence, personality, likes and dislikes. They receive equal educational training.

By chance, Henry determines to pursue the profession of law, while Charles directs his activities toward manufacturing. Time goes by, and finds Henry as senior partner in his law firm. The clientele is substantial and the firm enjoys a splendid reputation in the community. Charles, too, has prospered. He is now president of the A Manufacturing Corp.

Both brothers receive substantial incomes. They work equally hard. If any difference is apparent, it would seem that Henry spends more time at the office than does Charles. During this same period each brother has become a family man, and, strangely enough, the parallel continues in the fact that each of them has three children. Their families live in similar surroundings and acquire much the same habits of life respecting living and educational expenses.

Finally, to complete the cycle, death claims both brothers—let us say, on the same day. The story comes to its natural end. One is

likely to remark, "Henry and Charles were alike as two peas in a pod. Their lives and fortunes were identical"; and so they were to the point of death. There all similarity ceased.

Under the wills of the two brothers, Henry's law firm undertook the administration of both estates. The assets appeared to be roughly equivalent. Henry and Charles each owned comparatively equal homes in the same town. Their bank balances were about the same. The face value of their respective life-insurance policies approximated the same sum. But Henry's estate would receive only his undistributed profits from the law firm, plus additional amounts under an accounting for his interest in the capital accounts, work in progress, and the like. This summed up Henry's financial matters.

Charles' family was in a much better position with regard to future income. There were social-security benefits from the Government. There were dividends on the stock of Charles' corporation—stock received by him under bonus plans in effect during his life. Finally, in point of mention but not importance, there were the death benefits payable to Charles' family under the corporation's pension plan.

THE LAWYER'S ESTATE IN AN UNFAVORABLE POSITION

The net effect of these final differences was that Charles' family was placed in a much sounder financial position than was Henry's. Charles left his family with a secure, comfortable future. Henry, while providing with some adequacy for the future, had done far less in this respect than his brother. The parallel of their lives had been brought to a sudden end by their deaths.

The foregoing drama serves to illustrate the position of the professional man engaged in private practice. It applies to all of them—lawyers, doctors, accountants, engineers, brokers—all men for that matter who are engaged in a business or calling in the form of a partnership or individual proprietorship. This article, while applying to the group as a whole, is primarily directed to problems of the lawyers.

The Federal Government has, over the last 20 years, given serious consideration to its responsibilities to the aged and needy. It is clearly established that each individual has an expectancy of only so many productive years. Thereafter he may be unable to support himself financially, but someone must do it. The Government has, for various reasons, assumed such an obligation.

In 1935 the Federal Government enacted social security legislation to provide some such support for aged and needy. Such assistance was given to all employees, whether employed by an individual, a partnership, or a corporation. Charles, as president of his corporation, came within its purview; Henry, and all other individuals engaged in a profession or partnership business, did not.

Congress also turned to employees' trusts as a method of furthering its efforts to carry out its social duties. It encouraged employers to establish such plans by offering them tax relief in the form of deductions in the amount of their contributions to the plans. Charles, as president of his corporation, became a beneficiary of his corporation's plan, albeit with certain restrictions; Henry, while he could establish such a plan for his employees, could not, nor could his other partners, become a beneficiary of such a plan.

OTHER DISPARITIES AGAINST A LAW PARTNER

Even if a law partner resigns himself to the fact that he cannot avail himself of the above-mentioned benefits, further obstacles to making adequate provisions for his family present themselves. The necessity that a law firm maintain an adequate bank balance is well known, whether it be for the payment of employees' salaries, for office supplies, or anything else. In setting aside such amounts to keep the business liquid, the partner is giving up the use of some of his income.

At the same time the Government collects income tax on the partner's entire distributive share, which includes the sums the partner never drew for personal use. Such a situation, coupled with living expenses and other like items, results in the average lawyer finding himself no younger and not much better off from a standpoint of savings or security for the future, than he was 10 or 20 years earlier when his income was much smaller.

NO SOUND REASON FOR EXCLUDING PARTNERS

The foregoing is not just griping by one of the profession. It is quite generally true that the average lawyer works as long and as hard as the average businessman or corporate executive, but has far less to show for it at the end of his active career. He spends a great deal of his time giving his corporate clients the benefit of his advice and legal knowledge. He guides them through periods of change and unrest, contributing as much to a corporation's success as do many of its top-flight executives. The unfairness of the situation is further pointed up when the corporate client calls upon the lawyer to establish a pension plan for the company. The lawyer sees and works with the plan, appreciates the benefits available to the participants, and then realizes that he and his partners cannot avail themselves and their families of such a plan.

There is no justification, apparent from an economic or social point of view, for excluding partners and individual proprietors from the benefits already discussed. If it is agreed that the reason for establishing such benefits stems from a feeling of social responsibility and a desire to make certain that everyone is assured of adequate income during his later years, why should certain individuals be prevented from attaining such security, solely by reason of the form of doing business they choose to adopt? When I say "choose to adopt," I am speaking of unincorporated associations in general. In the case of lawyers the situation is further aggravated by the fact that attorneys are prohibited from adopting the corporate form of doing business.

Under the law as it exists today, partner attorneys in private practice cannot participate in any of the benefits of either social security or pension plans. Any amounts set aside by a partner attorney to provide for his family's security after his death have to be accumulated in spite of high income taxes on all his net earnings over the years, in addition to his over-all living expenses. This method of forced savings is not only extremely difficult but at times impossible.

There is no reason apparent why partners should not be able to include themselves as beneficiaries, other than the fact that the applicable section of the Internal Revenue Code refers to plans of an employer for the exclusive benefit of his employees. Since, in dealing with the law, the authorities have difficulty in conceiving that a partner is an employee, the benefits are withheld. See for example I. T. 3350, 1940–1 C. B. 14 and I. T. 3268, 1939–1 C. B. 196.

That denial of equality to partners stems from theories of what constitutes a legal entity and what does not, further serves to point up the artificiality and arbitrary nature of the present situation. The lawyer who is at all familiar with the various problems involved in the law of partnerships realizes that under certain circumstances a partnership is deemed to be an entity separate and apart from the individual members constituting it. However, such fine legal reasoning should not be necessary in a matter of such broad and general interest as this one.

It is submitted that the law as it stands in present form is grossly unfair both from a social and from an economic point of view. The solution to the problems lies in legislative or administrative enactments or amendments to existing laws and regulations. Study of the problems and obtaining necessary governmental action is worthy of consideration by the entire profession.

Secrecy and Science

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, May 14 (legislative day of Monday, April 21), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in the Monday issue of the New York Times entitled "Secrecy and Science."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SECRECY AND SCIENCE

Late in 1945 the physicists of the country protested against the veil of military secrecy that had been drawn over research. The protest made some impression on Congress, for the McMahon Act, which creates the United States Atomic Energy Commission, calls for the dissemination of scientific information. Progress has come to mean scientific progress, and scientific progress is likely to be most rapid when there is freedom of publication. Nevertheless, we keep to ourselves not only much about atomic energy but also about geology, meteorology, and biology because of the advantage that secrecy gives us in our attempts to preserve the remnants of democracy and free enterprise in Europe. So we are faced with a dilemma. If we want rapid scientific progress and hence technologic progress, military secrecy is a handicap, and if we are convinced that military secrecy is of advantage to us in our dealing with other nations we must retard scientific progress.

Just what secrecy and censorship mean in science the public hardly realizes. For example, geodesists would like to determine the exact shape of the earth, which is known to be roughly that of an oblate spheroid. The determination can be made only by the cooperation of geodesists of all countries. Cooperation is impossible because the information to be pieced together would be of the greatest help to a power that might hurl rockets loaded with high explosives for great distances. The age of the earth cannot be more accurately measured than it has been because radioactive materials, the clocks used, can now be obtained only with the greatest difficulty from Government supplies. Energy can be released from lighter elements as well as from uranium, but the physicist who succeeded, even on a scale as infinitesimal as that which enabled Hahn and Strasmann in 1938 to show what could be done with uranium, would undoubtedly be kept silent.

The most formidable task that confronts the United States Atomic Energy Commission is that of safeguarding our national interest and at the same time stimulating scientific discovery

Ohio Opposes Gift of Lake Erie Fisheries

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. WEICHEL. Mr. Speaker, the people of the State of Ohio are opposed to giving its lands and waters in Lake Erie to an international commission having jurisdiction of lands and waters owned by the State of Ohio through a treaty negotiated by the State Department with England and I am including a resolution of the Honorable Fred Adams adopted by the Ohio Senate on April 23, 1947, expressing the opposition of the people of Ohio and memorializing the Senate of the United States to disapprove ratification of the convention relating to the treaty between England and the United States covering the fisheries of the Great Lakes and connecting waters, signed at Washington April 2, 1946, especially with reference to the opposition of the State of Ohio being included in such treaty.

The resolution follows:

Senate Resolution 30

Resolution memorializing the United States Senate to disapprove a convention between the United States of America and Canada, relating to fisheries of the Great Lakes and their connecting waters, signed at Washington April 2, 1946

Whereas a convention was negotiated and signed April 2, 1946, with the objective of providing for the development, protection, and conservation of the fisheries of the Great Lakes by joint action of governmental agencies of the United States and Canada; and

Whereas as a means for achieving such objective the convention creates an international commission for the Great Lakes fisheries; and

Whereas, if such convention becomes effective, Ohio and other States of the Union having responsibility and valuable interests in such fisheries will lose jurisdiction over the same; and

Whereas the inclusion of the waters of Lake Erie in the proposed international treaty delegates forever the sovereign rights of the United States and of the State of Ohio to an international governmental agency; and

Whereas the interests of the State of Ohio in these waters and fisheries will best be served if the convention is not ratified; and

Whereas the citizens of Ohio are very much opposed to the convention establishing an international authority over such fisheries: Now, therefore, be it

Resolved, That the Ohio Senate respectfully memorializes the Senate of the United States to disapprove ratification of the convention between the United States and Canada relating to fisheries of the Great Lakes and connecting waters signed at Washington, April 2, 1946; and be it further

Resolved, That properly attested copies of this resolution be transmitted to the President of the United States, the Senate of the United States, to each Ohio Member of said Senate and to the Governors of the States of New York, Pennsylvania, Indiana, Michigan, Minnesota, and Illinois; and be it further

Resolved, That the attorney general of Ohio be directed to inform appropriate Federal authorities of the desire of the State of Ohio to intervene before the appropriate senatorial committee in opposition to the treaty creating such international commission.

Office of Technical Services of Department of Commerce Should Have More Funds

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. KEFAUVER. Mr. Speaker, I am, of course, very much in favor of reducing taxes and eliminating useless and needless Government expenditure. But there is one item in the present appropriation bill which has been too severely cut by the committee. This is the item which appropriates for the Office of Technical Services, an office that functions directly under the Secretary of Commerce.

The Office of Technical Services has been functioning for some 3 years. It performs services of vital importance to small businessmen and to the national defense.

First. It has been engaged in examining and making available for the use of American businessmen the valuable patents and technical information acquired by the United States Government from German and Japanese industry. Our experts were frankly amazed at the amazing technical progress of the German people when we went into Germany. From the German patents and German technical information alone American business will profitably learn a great deal and our position in the industrial world will be correspondingly enhanced.

The examination of this information and the making of it available to American business requires the resources of Government since the cost would be prohibitive from the standpoint of private parties. This information is legitimately the property of American business since it was one of the good fruits of war.

Second. This Office is engaged in the work of correlating and making available all known information on the technical processes of production, whether here or abroad. Lack of such correlated information cost the Government many hundreds of millions of dollars in the last war. There were many duplications in investigations into technical processes because hidden away in voluminous Government files a preceding investigation was buried. This was an indefensible situation. It not only cost the Nation money, but it cost it time, natural resources and slowed down technical developments which in turn resulted in a needless loss of life on the battle fronts.

The existence of such correlated information will be of inestimable value to the United States in any future wars. Hence, in this work, the Office of Technical Services is performing a task of the highest value to the Nation from a military standpoint.

Third. For many years small business in the United States has been starved, technologically speaking. Progress in technology has tended to become the exclusive property of big business which has acquired patent title to the greater part of improved technology. At the same time the Federal Government has for many years been spending many millions of dollars to promote the technological efficiency of the farmer. Only small business has been left to shift for itself in its quest for better tools and under existing conditions the handicaps have been too great for small business to succeed. Because of this condition the Office of Technical Services has worked out a plan for assisting the small businessman to better and improve his chances for business success through the medium of obtaining more efficient technology.

A small businessman who has developed an idea up to a point where his resources will not permit him to carry it further, has the opportunity to forward his incompleted work to the Office of Technical Services for examination. This Office then consults outstanding engineers and scientists, both in Government and in private business, and if the verdict is favorable the incompleted invention is then "farmed out" to a private-research laboratory. These laboratories operate under contract with the Office of Technical Services. The funds necessary to conduct the research are split between the Government and the private parties interested in the development of the invention. If the invention proves successful patents are issued to the interested parties, but the Government shares in the royalties until the part which it contributed to the perfection of the invention has been fully paid.

This kind of a system, it seems to me, is of paramount importance to small business. Our giant corporations have wonderful laboratories only for one reason. Numerous competitors were merged to make these giant corporations and naturally they have the money to spend on expensive laboratories. But as a consequence of their size we have had a great increase of monopoly in the economic system. The small businessman is still competitive business in the United States and if he has not merged with other competitors to form some giant combine which will destroy competition, we should do everything we can to preserve and promote his independent status.

One of the reasons why the small businessman is handicapped in the industrial struggle is that he has not been able to get efficient tools. The Federal Government has been more than generous with the farmer on this score. Every year thousands of agricultural agents make available to the farmer, entirely at Government expense, the latest and best information on scientific farming. Under the Office of Technical Services the small businessman is willing to pay the cost of making progress in technology. All he asks is that the Government temporarily advance the funds until new ideas can be perfected. I

do not think that the Congress can say "No" to the small businessman and "Yes" to the farmer. Such a position is glaringly inconsistent. If Government aid on technology is good for the farmer, it is certainly good for the small businessman, and particularly where the small businessman is willing to pay on a self-liquidating project basis.

Though the Office of Technical Services has only been in existence for 3 years, the numerous requests for scientific information coming to it, not only from small business, but from big business as well, indicates clearly the lack of coordinated scientific and engineering information about production. No library has the resources to do this job. No private agency could do it. The cost would be prohibitive to private enterprise.

To date nearly 88,000 requests for information have been received from American business by the Office of Technical Services. The present monthly average of requests is over 8,000. But remember, gentlemen, that the furnishing of this information to businessmen in peacetimes is not only an important and necessary service in that the dissemination of such information results in increased business efficiency and more production, but the coordination of such scientific and engineering information about production is a vital service to military preparedness. On the military side alone this service could easily be justified. Would any man in this House say that it is not worth $3,000,000 a year to know at any one moment where the military can put its hands on all information about any productive process?

Under the budget this office asked for $3,400,000. The Appropriations Committee slashed this to $1,700,000 and recommended that the functions of this office be scattered in other departments where effective coordination of this kind of work would be impossible. I hope the committee may restore the whole amount or that the House will sustain the Senate if that body grants an increase.

The value of the services of this Office is demonstrated by two letters which I have secured permission to include in the RECORD. They are:

MAY 14, 1947.

Congressman ESTES KEFAUVER.

DEAR CONGRESSMAN: I am part owner and chief engineer of the Breco Manufacturing Co., Baltimore, and technical director of the B-R Engineering Co., the Baltimore Engineering & Chemical and the Medical Chemicals Co., all of Baltimore. It has been my duty to try to keep these manufacturers abreast with the latest technological developments relating to each of the above company's business. For the past 2 years I have depended to a very large degree upon technical know-how which I have obtained from the Office of Technical Service.

Let me cite two specific cases where information from OTS has materially reduced the cost to the consumer; one: we manufacture a water base coupling which costs the consumer $2.50. Data furnished by OTS enabled us to modify our production procedure so that at present the reduction in man-hours through the use of a new method of induction welding reduced the production cost. The sale price of this unit now is $1.80 despite the rise in both labor and material cost. The second case covers the preparation of cutting tools. By a new special blasting treatment we have been able to more than double the life of many of our cutting tools. The reduction in maintenance cost has been passed on to our customers.

Small business, particularly the small manufacturer, is in critical need of better technology and more efficient methods of production. The present Office of Technical Service is our only real source of aid at the present time. We don't ask for the service as a gift. Small business is willing to pay as we go and we sincerely hope that something can be done in Congress to continue this vital service.

Very truly yours,

C. E. EARLE.

DECEMBER 3, 1946.

Mr. J. C. WOODMAN,
United States Department of Commerce, Minneapolis, Minn.

DEAR MR. WOODMAN: After your visit here on November 28, Miss Hilligan, our research librarian, discussed the OPB reports with the men who most frequently use them, and the following statements indicate the value that we place on this information:

The main value of the OPB reports is, perhaps, that they are a means of determining the direction and extent of German research. Since this information is available, it is felt that it cannot be ignored. One report may conceivably justify any amount of investment of money and time. In some cases, as for example, the Reppe work, introduces new fields of chemistry.

Difficult as it is to estimate the dollars-and-cents value, it can be said that these reports were in part a determining factor for this company in deciding to enter the fatty-acid field to the extent of several million dollars. Had these reports not been available, it is very likely that the company would have had to send an investigator directly to Germany.

Very truly yours,

GENERAL MILLS, INC.,
RALPH H. MANLEY,
Director of Research.

Birthday of William J. Veitch

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. WEICHEL. Mr. Speaker, Mr. Veitch has been long an outstanding and distinguished citizen of Perrysburg, Ohio, and I want to add my tribute to those of his fellow townsmen and include the following item from the Messenger, published at Perrysburg, Ohio:

When you have lived in any town for 79 years it becomes really home to you. Our fellow townsman, Mr. W. J. Veitch, of 420 East Front Street, was born in Sandusky and came to Perrysburg at the age of three. His parents resided in a house at Fifth and Pine Streets and his father was engaged as an expert cooper in a stave factory owned by Mr. M. A. Trowbridge. At the age of 10 Mr. Veitch was taken on as a regular employee. He remained with this firm until he was 20. As he grew up, so did his family. Soon there were three girls and three boys. His father died when young William was 18, and it was indeed a task for this brave young man to keep that family well fed and properly clothed. But he never wavered. Finally the stave factory closed down for lack of wood and there were few things to do in this village. William worked on a farm for some time, then secured a position with Dow Snell, a wholesale firm in Toledo. He remained with them for many years.

When he was so busy keeping his family cared for, he admits, he very often dreamed of the time when he would fall in love and marry a lovely girl and settle down as many of his men friends had done.

One day, he saw a charming young girl walking down the street with his next door neighbor, Miss Wallace, and soon found that the new girl was a Miss Gertrude E. Easton, of Larwell, Ind., who had arrived to stay for a time with her grandparents, the Wallaces. Dan Cupid had little difficulty in making a love match between these young persons and in 1895 they were married. Soon after, Mr. Veitch decided he had been working for others long enough and tried out an experiment which proved very successful. He purchased a dry-goods stock in his present location and has been one of Perrysburg's substantial businessmen for the past 37 years.

He built a 9-room house, fully expecting to have every room filled. Only one child came to this fine pair, a son, Kenneth, who when he returned from World War I married and settled down in Perrysburg. When their son Stephen was 2½, Kenneth died in New Mexico, where he had gone seeking health. The grandson is now 18 and is in college fitting himself for a business career.

Mr. Veitch admits never going but to the seventh grade, but in the school of hard knocks, he graduated with great success.

He has held about every elective office in the town. Being mayor for 4 years. Member of school board for 4 years. Water commissioner for 4 years, member of Way library board for 4 years, township treasurer. He is a member of the I. O. O. F.

He is a Methodist for so many years he cannot recall when he was not a member of the Sunday school and church. He has taught a class of high school boys for over 30 years and has been a member of the church council for more than 50 years. And throughout the years he has taken great pride in his town and has always worked for the betterment of the community.

It was Mr. Veitch who was very influential in securing the handsome monument of Perry and his midshipmen which stands at the foot of Louisiana Avenue at the entrance to Hood Park.

When it was learned that the city of Cleveland was willing to give this wonderful monument to any town who would give it a fitting setting, he went to that city and with several other townsmen, secured this statuary for Perrysburg. Few men have lived longer in our town and made each moment count for its betterment than has Mr. William J. Veitch.

Mr. Veitch will celebrate his eighty-second birthday anniversary Friday. We suggest that all persons who appreciate this fine gentleman's efforts "say it with a card."

Hydroelectric Power for the Industrial Northwest

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. ANGELL. Mr. Speaker, as I pointed out before on the floor of the

House, we should not overlook the fact that many of the public works' projects throughout the Nation are the lifeblood of our economy and in our enthusiasm for curtailing Government expenses we should not fail to make adequate appropriations to carry on these important works. This observation is particularly true with respect to hydroelectric power in the Columbia River Basin. The demands for this power are greater today than they were during the war. Many industrial activities have been using this power in converting from war to peace and are providing jobs for veterans and other civilian employees and unless the power program is continued disastrous results will follow in the Pacific Northwest. The power projects on the Columbia River are self-liquidating and are returning to the Federal Government every dollar expended on them with interest, and at the same time are richly aiding the people of the Northwest as well as the entire Nation.

I include as part of these remarks a timely and pertinent editorial which appeared in the New York Times in its issue of Sunday, May 11, 1947, entitled "The Industrial Northwest" which is as follows:

THE INDUSTRIAL NORTHWEST

In 5 years the Pacific Northwest, which means Oregon, Washington, Idaho, and western Montana, has been transformed by electric power. Where once the lumberman's ax rang and farmers raised crops on irrigated soil there are now huge plants that produce aluminum, magnesium, ferro-alloys, heavy chemicals, airplanes, ships and plutonium. It is safe to say that had it not been for Bonneville and Grand Coulee we could not have met the war demand for some of these materials. On the basis of energy deliveries the Bonneville-Grand Coulee system is the third largest in the country. Yet the Northwest is so hungry for power that it is clamoring for more. What this means, Ivan Bloch of the Bonneville Power Administration recently told the Chicago Electrochemical Society.

When it was first projected the Bonneville-Grand Coulee system was regarded as an enterprise that could hardly pay for itself in decades. There was some reason for this pessimism. By a stroke of good luck the more important power plants were ready by the time we were preparing to enter the war. Instead of falling off with the arrival of peace, the demand for aluminum, magnesium and ferro-alloys is actualy increasing, so that the Northwest is bound to grow industrially. The Niagara Falls plants cannot be expanded; TVA has about reached the limit of its hydro-power possibilities; the St. Lawrence project may not offer much relief because of the rapid expansion of nonindustrial power requirements of this State. As Mr. Bloch sees it, the West remains the one great source of hydroelectric energy.

It is gratifying to learn that the Bonneville-Grand Coulee system has been a profitable investment. As of June 30, 1946, the Bonneville Power Administration had returned to the United States Treasury some $80,000,000—about one-fourth of the investment so far made, including interest. This financial showing is all the more remarkable because the 36,000,000,000 kilowatt-hours sold since 1938 have averaged 2.55 mills per kilowatt-hour. Those who proclaim the dawn of a new industrial day, now that a uranium pile may be substituted for coal or oil, may well ponder these figures. Nuclear fission cannot compete with falling water, which costs nothing. Whatever may happen in other parts of the world, the Northwest will rely on the Columbia River and its tributaries. A potential of some 25,000,000 kilowatts remains to be developed. There is more gold in the water of the Columbia than there is in any of the hills of the Far West. Horace Greeley's advice to a young man is still good.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 13, 1947:

SAVING THE SOIL

A recent announcement from the Soil Conservation Service of the Department of Agriculture emphasizes two important points. First, efforts to save the Nation's topsoil are making progress; second, we still have a considerable distance to go. The statistics of the past are sober reading. The Service estimates that between 1895 and 1930 a full million acres of topsoil were lost each year; that more than 50 percent of the country's farm lands have been damaged to some degree by wind or water erosion; that the cost has been about $4,000,000,000 annually.

Since 1930 the rate of damage has been slowed to approximately half a million acres per year. As the result of a recent survey, the SCS says that since 1750 we have ruined or badly damaged about 282,000,000 acres of crops and grazing land; some 775,000,000 acres are eroded to greater or lesser degree. The inventory shows 1,060,000,000 acres of farm land for the future. Of this figure, about 460,000,000 acres are classified as good cropland. The balance will serve best as grazing and timber-producing land.

A significant victory for the conservationists came in 1935 when the Congress passed the Soil Conservation Act and the Soil Conservation Service was made a permanent part of the Department of Agriculture. Since that date 1,650 soil-conservation districts have been organized. The districts are run by the participating farmers. Nearly 4,000,000 of the approximately 6,000,000 farms in the United States now belong to districts. Through cooperative arrangement farmers can hire machines for terracing, draining, and contouring. Soil Conservation Service experts and farmers plan strip-cropping, irrigation, cover cropping, gully planting, and restoration of eroded fields. The restoration of farm land is a world problem. Food is fundamental to a peaceful world. Efforts to save the soil must go forward to a successful conclusion.

Displaced Persons 80 Percent Christians

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Courier-Journal, Louisville, Ky., of February 11, 1947]

WHO ARE THE DISPLACED PERSONS?—A GREAT MAJORITY OF THE DP'S ARE NEITHER COMMUNISTS NOR JEWS, BUT PEOPLE LOOKING FOR A HOME

(By Barry Bingham)

Two big misconceptions block much American thinking on the displaced persons of Europe. One is that most of them are Communists. The other is that most of them are Jews. Let's explore the real facts, which give an utterly different answer.

Taking the Jewish question first, official records show that only about 20 percent of the DP's are Jews. The largest group among the 80 percent who are Christians belong to the Roman Catholic faith, followed by Protestants and Greek Orthodox.

The idea of communism among the DP's is even wider of the mark. Of all the displaced persons of Europe, more than half are Poles, another 20 percent Balts (from Lithuania, Latvia, Estonia), and 5 percent Yugoslavs. Why won't these people go back to their homes? For the simple reason that they are violently anti-Communist. The Poles face a government at Warsaw which is strongly under Soviet domination, the Yugoslavs feel they would get short shrift under Tito's regime at Belgrade. Both groups fear persecution, exile, and possibly death for their political beliefs if they should go back to their native lands.

LIFE WITHOUT HOPE IS GRIM

The case of the Balts is even more extreme. Their three small countries have been completely absorbed by the U. S. S. R. They would have to become Soviet citizens if they should ever move homeward. Much as they hate the sterile life of the DP camps, they cannot and will not accept the alternative of surrendering themselves to the tender mercies of the U. S. S. R.

There are roughly a million of these homeless people left in Europe, most of them crowded into the American and British zones of Germany and Austria. The two Allied powers have repatriated over 5,000,000 DP's since the end of the war. Those were people who wanted to go home, who had been dragged into Germany as slave laborers and who only lived to get back to their own countries. Small numbers are still heading homeward, but a hard core of about 850,000 DP's will be left. The great majority of them are Christians with anti-Communist records, who dread political persecution at home. The minority of not more than one-fifth are Jews who fear religious persecution in their homelands.

Figures are cold and impersonal things. It is valuable to know, however, that among the million-odd DP's, there are 572,000 Poles, 190,000 Balts, 51,000 Yugoslavs, 11,000 Czechs, and a smattering of a dozen more racial groups. It is well to remember, too, that 52 percent of these people are women and children, and that 17 percent are under 16 years of age.

CONFUSION COSTS US MONEY

Thinking of them still in terms of statistics, it is costing the United States Government about $300,000,000 a year to support those who are in our zones of Germany and Austria. We have about half of the total group. The money we are spending on them is doing nothing but keep them alive, which is a dubious favor on our part. Life without hope is a grim commodity.

One look at a displaced persons' camp has the uncomfortable effect of turning dead statistics into live human beings. These are not brute beasts who can be kept indefinitely in a corral, but men, women, and children

who want to live a normal life of their own. They have been marking time since the end of the war, nearly 2 years ago, living in slightly renovated concentration camps, waiting for a door to open to them somewhere in the world. They are a cross-section of humanity. Some are highly intellectual college professors, lawyers, doctors; many are artisans and small tradesmen; a large number are peasants whose knowledge and experience is on the land.

America is not going to force these people to go home, to what they believe would be persecution and death. If we adopted such a policy, it would be greeted by mass suicides. We surely are not going to let them stay on indefinitely in the camps, where they cannot produce their own livelihood and can only act as a continual drain on the American taxpayer.

[From the Courier-Journal, Louisville, Ky., of Feb. 12, 1947]

HOW CAN WE DEAL WITH THE DP'S?—UNLESS WE DECIDE ON A COURSE OF ACTION, THE DP'S ARE GOING TO BE A COSTLY BURDEN ON OUR HANDS

(By Barry Bingham)

What are we going to do about the displaced persons of Europe? As cited in this space yesterday, there are about 850,000 of them who would literally rather die than go back to their native lands. About one-fifth of them are Jews, who fear religious persecution in Poland, where pogroms have recently occurred. Four-fifths are Christians, most of whom fear political persecution because they have anti-Communist records.

There are four courses which America might pursue in dealing with this human problem. One is to let the DP's stay forever in former concentration camps, at a cost of $300,000,000 a year to the American taxpayer. Another is to abandon them and let them starve. A third is to try to force them on other countries, while insisting that we ourselves can give shelter to none of them in the United States. The fourth is to take the lead in distributing them among various nations by offering to take a limited number into this country.

The first two solutions seem out of the question, as too expensive and too brutal. The third is the course we have been tacitly following, though we have never officially adopted it and it is not sanctioned by any of our responsible leaders. It has produced no results to date, for almost none of the DP's have been resettled in new countries.

REASON BATTLES WITH PREJUDICE

The fourth solution has both logic and humanity on its side, but it unfortunately creates an emotional block in many American minds. The Citizens' Committee on Displaced Persons has proposed admitting 400,000 DP's into the country in the next 4 years, and no agency has suggested a larger figure. There is no rational basis for dread that a nation of 145,000,000 people will be swamped by a mere 400,000, more than half of whom are women and children under eighteen.

The proposal seems less alarming, too, when we consider how little immigration we have had in the last few years. The United States has long had quotas on immigration, totaling about 153,000 a year from all foreign countries combined. During the period 1940–46, then, we were prepared to accept 1,071,000 people under our quotas, but only about 170,000 came. We had places for about 900,000 people we would have taken in during those years if they had presented themselves. Why should we not have the same places for at least half of them now?

General Marshall has requested legislation for entry of displaced persons into this country, a proposal which will soon come before Congress. We would go back and pick up part of the unused immigration quotas for the war years, and select some 400,000 refugees we are willing to admit. There would be no change in the basic quotas for the future. There would be the standard immigration restrictions against anarchists, persons who would overthrow our Government by violence, criminals, and all of known bad moral character. The screening would be much more efficient than under normal immigration, for American authorities have full records on the DP's and could readily exclude undesirable applicants.

Not a one of the DP's would become a charge upon the community. Organizations and individuals are already pledged to take financial responsibility for all those admitted. Many would become producers in this country, using their skills to create employment for American workers. The housing shortage would be little affected by their admission, as nearly all have relatives in this country who would take them into their own houses.

THE DP'S WOULD BE AN ASSET

The American Federation of Labor has recently endorsed the "recapturing" of wartime quotas for the use of displaced persons. Church groups are taking the same position. Organized labor shows that it does not fear the competition of these refugees, a large proportion of whom are farmers who would help to meet a shortage of farm labor.

There are eminently practical reasons for America to take the lead in placing the displaced persons. General McNarney, the commanding general of our military forces in Europe, has said that our occupation troops in Germany could be cut sharply if the DP's were moved out of the country. At present they are a dead expense on our hands.

The moral reasons for coming to their rescue hardly need recital. One of the proudest of American traditions lies in the fact that this country gave harbor to the victims of religious and political persecution. The Pilgrim Fathers came to our shores for those very reasons. The same impetus sent thousands of German families to America after the revolution of 1848, and this country has had few more useful citizens. America was built by refugees from foreign lands. Is it any wonder that the world looks to us today for an act of leadership?

Philippine-American Friendship

EXTENSION OF REMARKS

OF

HON. C. JASPER BELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BELL. Mr. Speaker, today Vice President Elpidio Quirino of the new Republic of the Philippines brought to the members of the National Press Club at luncheon a message of friendship from the Philippine people to all Americans. So that Members of Congress and readers of the RECORD may share in the message he has brought, I am placing his speech in the RECORD today.

In addition to his duties as Vice President of the Philippines, Mr. Quirino is also Secretary of Foreign Affairs of the Philippines where his long experience in government under the American flag in the Philippines is now serving him well. He is truly a friend of the United States, for during the war which so recently ravaged the Philippines, his wife and several of his children were killed by the Japanese because of his family's resistance of Japanese occupation.

His speech is as follows:

OUR BID FOR SURVIVAL

I have come before you to introduce the new Philippine Republic which is the first independent state to be launched after the Second World War. It was born under the cross-fire of powerful enemies, and it received the most cruel baptism for having sided stanchly with the United States and remaining loyal to her to the last. As a grateful and steadfast depository of all that is noble and great in American colonial policy, the Philippines of today is the new America of the East. We are proud to be the daughter republic of the United States of America, and our ambition is to make this new nation strong and enduring, a worthy example of America's work as a leader among nations.

I have come to this country in compliance with a national obligation to convey in person to President Truman and to the Government and people of the United States the deep appreciation of the Filipino people for the liberty and freedom granted us by the United States, and for America's continued concern to make this her handiwork a real blessing to 18,000,000 Filipinos.

It is very fortunate that the liberation of the Philippines occurred before August 5, 1945, otherwise our fate might have been worse. Certainly, it could have been worse. As you will remember, the Japanese made our homeland the south Pacific bulwark of their mainland. They had us in their grip for more than 3 long years. If they had held out as they proposed to do, and if our guerrillas had not continuously thwarted their every move to consolidate to strengthen their defenses, Manila could have been Hiroshima or Nagasaki. Who knows?

Nevertheless, if the Philippines did not suffer from the atomic bombs, the destruction wrought upon her by the invasion and enemy occupation and finally by the war of liberation was far more extensive and heavier than that suffered by Japan, or any other theater of war. So as a result of this great catastrophe to our land and people, we are today faced with the tremendous task of reconstruction and rehabilitation. The task involves the restoration of what has been taken away or destroyed. We know there is no power on earth that can restore the lives of over a million of our people—1,111,938 persons so far accounted for—that the enemy made us pay for his wanton cruelty and to which our civilian population was the heaviest contributor.

More than the task of reconstruction and rehabilitation, which will certainly take us years and years to achieve, our immediate problem is one of reorientation and national survival. We who are lucky enough to have outlived the inhumanities and brutalities of a bloodthirsty and power-drunk enemy, know only too well the years of heavy labor and hard-thinking required in order to heal the shattered spirit and shake off the hateful regimentation imposed upon our lives by threats and tortures.

The sad history of my sun-kissed land is that every successive invader tried to fashion it after his own. The Republic of the Philippines is, therefore, essentially the product of a singular evolution. Its beginnings date back to the time when adventurous sea rovers in the Pacific reached the islands' hospitable shores and thereon established their homes. They tilled the land and prospered. They built commerce and fostered cultural intercourse with neighboring peoples and with eastern powers and races. In 1521 Magellan brought to this corner of the then eastern isolated world western culture and civilization. From then on the blending of western and eastern cultures took place,

resulting in the establishment of Christianity and an enlightened social and political system, and, finally, under the American regime, in the birth of a true democracy, the first one to rise in the Far East.

It took no less than 400 years for the Filipino people to complete this process amidst throes and hardships which tested their every mettle to live or perish, such as the endeavors of the Spanish, the English, the Dutch, the Portuguese, the Japanese of the feudal era, the Chinese of Limahong, and lastly, the Americans in 1898, to subjugate them. Each nation tried to wipe out what the previous one had achieved or accomplished so as to establish a new order of things. However, despite the odds against them the Filipino people went through all these processes as a matter of evolutionary development, and if today they are faced with the problem of national survival as they never were so faced before in their lives, they know that from their own past they can draw sound and deep inspiration for the future.

Thus, the international character of their history makes the Filipino people feel almost akin to all the peoples of the world. While they always resisted every foreign invader and felt grievances against all and every one of the peoples who tried to dominate and subjugate them, they never entertained any lasting hatred against anyone because in the end their patience and endurance invariably won for them new strength, new courage, and even new friends.

With an abiding source of inspiration such as this, the Filipinos are trying today to establish the foundations of their Republic. But what would have been the material groundwork of this endeavor unfortunately was blasted away in the last war. The joint effort of the United States and the Philippines to build an enduring economic structure for an independent and democratic government in the Far East, a joint work of 48 years, is well-nigh obliterated. The work must be done all over again, if the newly established Republic is to become not a mere shell but the symbol of a vigorous state capable of maintaining its position among the nations of the world.

What this work means will perhaps be better understood if we make a brief recapitulation of the present devastation of Philippine economy. The total value of damages and losses in the Philippines resulting from the last World War, as of November 5, 1946, is estimated by American and Filipino experts at approximately $6,000,000,000.

The casualty loss, evaluated in terms of economic wealth, is estimated at 74.5 percent of the total damages.

The next item is damage to real estate improvements amounting to 5 percent of the total value and consisting of Government edifices, buildings for industrial, commercial and financial purposes, and private residential houses. The estimated prewar value of this item is $1,351,000,000. The damages actually sustained is $1,104,000,000, or 80 percent of the whole.

Japanese military notes, which were issued and circulated by the Japanese military government in payment for goods and services, rank third, representing 4.9 percent of the total losses.

The fourth item in the list of war damages and losses, described as industrial, commercial, financial, and public-utility properties and mining, excluding buildings, represents 4.8 percent of the total value. Our prewar shipping, which was valued at $75,000,000, sustained a loss of $70,000,000, thus 95 percent of the whole has been destroyed. Damage to agriculture amounted to $145,585,395.

The fifth item is made up of personal and household effects, representing 3.8 percent of the total losses. Then follow agricultural products and implements, public works, Government office furniture and fixtures, properties of Government corporations, and libraries, in the order named.

These figures vividly describe the material loss of the Philippines. The destruction of capital equipment and prewar industries and transportation facilities, and the shortage, if not absence, of capital to buy new machineries and equipment to replace them, are the principal deterrent factors in the immediate rehabilitation of Philippine economy.

Production, by this very reason, is at an extremely low level. The domestic and foreign trade of the country, which before the war was dependent upon the export crops, has greatly shrunk. The disruption of our transportation, communication, and port facilities is also contributing to the slow revival of business. While crops may be raised in many localities, they cannot be moved out on account of the high cost of transportation. The problem of distribution is accordingly acute.

With livestock, particularly work animals, depleted, many farms remain uncultivated. The sugar industry, depending largely on sugar mills, is slow in reviving because sugar centrals destroyed have not as yet been replaced. Mining is in the same predicament. The production of gold which came second to sugar in value of our exports before the war has not started due to lack of mining equipment and adequate capital.

Other industries, such as the lumber, cigar, furniture, and some household industries, have not recovered their prewar footing in Philippine economy.

Before the war, our pleadings with the Government of the United States were somewhat in the nature of demands for increased quotas in our shipments of sugar, Manila cigars, cordage and coconut oil to the American market, as Philippine economy had an excess of these commodities. Today, what a paradox. Our pleas are for a greater allocation of rice and sugar for consumption in the Philippines.

Again, before the war, we not only had balanced our yearly budgets, but succeeded in reducing our public indebtedness year after year. Our budget, like that of the United States, was an elaborate statement of income and expenditures. In fact, our statement of expected revenues was more impressive than the statement of expenditures.

Now, for the first time in our political experience our finances are strained, and we must explore all potential sources. There are many ways of borrowing money which are open to an independent government with undeveloped wealth and credit and with a good record of past performances. For the first time also in our national existence, we have come to realize that it is neither a disgrace nor a confession of national weakness to borrow when borrowing is justified by one's needs and ability to meet obligations.

The rehabilitation of our major industries at an early date must be accomplished. Our sugar industry, because of world shortage of sugar, has top priority. The procurement of a better variety of sugar seedlings, the restoration of transportation facilities, and the reconstruction of the mills, these are urgently needed to rehabilitate the sugar industry. Our gold mines, the source of an annual national income of over $40,000,000 before the war, must also receive immediate attention. The Philippine Government is definitely committed to a long-range program of rebuilding our economic structure on the prewar basis, and the groundwork for this undertaking has been laid. This program may not be as complete as the situation demands, but we have started it and we mean to press toward a speedy and successful end.

The people and Government of the United States have generously extended the initial help. The war damages voted by the United States Congress amounting to $400,000,000 will be paid in the course of 4 or 5 years to citizens of the Philippines and the United States who suffered property losses. In addition, the Philippine Government will receive approximately $120,000,000 for the reconstruction of roads and highways and the replacement of public buildings completely destroyed during the war. Likewise, American war surplus materials, some of which are usable for agricultural and industrial purposes, have been turned over to the Philippine Government.

Because the Philippine Government does not derive at present any revenues of consequence from taxation as a result of the impoverished condition of the Islands' major industries, we have obtained a loan of $75,000,000 from the United States to meet budgetary requirements of the national government this year.

The preferential trade agreement between the United States and the Philippines, which will continue for 28 years from 1946, is, in the considered opinion of experts on Philippine affairs, the most important single factor in our rehabilitation program.

Upon the initiative of President Roxas, there has recently been created the Philippine Rehabilitation Finance Corporation, capitalized at $150,000,000, so as to provide government agencies and private individuals with the necessary means with which to rebuild our homes or to finance or rehabilitate our ruined industries.

But when all these are said and done, there yet remains a wide gap toward the complete restoration of Philippine economy. Considered against the over-all background of real Philippine reconstruction and rehabilitation, these measures, I might say, are largely of a remedial nature. In a recent plebiscite held to amend the Constitution of the Philippines, the Filipino people voted to extend the same rights to American citizens as those enjoyed by them in the development of their natural resources and the operation of public utilities for a period of 28 years. They have done this fully realizing that the initial measures already undertaken alone cannot cope with the vast reconstruction program without the active participation of private capital and technical experience.

Let it not be understood that the Philippines is inspired only by self-interest. Much as she desires to have her economy reestablished and to see it working normally at this critical period, when nations are starving and suffering for lack of food and shelter, she knows that with the immediate rehabilitation of her industries, principally agriculture, lumber and mining, she can be of great help to a needy world. For example, because her coconut industry miraculously escaped war destruction, she was able soon after the close of the war to export large quantities of copra which partly supplied the world's acute needs for fats and oils. In a similar measure, she was able to provide the world with abaca and rope which had become critical materials during the 3 years in which the Philippines was under enemy occupation. Likewise, the early revival of the Philippine sugar industry can partly satisfy the present world shortage of this commodity, and the same thing can be said of the export of lumber, which industry is only awaiting the replacement of destroyed mills to resume the sale of its products abroad, particularly Philippine mahogany, which today is in great demand everywhere.

Not for a billion dollars or any amount of money in the world would we Filipinos barter our birthright. In granting equal rights to American citizens in the development of our resources and public utilities, we are fully certain that the Philippines can absorb any amount of American capital and still be able to reward it adequately because our resources are tremendously rich. And in

making such a particular offer to the citizens of the United States, our decision is not merely guided by our desire to enlist American financial assistance and technical guidance but by the conviction that we can offer, too, through this means, the best returns that American capital and technical knowledge can have anywhere in the world under the present circumstances. Where in the world today can Americans trade freely without being afraid of run-away inflation and bloc currencies? Our Philippine peso is tied by law to the American dollar at the ratio of 2 to 1.

Under the military base agreement recently approved by the Governments of the United States and the Philippines, the United States has shown its determination to provide both countries with mutual protection. The Philippines, too, on her own part, has assured the people of the United States of her willingness to share with them not only the use of her territory but of her manpower to help preserve the peace of the world and extend her aid to the United States whenever it is needed for the protection of her interests in the Far East. Under the provisions of this agreement these bases have also been made available to the United Nations. Security is thus insured under this joint guaranty not only for the safety of American life but also of American investments.

The two pacts, the trade agreement and the base agreement, providing for the economic and military security of the two countries, have brought them into closer relationships of mutual trust than was the case, I dare say, before the grant of Philippine independence.

To us Filipinos no factor can better strengthen the links that presently exist between the United States and the Philippines than the readiness with which the people of the United States will come to participate in the rebuilding of our industries and economic life in their critical state. After all, our present deplorable situation as a result of the Great War is not completely of our own making. At this juncture, may I recall also the great sacrifices of our people who fought and survived the war—the veterans and the widows and their families—whose sufferings have not yet ended and who expect but justice and generous assistance from this great Government of the United States. We ask American help not in terms of charity but in terms of mutual benefit. We want to be in a position, morally and materially, to discharge all our obligations to the United States and to share with the American people the benefits to be derived from sound and legitimate enterprise pursued in the spirit of partnership. We certainly need you, and we feel that you need us, too, in many ways. The strength of America today is the guaranty of our security, and a reinvigorated Philippines, drawing inspiration from your democratic teachings and ideals, will add to your power. Whatever investment you make in the Philippines, material or spiritual, will be an invaluable asset in America's leadership of the world.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. KEATING. Mr. Speaker, as indicative of the fact that those who have demonstrated most intense interest in the success of the United Nations consider the Greek-Turkey aid bill which we have passed a necessary step toward world peace and the actual strengthening of the Organization itself, under leave to extend my remarks, I include a report of the policy committee of the Rochester United Nations Association, published in the Rochester Democrat and Chronicle:

TRUMAN POLICY NECESSARY, ROCHESTER GROUP ADMITS—SUBSTANTIAL PORTION OF REPORT OF POLICY COMMITTEE TO MEMBERS OF ROCHESTER UN ASSOCIATION

Your policy committee feels that the members of the United Nations Association have a right to expect a statement on the President's program for action in Greece and Turkey.

One of the unfortunate consequences of the President's announcement was that it brought about a feeling on the part of thousands of our citizens that war was nearer. We do not want war and we may be sure that Russia wants it as little as we do. Our position of gigantic strength and power in this world forces leadership upon us.

We can say with unanimous and definite conviction that without this move Russia might well have maneuvered into a position of dominance in Europe and the Near East incompatible with lasting security to the rest of the world.

We can say that while the UN has made considerable advance in its many councils, very little progress has been made in giving it power in the military sense. Until the United Nations can be endowed with force that is superior to any nation we remain in an era of national power in which the balance can be maintained only through national action of various degrees and natures.

We recognize the grave dangers of such a situation. We recognize the questionable character of the precedent which we are setting both because it is on the line of national, rather than international, action and also because it obligates us to support types of government which are not, in the American sense of the word, democratic.

The committee, therefore, makes the following recommendations to its members:

1. That the Truman policy toward Greece and Turkey be supported if all its implications are directed toward strengthening the UN as the agent to secure peace.

2. That the members of the association recognize that this can be done if:

(a) The Vandenberg-Austin amendments, providing for the early assumption by the United Nations of responsibility for the situation in the Near East, not only are accepted but are made the objective of the program as it develops in the near future.

(b) Immediate attention be given to the promulgation of a strong program for the transfer of strong military forces under the UN and that urgent and immediate steps be taken to press this program to a successful conclusion.

3. That the United States move to accomplish the transfer of the problem to the UN at the earliest practical moment.

4. That the United States indicate that the policy shows the absolute necessity for strengthening the UN militarily and financially to the extent that it is able to give security to the world as a whole.

5. That the Truman policy be used as an implied warning to other nations that our unilateral action is inconsistent with long range planning for peace and will be carried out by the United Nations as the organization to maintain peace.

6. That we recognize that this move which we must make focuses attention upon this basic fact; it is only through the United Nations and its full and complete implementation that hope for permanent peace can develop.

7. That the United States grasp the leadership in putting under way the Food and Agriculture Organization rehabilitation program for Greece.

8. That the members of the association transmit these views to their Representatives in Congress.

Members of the policy committee of the Rochester Association for the United Nations are: Gregory Smith, chairman; Mrs. David M. Allyn, Dr. Sidney Barnes, Harry D. Goldman, Ann Hale, Julius Loos, the Reverend Justin W. Nixon, Edward M. Ogden, Dr. Dexter Perkins, Dr. Glyndon Van Deusen, and Mrs. Rex Wilsey.

Giving Away Our Great Lakes Fisheries

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. WEICHEL. Mr. Speaker, the State Department in its eagerness to do something for foreign governments has negotiated a treaty with England giving away control of our Great Lakes fisheries and jurisdiction over the lands owned by the several States. I am including herewith a resolution by Mr. Krueger adopted by the Ohio House of Representatives on May 8, 1947, memorializing the United States Senate to disapprove the action of the State Department:

House Resolution 73

Resolution memorializing the United States Senate to disapprove a convention between the United States of America and Canada, relating to fisheries of the Great Lakes and their connecting waters, signed at Washington April 2, 1946

Whereas a convention was negotiated and signed April 2, 1946, with the objective of providing for the development, protection, and conservation of the fisheries of the Great Lakes by joint action of governmental agencies of the United States and Canada; and

Whereas as a means for achieving such objective the convention creates an international commission for the Great Lakes fisheries; and

Whereas if such convention becomes effective, Ohio and other States of the Union having responsibility and valuable interests in such fisheries will lose jurisdiction over the same; and

Whereas the inclusion of the waters of Lake Erie in the proposed international treaty delegates forever the sovereign rights of the United States and of the State of Ohio to an international governmental agency; and

Whereas the interests of the State of Ohio in these waters and fisheries will best be served if the convention is not ratified; and

Whereas the citizens of Ohio are very much opposed to the convention establishing an international authority over such fisheries: Now, therefore, be it

Resolved, That the Ohio House respectfully memorializes the Senate of the United States to disapprove ratification of the convention between the United States and Canada relating to fisheries of the Great Lakes and connecting waters signed at Washington April 2, 1946; and be it further

Resolved, That properly attested copies of this resolution be transmitted to the President of the United States, the Senate of the United States, to each Ohio Member of said

House, and to the Governors of the States of New York, Pennsylvania, Indiana, Michigan, Minnesota, and Illinois; and be it further

Resolved, That the Attorney General of Ohio be directed to inform appropriate Federal authorities of the desire of the State of Ohio to intervene before the appropriate senatorial committee in opposition to the treaty creating such international commission.

Adopted by the house of representatives May 8, 1947.

Attest:

CARL GUESS, *Clerk*.

Progress in Race Relations

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Greensboro Daily News, Greensboro, N. C., which outlines the economic and cultural progress in race relations in North Carolina:

PROGRESS IN RACE RELATIONS

For a long time North Carolina unashamedly used its Negroes as stepping stones for the whites in their struggle for economic and cultural progress. This course of action has now been reversed and exchanged for a more humane, enlightened, democratic, and hopeful one. North Carolina is now doing much—maybe not all it possibly can but the State is unquestionably straining itself—to give its Negro citizens an education in order that they may make their economic and cultural contributions to the life of the State and the South.

Some of the things the State has done are summarized by Burke Davis in the Baltimore Evening Sun. For instance, this State invests more than $10,000,000 a year in Negro schools exclusive of higher education. No less than 11 of the Nation's 16 four-year Negro colleges are in North Carolina. Salaries for Negro teachers have been equalized with those for white teachers, with the rather startling result that the average Negro teacher now has slightly more college training than the average white teacher. Between 1923 and 1942 the number of Negro school children in the State rose from 4,700 to 32,000; the number of standard Negro schools from 11 to 180; the number of high-school graduates from 380 to 4,700; and the circulation of Negro libraries from nothing to more than 1,000,000 volumes. We do not have the statistics for the progress which was made between 1942 and the present, but it is considerable.

North Carolina's faith in democratic principles is having its effect not only within the State but throughout the South. As Dr. James E. Shepard, president of the North Carolina College at Durham, has pointed out, "the leaders in many other States watch carefully what is going on in North Carolina in the field of race relations. They consult the leaders of this State to find out what plans have been formulated, and how these plans are to be carried out. This is most significant when we consider the fact, unfortunate though it may be, that so many of the things that the better thinking people of the South know should be done for the Negro are not done because of some traditional fear of the results. These people are unwilling to follow the suggestion or leadership of any outside group, but if another Southern State can abolish the poll tax as a prerequisite to voting, if it can let down the bars of party primaries, if it can equalize teachers' salaries, and do all these things without any friction or strife and without undesirable results, then the arguments of the opposers in other States are destroyed, and the courage of those who favor these just measures is strengthened by the example of North Carolina."

There is no doubt, as one of the Regulators said with more of wisdom than grammar in the early days of our history, that "though there is a few men who have the gift or art of reasoning, yet every man has a feeling and knows when he has justice done him as well as the most learned." The continuous cultivation of such a feeling is the only substantial foundation which good race relations can rest on securely.

"Democracy," said President Shepard, "is that audacious belief of our people that in the most ordinary men there are resident the most extraordinary possibilities, and that if we keep the doors of opportunity open to them they will amaze us with their achievements." If there is a better definition of democracy, we haven't run across it.

We stand a good chance of continuing on our progressive course as long as we do not allow ourselves to be deflected from our goal and led astray by the will-o'-the-wisp of social equality into the swamps of semantics or against the cliffs of custom.

The white leadership of North Carolina should not be fearful of or apologetic for its course of conduct which is not only just and generous but which in the long run will work out for the benefit of all of us if our faith in democracy is worth its salt.

Control of Airport Control Towers

EXTENSION OF REMARKS

OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. LUCAS. Mr. Speaker, under leave to extend my remarks I insert in the RECORD the telegram which I have received from Mr. Allen Rubottom, who is manager of the municipal airport at Fort Worth, Tex. Mr. Rubottom expresses the best reasons why the Civil Aeronautics Administration should not relinquish its control of the airport control towers at the various municipal airports throughout the United States. The Federal Government regulates all commercial planes in flight and I see no reason why the Civil Aeronautics Administration should give over to the cities the regulation of the planes as they approach the fields. I am hoping the Congress will make sufficient appropriation for a continuation of this vital service. The telegram reads as follows:

The American Association of Airport Executives in annual convention at Chicago and as a special first order of business request that you present to the Congress immediately its unanimous and urgent protest against the elimination from CAA appropriations of funds for the operation of air-traffic control towers. This association composed of airport managers and executives of wide experience in aviation, and from localities with the heaviest volume of air traffic, are amazed at the elimination of funds for this key agency on which is dependent the safety of air commerce and the life of every pilot and air passenger on air-line or any other aircraft. Congress must reinstate funds for the Federal operations of air-traffic control towers or take the responsibility for the complete break-down of a system of flight control which has been proven the safest in the world.

ALLEN RUBOTTOM.

Western States Penalized by Interior Department Budget

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. McDONOUGH. Mr. Speaker, the Western States, where reclamation, irrigation, and hydroelectric-power projects are so badly needed to sustain and expand the economy of that area, are suffering a severe penalty by the extreme economy recommended by the Appropriations Committee in the Interior Department bill.

The development of the Central Valley water project, which was largely curtailed during the war years, is of vital importance not only to California but to the Nation.

The development of the Colorado River, which was also postponed during the war years, is of equal importance, and especially since we have now entered into a treaty with Mexico for a sustained flow of water from the Colorado and Rio Grande Rivers for use below the border.

Under leave to extend my remarks, I include the following resolution recently adopted by the board of commissioners of the Department of Water and Power of the City of Los Angeles, which expresses the sentiment of the people of southern California on this important subject:

Resolution 949

Whereas the United States has invested some hundreds of millions of dollars in the partial construction of various authorized reclamation projects; and

Whereas until these projects are completed they cannot earn the revenues which were contemplated by the Congress as a basis of their authorization; and

Whereas a minimum regard for sound business principles requires that these projects be promptly completed and converted into operating, revenue-producing assets of the United States; and

Whereas the existing and immediately prospective market for electric power for domestic and industrial use must be met promptly, and the consumers cannot abide some more convenient time for the construction of hydroelectric projects by the United States; and

Whereas failure to install the necessary hydroelectric facilities will require that this demand be met by the annual consumption of tens of millions of barrels of fuel oil from our irreplaceable reserves; and

Whereas the natural hydroelectric resources of the United States should not

remain undeveloped at a time when the people have urgent need for the power; and

Whereas the prudent authorization and construction of reclamation projects must be preceded by years of study and planning; and

Whereas any period of curtailed construction should properly be a period of increased activity in the field of study and planning of potential projects; and

Whereas the sums proposed by the House of Representatives to be appropriated to the support of the Reclamation Bureau of the Department of Interior are wholly inadequate to achieve any of these results: Now, therefore, be it

Resolved, That the Congress of the United States be urged to increase the proposed appropriation to the support of the Reclamation Bureau of the Department of Interior to an extent at least sufficient:

1. To permit completion of all partially constructed units of reclamation projects as promptly as sound planning and orderly progress will permit;

2. To permit prompt construction and installation of hydroelectric facilities in every proper case in which the potential power demand justifies the investment, and particularly in every case in which the paramount interest of the United States in interstate commerce, navigation, flood control, and reclamation is such that any dam and reservoir constructed at that site should, in the opinion of Congress, be owned and controlled by the United States;

3. To permit an adequate and accelerated program research, study, and planning of potential reclamation projects.

General Vandegrift's Plea

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dayton Herald:

The plea of General Vandegrift, Marine Corps Commandant, that the bill to unify the armed services be amended so as to assure the continuance of the corps revives in us the same thought we had when first we heard of the matter: The American people are unpleasantly surprised to hear that there is any doubt as to the future of the marines.

Surely, at this late date in its history there is no need to attempt to justify the existence of the corps.

The two amendments which General Vandegrift stressed in his plea before the Senate Armed Services Committee are simple ones. The Herald discussed them some time ago.

The first would define the functions of the branches of the armed services, including the marines. The second would expressly permit the naming of Marine officers to the joint bodies which the unification bill seeks to set up.

It is difficult to see what serious objections can be raised to these two amendments. One cannot conceive that they in any way would hinder the desired unification of the armed services. And they would assure the Marine Corps' future.

No one, of course, is urging openly that the Marine Corps be disbanded. But the framers of the unification bill have managed so to ignore the corps that the marine fears are wholly reasonable. The Vandegrift amendments would allay those fears.

Giving Away Fisheries

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. WEICHEL. Mr. Speaker, the executive side of the Government has been very eager to give away America, particularly with reference to a treaty President Truman signed with England giving away control of our Great Lakes fisheries and the jurisdiction over the lands owned by the several States. I am including the following thoughtful editorial covering the facts by Spencer Canary, editor of the Daily Sentinel-Tribune, of Bowling Green, Ohio:

GIVING AWAY FISHERIES

The Ohio Legislature's resolution, presented by Senator Fred L. Adams, is in line with the speech made in the House of Representatives on December 20, 1945, by our Congressman, ALVIN F. WEICHEL.

At that time Mr. WEICHEL, a member of the subcommittee of the Committee on the Merchant Marine and Fisheries, protested against the action of the President in carrying on secret negotiations with England on behalf of Canada, whereby the rights of the States bordering on the Great Lakes would be taken away by the Federal Government and given to a joint fishery commission composed of three Canadians and three Americans. Mr. WEICHEL at that time introduced a bill ordering the State Department to cease its efforts toward such a treaty.

Mr. WEICHEL at that time pointed out that nearly 80 percent of the fish resources and fish food production of the Great Lakes is produced by Americans in the waters of the various Great Lakes States. He also said that this proposed treaty would give control to such partly foreign commission not only to the lakes but also to the connecting waters, bays and component parts of each of the lakes.

Thus, it is not unlikely that in this section the Maumee River would be affected as well as the Portage and Toussaint and all other rivers that empty into the lakes. Nor is it an exaggeration to picture the drinking water supply of cities like Toledo and Cleveland that have cribs in lakes, would be subjects of controversy, for America knows from experience that treaties have some elasticity which a needy country tries to stretch almost, if not quite, to the breaking point.

Every school pupil knows that back in the early days of our country there was controversy over the boundary line between Canada and the United States. Especially was this true of the section including the present States of Washington and Oregon. This was due to the Canadian claim to the Columbia River because of the Hudson Bay Co.'s exploration there and by right of using it, while the United States based its claim on the Lewis and Clark Expedition and an earlier Spanish claim which was transferred to our Nation in the Louisiana Purchase of 1803 and in 1819, when Florida was sold to the United States.

So violent did the Northwest settlers become that the Oregon Territory threatened to secede if its claims were not adequately protected by the United States. Eventually the famous cry of "54–40 or fight" was raised; and for a time it looked in 1846 like war would have to settle the dispute. This meant that the boundary line was to extend to that latitude of 54°40'.

The treaty of 1818 with Great Britain had fixed the north boundary line west to the crest of the Rocky Mountains at 49 degrees; but it had left the land west and north of that open for 10 years for occupancy by both countries. Following this in 1824, Russia concluded a treaty with the United States acknowledging her southern boundary to be 54°40' north latitude. Finally, in 1846 a compromise treaty with Great Britain was ratified which established the present boundary at the forty-ninth parallel and the main channel through the Straits of Juan de Fuca. Then followed the century of peace with Canada which was celebrated June 15, 1946, especially in the Northwest.

Thus, the proposed treaty with reference to fisheries, which Congressman WEICHEL, Senator Adams, and the Ohio Legislature protest, would, in effect, change the boundary line which has stood for over 100 years, since it would acquire the same right over theirs, while the adjacent States would have nothing but arguments as to their interests. Let the Congress insist on keeping these interests.

Marine Corps Critics Should Speak Openly

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dayton Journal:

The value of opposition even to worth while measures is being demonstrated today in the unification hearings before the Senate Armed Forces Committee. Were Senator ROBERTSON of Wyoming not a foe of unification, the charges that a plot is afoot to reduce the Marine Corps to impotence might never have been brought to light.

Now the Wyoming Senator is digging deeper. General Vandegrift, the Marine Commandant, told the committee a year ago in closed session that "for some time I have been aware that the very existence of the Marine Corps stood as a continuing affront to the War Department." Moreover, he stated that documents held by the Joint Chiefs of Staff bore out his claim.

Senator ROBERTSON wants a look at those documents. So does the public. If there is any intention to deemphasize such an integral part of our armed services set-up, the only branch that is continually alerted for instant service, the branch with the highest esprit de corps, then the public is entitled to know about it. More than that, the public is entitled to know why.

Public statements from the brass in other branches leads one to believe that the Marine Corps is held in the same esteem by the Army as it is by the American people. If this is not true, the public of this Nation, which now itself has a high percentage of veterans from all branches, needs to be informed on the reasons for such prejudice.

Let's have the story—the whole story. Let critics of the Marine Corps present the case at the bar of public opinion. Star chamber politics has no place in so vital a matter.

Proposed United States of Europe

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper editorials:

[From the New York Herald Tribune of May 11, 1947]

REPORTS AMERICANS SEEK UNITED EUROPE—COUDENHOVE-KALERGI SAYS PUBLIC OPINION IS FOR IT

PARIS, May 9.—American opinion, both public and official, strongly approves the formation of a United States of Europe, Count Richard Coudenhove-Kalergi, president of the Pan-European Union, said here Friday.

Count Coudenhove-Kalergi, who has just returned to Europe from the United States, said "Americans simply can't understand why we on the Continent have tolerated anarchy and autarchy instead of uniting within the type of federal structure that has made the United States the richest nation in the world."

The count predicted that the first step in achieving the ideal of a federalized Europe would be a union between England and France, and that Belgium and Holland would soon follow suit.

[From the Chattanooga Times of May 7, 1947]

AN ANNIVERSARY

Tomorrow is the second anniversary of the end of World War II in Europe. And yet the world is far from being in a formal state of peace.

No treaties have been arranged for the principal enemy, Germany, or for Austria. The peace treaties with Italy, Hungary, Bulgaria, Rumania, and Finland were finally signed on February 10, 1947, 1¾ years after hostilities ended in Europe. But even these treaties have not been ratified and hence have not gone into effect.

A certain amount of opposition has arisen in the United States to ratifying the Italian treaty without changes.

The stalemate on the treaty with Germany has meant that actual drafting has not yet begun. A little more, but not much, has been accomplished on the Austrian treaty; and 1¾ years after the surrender of Japan not even preliminary discussions have been held on the peace treaty with that country.

VE-day came 11 months and 2 days after D-day when British-American-Canadian forces landed in Normandy. Two days before Rome had been captured by the Allies, but thereafter the campaign in Italy bogged down.

Four days after D-day, the Soviet forces launched their final offensive against Finland. Seventeen days after D-day the Red armies began their offensive against the main eastern front which was to carry them to Berlin.

Almost 2 years after the victory we find Europe in danger of slipping into chaos. While Secretary Marshall counsels patience, many students of world problems come forward with a plan. It calls for a union of western European states, predominantly economic but also to some extent political, into what has begun to be known as the United States of Europe.

Senator FULBRIGHT, Democrat, of Arkansas; Senator THOMAS, Democrat, of Utah, and Representative BOGGS, Democrat, of Louisiana, have introduced in Congress a resolution reading in full "that the Congress favors a creation of the United States of Europe within the framework of the United Nations."

Aristide Briand, 10 times premier of France, proposed such a union after World War I and it is now supported by Mr. Winston Churchill.

In order to secure peace in Europe, such a union seems necessary.

[From the Peoria Journal-Transcript of May 6, 1947]

A UNITED STATES OF EUROPE?

Secretary of State Marshall told the people of the United States in his radio report that Europe is slipping into chaos while nothing is being accomplished toward drafting of a peace treaty for Germany.

He indicated that he believed some action must be taken without waiting for Russia to decide she is ready to agree upon a treaty. But he did not reveal what plan he had in mind, if any.

Whether or not our State Department has a plan we do not know. But many students of world problems, both in Europe and the United States, do have a plan, one that has been suggested before. It calls for a union of western European states, predominantly economic but also to some extent political, into what has come to be known as a United States of Europe.

Senators FULBRIGHT and THOMAS and Representative BOGGS have introduced in Congress a resolution reading in full:

That the Congress favors the creation of a United States of Europe within the framework of the United Nations.

As we have said, the idea is not new. Disregarding such early advocates as Henry IV, William Penn, Immanuel Kant, and Victor Hugo, the proposal was pushed after World War I by so practical a statesman as Aristide Briand, 10 times Premier of France.

In fact, under Briand's instigation the 27 European states that were members of the League of Nations met in Geneva in 1930 to discuss ways and means of creating a United States of Europe. The conference got nowhere fast. The delegates praised the principle but disagreed violently on how to achieve it. Some objected that a body outside the League would weaken the League. Others disagreed with the Briand thesis that political should precede economic unification. Others saw an attempt at economic and financial rivalry with the United States.

The Soviet Union was not represented. Some of the delegates at Geneva in 1930 thought it futile to project a United States of Europe with the largest and most populous European state left outside. Others even saw in the 1930 conference another attempt to strengthen the existing "cordon sanitaire" against Moscow.

Any move to create a United States of Europe in 1947 would in effect be an anti-Soviet move. The great difference would be that in 1930 the Soviet Union was on the defensive, in 1947 it is on the offensive. The move today would be an attempt to avert the chaos which is threatened by the Soviet tactics in international affairs and which the Soviet Union is widely suspected of actually desiring. If objection is raised that a union of western Europe now would create two worlds instead of one world visualized by the United Nations Charter, the answer would be that in actuality Europe is already divided into two worlds.

Many Americans observe blithely: "If the 13 States could create a Federal union in 1789, why can't the countries of Europe, at least of western Europe, create their own united states in 1947?" But the problem isn't so simple as that.

In 1789 the former British colonies had recently been united in war and had much the same attitude toward all foreign nations. In the war recently ended, Italy, Germany, and Austria were on the losing side; Spain was pro-Axis; Portugal, Switzerland, and Sweden remained neutral; and certain of the western European states harbor pro-Soviet minorities which are powerful both politically and economically.

If a United States of Europe is to be the solution to Europe's ills, it has many obstacles to overcome before it becomes a reality. The chances for success do not appear very good. Some other solution will have to be found.

[From the Montana Standard, Butte, Mont., of May 6, 1947]

WILL IT BE A UNITED STATES OF EUROPE?

As Europe slips further and further into chaos, a condition which some observers suspect is being fostered by the delaying tactics of the Soviet Union, the age-old plan of forming a United States of Europe has come again into the limelight. The new plan calls for a union of western European states into a predominantly economic, but to some extent political, United States of Europe. Senators FULBRIGHT, Democrat, of Arkansas, and THOMAS, Democrat, of Utah, and Representative BOGGS, Democrat, of Louisiana, have introduced a resolution in Congress reading as follows:

"That the Congress favors the creation of a United States of Europe within the framework of the United Nations."

In the past the idea has been advanced by such notables as Henry IV, William Penn, Immanuel Kant, Victor Hugo, and former Senator B. K. Wheeler. The proposal was pushed after World War I by Aristide Briand, 10 times premier of France, and is now supported by Winston Churchill.

Under Briand's instigation the 27 European states that were members of the League of Nations met in Geneva in 1930 to discuss ways and means of creating a United States of Europe. The conference was a failure. While the delegates praised the principle, they disagreed violently on how to achieve it. Some objected that such a body outside the League would weaken the League. Others disagreed with the Briand thesis that political should precede economic unification. Others saw an attempt at economic and financial rivalry with the United States.

The Soviet Union was not represented at the conference and some of the delegates thought it would be futile to project a United States of Europe without including the Soviet Union in on the plans. Others saw in the proposal another attempt to strengthen the existing "cordon sanitaire" against Moscow.

It is most likely that any move to create a United States of Europe in 1947 would be considered an anti-Soviet move, but there would be one great difference between now and 1930. In 1930 the Soviet Union was on the defensive; it most definitely is on the offensive today. The move today would be an attempt to avert the chaos which is threatened by Soviet tactics in international affairs and which the Soviet Union is widely suspected of actually desiring.

If objection is raised that a union of western Europe now would create two worlds instead of the one world visualized by the United Nations, then the answer would be that in actuality Europe is already divided into two worlds.

Many observers argue that if the Thirteen Original States could create a Federal Union in 1789, why can't the countries of Europe, at least western Europe, create their own United States in 1947?

But the problem isn't that simple.

In 1789 the former British Colonies had recently been united in war and had a suspicious attitude of all foreign nations. In the war recently ended there is no similar solidifying element. Italy, Germany, and Austria were on the losing side. Spain was in effect pro-Axis. Portugal, Switzerland, and Sweden remained neutral. And, in addition, certain western European states harbor pro-Soviet minorities which are powerful both politically and economically.

Curb on Reckless Spending Requires Public Support

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of May 10, 1947:

CURB ON RECKLESS SPENDING REQUIRES PUBLIC SUPPORT

Saving public money isn't a very exciting subject for an editorial, but in these days, at least, it has the virtue of being different.

Other than the harassed taxpayer who is carrying an unprecedented burden of income, sales, real estate, and intangible levies on his weary back, few are raising their voices in protest against a reckless draining off of public funds.

World-saving politicians, 90 percent of the metropolitan press and, oddly enough, big business management, seem to think there is no limit to America's capacity to pay for every worthy project and endeavor that is suggested.

It is considered modern to sneer at economy and to brand as reactionary anyone who questions huge appropriations for nonessential functions of Government which could be deferred until our financial house is put in order.

Most of the "do-gooders" in Congress are well-intentioned and honorable people, but they haven't the faintest conception of fundamental economics. They support all legislation labeled progressive and enlightened, without the slightest regard for the ultimate cost.

To an alarming degree, the metropolitan press has abdicated its role as public defender, and smears Members of Congress as visionless, little men when they challenge foreign loans and swollen departmental budgets.

Along with the growing concentration of industry and the disappearance of individually owned firms, industrial management has become as careless about Government expenditures as it is cautious about its own.

Many a business executive who insists that lead pencils and typewriter ribbons must get the maximum use sees nothing inconsistent in howling his head off for Federal funds to finance his pet local project.

The prevailing delusion is that somewhere, somehow, the money can be found to reduce taxes, balance the budget, curtail the national debt and bail out distressed nations all over the world.

CRITICS HINDER ECONOMY FIGHT

An economy-minded Republican majority in Congress is now drawing the wrath of the press and Washington bureaucracy for attempting to do precisely what it was elected to do.

Granting that the House has at times been clumsy in method, sizable reductions in Federal expenditures can and should be made. Some of the proposed cuts are extreme, particularly in the Interior Department. National parks and public power are a part of our national wealth and should be developed, not retarded.

No intelligent person questions the necessity for adequate national defense or the newest developments in aviation safety devices.

But when the Secretary of Commerce, Averell Harriman, says, "The proposed cut would result in a dimout of the light that business and Government require to make sound decisions," he is talking through his hat.

Perhaps the Secretary could name a few business concerns which depend upon Department of Commerce statistics and assistance to guide them in their day-by-day competitive decisions.

Mr. Harriman's sole contribution to the relief of the publishing industry was to announce at a public meeting that his Department was convinced that a serious shortage of newsprint exists.

MUST AMERICA "SELL" FREEDOM?

The State Department finds that the proposed elimination of its Voice of America broadcasts to foreign countries is proving embarrassing.

These broadcasts are part of a governmental propaganda program designed to sell the American way of life to other nations. Does it need selling? Is their way of life more attractive?

One would not think so from reading of the low standards of living in regimented Russia, of England's scanty diet and near economic collapse, of France's black markets and political instability.

While the fight for reductions in Government spending does not represent a scientific approach to the problem, the meat-ax methods may serve to sever a sizable number of useless jobholders from the Federal pay roll.

Federal agencies have been placed on the defensive where they must justify their expanded activities.

On several occasions President Truman has exhorted businessmen to lower prices, so that production may be increased and the national economy maintained at a high level.

Yet he stubbornly refuses to look with favor upon tax reductions which would encourage incentive and increase purchasing power. It is expected, however, that his views on tax reductions will undergo some political adjustment in 1948.

Punitive taxes have brought more than one nation to the wailing wall. Why should we follow the example of England, where venture capital is practically nonexistent?

In the United States, which is the sole remaining major citadel of capitalism in the world, the press should encourage, not condemn, reductions in the cost of government.

It should discourage States and municipalities from leaning upon the Federal Government for support. Federal aid should come only after they have demonstrated the ability to conduct their own affairs completely and without waste.

The Ohio Chamber of Commerce reminds us that although chambers of commerce, manufacturers' associations, and other business organizations are constantly demanding Federal budget cuts, too many of them are likewise asking for exceptions in the cutting where it affects their local community and area projects.

The Ohio chamber correctly observes that under such conditions, the average Congressman could, with understandable bewilderment, abandon his determination to curb an extravagant government, leaving the Federal spenders and bureaus free to continue almost unlimited squandering.

LOANS TO STRAIN UNITED STATES RESOURCES

With passage of the Greco-Turkish loan virtually a certainty and further extension of the Truman doctrine yet to come, the lending resources of the United States will be subjected to a terrific strain.

England has already used up nearly half of our $3,750,000,000 loan to keep her economy from disintegrating. There is no good reason to believe that any of this money will ever be repaid.

Sly suggestions have come from Stalin that Russia will be far more "cooperative" if she can get a billion or two from the United States.

Financial help for Korea will soon get its first test in Congress. A loan to Hungary and increased aid to Austria follow Korea on President Truman's foreign-aid timetable. France and Italy are next.

The eventual cost of the so-called Truman doctrine is placed somewhere between seventeen and twenty billions of dollars, a sum approximating our total national debt in 1932.

LET'S SELECT THE ESSENTIAL

It is high time that we came to a true realization of the financial perils that lie ahead and swung into action against waste in government, whether it be local, State, or National.

Let no one convince you that all of the desirable projects undertaken by Government are essential, or that all Federal employees are devoted public servants who save your money and protect your interests.

The waste and inefficiency in Government bureaus is appalling. Civil service protects the incompetent. A Member of Congress can make life uncomfortable for any conscientious administrator who fires an employee from the Congressman's district for any cause.

The lazy, shoddy methods used in many Washington agencies would, if known to the general public, start a clamor for a house cleaning that would be heard from one end of Pennsylvania Avenue to the other.

So, if your Senator or Representative in Congress believes there is some justification for cutting the costs of government and making your tax dollars go further, he is more nearly right than wrong.

As a wartime ex-bureaucrat, I know whereof I speak.

JOHN S. KNIGHT.

Aid to Greece and Turkey

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Times-Picayune:

HEARD 'ROUND THE WORLD

The bill passed by the House last Friday for aid to Greece and Turkey carries the amount asked by President Truman and complies substantially with his other requests. There are a few minor changes from the Senate measure which should be easily adjusted in conference. All radical and emasculatory amendments proposed from the floor were easily beaten. On final roll call majorities of both parties voted "aye" and only 107 Members—less than a fourth of the total House membership—cast opposing ballots.

The noise and vehemence of the opposition during the preceding debate probably cheered Moscow. Given full play in American newspapers, some Americans got the impression that the measure might be beaten or mutilated by a coalition of isolationism, politics, and Henry-Wallace-ism. But the result decisively revealed bipartisan unity in the House, as well as the Senate, on the issue directly and vitally involving the Nation's foreign policy. Congress agrees with the administration that the time has come to take a stand in support of the United Nations' obligation to small nations—and against their virtual subjugation and absorption through force and intrigue by aggressive and expansionist neighbors.

News of the congressional stand travels around the world. It will even penetrate the iron curtain. And no matter how it may be misrepresented or distorted by Moscow propagandists, some of the folks behind that curtain will grasp, we believe, the true import of its message. Some gains for freedom and democracy overseas already have accrued from the frank enunciation of the so-called Truman doctrine, which is in essence an affirmation of United Nations doctrine. Lovers of democracy abroad take fresh hope and courage from its vigorous support by an American Congress whose decision in turn has the strong support of the great majority of the American people.

Ernest Foster Marlatt: Soldier, Editor, Patriot

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, Wisconsin has lost one of its outstanding citizens in the passing of Ernest Foster Marlatt, editor of the Kenosha Evening News, Kenosha, Wis.

"Ernie" Marlatt, as he was affectionately known, by all the people in Kenosha, and especially by his comrades of World War I, made an invaluable contribution to public opinion in his city and State. He was at all times ready to serve the public interest. His city was his primary concern, but he always maintained an avid interest in national affairs.

I came to know him quite intimately since entering public life. He often discussed national and international questions and many times we were on opposite sides. He was always gracious enough to respect my views and I had a high regard for his opinions. He had a convincing faith that no matter what happened to upset the equilibrium of this country the good sense of our people would ultimately restore it. He believed that this country should remain strong. In his opinion a universal military bill is "must legislation." His final editorial effort was on this theme and it will live forever as a monument to his memory. He was indeed an outstanding soldier, editor, and patriot.

Mr. Speaker, I include, as part of my remarks, the editorial referred to:

ERNEST FOSTER MARLATT

Ernest F. Marlatt, working as usual this morning only a few hours before his sudden death from a heart attack, wrote the following editorials. He also contributed his daily column Sidelights as his final stint. Those works are carried below in respect to the memory of his many years of community service and leadership.

LEGION SPEAKS OUT

While many organizations and individuals by the thousands dodge the issue, the American Legion comes out courageously for universal military training for the young men of this land and sets forth clearly the reasons for its stand. The Kenosha Post, No. 21, of the Legion has supported the national organization in this movement and is actively engaged in urging Members of Congress to act favorably on this proposal.

Deep in their hearts many other organizations and the public generally must realize, to some extent at least, that universal military training holds the key for this Nation to avoid some of the pitfalls into which it has fallen in the past. It is a measure which, contrary to what its opponents say, is designed to maintain peace and to prevent war. A strong America will be respected and will not be attacked. A weak America invites attack and will lead to war.

This is not only theory; it is also fact. The history of our country for the past three decades has demonstrated it without any fear of successful refutation.

Universal military training is one of the important links in the chain of maintaining the potential military strength of our Nation at a standard which would prevent war.

The American Legion and other veteran organizations is made up of those who served in two wars to restore the blessings of peace when the world had been at war. They saw some of their comrades die because unpreparedness had failed to give them the training which they might have had and should have had. They have realized that this unpreparedness invited the wars until they could not be escaped. They do not want this to happen again.

They know, too, that if such training can be divorced from the dangers of war—and universal military training plans hold out that hope—this training will benefit the individual. Opponents of universal military training at times try to point out that such training will harm the individual but if we accept that thesis, all those millions of young men of the present generation who so bravely and courageously answered the call to the colors were spoiled thereby. That means your boy and my boy, your brother or your husband. But we know that this is not the case. We know that in the great majority of cases they were benefited by this training and more eager and better prepared to take up the careers which they are to follow.

It was war that brought the gold stars and the injuries. That is what we want to prevent, and universal military training holds the best chance of preventing war in the future.

The American Legion has sounded the tocsin on this needed measure. We feel obligated and are glad to support it in the best interests of our country and of its youth.

The National Guard

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BOGGS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Labor Herald, a Wilmington, Del., newspaper.

This editorial is significant and timely. May I point out in particular the very high and justified compliment the editor directed to the National Guard in the closing words of his editorial:

To the community, the guard is a proud local asset. It represents public service of the highest order.

The editorial is as follows:

THE NATIONAL GUARD

One of George Washington's most famous statements was this: "To be prepared for war is one of the most effectual ways of preserving peace."

That should be remembered in the present troubled world. And it has an especial significance now that an aggressive effort is being made to build up the National Guard to its authorized strength of 682,000 men.

The Guard is a volunteer, civilian-soldier organization, and it has a long and distinguished record of service. It provides a priceless nucleus of trained men upon which an effective fighting force can be built in time of war. Units of the guard were among the first to see action in the last conflict, and they fought gallant delaying actions while we worked against time to create a gigantic Army. And war is not the only emergency which the guard is called upon to meet. In every great disaster, from the San Francisco fire in 1906 to the ghastly explosion at Texas City a short time ago, the guard has done a superb job as a protector of life and property.

To young men, the guard offers an opportunity to learn new skills, to improve old ones, and to acquire experience in organization and leadership. Each member draws a full day's Regular Army pay for 2 hours of spare-time training a week, and for each 15 days of field training a year. To the community, the guard is a proud local asset. It represents public service of the highest order.

Benefits Under the Social Security Act Should Be Liberalized and Extended

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BENNETT of Michigan. Mr. Speaker, I have introduced two bills today to liberalize and extend benefits under the Social Security Act.

The first bill reduces the eligible age limit from 65 years to 60 and provides for a 25-percent increase in benefits payable. Laboring people should not be required to struggle along on their jobs until they have reached age 65 in order to receive this pension. If the average person works until he is 60, he has devoted most of the fruitful years of his life to toil and he ought to be able to retire at that age and live comfortably on a pension for his remaining years. Moreover, the present benefit schedule has been entirely too low. As a matter of fact, it is ridiculously low under present high-cost living conditions. The 25 percent increase, provided in my bill, would put these pension benefits on a more fair and equitable basis.

Within the last week Congress voted an additional $400,000,000 to bail out bankrupt and decadent governments of foreign countries. Millions more in this direction are in prospect. I do not favor this kind of policy which is made without regard to our own financial security. Nevertheless, if we can afford to spend millions on people and governments of foreign lands, we certainly can afford to be a little more liberal with our own people. The old-age pensions in this country ought to enable our citizens to live a decent and respectable existence. They cannot do it on the present miserly rates.

STATE AND MUNICIPAL EMPLOYEES

The second bill I have introduced would extend social-security benefits to

State, county, and municipal employees and to individuals who are self-employed.

In my judgment, there is no sound basis for denying social-security benefits to an individual merely because he happens to work for the State, county, city, or other municipality. These persons should have the right to make social-security contributions the same as persons in private employment and receive the same benefits when they reach retirement age.

Some of our States, counties, and municipalities have adequate existing retirement or pension systems. Most of them do not have any such program. It is not my intention to disrupt or interfere with State, county, or municipal retirement pension plans which adequately take care of the employees covered thereby. Rather it is my intention primarily to provide retirement pension coverage for those not now covered and, secondly, to permit those units of Government now having such plans to supplement it by Social Security Act benefits. Inasmuch as my amendment makes it optional for these governmental units to have their employees covered by the Social Security Act, those already adequately provided for by their own retirement laws can continue under their present system. But social-security benefits would not interfere or be a substitute for retirement pay because in most cases retirement pay is not sufficient to provide the individual with an adequate living. Then, too, these benefits under the Social Security Act would accrue to hundreds of thousands of city, county, and other municipal employees who do not at present have any retirement or other old-age benefits whatsoever. This is particularly true of the many small cities and other small municipal agencies throughout the Nation. These agencies are in most cases financially unable to provide any retirement assistance even in a small degree, no matter how much they would like to care for aged employees. So, if they are to be taken care of at all, it must and should be under the broad plan of Federal social security, the machinery and framework of which have already been created and established.

We have hundreds of thousands of State and municipal employees in this country who have given the better part of their lives to that particular service. It should not be expected that they should run the risk of giving up their present jobs to seek private employment in order to be eligible to receive social-security benefits.

SELF-EMPLOYED PERSONS

Likewise, there is a large group of self-employed persons in the country who would like to make social-security contributions and thus receive the benefits thereof at retirement age. These self-employed individuals in most cases are employers only in a technical sense. I say technical sense because as a practical matter a man with only one, two, or three employees is not considered an employer in common parlance or usage of the term. Furthermore, the average employer with only a few employees comes within the $3,000 per annum salary limitation which makes a person eligible for benefits under the act. When we consider that the over-all purpose of the Social Security Act was to provide financial security for the latter years of his life, to the so-called low-income-bracket worker, then we can find no reasonable or sensible basis for excluding the small employer. The barber, the plumber, the small merchant, the garage and gas-station operators, and hundreds of other small business and professional groups, too numerous to mention here, are at present denied the opportunity of availing themselves of the privileges of this law. They wonder why they are excluded and, to my knowledge, no one has been able to give them a satisfactory explanation. Actually there is no answer except that they have been arbitrarily discriminated against without justification.

In conclusion, Mr. Speaker, my bills are designed to accomplish two things. First, to take care of the hundreds of thousands of our people who are presently excluded from any form of social security, and second, to reduce the eligible age limit from 65 years to 60 and to increase all benefits payable 25 percent.

The St. Lawrence Waterway

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

Thursday, May 15 (legislative day of Monday, April 21), 1947

Mr. ELLENDER. Mr. President, on behalf of my colleague the distinguished senior Senator from Louisiana [Mr. OVERTON], I ask unanimous consent to have printed in the RECORD an editorial entitled "New Drive To Sink Vast Federal Fund in Part-Time St. Lawrence Waterway," published in the Mobile Register of May 10, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW DRIVE TO SINK VAST FEDERAL FUND IN PART-TIME ST. LAWRENCE WATERWAY

Off they go again on another campaign in Congress for the St. Lawrence seaway project. This time they have thought up a different approach—the collection of tolls to liquidate the cost of construction.

New legislation to authorize the controversial project was introduced Friday by Senator ARTHUR H. VANDENBERG, Republican of Michigan, acting for himself and 14 other Senators, 10 of them Republicans and 4 of them Democrats.

Representative GEORGE A. DONDERO, Republican of Michigan, introduced a companion measure in the House.

This proposal is almost identical to earlier proposed legislation, except for the seaway toll proposition.

In explanation of the toll feature, Senator VANDENBERG said:

"The proposal to charge tolls on the St. Lawrence seaway does not apply to the present navigation facilities within the Great Lakes system.

"Specifically, it does not apply to the local domestic Great Lakes traffic of Canada and the United States that utilizes the 'Soo' locks and the Welland Canal. It will not apply also to the 14-foot Canadian canals on the St. Lawrence River. Trade and navigation that has adjusted itself to these navigation facilities will remain unaffected.

"Only the new deep water navigation facilities on the St. Lawrence River authorized by this resolution will be affected by the proposition to charge tolls."

How many years—or centuries—would elapse before the enormous St. Lawrence debt could be paid out of tolls collected on the basis outlined by Senator VANDENBERG?

And where is the justification, much less the necessity, for sinking untold millions of dollars into that project?

Senator JOHN H. OVERTON, Democrat, of Louisiana, has laid before the Senate a big stack of letters from American ship operators and out of the whole business only one declares in favor of constructing the seaway.

Summarizing the objections to the project set out in that stack of letters, Senator OVERTON named as one that the seaway would be in use only 7 months a year due to ice conditions. It has long been cited that the seaway would be available to navigation only a part of each year because of severe weather.

And yet a fresh drive has been started to toss a vast sum into the project, and in this drive tolls are dangled before the eyes of Congress as a lure for support.

Meanwhile, the Tennessee-Tombigbee waterway, a thoroughly sound and needed project to shorten the navigation distance between a wide area of the country and the Gulf of Mexico, still pleads for construction funds.

Voice of America Programs

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of May 6, 1947:

TELLING OUR STORY

Secretary Marshall's conference with congressional leaders should have left no doubt as to how important he considers continuation of the Voice of America programs. Secretary Marshall has had first-hand experience with the distorted impressions of the United States cultivated by those who deprecate our way of life. The Secretary is a man who has no patience with idle effort. His remedy for inadequate propaganda is more propaganda. He recommends that the Voice of America broadcasts be continued and intensified, and he does this in the realization that these programs are our principal weapon in the world battle of ideas. If we expect to win this battle, we should be doing everything possible to see that the world knows the truth. For Congress to follow the lead of the House Appropriations Subcommittee in denying funds for the broadcasts would be to throw in the towel and admit that we're licked.

The objection that the broadcasts are propaganda and therefore unsuitable for Government supervision could be met in some degree by adoption of the proposal by the State Department to remove the programs from official State Department control. The bill would establish an International Broadcast Foundation. This would be administered by a board of trustees consisting of 13 "distinguished private citizens," with the Secretary of State serving in an advisory capacity as the fourteenth member. Funds for the Foundation, at least in the beginning, would have to come from the Government,

but the fact that private citizens were represented would eliminate some of the stigma in congressional minds of Government control.

The advantage of such an operation is that it would place on private broadcasting outlets much of the responsibility for seeing that people in other countries get a balanced view of the United States. This would remove the broadcasts from the political arena. At the same time, the State Department would have a check to insure that the national interest was being served. This sort of direction should make possible the maximum degree of coordination in use of our short-wave facilities. Obviously private outlets now are not in a position to bear the cost of an adequate program themselves. One reason we do not have more short-wave broadcasting is that it is not, as now constituted, a profitable commercial enterprise. But through a combined operation there is a good chance that ultimately sales of radio time and support by private foundations would lessen the cost to the Government.

As we embark on our plan to counter aggression and bolster free governments, it is of crucial importance that our motives be understood. Our detractors have long since started a campaign of misrepresentation. Their efforts are bound to take effect unless we make ourselves heard. If democracy is to survive as the goal of millions of people throughout the world, it cannot afford to keep silent while the totalitarians are broadening their attempts to vilify it. We are heartily in favor of Mr. Marshall's plan. It is of a piece with a foreign policy of affirmation and reconstruction which is the only one that can save our stricken world from degenerating into chaos.

Britain: When Wealth Evaporates

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. ANGELL. Mr. Speaker, pursuant to authority granted, I include in the extension of my remarks the following article appearing in the Pathfinder of May 21, 1947, entitled "Britain: When Wealth Evaporates," as follows:

BRITAIN: WHEN WEALTH EVAPORATES

(By Felix Morley)

The British Labor Government, in office since July 1945, has been successful in achieving a more even distribution of the national wealth. It has been much less successful in stimulating that production without which there can be no wealth to distribute.

Fewer than 1,000 people in Great Britain, with a total population of about 49,000,000, now have a net income, after payment of income tax, above $16,000 a year. There are not 50 individuals whose net annual income remains over $24,000. The rich, as a class, have been wiped out, and spokesmen of the Labor Government are frank in saying that, while it holds power, this leveling process will continue.

Individual wealth is dissipated by two very efficient forms of taxation: On incomes and on inheritance. In the United States, with the war over, there is a tendency to ease these taxes for everybody. In Great Britain the Labor government is maintaining the income tax, in the higher brackets, at confiscatory wartime levels. And for the current fiscal year, beginning April 1, it is doubling already high death duties on all sizable estates.

Income-tax changes in the new budget illustrate the policy of favoring the poor while continuing the wartime penalization of individual accumulation. A married worker with earnings of $1,600 a year, having two dependent children, will this year pay an income tax of $20, as against $54 last year. A professional or businessman earning $16,000 a year, with the same family, will pay income tax of $7,255 in 1947, as compared with $7,471 in 1946. In the case of the rare executive who commands a nominal salary of $160,000 a year, and also has two dependent children, the tax saving provided by the new budget is trifling. The executive will pay income tax of $140,755 in 1947, as contrasted with $140,971 in 1946.

Thus the tax reduction in the new British budget, figured as a percentage of income, works out at 2⅛ percent for the poor man; at 1⅓ percent for the middle-class representative; at less than one-seventh of 1 percent for the rich man.

The British Socialist government, however, is not concerned only with dragging the rich down. It also seeks to raise the standard of living for the poor, primarily through an elaborate system of subsidies on basic foodstuffs, and to a lesser extent on what is called utility clothing and shoes. The amount of the taxpayers' money spent on these subsidies was in the neighborhood of $1,500,000,000 during the fiscal year ending March 31 and the appropriation for this purpose is increased to $1,700,000,000 in the current budget.

These cost-of-living subsidies, combined with efficient rationing and sales taxes to discourage the production of luxuries for the domestic market, have proved successful in holding down the price of most necessities, when obtainable. Indeed, the cost-of-living index, as figured for a working-class family, has scarcely increased since 1941 and is now only one-third higher than it was when England went to war, at the beginning of September 1939.

The theory is that the unions will not demand higher wages as long as the cost of living does not rise. Nevertheless, the Labor Party naturally favors high wages and actually the average weekly wage rate has mounted by two-thirds during the same period that the price index has gone up one-third.

In many other respects governmental policy favors the wage earner. A license must be obtained for any repair of dwellings, let alone new construction, and it is easier to get the necessary priorities if the applicant is a factory worker. That is why so many bomb-damaged mansions in the west end of London remain in a forlorn decay.

Moreover, all real estate, stock market, and legal transactions, in which the poor seldom indulge, are heavily taxed, with the rates in some cases doubled by the current budget. Only the staggering tobacco tax, which now raises the cost of a packet of 20 cigarettes to 70 cents, can be said to hit the poor relatively harder than those who once were well to do. But the primary purpose of this tax is admittedly to curtail the tobacco imports which have been rapidly using up a large proportion of the American loan to Britain.

The assumption of the Labor government has been that a fiscal policy which definitely favors the common man will automatically result in increased production. Unfortunately, in Great Britain, this assumption turns out to be unfounded.

In a few specialities, British production is up in volume from prewar. But in many important commodities it is sharply down. The most-advertised illustration is coal, where output is still 15 percent below the level of 1938. However, much the same decline is found in the manufacture of such diverse products as locomotives, automobiles, linoleum, blankets, hosiery.

This difficulty in restoring production to prewar levels was apparent long before the winter fuel crisis forced many factories to close. As a result of this mismanagement, output in many lines fell temporarily to almost nothing. The result is now apparent in a sharp drop in those exports which Britain must sell in order to import the food and raw materials which cannot be produced at home.

There is almost no involuntary unemployment in Great Britain. But this desirable situation, plus the Government's cradle-to-grave program of social security, has done nothing to animate production. On the other hand, the confiscatory taxes and the expanding program of Government ownership are keeping industry from a modernization of equipment which would have been overdue even without wartime deterioration.

Endless priorities, restrictions, regulations, and directives create more handicaps, helpful only to the ever-increasing army of Government employees. Thus, output diminishes, even when the will to work is present, in spite of a governmental promotion campaign which now frankly warns the British people, "We work—or want."

There is no doubt that the Labor government, carrying on where wartime socialism left off, has divided up British wealth more evenly than ever before. But it is no mere coincidence that simultaneously the production of wealth is drying up. The British people cannot live indefinitely on American and Canadian credits. And there are many of them who see no exaggeration whatever in Winston Churchill's recent gloomy prediction that, under present trends, "it will only be a question of time before we shall be unable to support our population."

Disability Security and National Economy

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. ANGELL. Mr. Speaker, pursuant to authority granted, I include in the extension of my remarks the following timely and thought-provoking article on disability security and national economy by Dr. Francis E. Townsend:

DISABILITY SECURITY AND NATIONAL ECONOMY

I have just read Ernest Haycox's article in the May number of Reader's Digest, Fear Is Out of Date. I wish I could agree with him. But I find fear wherever I turn. The one great fear just now is that we are headed for another depression. I have been listening within the hour to a group of men, every one of whom expressed fear that a depression of gigantic proportions seemed to be inevitable. The gist of their contentions was that we had learned nothing from our past experience of depressions that gave us even an inkling of what to do to prevent their recurrence.

Fear may be out of date but there is an overabundance of it still in the hearts and minds of men. But if we analyze modern fear we find it quite a different thing from the form that enthralled humanity in primeval days when fear was an essential to the business of existence; when just to stay alive required the building up of fear in every fiber of the human carcass. The fear that drives all of us half mad today is fear of our fellow men; fear that we may not be able to compete successfully with our fellows in acquiring our share of the good and necessary things of life; fear that some incapacity may overtake us that will unfit us for the struggle of life and leave us victims of poverty and want.

I am sure this modern fear is more nerve wracking, more devastating and cruel in its effects upon modern men than the mere physical fear that dominated the minds of our prehistoric ancestors. They could crawl into their treetops or their caves at night and sleep without being ridden with the dread of finding themselves out of a job on the morrow, or of facing a wage cut or a bank failure or an eviction for nonpayment of rent.

Those of us who were bread winners in the era of the bitter thirties know what real fear is, and we want no more of it, and most of us are bitterly aware that when World War II came along and ended that period of fear we designate as "depression" we had done nothing at all to insure ourselves against a recurrence of that terrible period; and now that the artificial prosperity engendered by the war is beginning to slip away from us and the specter of want in the form of sky-high prices and shortage of money is again hovering over us, nerve-shaking fear is beginning to drive great masses of us into a half panic of apprehension. Those of us who have lived long enough to have experienced the effect of an epidemic of sudden fear upon great masses of humanity are gripped with a nausea of foreboding for ourselves and our children. Ancient man feared for his physical self and for his little family group. Our fear today is multiplied into fear for the millions—for the collapse of civilization itself.

President Roosevelt once said that we Americans had nothing to fear but fear itself. That was one of the most thoughtless things that he ever said. The cause of this universal fear is so obscure to the most of us that we become panicked, like a man becoming suddenly stricken with blindness, when we think of the disaster that will follow if we go into another economic tailspin. This economic fear transcends all others that we have ever known in virulence; it is the crowning infamy of all human afflictions. Just now it is a worse threat to the world than the atomic bomb itself, for if we cannot conquer it, if we give another exhibition of the vulnerability of our Nation to its devastating results, there will be no possibility of our selling the American way of life to the other nations of the earth, and the conflict with Russia which we so dread will become inevitable.

The ideals of democracy are still virile and strong in American hearts, but the skillful practice of democracy has thus far eluded our efforts. We are wholehearted in our love for it, but halfhearted in our attempts to practice it. This causes us to be looked upon as hypocrites by the peoples of the earth who have only known autocratic rule. Shilly-shallying will no longer avail us, democracy must make good now, all citizens of our country must be made to realize that opportunity is open to all alike under the protection of law, discrimination because of race or religion must end, and the distribution of created wealth must be made with the clear understanding that since all honest labor is equally necessary for the well-being of humanity the rewards of labor must be such that poverty can no longer exist.

Our country has attained such facility in the production of wealth that there can be no excuse for the existence of poverty. The good things of life in the form of food, clothing, and shelter must be made available to all in profusion, since there is no limitation on our ability to produce. Our civilization will stand or fall as we decide upon this division of our abundance.

War has just now destroyed the greater part of the wealth of an entire continent. Whole peoples are reduced to beggary. Disease is rampant; actual starvation is common where a short time ago abundance was in evidence everywhere. This wholesale devastation has resulted from the application of science to the instruments of destruction. Is anyone so fatuous as to believe that we have reached the limit of destructiveness? Is not the most titanic of all destructive forces hanging by a thread over the heads of all nations? What shall we do before the thread breaks? My hands shake as I try to frame a reply. How can we insure the world against the destruction of our civilization?

Well, I place much faith in that word "insure." If we Americans will make a conscientious effort to insure that no one in this Nation shall suffer for want of the essential things of life, food, clothing, and shelter, the democratic exhibition of justice resulting will make us the envied of all nations. All nations will endeavor to emulate us by following our methods. America can become the guiding star for all the world.

Our procedure should be simple and along lines with which we are familiar. Let us insure ourselves abundance for all time by insuring each and every citizen his equitable share of our wealth as it is produced. How? By establishing a national mutual insurance for all American citizens against the hazards of life, so that when overtaken by any of these hazards the citizen will immediately begin to receive insurance in the form of monthly installments, to continue as long as the disability lasts. Disability payments should start immediately when competent civilian boards declare the citizen to be unemployable. This might result from sickness, crippling accidents, old age, or any other incapacity, to provide for himself. Old age should be declared by law to begin at an established birthday, say 60 or 65 years; any one of that age should be permitted to retire on his Government insurance, and all citizens receiving the insurance should be required to spend the money within 30 days of its receipt. The reason for this requirement lies in the fact that our industrial equipment of labor-saving machines has arrived at a stage where the production of the country has outgrown the market. We can produce faster than we can sell. But if the unemployables all become able to buy liberally, instead of being pauperized, their insurance money added to the wages and salaries of the employed would create and maintain a dependable market for all classes of goods.

The money for supporting this kind of insurance would cost the Nation nothing. It would be collected through a gross income tax levied against business and individuals alike, collected and paid out each 30 days, thus creating a circulating fund that would increase and diminish as business rose and fell. Exemptions of wages and salaries from the tax, up to a certain level, say, $2,400 per year, could be established so that business would carry the largest share of the tax. This, business should be willing to do for the reason that business actually passes all its taxes on down to the consumers and collects in the price exacted from the buyers. Wage and salary earners—those with fixed incomes—and their families are the great supporters of the market.

It is said that 90 percent of all business done depends upon the circulation of wage and salary money. Obviously then, if we want a dependable market capable of purchasing the full output of our factories and farms, equipped with the latest labor-saving machinery, it will be necesary for us to supplement the buying power of the wage earning groups with the buying power of those receiving insurance pay.

The gross income tax should become the sole method of taxation. The wage and salary people are compelled to pay on their gross income. They have no net on which to pay. They have nothing to sell that can be passed on down to someone else. They pay through the nose. They must buy everything at retail, and the retail price has in it all taxes, all interest, and all profits accruing from the transfers of ownership all along the line from the raw material to the retail sale. If it is fair to tax labor on his gross income, certainly business can stand a like tax.

Business could always thrive if all adult citizens were provided with liberal buying power. Unless this buying power can be fully established and maintained, the profit system will die for want of a market. The proportion of those engaged in production is constantly being diminished by the new automatic machines and labor-saving devices. The unemployables, because of these same forces, are increasing proportionately to the entire population. Unemployable people cannot buy liberally if at all. Something must be done to balance production and distribution or production will soon glut the market and factories will stop, transportation will fall off, farms will curtail output and nonbuyers will again ride the brake beams and curse us for our stupidity.

The gross income tax has been in use in the Hawaiian Islands since 1935. The islanders pronounce it the easiest collected and the most productive of revenue of any tax ever devised by man. It should be given a trial here and if effective on the small scale we have suggested as a means of raising the insurance money for the unemployables (3 percent), it could become the sole source of Government income and wipe out for good the hodgepodge excise and property taxes that are now undermining the morality and the patience of our citizenry. Let us act quickly. Let us cease to be afraid.

Dr. FRANCIS E. TOWNSEND.

The Truman Doctrine

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 15 (legislative day of Monday, April 21), 1947

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. Alf M. Landon before the Optimist Club in Topeka, Kans., on May 9, in which Mr. Landon discussed his views on the foreign situation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

VE-day was 2 years ago yesterday.

Russia has been arrogantly and aggressively pushing us around since the first Moscow Conference in November 1943.

Other nations—awed and unnerved by this bullying spectacle—have reluctantly capitulated to the Russian combination of outside pressure and internal force exerted by a communistic minority acting under orders from Moscow. All this suddenly stopped when President Truman sent his challenging message to the Congress, stating with these ringing words:

"It must be the policy of the United States to support free people everywhere who are resisting attempted subjugation by armed minorities or outside pressure."

The first foreign reaction to this frank and bold statement of policy was the stiffening in France to Communist pressure.

I have felt from the first that the Truman policy could be the ounce of prevention that might prevent a future war.

I opposed lend-lease because, to me, it could only mean war, and was being deceptively presented to the American people as the way to peaceful neutrality.

Therefore, I now deplore the tendency in the Senate debate and by members of the President's Cabinet to minimize the significance and the importance of the responsibilities we assume under the new foreign policies as outlined in the President's message to the Congress.

Hence, although I don't agree with their oppositions, I am glad to see the Republicans in the National House of Representatives frankly stating, without exaggeration, their apprehension of what the Truman policy means.

Secretary of State Marshall's talk to the Nation gave little real indication of a new policy. He made the same sort of negative and inconclusive remarks that have been our bane for years.

Of course the Secretary of State speaks under limitations. But there was little indication of a determined new policy for a torn and distracted Europe sinking into even greater depths of starvation and despair. And Europe as a whole is tremendously important.

Wordy protests and grandiloquent speeches won't do the job. Democracy—in order to live—has for once got to be tough. We have the power, and we have got to use it now.

I hope Stalin will not be fooled by the apparent reluctance of the American people to assume the burdens the Truman policy entails.

Hitler and Hirohito made that bad mistake—and before them the Kaiser.

In 1936 I said—"Specific pledges not to go to war under any condition, risk encouraging belligerents to attempted aggression which would, in fact, precipitate us into war." In 1940 I protested against our foreign policy of supplying Japan with war materials and financing China. We were helping both warring sides.

In other words, our prewar foreign policies were so deceptive that they fooled not only the American people, but Hirohito and Hitler into believing we would not fight—and thus made war certain.

The Kaiser was fooled the same way by Woodrow Wilson's—"He kept us out of War" campaign for reelection.

It is very plain that we have a critical decision to make, perhaps the most critical in our history. The decision is simply whether we assume the responsibilities of leadership in international affairs or let this leadership pass by default to Soviet Russia. There is no safe—no soft—middle ground alternative.

World War II shattered all the balances that made for stability in the world. It—plus our own unbalanced actions—left a vacuum in Europe. The British withdrawal is leaving another in the Near East. Our lack of any semblance of a sound, consistent and farsighted policy following VJ-day—for Manchuria and Korea created another one in the Far East. Wherever such an opening has occurred, Russia has moved in. That is the settled Soviet policy. If unchecked, Russia will occupy every vacuum that exists. Meanwhile the Soviets are proceeding to extend their power by infiltration and the promotion of chaos and disorder in other countries. By this process, if it goes unhindered, world leadership will become a Soviet possession.

Our new foreign policy provides a check. But so far in only one sector. Turkey and Greece are only part of what must be a whole policy. We have no guidepost as yet to the rest of that policy. But the alternatives permit of no half-way policy. Any hesitancy on the part of the administration—or the American people—undermines our position and encourages Russia. Until the United Nations organization becomes capable of handling international disputes—or until an association of European nations is formed to meet issues in that sphere—we shall have to close the gaps, wherever they appear.

If the President follows through on such a course courageously and skillfully—if the American people back him up without equivocation—I believe this new foreign policy will lead to peace, more successfully than the roads we have been following.

It will take care of the time that must elapse until the United Nations gathers strength and experience to deal with world problems. It serves notice that aggression has no place in the world of the twentieth century. It means that we have done with pussyfooting, and backing and filling, in our international relations. We tried this last course in 1930—and it got us into war. We tried it in 1915—and it got us into war. A firm, definite policy is far less likely to get us into another war. Don't overlook the fact that three-fourths of the trained and experienced reporters covering the Paris Conference last summer voted its outcome meant another war.

There is another reason why the Truman doctrine is less likely to lead to war. Actually we are the only first-class power in the world today. We demonstrated this fact when we successfully carried on a global war and armed and provisioned our associates at the same time. The Soviet leaders know this. They have no productive system comparable to ours. Furthermore, the forced labor of communism is close enough to human slavery to have a paralyzing effect on technological "know how." And modern war is mechanical, technical, and scientific. With these facts well known, here and abroad, I do not believe our course will be challenged. But if we wait too long they may fill their hand.

The Wallace charge that the Truman doctrine means the American people are seeking to rule the world is too silly to treat seriously. He would actually furnish them the means of aggression like we did the Japs prior to July 1941. Neither is it a negative policy as Stassen says. It is a positive statement that we are going to block Russian imperialist expansion by military assistance if necessary. It also means we are reversing Roosevelt's policies of active aid to Stalin—enabling the Russians to dominate the Balkans—part of Germany and parts of the Far East.

Perhaps that is about all we will have to do. Every people wants to let down after a war. Russia, although ruled by ruthlessness hardly comprehensible to American citizens, can be no exception. But we have got to be prepared to tell the Communist bullies where to get off. If we are serious and in earnest, that is clearly the way to get results. Otherwise, we shall be simply perpetuating a state of civil and international war. To finance resistance against Communist forces and ignore Communist general headquarters is fantastic. To ratify the Trieste treaty is ridiculous in the light of President Truman's message.

We should never have agreed to it in the first place. We are pouring money into Greece and Turkey to resist Russia; hence, to simultaneously ratify a treaty with Italy, under which we will be paying in part Italy's reparations to the Communist bloc, will have dangerous repercussions all over the world to the Truman doctrine.

It will anew create despair in the hearts of all our friends. If we are going to support democracy in Europe, Italy is far more important than Greece or Turkey.

If the Truman doctrine really means business we must not ratify the Italian treaty. We must make our own decent peace with Italy as we did with Germany in 1921.

That will enable us to work consistently for a rehabilitated and democratic Italy. That will encourage tremendously democratic forces all over the world.

Any policy may lead to war. Which way the new policy leads depends on just how it is implemented. If we are going simultaneously to finance and aid Greeks, Communist Yugoslavs, and others, and ignore the urgent necessity of a firm and emphatic attitude toward Moscow, it will, of course, lead to continuation and expansion of war. There is a parallel in the Chinese-Japanese war from 1937 to 1941, when we deliberately built up Japanese military and naval power by shipping her oil, scrap, and other means of aggression. We were not only supplying the Japanese, but also aiding the Chinese, whom the United States Treasury directly financed—first by silver purchases, then by outright increasing of subsidies and credits. We actually financed both sides until July 1941. Russia today is like Japan was when we were financing and supplying her prior to July 1941—more dependent on American cooperation than any other power with the exception of Britain and France.

A policy worthy of the noble traditions upon which this Republic was founded will not deal merely with the Greek or Turkish borders, but will set forth its aims to make all Europe a place devoid of fear, with liberty and economic security of the kind proposed for Germany by ex-President Hoover, and aiming at a United States of Europe based upon the concepts known to every American. We should be as firmly and resolutely devoted to the strengthening and expansion of democracy as Moscow is devoted to the strengthening and expansion of Communist power everywhere. This is the challenge that faces us today.

That would not mean war. The danger of war lies in the fact that Moscow has no respect for us—that they think we have no principles—that they think we will appease and compromise and chatter while they move ahead, and consolidate their position everywhere. Danger lies in the fact that that is their experience with us—that F. D. R. at Yalta actually signed away secretly to Stalin the rights of our Chinese allies to Manchuria, though these were already promised to Chiang Kai-shek. Stalin knows by experience that F. D. R. and his "statesmen" (or "statesboys") were completely unprincipled, and would sign away one ally to another—as we did in that case, as well as in the case of Poland, the first country actively to war against the invading German Army.

A policy for peace must be based upon knowing what we want, and standing firmly for it. We made a statesmanlike and generous offer with the Baruch plan—a plan for organized peace, which could be extended to more conventional armaments in turn. Moscow refused it—and we permitted them to refuse, though their obvious purpose in refusing and filibustering was and is to gain time to develop their own atomic armaments against us.

The Communists respect superior force. It is only through that respect for superior force that we can effectively approach the Communists. It is because of Communist respect for superior force that war is unnecessary. If and when we tell the Communists what we are going to do, and inform them simply and firmly that we are not going to await their atomic militarization—if and when we tell them that, with no mincing of words or bargaining, they will join in the organization of peace. But not before.

We must take the bold steps required in our new foreign policy for one final reason. We are the heirs of all that has been won in the long, hard struggle for human liberty. If we prize the rights and privileges of western civilization we must stand up for them. We must chart our course by the immortal words of Daniel Webster, "God grants liberty only to those who love it, and are always ready to guard and defend it."

Proposed Reorganization of Executive Branch of the Government

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, May 15 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have reprinted in the Appendix of the RECORD an article by George E. Sokolsky, regarding a measure which Representative BROWN of Ohio and I have introduced for the reorganization of executive branch of the Government. The article was published in the Washington Times-Herald of May 1.

There being no objection, the article was ordered to be printed in the RECORD as follows:

THESE DAYS

(By George E. Sokolsky)

Senator HENRY CABOT LODGE, Jr., and Representative CLARENCE BROWN have introduced a measure in Congress to reorganize the executive branch of the Government with the view to promote economy, efficiency, and improved service in the transaction of the public business in the departments, bureaus, agencies, boards, commissions, offices, independent establishments, and instrumentalities by limiting expenditures to the lowest amount consistent with the efficient performance of essential services, activities, and functions; eliminating duplication and overlapping of services, activities, and functions; consolidating or abolishing services, activities, and functions of a similar nature; and defining and limiting executive functions, services, and activities.

A commission is to be appointed which would make recommendations to Congress, consisting of 12 members, 4 each appointed by the President, the President of the Senate, and the Speaker of the House, 2 from the particular branch of the Government, 2 from private life.

This has been an urgent question for many years and has never, in the past, been handled with any success, largely because the departments of Government seek to perpetuate themselves and use every type of political influence to achieve this end.

Politicians in Congress wish to protect their patronage; heads of departments seek to keep their departments as large as possible.

Actually, the Government of the United States is a wasteful, inefficient organization that does not provide a dollar of work for a dollar spent, that permits unconscionable duplication and that protects such featherbedding, time-wasting, and juggling of accounts as no private enterprise could tolerate, or as, to put it another way, the Government would not tolerate in any private enterprise.

Senator LODGE said that "there are actually 150 members of boards and commissions, 15 heads of departments and major agencies, 5 people in the Executive Office of the President, 7 people in the White House staff proper, 11 persons in those emergency agencies which are still functioning, and 3 persons pertaining to the Joint Chiefs of Staff, who all have direct access to the President of the United States."

Actually, no corporation of any size could be operated on that basis. Senator FERGUSON added: "If they were reporting for a period of 30 minutes, it would take him (the President) 3 months."

Senator BYRD once stated: "It is inconceivable that the departments and old-line agencies extended to 777 component parts at the height of the war should now need to expand still further to require 920 principal component parts.

"There is no justification for having 1,200 field offices in New York, 1,000 in Chicago, and over 600 each in Philadelphia and Los Angeles, to mention only a few."

Senator LODGE quoted Representative WIGGLESWORTH as providing data that there are no less than 29 agencies lending Government funds, 3 agencies insuring deposits, 34 engaged in the acquisition of land, 16 engaged in wildlife preservation, 10 in Government construction, 9 in credit and finance, 12 in home and community planning, 10 in materials and construction, 28 in welfare matters, 14 engaged in forestry matters, 4 in bank examinations, and 65 agencies engaged in gathering statistics.

I think I have quoted enough to show that Senator LODGE has proposed a bill that should be passed. His commission idea is sound, because it includes the Executive, Congress, and the public in a joint effort. This will solve one of the major difficulties of the past.

The point is that the American Government is run without system or plan except within the broad lines laid out by the Constitution.

Several methods might be employed:

1. The hacksaw method of cutting off agencies without plan is as bad as creating agencies without plan. That will not produce greater efficiency; it may even result in increased confusion.

2. The method of making the suit fit the cloth is often suggested, by which, instead of allocating $6,000,000,000 to the Executive, another amount, say $5,000,000,000, would be voted, and the President would then have to deal with the problem as one of provident administration.

This is the method now generally being pursued and has virtue in the present state of administrative inflation.

3. Senator LODGE's method, which involves a systematic, scientific overhauling of the administration of government to achieve permanent improvement and increased efficiency.

Erratic Congress

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of May 13, 1947:

ERRATIC CONGRESS

The logical order of procedure has been reversed by the haste to cut taxes before Congress has agreed on the size or made sufficient headway in disposing of appropriation bills to determine the actual amount of savings in prospect.

We fail to see how Congress can act intelligently on the proposed tax legislation in face of these uncertainties. House and Senate are still deadlocked over the question of the size of the over-all cuts at which to shoot. Since there is slight chance that even the lower $4,500,000,000 savings goal set by the Senate will be reached, it probably makes little difference whether the two Houses settle their differences or agree to disagree. The only reason for urging prompt action is that it looks bad to pass a tax bill without first reaching a decision about spending objectives.

A much more serious objection to the erratic order of procedure has been raised by Senator GEORGE of the Finance Committee. Although voting to report out the tax-reduction bill, he has reserved the right to oppose it on the floor, unless assured that prospective cuts in appropriation bills will result in greater economies than have been effected to date. "On the basis of what is now apparent in the way of a surplus," Senator GEORGE cautions that "enactment of the tax-reduction bill would leave nothing for a payment of the $258,000,000,000 public debt."

Since the Senate has gone on record in favor of devoting at least $2,500,000,000 of an anticipated budget surplus to debt retirement, it seems to be the height of irresponsibility to ask it to vote on a tax-reduction program that would make heavy inroads on that surplus before debt reduction. Indeed, premature tax reduction based on guesses might even turn that surplus into a deficit if Congress fails to make good on its economy program, or if expenditures have to be increased in order to halt the march of communism and arrest the economic deterioration that threatens to set back world recovery and weaken our own resistance to the forces of depression.

There Is a Simple Remedy

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 15, 1947

Mr. HOFFMAN. Mr. Speaker, to Congress are presented many plans and superplans to give first to the members of one group, then to another, everything that particular group desires, without, we are advised, injuring anyone.

None of the so-called panaceas which over the past 14 years have been adopted seems to be the complete answer.

From the Saturday Evening Post of May 17, 1947, comes the following editorial, which is at least a step in the right direction:

WE HATE TO PART WITH THE WAR BOOM

The basis of our current economic complications is that none of us wants to take the rap for the war. In that unprecedented conflict billions of dollars in goods and resources were destroyed. In some countries the destruction was obvious, but the United States was not physically blasted by the war and it was thus possible to disguise the war's destruction as a boom. Rationing and price control partially concealed the fact that we were blowing up our assets on the world's battlefields. One result of this widespread misconception is that we shudder at peace and plenty because money inflation made war and privation look attractive to all except the fighting men. We were even propagandized into believing that the war was being fought to bring about a "better world," the outward and visible sign of which was to be more and better commodities and gadgets which would flow to the consumer in an endless stream with very little effort on his part.

These illusions still persist. We still waste precious time battling to protect and increase inflated money incomes, and thereby to delay the return of increased production and a better standard of living. Workers, farmers, and businessmen alike hesitate to make the concesions which alone will halt the spiral. Labor leaders can hardly wait for the next set of price statistics before talking up new strike votes. Farmers are cool to a return to a free market in their products. Businessmen fear to offer goods at lower prices lest they find themselves stuck with commitments which rising costs may prevent them from meeting.

A specific example of the prevailing stagnation is the building-trades industry, which is all but paralyzed because nobody can afford to build houses at present costs. What keeps building costs up? There is still sand in the pits, wood in forests, everything necessary to the building of houses. The trouble is we have complicated the process of transmuting these simple materials in houses by surrounding the building business with regulations, restrictions, price agreements and featherbed labor rules which in many areas reduce the building business to the status of a racket. Employment of a steam fitter outside the charmed circle incurs the risk that a union-dominated city inspector will refuse to connect the house to the water mains. Whatever hope existed in prefabrication is dying through the imposition of rules and restrictions which nullify virtually all the advantages in buying a ready-made house. In some areas agreements between unions and material manufacturers compel the use of favored materials at a prohibitive price set by the combine. And the public is told that new housing could spring up in a week if some new commission with greater powers were set up by the Government.

It seems to us that the crisis against which we are warned every day could be averted if all parties would agree to stop yearning for the false boom of the war years and get on with the job of providing what people want at prices they can pay. As long as bricklayers sit around waiting to be paid $20 a day when there is plenty of work at $14, and as long as manufacturers delay putting goods on the market at a competitive price instead of waiting for some ironclad guaranty against losing a dollar, and as long as farmers look to the Government to put a floor under every hazard of their occupation, just so long shall we continue to lack the things we need.

Perhaps it is extravagant to hope that the American people will relate their activities as individuals to the welfare of the Nation, as the English people today endure austerity in the belief that, if they can sweat their way through this period of transition, the whole nation will reap benefits. Nevertheless one may still hope. The steel wage agreement is a hint of what can be done to step down the boom when men of good will put their backs into it. It seems to us that, more than leadership or a dynamic program, we need a widespread understanding that the boom on money is over and that we can have a boom in houses and goods if we want one. As Sydney Smith wrote in his famous letter to Lady Grey more than a century ago, "No eloquence! But apathy, selfishness, common sense, arithmetic!" Or, as Bernard M. Baruch put it just a few weeks ago, "We will find that work will solve many of the problems threatening security."

A way must be found to enable an industrialist to start something new without consulting all his competitors, for a worker to be, to quote Alf Landon, "A real competitor, not just a member of the herd." Every day that we waste waiting for a master plan, or in envy of somebody else who makes more money, or waiting for Congress to pass a law, is a day lost to the production of the goods which alone can reduce and stabilize the cost of living.

Industry-Wide Bargaining or Chaos

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. ROONEY Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Washington Post of May 14, 1947:

INDUSTRY-WIDE BARGAINING OR CHAOS?

The issue: Industry knows no boundaries. It sprawls across the Nation. Thousands of employers are organized on an industry-wide basis. To meet industry as an equal, labor must bargain on an industry-wide scale. The real interests of the public, the workers, and the employers are identical. What they all need, what America needs, what the world needs, is labor-management peace and increased production.

You, the public, certainly have an interest. Wartime economic maladjustments brought on strikes. You resented this inconvenience. The NAM—National Association of Manufacturers—in an attempt to capitalize upon this resentment, has charged that industry-wide bargaining causes industry-wide strikes. This is not true. It is not the type of bargaining, whether local or national or industry-wide, that causes strikes. It is all too frequently the stubborn refusal of certain employers to give labor a fair break. In the last 10 months wage rates have risen only 9.5 percent. Wholesale prices spiraled 30 percent; retail prices were up 20 percent—and industrial profits were the greatest in 10 years.

Over 4,000,000 working people are now covered by industry-wide bargaining contracts. Thousands of employers prefer this method of bargaining. If industry-wide bargaining is banned, a major upheaval in thousands of companies will result. Hundreds of new strikes will be encouraged, many in industries which have had no strikes in generations. You will get industrial chaos—not industrial peace. Such unwise legislation will create the very conditions which it ostensibly seeks to abolish.

You, the workers, have a vital interest. Remember, if you work for a living, you're labor. Trade unions, by tremendous sacrifice and suffering on the part of their members, have raised the living standard of all Americans. Farmers, office workers, tradesmen, professional men—all have benefited. Industry-wide agreements have helped to achieve this high standard of living. To abolish industry-wide bargaining would open the door to a nation-wide attack on the wage scale of all working people by the low-pay employers who still bitterly oppose all union organization. Small unions would find it impossible to bargain equitably with gigantic corporations. Larger unions, forced to bargain on a restricted local basis, would find themselves broken into helpless fragments—and ever-expanding corporations could wipe them out one by one. The social benefits won for all workers during the last generation would be lost overnight.

You, the employer, have a definite interest, too. Employers, too, are members of the public—and many of them are friends of labor—as witnessed by the thousands of industry-wide bargaining contracts now in existence. Employers save themselves time, trouble and cutthroat competition by industry-wide contracts. Settlements are made for all employers through their association rather than on an individual employer-by-employer basis. Industrial peace and stability are achieved in one step. Industry-wide bargaining also prevents chiselers from competing unfairly with the large and ever-increasing number of employers who believe in playing fair with their workers.

But NAM has only a selfish interest—and it's not yours. Let's face it! There are employers who don't like labor unions. NAM—the National Association of Manufacturers—is their mouthpiece. They have fought and continue to fight every social and economic forward step America has taken in the past 35 years. The list of advances they were against in that period cover everything from the child-labor amendment to the 40-hour week. They want to get back to the "good old days," when they could pay a man anything they felt like paying, fire employees when and as they pleased and, in general, treat the labor of human beings with less regard than they do their well-oiled machines. Congressman HARTLEY said the purpose of the ban on industry-wide bargaining was to "* * * break the unions down to the local level." This follows NAM's doctrine of "divide and rule." First "bust" the unions—then "bust" the country—just as they did in 1929. That's the vicious strategy behind the NAM-inspired slave-labor bill.

For the good of America, this bill must not pass!

AMERICAN FEDERATION OF LABOR.
WASHINGTON, D. C.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. KELLEY. Mr. Speaker, with permission to extend my remarks, I am including an editorial from the Pittsburgh Catholic entitled "To the Point." This editorial sets forth in clear and explicit language some of the problems confronting the Congress in its proposed labor legislation. It expresses a viewpoint that is entirely logical and sound.

TO THE POINT—REFORM OR WRECK?

(By the Editor)

Is it possible to bring calm thinking and sound reasoning to bear on the country's labor problem, before misunderstanding, selfish propaganda, political considerations, personalities and plain stupidity run the country back into the swamp of social injustice from which it extricated itself with such difficulty? Out of the present confusion a pretty grim prospect is looming. A dozen State legislatures have passed bills outlawing the closed shop and have adopted other measures designed to weaken labor unions; the House of Representatives has voted for a bill embodying just about every proposal which the foes of the working man have been demanding; the Senate is grinding out a companion bill which, though somewhat milder than the House version, is still calculated to render the workers helpless to protect themselves against predatory employers; and while it is predicted that the President will veto so one-sided a measure as Congress seems bent on presenting to him, its advocates confidently predict that they can pass it over his veto.

What's back of all this? The antiunion forces make no secret of their belief that the

time has come to strip labor of the protection it has enjoyed under the Wagner Act, the Norris-LaGuardia Act and other legislation adopted to correct the evils of the past. But surely all the legislators who are supporting today's antilabor proposals are not foes of the working man; most of them, indeed, while accepting at face value the smooth propaganda prepared by the National Association of Manufacturers, the Committee for Constitutional Government, the Hearst stable of Adam Smith economists, and other spokesmen for laissez-faire reaction, vehemently assert that they are friends of the worker. They say they must back these restrictive bills because the people were enraged by the strikes of the postwar years and demand that labor leaders be curbed; they say they were elected on pledges to do something about these strikes; they cite the Gallup polls as proof that the public wants action; some of them have circulated questionnaires among their constituents and claim that they are merely obeying the will of the majority when they join in the hue and cry which the foes of organized labor are leading.

All very hysterical, and specious, and shot through with false reasoning. The sharp answer to all such defensive pleas is that the first duty of legislators and of every other public official is to serve the public welfare. Gallup polls, questionnaires, the output of propaganda agencies and paid lobbies, even if they form a pile as high as the Rockies, don't create a single principle; they are no part of the American system of constitutional government. No line in the Constitution requires a Congressman to read the Gallup reports, or to take his own polls, or to listen to the spokesmen hired to testify before congressional committees on behalf of antiunion forces. A Congressman is elected to act for the people, and his most solemn duty is to satisfy his own conscience that any vote he casts is in their interest. If he wants to study arguments for and against any proposal, in order to inform himself, he shows that he is wise; but if he accepts the conclusions spelled out for him by those who argue for the current shackle-labor projects, he cannot escape having his sincerity or his power of discernment brought into question.

Yes; the public disliked the strikes which caused widespread inconvenience or hardship. Yes; there was plenty of growling that something should be done about them. The NAM gaily and glibly translates this feeling into a public demand that labor unions be weakened, labor leaders be deprived of power, the workers be stripped of the rights in which they are now protected by the Wagner Act. That is, the NAM sets up, without any proof whatever, the premise that the strikes were caused by the strength of the unions, the power of the union leaders, and the Wagner Act; whereas the strikes originated directly in the killing of price control and the refusal of employers to grant wage increases to meet the jump in the cost of living. The do-something mandate could far more reasonably be interpreted as calling for reestablishment of the OPA; that would be the obvious way to serve the public as a whole and to make strikes unnecessary. To attempt to shackle labor while leaving workers and the rest of the people exposed to exploitation by price profiteering is the rankest sort of injustice.

As to the polls and questionnaires; they are utterly worthless, since they asked stupid and misleading questions. A question suggesting a change in public policy should always state the alternative, and the whole thing can be put thus: "Do you favor depriving labor of the rights it is now guaranteed and thereby returning to the conditions that existed before 1932?" "Do you think strikes are worse than bread lines?" "Which year would you rather see repeated—1946, with all its labor disturbances, its record profits for industry, its high income for workers, and its widespread prosperity, or 1931, with its closed banks, its soup kitchens, its idle millions? The former had strong unions, powerful labor leaders and the Wagner Act; in 1931 there was no labor movement to speak of and no Wagner Act."

The alternatives make only one answer possible. And Congressmen who are reckless enough to vote the country back into pre-Wagner Act conditions can't expect the public to be satisfied with any claims that the NAM and Mr. Gallup told them it would be all right.

THREE-QUARTERS

One must admire the frankness of Senator TAFT's admission that the version of the antilabor legislation in the Senate which he is supporting represents about three-quarters of the matters "pressed on us very strenuously by employers." But such subservience to special interests cannot be admired.

SIDETRACKED

While Congress is consuming time and rousing bitterness on an ill-advised and totally unnecessary antilabor bill, legislation essential to the national welfare is languishing. This includes the appropriation to carry on some of the relief work abroad, formerly administered by the soon-to-expire UNRRA; the bill extending rent control; the long-range national housing bill (of which Senator TAFT is one of the sponsors); the national fair employment practices bill; the Federal aid to education bill. Some of these, it is now apparent, will not get the attention of Congress at this session at all.

A peculiar sense of values seems to prevail.

Increased Compensation for Federal Employees

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1947

Mr. BLATNIK. Mr. Speaker, I would like to discuss briefly the bill which I have introduced last week for the purpose of providing additional compensation for employees of the Federal Government and the District of Columbia. I am sure that almost everyone will agree that the wage scales for Federal employees are entirely too low and that a wage adjustment is long overdue.

As you know, the basic law establishing wage and salary scales for Federal workers in the departmental and field services is the Classification Act of 1923. This act set the wage rates for all Federal employees with the exception of: (1) employees in the field service of the Post Office Department whose pay rates are fixed by Congress under separate laws; and (2) per diem workers in the navy yards, arsenals, and other industrial establishments whose pay rates are adjusted from time to time by wage boards or other administrative agencies.

Under the Classification Act of 1923, the median annual salary for Federal employees in 1941 was $1,620—the salary rate of a grade 3 clerk (CAF–3). The median annual salary for postal employees for the same year was $1,902. During the war Federal employees, including postal employees, received some wage increases. The Federal Employees Pay Act of 1945 granted a 17-percent increase to Federal employees, and another increase was granted by Congress in 1946. The effect of these two increases brought the median average salary for Federal employees from the prewar level of $1,620 up to $2,168 per year. During the same war period, postal workers were granted increases which brought their median average salary up to approximately $2,700 per year.

Thus the total salary increase for the average Federal employee since prior to the war has been about $584—a 33.8-percent increase. During the same wartime period, the salary of the average postal worker was increased by about $800 per year—an increase of 42 percent.

Although such increases appear substantial, they were not sufficient to maintain the real wages of Federal employees against the rising cost of living. Neither did they correspond to the increase in wage levels in industry. I maintain that the Federal and postal employees should be given a wage increase at this time for the following economic reasons:

First. The cost of living has increased by 56 percent since 1939 while the salaries of Federal and postal employees have increased by only 33.8 percent and 42 percent respectively. A salary increase of at least $500 per year for all Federal and postal employees is necessary to bring wages in line with the increase in the cost of living and thus maintain the real wages and living standards of the employees of the Federal Government.

Second. Federal salaries must be adjusted upward in order to bring Government wage policy into balance with wage policies in industry. During the period that Federal employees were obtaining a 33.8-percent wage increase and the postal employees a 42-percent increase, wages in manufacturing industries were going up by approximately 76 percent. Wage increases in durable goods industries amounted to 61 percent for the same period. Moreover, the wage pattern for industry which is developing indicates that industrial workers are to realize another 15-percent increase during the next few weeks. Thus it seems that a salary increase for the employees of the Federal Government is necessary to provide equity and justice to the workers in the Federal services.

And third, an increase in Federal wage rates is in keeping with a sound Government program of full employment and prosperity. Let me remind you that business prosperity is dependent upon the maintenance of adequate purchasing power in the hands of the great majority of the people. To permit this volume of purchasing power to fall makes depression inevitable. To combat this danger it becomes mandatory to maintain wage levels to insure the purchasing power necessary to purchase the goods produced by industry. Thus the proposal to raise Federal salaries is based on sound economics, and is part of a policy of full employment and prosperity.

The bill that I have introduced is designed to provide the increase in the

salaries of Federal employees by granting a cost-of-living bonus of $500 per year to all Federal and postal employees. I feel that such an increase is most necessary in the light of the increased cost of living, the wage levels in industry, and the urgent need to maintain real wages and mass purchasing power. In justice to the thousands of people who are making a career of Government service, I feel that this proposal deserves serious consideration by the Congress.

Living in Dreamland

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of May 6, 1947:

LIVING IN DREAMLAND

One sure road to a mood of utter discouragement is to pick up a newspaper and read these words from the House Appropriations Committee: "Our forebears planted on this soil the seed of liberty and freedom which, if properly nurtured, should outgrow our boundaries and reach out into the rest of the world, not through a centralized disseminating agency but through the force of its own dynamics."

Having delivered themselves of this, the committee members proceeded to kill the $31,000,000 appropriation for the State Department's Office of International Information and Cultural Affairs. Henceforth, so far as the committee is concerned, there will be no voice to carry the American story to those areas of the world where communism, with its propaganda of lies and distortions, is seeking to discredit and destroy democracy. The field would be left to the hostile philosophy, and if perchance the seed of liberty and freedom should not be able to reach out into the rest of the world through the force of its own dynamics it need expect no help from the Appropriations Committee.

This action has been taken in the face of an urgent plea in behalf of the program by Secretary of State Marshall and its vigorous indorsement by Lieutenant General Smith, our Ambassador to Russia. The country looks to these men, particularly to General Marshall, to lead us in this struggle with communism which will shape the future of the world. Presumably the country has confidence in General Marshall and his judgment. But the members of the committee, on the basis of an argument which would not carry weight with a school child, deprive him of a tool which he considers essential for the job. And this to save the relatively insignificant sum of $31,000,000.

These committee members are living in a dream world. If their words can be taken at face value, they are in the grip of an illusion which will lead us straight to disaster. Democracy cannot win this battle with pious hopes or platitudes. It is not enough to wait for some miracle that will get our story out into the world. We should do everything in our power to make certain that it gets there, and this program is one means to that end. The Senate most certainly should restore the necessary funds.

Civil Government in Guam

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. POULSON. Mr. Speaker, under permission to revise and extend my remarks in the RECORD, I include the following letter by Mr. Richard H. Wels, as printed in the New York Times under date of May 13, 1947, concerning civil government in Guam:

CIVIL GOVERNMENT IN GUAM—HEARINGS SAID TO GIVE OPPORTUNITY FOR GUAMANIANS TO PRESENT CASE

To the EDITOR OF THE NEW YORK TIMES:

Chairman FRED L. CRAWFORD of the Subcommittee on Territorial and Insular Possessions of the House Public Lands Committee has scheduled hearings before his committee on the various bills which have been introduced in Congress with respect to Guam. The hearings will commence probably late this month.

The treaty of peace with Spain, which was entered into by the United States in 1898 and which was the instrument which brought Guam under the American flag, provided that "The civil rights and political status of the native inhabitants of the Territories hereby ceded to the United States shall be determined by Congress." Until July of 1946—some 48 years later—when Representative ROBERT A. GRANT, of Indiana, introduced a bill to make the Guamanians American citizens and to give them some form of democratic self-government, not a single step had been taken by Congress to redeem the obligations which had been assumed by the United States under solemn treaty.

The hearings which have been scheduled by Representative CRAWFORD will provide the first opportunity that the citizens of Guam have had to present their case to Congress and the American people. The committee will examine the merits of H. R. 3044, introduced by Representative GRANT, and H. R. 2753, introduced by Representative NORRIS POULSON, of California. Either bill would remedy the neglect and injustice which the Guamanians have sustained for half a century.

It is to be hoped that the State and Navy Departments will present recommendations to the committee consistent with the provisions of the United Nations Charter which specify that "Nations which have responsibilities for the administration of Territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants of these Territories are paramount, and accept as a sacred trust the obligation to promote to the utmost * * * the well-being of the inhabitants of those Territories, and, to this end: I, to insure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, and their protection against abuses; second, to develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each Territory and its peoples and their varying stages of advancement."

RICHARD H. WELS.

NEW YORK, *May 12, 1947*.

An Open Letter to the President

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. CASE of South Dakota. Mr. Speaker, under permission granted, I place in the RECORD the following open letter I have written to President Truman:

WASHINGTON, D. C., *May 10, 1947*.

MY DEAR MR. PRESIDENT: I wish you might have heard the debate in the House of Representatives on the bill to extend aid to Greece and Turkey. The printed RECORD can never convey the intensity of feeling that accompanied the words as Members voiced their deepest convictions about their country and the world picture.

Presiding as Chairman of the Committee of the Whole House for the consideration of the bill, I had an unusual opportunity to hear each word spoken during the 4 days and to observe how it was said and how it was received. And because the issues do run to the very existence of our country as a Nation and to the existence of a stable society in the world, I am venturing to write you about it. I do so in the sincere hope that it will prevent any misinterpretation of the rejection of practically all amendments and the very heavy majority on final passage.

1. There was no comfort for communism as a doctrine in the United States. The House froze when one Member (KERSTEN of Wisconsin) told that a group of Communists called on him that last morning to oppose the bill and, in response to his questions, admitted that if the issue arose, they would have to follow Moscow rather than the United States. And, it should be kept in mind that of those who did vote against final passage, many were men who have been most outspoken for years in their opposition to communism.

2. Very, very few spoke of the bill with enthusiasm. Support was reluctant. Argument was not "We like to do this" but rather "We have to do this." The situation was regarded as an accomplished fact. You had spoken to the world. The Senate had acted. At least 75 Members, I judge, would have voted against final passage, myself included, had it not been that we thought it would be like pulling the rug out from under you or Secretary of State Marshall in the positions you had taken at Moscow and would of necessity take until settlement is reached of many problems affecting the peace of the world today.

3. Even so, the bill would have had rougher sledding except for two provisions: (1) the condition that the aid to Greece and Turkey be "upon request of their governments" and (2) that the program will be stopped whenever the United Nations says that "the continuance of such assistance is unnecessary or undesirable" with respect to which finding the United States waives its veto power (the so-called Vandenberg amendment).

In other words, the House of Representatives in my opinion does not want to by-pass or weaken the United Nations. We, and the country, are committed to the idea of collective security. We do not want small nations used as pawns in a balance of big powers or even bolstered internally, without their consent. We believe that the only lasting peace rests upon government by consent of the governed.

4. Some Members were impressed by the talk about oil reserves in the Middle East.

I was not. The Secretary of the Interior tells me that the lignite fields of Montana, North Dakota and South Dakota offer a reserve of 530,000,000,000, barrels of synthetic gasoline as compared with proven reserves of 21,000,000,000 barrels of crude petroleum in the entire United States. (Middle East 13 to 18 billion.) The Bureau of Mines says German processes with brown coals make these reserves competitive with oil at $1.50 per barrel. Oil shales and waste coals increase this. More research and large-scale production will cut costs. It is clear we can lick our fuel problem a lot cheaper than by policing the Mediterranean and the Middle East.

5. A handful may have supported the measure as a step toward an inevitable war, but many times more opposed it on the ground that it would lead to war. Practically all who spoke on that point either said it would lead to war or was the only alternative. I do not think anyone could have heard the entire debate and have the idea that the Representatives believe the American people are ready for war or want it.

If this program leads to war and devastation and destruction sweep the earth and the seas and the air, as they would from what we call modern weapons, would the despair that followed mean more or less communism in the world? If the United States somehow survived, what would be the condition of our factories, our cities, our homes, our families, our form of government? And if this program leads us into World War III will those who administer it escape responsibility?

That places a very heavy burden upon you, as everyone must realize. The President determines when assistance should be supplied and where and how, under the terms of the act. And that is why I have ventured to write you this background of the passage in the House as I saw it.

6. And finally, may I say that I think the adoption of this program must be regarded as merely a stop-gap. The people of the United States are weary of government by crisis. Every man must realize that no country, ours or any other, is wise enough or rich enough or just plain big enough to run the rest of the world.

We must find a way for nations to live and let live. The bill to aid Greece and Turkey was passed by the House of Representatives, as nearly as I can sum it up, in the hope that it might give you a little help and a little time to get that job on its way.

Men spoke of their convictions during the debate as the result of "prayer at home alone." I think the bill was passed in that mood.

Earnestly and respectfully,

FRANCIS CASE,
Representative in Congress,
Second South Dakota District.

Adequate Funds for Antitrust Division Imperative

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. BLATNIK. Mr. Speaker, this is not the first time that I have spoken in opposition to what I consider to be the short-sighted and irresponsible slashing of the budget. Such appropriation cuts which eliminate essential public services beneficial to the people, however, have no relationship to real government economy. Such a "penny-wise and pound-foolish" policy is one of false economy, and is just as detrimental to the national welfare as the reckless squandering of public funds.

In the time I am allotted it is impossible to survey all the items in this appropriation bill (H. R. 3311), and point out the many instances where there has been sacrified the well-being of the people and the interests of the Nation. I would, however, like to mention a few items in this bill which represent flagrant violations of the principles of sound public finance.

I have noticed that the Appropriations Committee has slashed $32,500,000 off the Budget Bureau's recommendations regarding the appropriation for the Federal-aid airport program. As my distinguished colleague from New York [Mr. ROONEY] pointed out on Tuesday, the effect of this cut will be felt in every State in the Union; hundreds of Federal airport projects must be discarded. In my State of Minnesota this appropriation reduction will mean that the proposed Federal airport projects at Duluth, Bemidji, Rochester, and Alexandria must be eliminated completely, and the Minneapolis project must be reduced by $375,000. Such a drastic slash will be a severe blow to our aviation industry and will tend to retard progress in the field of aviation.

Another glaring example of this short-sighted policy is found in the failure of the Appropriations Committee to give adequate funds to the Antitrust Division of the Department of Justice. It is true that the committee's estimate is only $100,000 below the recommendations of the Budget Bureau. But it is also true that the Antitrust Division has always been understaffed and short of funds. Year after year this Division has been starved to death for lack of funds, while the task for which it is responsible—the checking of monopolies—has been getting bigger and bigger.

Let me remind the Members of the House that broad changes are taking place in the economic structure of the United States. The economic pattern of our society is changing, and this change is marked by the long-continued trend toward the concentration of economic power in the hands of fewer and larger corporations. This fact is borne out by the report of the Temporary National Economic Committee, and the 1946 report of the Kefauver committee. In this last report entitled "The United States Versus Economic Concentration and Monopoly," the following conclusions are set forth:

First. That 250 great corporations and trusts now hold approximately two-thirds of the Nation's usable manufacturing facilities.

Second. That the 250 largest corporations now have control of 70 percent of the new publicly financed war facilities.

Third. That eight banking houses now control 106 of the 200 largest corporations—the Du Pont, Mellon, and Rockefeller families alone control 11 percent of the 200 largest corporations.

Fourth. That this growth of economic concentration is slowly driving small business enterprises out of business; some 500,000 small businesses folded up during the war, and today there are 160,000 fewer small business units than in 1941.

In other words, the degree of concentration of economic power is fast approaching the point where the control of American economic life will be vested in the hands of a very few industrial giants and trusts. The effect of this monopolization of American industry is far-reaching and detrimental to the public welfare. As the committee report demonstrated:

First. Monopoly has meant high prices. In one case a company reduced the life of lamp bulbs and discouraged testing. Prices fall less in concentrated than in competitive industries. For example, from 1929 to 1932, prices fell only 4 percent on aluminum, a field in which the entire output was controlled by a single company. Prices in the highly competitive lumber industry dropped 36 percent.

Second. Monopoly has suppressed new products and restricted production. For instance, the introduction of fluorescent light bulbs was delayed because they would reduce the consumption of electricity. Similarly, the development of synthetic rubber was blocked before the war.

Third. Monopoly agreements with foreign cartels have interfered with United States trade. The report points a finger directly at three Federal Government agencies for promoting the growth of economic concentration, and indirectly at the Bureau of the Budget for starving the antitrust forces for funds.

The evils of monopoly control, however, are not limited to monopoly pricing, the exploitation of the consumer public, and the restriction of production. The growth of monopoly is a serious threat to our free enterprise system. As the industrial giants grow bigger, the area of business competition becomes smaller. Such competition is a basic principle of our free enterprise system, and to restrict said competition is to undermine the system. Our economic system can stand only so much of this sort of thing. Unless we act vigorously to prevent the great corporations and chain stores from crushing the life out of small business enterprises in America, our competitive system will surely be destroyed.

Yet what is the Government doing to check this trend toward industrial monopoly? The Sherman Act has been on the books since 1890, but only lip-service has been given to it. The law has remained a dead letter most of the time for the simple reason that the Antitrust Division has never had sufficient funds to maintain a staff needed to enforce the law.

On April 1, 1947, the total staff of the Antitrust Division consisted of only 333 persons, of which 143 were functioning as field units. About 190 lawyers

are employed along with 20 economists and experts. The remainder of the staff consists of clerical help.

It is obvious that such a small staff is unable to check the growth of industrial monopoly. The Antitrust Division receives, on the average, about 650 written complaints a year. Due to the lack of personnel, only about 50 cases are instituted a year—a ratio of 1 case to 13 complaints. There can be no doubt that there are many well-founded cases among the 600 regarding which no action is taken.

I am convinced that the Congress should be more liberal in making appropriations for the enforcement of the Sherman Act. I might say that during the last 6 years the Division has paid into the Treasury just under half of its own cost of operation in annual fines collected. But this is neither here nor there. In the face of this monopoly threat to our free enterprise system, the cost of enforcement of the Sherman Act is cheap at any price. Let us give the Antitrust Division the funds necessary to do its job and do it well.

East European Nations Desire Ties With West

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1947

Mr. ROBERTSON. Mr. Speaker, Mr. C. L. Sulzberger, writing in the New York Times of Sunday, May 11, throws some light on the involved conditions in the neighboring countries of Russia, and particularly those countries which found themselves under the direct influence of the Russian Government.

There is evidence that these people, despite their geographical location, are kindly disposed toward western Europe and toward some of the philosophies as expressed by the United States.

Under leave to extend my remarks, I include the article written by Mr. C. L. Sulzberger in the Sunday, May 11, New York Times:

EAST EUROPEAN NATIONS DESIRE TIES WITH WEST—CZECHS AND POLES, THOUGH LEFTIST, HOPE TO RESTORE NEEDED TRADE

(By C. L. Sulzberger)

PRAGUE, May 10.—That the United States and the Soviet Union should not be getting on as well as they ought to be is awkward, nerve-racking, and costly to the hundreds of millions of citizens of those two nations. But it is a positive tragedy to central and eastern European countries which lie along Europe's broken backbone.

These are the lands which traditionally suffer most when the continental equilibrium—and now global equilibrium—is upset. They are almost inevitably the first to be invaded and occupied in times of war. They are the last to be liberated. They can recover—and indeed exist—only in times of harmony. Since no such harmony has yet been established, they are miserable.

Poland and Czechoslovakia typify this unhappy condition. In each of these countries, geographical facts (their position between Russia and Germany) now force them to depend for their security upon Soviet Russia. But their traditions, culture, and trade have always looked westward rather than eastward. Now they are definitely under the Soviet wing and cut off from western Europe by an occupied, disorganized Germany which effectively serves as a barrier to keep them within the Muscovite orbit.

SOVIET RUSSIA UNPOPULAR

Outside of the ranks of the large Communist parties founded in the western Slavic states—Poland, Czechoslovakia, and Yugoslavia—Soviet Russia is definitely not popular.

One can hear all kinds of sarcastic political jokes muttered in bourgeois Prague or the shattered cafes of Warsaw. For example this from Prague:

Question: "Why do Russian dentists extract teeth through the nose?"

Answer: "Because nobody in the Soviet Union is allowed to open his mouth."

Or this from Warsaw:

Question: "What is the largest country in the world?"

Answer: "Poland. Its western frontier is on the Oder and the Neisse. Its capital is in Moscow. And most of its population is in Siberia."

Whether these people like it or not, geographical facts and great power deals have placed them in a position where it is difficult to see how they could have, at this moment, governments very different from those in office and foreign policies other than those they have adopted. That is not to say that these western Slav states are exactly similar in a political sense. Such is not the case.

The trend toward Marxist socialism is unmistakable in all these lands, and with it, a vastly increased reliance upon the great Slavic socialistic mother, Russia. But in Yugoslavia, where tough, independent-minded and politically immature peasants are essentially against any government, the revolution is being beaten into their reluctant brains and bodies.

In Poland, whose history of partitions, shifting frontiers and a prewar medieval, feudal land system made it a special case, the installation of socialism (although it has brought certain definite benefits to the people) is bitterly resented by a population prepared to hate anything Russian. The Catholic clergy's comments on Marxism add a sharp, strong flavor. Firmly as it is at present in the saddle, the Warsaw Government is detested.

CZECH SITUATION

In Czechoslovakia, socialism is coming about in a thoroughly bourgeois way. The Czechs are cast in what might be called a Platonically idealistic middle-class mold. Even the boss of their Communist Party looks and talks like the president of a rural agricultural bank. Socialism by evolution and not by revolution seems to be the motto of most politicians in Prague today, all the way from wily little Edouard Benes to the presidium of the Communist Party.

As a result, now that the normal legal system of trial by jury has been restored and it has been announced that there will be no further nationalizations for a long time to come, Czechoslovakia has more stability and more industrial and economic promise than either of the two other western Slavic lands.

But communism is having its troubles. These are based more on economic factors than on the dislike of governmental ideology which is deeply rooted in the landholding peasants of Poland, Yugoslavia, and Slovakia and the merchants and businessmen of Bohemia. The reason for this is that so far the Soviet Union has little to offer these cousins in the way of trade, and prosperity goes a long way toward swinging political sentiment.

Both Yugoslavia and Poland specialize in the export of raw materials—grain or coal, grapes, meat, etc. Czechoslovakia, with a more industrialized economy, thrives normally on the extensive trade of manufactured goods and special products.

Before the war—even before the advent of nazism—all three economies were linked closely to Germany and to the western nations. For example, only 3 percent of Czechoslovakia's prewar commerce was with Russia.

GERMAN ECONOMY

Now German economy is, of course, smashed. Western lands are wary of investing any money in countries where the nationalization bug is rampant and they are seeking elsewhere for markets.

The Soviet Union, sorely shattered and scarred by the war, needs everything central and eastern Europe can produce for it—either raw materials or finished goods. But so far it has little exchange. The governments of central Europe find they are building up sizable balances in the Soviet Union, but they are not getting anything like what they would want in the form of either of goods or free currency in exchange for their exports eastward.

That this situation will someday change is certain. Not only will the Soviet Union no longer require the same amounts of raw materials when its recovery has advanced—because its own economy produces these—but gradually it will be able to sell more and possibly better goods abroad.

But that will take a long time. What central European economists devoutly hope for is the reestablishment of better diplomatic relations between the East and West so that with a decrease of Occidental mistrust of the "iron curtain" region there will be an increase in markets.

Actually, the term "iron curtain" is a most inept one. In none of eastern Europe's lands is freedom as the Occident knows it so stifled as in the U. S. S. R. itself. The Yugoslav regime is probably roughest on the individual rights of any western Slavic land.

LACK OF CENSORSHIP

Incidentally, in contrast with the U. S. S. R., in none of those three countries is there censorship of foreign correspondents, although one feels an unfriendly reporter would not be permitted to remain forever in Yugoslavia. What, especially in Czechoslovakia and Poland, is hoped may develop when friendlier relationships are eventually established between Washington and Moscow, is a new type of European socialism. It would someday be sufficiently solidified to serve as a political and economic bridge between the strikingly different systems of the American and Russian continental masses—Eurasia being distinct from Europe.

There were many political philosophers before the last war who saw a chance of such a bridge—not a buffer—being created in eastern Europe. But these trends are now dead. The U. S. S. R. vigorously stamped out the independent peasant movement of the Balkans and is operating strongly on what is left of it in Poland.

BENES' VIEWS

Yet men like Benes think that the bridge can be created anyway on the basis of a socialism which would probably have more in common with that of London than of Moscow, even if it had to look for its political security to the latter. They envision the day when all of the Continent and not just eastern Europe could serve as such a bridge between the U. S. S. R. and the United States.

But those thoughts are for the future. Nothing so independent can be developed until the world's two great powers get friendlier. And in the interim this part of the world is nervous, unhappy, and worried lest its pocketbook get filled with wooden nickels made in the U. S. S. R.

Belated Justice

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 9, 1947

Mr. KNUTSON. Mr. Speaker, it was the poet Longfellow who sang:

Though the mills of God grind slowly, yet they grind exceeding small;
Though with patience He stands waiting, with exactness grinds He all.

No poet has ever spoken more truly, and the truth was evidenced in the fullest measure when the Congress passed the bill to restore the immortal name of Hoover to the great dam that impounds the mighty Colorado. Of those who partook in the ignoble conspiracy to belittle a great man, only a chattering old misanthrope remains, the others having gone to their reward, whatever that may be.

It has remained for the Columnist George E. Sokolsky to review the history of that discreditable episode in a manner that throws full light upon Mr. Hoover and his traducers. The article follows:

HOOVER DAM

(By George E. Sokolsky)

To a Quaker, personal honors can mean very little, for their way of life abhors the swelling of the individual's ego to an assumption of immortality because of public services. Yet it is nice to be remembered and it is warming to know that one's contemporaries seek for means to acknowledge one's worth.

And curiously in such matters Harry Truman is a nobler personality than his predecessor. Harry Truman is a good sport, a gentleman. He never went to Groton, but he undoubtedly learned at his mother's knee that vindictiveness and malice are not Christian traits. And so he signed the bill restoring Hoover Dam to its original name. It is not a world-curdling act. It is nothing that will make Herbert Hoover a greater man than he is. It will not make the dam more useful. But it is a nice and decent thing to do—a gesture in manners to which the truly well-mannered respond automatically. Harry Truman's mother must be a fine American woman: her son's normal responses are so wholesome.

The most important part of the program at the big dinner at the newspaper convention in New York a week ago was hardly noted in the press. Apparently the working reporters were too concerned with mimeographed hand-outs of a poor speech to catch the flavor of high drama. Yet it was there in a spontaneous tribute paid to Herbert Hoover—so spontaneous that he could not and did not respond to it except in an expression on his face that might have been the struggle to withhold a tear.

Mr. Hoover has been damned and blasted more than any contemporary in the most venomous smear campaign ever devised to pillory one individual for decades of economic fallacy for which he was not and could not be responsible. He did not make World War I and therefore could not have arranged the course of events which were born in it and have grown into such lusty demons in our age. The newspapers of this country have, in these many years since 1929, not been very kind to Mr. Hoover. Many of them have often blamed him for conduct which they excused in others. He became the whipping boy of a nation and whoever sought someone to lick, hit out at him. He has taken all that in his stride without malice, without fear, without ever bearing a grudge.

Yet, in his seventy-third year, he was presented to these assembled publishers and their friends and they rose and cheered him as the ballroom of the Waldorf Astoria had never heard cheers. And when the chairman suggested that they break their custom of toasting only the President of the United States, they toasted Mr. Hoover not as an ex-President, not as a partisan politician, not as a retired oldster but as a beloved servitor of his country and of mankind; as one who has, in his old age, traveled the world at the sacrifice of his health, to find a way to restore food and work and a modicum of happiness to the weary and heavy-laden.

And so it will again be Hoover Dam, God's water will flow over the dam into the valleys that it enriches and none of the little children playing in the fields and meadows will ever realize the deep hurt of having a name erased, even if it is later restored. Nor will they realize that there were once men in America who took history by the forelock and tried to assure themselves immortality by belittling their peers.

But history has its own way of determining where greatness truly is. And it takes its own time to weigh in the balance the virtues that are eternal These virtues are never in words or voice or beauty of person nor even in the acclaim of the moment. The sustaining virtues of history are always measured by the accomplishment of an individual in his services for bettering the life of his fellowmen. In that realm, Herbert Hoover stands a colossus in our age.

Crisis in Italy

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sumner Welles:

CRISIS IN ITALY—PROBLEM FOR AMERICAN HELP

(By Sumner Welles)

Democracy is in grave danger in Italy. Unless remedial action is soon forthcoming, it may not survive.

The Christian Democrats are steadily losing ground. Charges of personal corruption have been brought against some of their leaders. But their loss of popular support is primarily due to Prime Minister de Gasperi's inability to better economic conditions or to lighten Italy's peace terms.

The left wing of the Socialist Party headed by Pietro Nenni has become a submissive captive of the Communists. Saragat's right-wing Socialists have failed since their break with Nenni to give any effective support to the Democrats in the Cabinet.

The influence of the Communist Party has simultaneously been growing rapidly.

Every Government department has its quota of Communists. Count Sforza, the Foreign Minister, nominally controls a foreign office whose administration is centered in the hands of a Communist undersecretary, Beale. The lion's share of patronage has been taken by the Communists. Their representatives occupy key positions throughout Italy.

The Communist Party is the only political organization which is well financed. It is in possession of Mussolini's secret deposits; of the loot seized by Italian Partisans during the final period of the German occupation, and of the Italian lire taken by Yugoslav Communists and now being sent back across the frontier. High officials of the Italian Government maintain that large sums also come directly from Moscow.

The Communist Party leader Togliatti is one of western Europe's shrewdest politicians. His party is well organized and increasingly well disciplined. In recent elections in Sicily, traditionally a conservative stronghold, the Communist campaign was lavishly financed. The propaganda was highly effective. The results were conclusive.

In Italy's greater cities, such as Genoa, Milan, Turin, and Florence, Communist headquarters have large quantities of arms at their disposal. It is not only a question of rifles and hand grenades. It is a question of machine guns and tanks. The National Government is practically helpless. It would be helpless in any concerted uprising, and such an uprising is today feasible. The police forces are replete with former Fascists who have now, like most of Mussolini's minor officials, gone over to the Communist Party. Only the carabinieri could be counted upon in a national emergency, and these, scattered throughout the country, number barely 65,000.

As the recent demonstration proved, the Communists can by a general strike shut down all industrial production and cut off all means of communication.

Since the announcement of the American policy of help to Greece and Turkey, the Soviet Union has been working overtime in Italy. If Italy becomes a Russian satellite, the independence of Greece, and presumably that of Turkey, would be doomed.

The French Communists would for the first time be able to count upon the cooperation of a neighboring government. The whole status of the Mediterranean would be radically transformed.

If conditions within Italy are permitted to drift further, the United States will be confronted with the most serious dilemma that it has faced since the end of the war.

The Democrats who still ostensibly control Italy's Government cannot counteract the impact of Communist money, pressure, and propaganda upon an impoverished, hopeless, and resentful population unless they are given material as well as moral support. If they are to preserve a liberal Italian democracy, such asistance must come from the United States.

Italy's agricultural exports to Central Europe represented 40 percent of her foreign trade. Those markets are now closed. She can no longer obtain in return German coal for her industry. The balance of the foreign exchange upon which Italy depended to pay for her imports of food and raw materials came from the tourist trade, from emigrants' remittances, and from her merchant shipping. All of these are drastically curtailed. Italy's national deficit next year will be at least half a billion dollars. And Italy will have neither foreign resources nor credit.

The relief which the Italians received from UNRRA is ended. Unless the United States is able to provide Italy with at least $120,000,000 of relief during the balance of this year, hunger and want will be acute. Communism will increase proportionately. Yet this is the moment the House has chosen to cut to $200,000,000 the $350,000,000 appropriated by the Senate for foreign relief. Unless the earlier amount is restored in conference, Italy cannot obtain the minimum amount required if increased popular unrest is to be averted.

The negotiations for an Export-Import Bank credit of $100,000,000 still drag on.

This credit would be devoted to such productive and self-liquidating projects as hydroelectric plants and new industrial enterprises. The use of this credit would consequently reduce unemployment and raise living standards.

If such help as this were immediately forthcoming, the hands of the democratic leaders would be strengthened, and popular confidence in the value of Italy's traditional ties with the West would be increased.

But what is equally imperative, especially if the pending peace treaty is ratified, is the categorical declaration by this Government that it cannot be indifferent to the fate of Italy, and that it will render the Italian people and their present government such assistance as may be needed to arrest all attempts to impose an alien political system upon the Italians against their will.

American foreign policy has rarely been more shortsighted and inefficient than in our course toward Italy since 1943. It has been a classic example of "too little and too late." But there is still a chance to prevent a sequence of events that may well end in major calamity if this Government now takes prompt and vigorous action.

The future of democracy in Europe is to no small extent contingent upon the fate of Italy. And the future of the United States is to no small extent contingent upon the fate of European democracy.

Guam and Samoa

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article by Harold L. Ickes on the subject of Guam and Samoa, which appeared in the Washington Evening Star of March 14:

MAN TO MAN—CONGRESS SHOULD ASCERTAIN REAL FACTS AS TO GUAM AND SAMOA, WRITER HOLDS

(By Harold L. Ickes)

Secretary of the Navy Forrestal has had no luck in selecting expert whitewashers to put a smooth coat on the arbitrary rule that the Navy has imposed upon Guam and American Samoa for almost 50 years. First, he carefully selected a group of Washington newspaper correspondents to whom the Navy gave a free ride and exceptional entertainment all the way to these Pacific islands. But there was not a whitewash brush in the lot. Then he tried again, with a commission consisting of Dr. Ernest M. Hopkins, chairman; former Governor Tobin, of Massachusetts, and Dr. Knowles A. Ryerson.

This commission was liberal enough with its whitewash, but the effect was patchy and dauby, too thick in some places and not thick enough in others. It was one of the most self-revealing jobs of its kind that the writer has ever seen. The report was just too good to be true and not true enough to be good.

For instance, Secretary Forrestal's committee said: "Nowhere did our committee find any expression of desire to be removed from under the auspices of the Navy but on the contrary, whenever discussion of the matter came up, apprehension was expressed as to whether from any other department than the Navy, services so vital to them as those in their possession could be afforded."

CHALLENGES REPORT

The committee must have been more than circumspect not to find a single Guamanian who wanted to slough off the petty tyranny of the naval governors. Secretary Forrestal himself could have shown the members of the committee petitions unanimously adopted by the Guamanian Congress asking for citizenship and a bill of rights. None of the newspaper correspondents brought back such a story from Guam, and Representative POULSON, of California, who himself has visited the island, came back with an entirely different impression.

It simply is not true, as this language would seem to imply, that no Guamanian desires the ordinary freedoms that are the natural heritage of freemen. I challenge this statement and its deliberate implication as not being true within the customary and usual interpretations of the English langauge.

One learns also from this report that Guam and Samoa have civil government "basically under the control of the local people themselves and of (Guamanian) congress." This congress lacks all powers except to give advice. There can be no local civil government when the people are subject to arbitrary arrest and trial before a naval tribunal without a jury. People do not govern themselves when their homes can be entered and searched without a warrant and their property seized at will.

The committee further reports that "government does not cease to be civil government in the true sense of the term merely because the executive head and some of his assistants may sometimes wear a military uniform and be responsible to a department of the executive branch of our National Government which is primarily concerned with our national security and defense." In other words, the Navy is not military merely because its personnel wear uniforms and an administrative officer in a naval uniform is not a Navy man if, in his closet, perhaps back on the mainland, he possesses a civilian suit which he may occasionally wear. The committee is not on solid ground when it distorts or attempts to explain away incontrovertible facts.

PLEDGES VIOLATED

The United States has continuously violated pledges made to and accepted in good faith by its wards in Guam and Samoa. These subject peoples do not have even a vestige of a bill of rights. The tenets of the American Bill of Rights have been violated wilfully and persistently. These peoples have been dened due process of law. The Navy doubtless thinks that its rule in these islands has been beneficent, but it has violated every principle of democracy.

It is to be wondered whether Secretary Forrestal's committee, or the Secretary himself, has ever read the report of the joint committee under the chairmanship of former Senator Bingham, of Connecticut, which found, in 1930, on investigating conditions in American Samoa, that the rights of the American Samoans had been ignored and trampled upon by the Navy. That committee, set up by Congress, recommended full citizenship and an organic act, including a bill of rights.

Secretary Forrestal should be rebuked by Congress for arrogating to himself rights that belong to the Congress and constitute a congressional duty. Out of what funds were the expenses of this handpicked committee paid? Whether or not he could properly pay them out of public funds, Secretary Forrestal of the Navy could, with propriety, select an outside committee to investigate a Navy operation and pass upon charges that have been made against him, or his Department. The Congress should ascertain the real facts as to Guam and American Samoa.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1947

Mr. HÉBERT. Mr. Speaker, may I commend for your reading the following editorial from the New Orleans Item which in simple and direct language presents a clear analysis of the situation as it obtains in connection with necessary remedial labor and management legislation. May I add an appendix to this splendid editorial: "These are my sentiments."

LABOR BILL VETO

It is worth noting that those who most vehemently warn their fellows in Congress that the President will veto either of the pending labor bills—one the product of the House, the other of the Senate—are those who themselves have voted or will vote against them on the floor. They may have some sort of warrant for their predictions, or these may be wholly wishful. But the only source from which a statement as to the President's intentions could come with complete authority has been and still is silent on the subject. That is the President himself.

Of the two measures, the bill which was passed in the House is the more severe. It received a majority far in excess of that needed to override a Presidential veto. The almost innocuous measure reported to the Senate by its Labor Committee was promptly "toughened," as many knew it would be. Again the majorities were sufficient to override a veto, but the margin was slender, leaving room for the possibility that enough party-line votes could change to maintain Executive nullification of the measure.

Mr. Truman would doubtless like to keep Congress under the impression that he will veto the bill, so that the legislators might save him the undeniable embarrassment of having to do so, if it comes to that. But he has been careful not to let any White House spokesman say anything that could be interpreted as an official announcement, one way or another.

There can be no doubt, however, that the overwhelming majority of the American people wants reasonable but effective legislation enacted to curb those who might seek to return the country to the big labor excesses of 1946, which crippled national production and preceded—if they did not actually initiate—the upward sweep of living costs. There is no desire to hamstring labor organizations as such by enacting punitive laws. But there is a very real, deep-rooted demand for sound protection of the public interest, which was the principal victim of last year's labor-management struggle.

If the final House-Senate conference labor bill is such a measure President Truman will be running counter to the will of the American majority in swinging a veto ax on it. He will be saying to the Nation, in effect, that the only way to assure the enactment of legislation banning abuses of the current Wagner Act by extremists among labor leaders is to make a change in the White House. And that isn't the way candidates for public office, from the Presidency to the village constable level, ordinarily act on the eve of an election.

Merger Bill and the Marine Corps

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Marine Corps League Bulletin in May 1947:

ALVAREZ BLASTS MERGER BILL AT NATIONAL STAFF MEETING

National Commandant Joseph Alvarez, welcoming the members of the national staff to the opening session, let go with both barrels on S. 758, the present bill before Congress to bring about a unification of the armed forces. The text of the national commandant's speech follows:

"Speaking as national commandant of the Marine Corps League, and for our 45,000 members and as the only vocal representative of the 600,000 marine veterans of two world wars—

"We of the Marine Corps League have studied this bill (S. 758) and have compared it with last year's bill. We do not perceive any major differences between the two bills—either in the principles advocated or the organizations and procedures set up by these bills.

"Some say a super Secretary can do less harm than a super Chief of Staff. But at the rate at which members of the Army General Staff are taking off their uniforms and being appointed to civilian positions of great importance in our Government—I do not consider it improbable that the President will appoint another member of the General Staff to the position of Secretary of National Defense—and a change of clothes won't make a civilian out of him, as far as the marines are concerned.

"Secretary Forrestal has reversed his course 180 degrees from last year. He is now willing for the office of Secretary of the Navy to be put out of the President's Cabinet. He says he could still go over the head of the supersecretary, to the President. But how long do you think he would hold his job? And now compare the chance of the Commandant of the Marine Corps ever getting an opportunity to present his case before the President or before the Congress.

"We old-time marines have seen a long and continuing fight in which the Army General Staff has attempted to reduce the Marine Corps to the job of guarding ships and guarding navy yards, and we marine veterans have heard too many Army men boast about taking over the Marine Corps after the merger goes through, if it does.

"General Vandegrift has, in all his speeches during the past year, repeated his firm stand against a single supersecretary running the armed forces. After the way the Navy has reversed course, every marine veteran in the country has been looking forward to the time when the Commandant of the Marine Corps would have an opportunity to speak his mind before a committee of Congress.

"We have read, with great concern, newspaper reports of the committee hearings in which every Navy witness has recited his approval of the merger bill. We have been looking forward to the testimony of those two great exponents of air and amphibious warfare—Admiral Radford and Admiral Turner, but they have not been called.

"In spite of the Navy's failure to place the Commandant of the Marine Corps on its original list of witnesses, we have been expecting that some Senator or Congressman would call for his opinion of the present merger bill. Then the Commandant could step forward and tell the committee, foursquare as a blunt marine, and as a citizen of the United States, that S. 758 has, in camouflaged form, the same objectionable features as last year's bill, that this bill would put a military clique in position to dominate, in time of peace, the national defense policy and foreign policy of the United States. We believe, as citizens of a democracy and as marines, that the control of our national defense and foreign policy belongs, not to the military, but to civilians—to the Congress and to the people of the United States.

"Many of us old-timers can remember after World War I when Champ Clark and other leaders in Congress exposed the War Department's attempt to put over the same type of legislation that is now before the country. It looks to us like the same old Army game—trying to slip some legal phrases into the law that will enable the General Staff to exercise the President's war powers in time of peace—through the medium of Executive orders prepared and submitted for his signature.

"As for an amendment to the present merger bill that will protect the Marine Corps, there are still many Members of Congress who are friendly to the marines but who do not believe that the marines are in danger, and I have received letters from Congressmen who haven't had the opportunity to study the bill, and who have asked me to point out how the Marine Corps or the Fleet Marine Force could be reduced if the proposed legislation becomes law. They are also anxious for proof that the General Staff has any intention of meddling with present roles and missions of the Marine Corps.

"We have heard the Commandant of the Marine Corps refer, in his speeches, to certain secret documents which contain proof of the General Staff's intentions concerning the Marine Corps. If these documents can be brought before a committee there is no doubt but what the Congress would amend the present bill with a concise definition of the functions of the Marine Corps.

"However, any amendment that is flexible, as recommended by General Eisenhower, is flexible for one reason—for the ultimate destruction of the Fleet Marine Force. Any amendment that leaves any of the functions of the Marine Corps subject to Presidential discretion will leave the way open for the future ruination of the Marine Corps—through General Staff pressure.

"Ambitious Navy men, like Admiral Sherman, may consider it is safe to 'play ball' with the Army. We do not. It is becoming apparent that the Commandant of the Marine Corps and his 100,000 marines have been ordered to stand at ease. They will obey this order just as they have carried out other orders: 'Take Belleau Wood,' 'Take Tarawa,' 'Take Iwo Jima.'

"But their old buddies now in civilian life cannot be gagged. If the present merger bill, or any merger bill, does not set forth the roles and missions of the Marine Corps, free from all executive and administrative meddling the marine veterans of two world wars stand ready to carry on the fight, and if necessary, to the Halls of Congress."

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview between Mr. Henry L. Nunn, a Milwaukee industrial leader, and Attorney David Keyser:

Mr. KEYSER. Mr. Nunn, your company, in its 35 years of existence, has never had a strike. What is your opinion of the cause of so many strikes throughout the country?

Mr. NUNN. We all wonder about that, especially when we know that there is usually good will and intelligence on both sides—both on the part of management and on the part of labor—and still there are strikes. It seems to me that there is a general misunderstanding as to the cause of strikes. Even the newspapers talk about how many years it will take the workers to make up the wages they lost through strikes. Wages are not the only cause. The fundamental things that the worker wants are security and recognition. It is the lack of this security or recognition which is the primary cause of strikes. The worker may not express this fact when he strikes—he may not have the idea clearly in his own mind, but, nevertheless, it is this basic lack which creates a frame of mind in the worker so that he can be influenced to strike.

Management-labor relations is not primarily an economic problem. It is also a social and psychological problem. A worker strikes for the same reason one man hits another man. The worker is mad at the boss and he wants to hurt him. And the only way he knows how is to strike. It is just a way of telling the boss to go to h—.

Mr. KEYSER. You believe you have never had a strike at your plant because your workers have both security and recognition?

Mr. NUNN. Yes; I think that's true. But that is not exceptional. There are thousands of companies througnout the country which have never had any labor trouble. After all, a man never gets his name in the papers until he beats up his wife. Small companies especially are usually free of labor trouble. And why? Because in a small plant the boss usually knows all the employees personally, knows about their background and their family; the employee is recognized and he has a greater margin of security than in a large factory. Our company was that way when it first started, 35 years ago.

Now we have over a thousand employees. At first, I did all the hiring and firing, knew each man personally. When we began to get a little larger, I called in the men and said: "We are working here together to produce shoes. From now on the management will consult you on any changes of any kind, even to the discharge of an employee. We will both get together, talk it over, and agree what to do. And in any case if we can't agree, we will call in an outsider to arbitrate the matter. Is that agreed?" And they said it was agreed. And it has worked that way ever since. We have never had to call in any outsider to arbitrate our disputes. We haven't always agreed, but before we ever had to submit it to arbitration, either one side or the other side has backed down. Sometimes I backed down. Sometimes they backed down. Sometimes we have compromised.

Some managements talk so much about their so-called sacred prerogatives. They say, "This is my business and I am going to run it as I please." They want to dictate to labor. Such an attitude merely begets a similar attitude on the part of labor. And soon the manager who wants to dictate to labor will find labor dictating to him. Workers are pretty much the same everywhere. If you treat them fairly they will treat you fairly. There is little difference in labor groups. There is no difference in dollars. It is the management of a company which makes the biggest difference between one concern and another. When we started in business there were 21 shoe factories in

Milwaukee. Today only three of them are still in business.

Mr. KEYSER. I see that under your system the workmen have achieved recognition. How about security?

Mr. NUNN. Anyone who has worked more than 2 years at our plant becomes a part of the share-production group, so that his wages will be proportional to the total production. Also, 70 to 80 percent of the production workers are guaranteed against layoffs. The number guaranteed is limited to 595, and a worker cannot become a part of this group until someone else leaves or dies. Right now, however, anyone who finishes the 2-year probationary period can enter the guaranteed group immediately, since it is now under 595. However, any worker who starts working for us after he is 45 is not eligible for the guaranteed group.

In 1935 we began our annual wage system. We took a look at our books and we discovered that over a 10-year period the percentage amount we paid out each year for direct labor varied little, even though those years covered both boom years and depression years. During those 10 years our direct labor costs varied from about 19 percent to 21 percent of our total sales. So it was a simple matter to gage our labor cost for the year, estimate an employee's yearly income and divide it by 52. As the year progresses the weekly check can be adjusted slightly, if necessary. I don't know where the hourly wage idea came from, but it must have been invented by the devil. Nobody lives by the hour. Why should his work be figured by the hour? A person can get $25 an hour and what good is it if there is no multiplier?

Another thing. Wages should be kept proportional to prices. This is almost impossible under a standard hourly wage system, but is easily done under a wage system that is geared to prices as an annual wage system can be. In our plant, if the price of shoes goes up the wages also go up simultaneously, since the wages are always a certain fraction of the total sales value. Under an hourly wage system wages always lag behind in an inflationary period and lag behind again in a deflationary period. In the first case they are too low and the worker's dollar loses its buying power, and in the other case wages are too high and business is forced to close down.

When the depression came on in 1930 we boasted that we would be the last to lower our wage rates. And perhaps we lived up to that boast, but we did it only by cutting some of the men's wages down to zero—we laid them off. Now I see how mistaken that policy was. We should have kept producing and have kept lowering our prices until the people started buying our shoes—just as a retail merchant does. In the process, of course, we would continue to lower wages proportionately, but if we kept the wages geared to the prices, our workers would still be receiving a wage which bore the same ratio to the price of our shoes. Producers should take a cue from the retail merchant. A retail merchant continues to slash his price until the stock moves off the shelf. Likewise a producer should regard his productive ability as goods on the shelf which must be moved, instead of closing down when he can't get his price. Production, not price, is the key to continued prosperity.

Mr. KEYSER. Would you say that your attitude toward labor is paternalistic?

Mr. NUNN. By no means. We treat the workers like men, as they are, on a basis of equality. I know that some concerns do have a paternalistic attitude toward labor. Small companies are often that way. They may sincerely like their workers but sometimes it may be a cloak to prevent organization. But a workman has an unerring instinct for being able to tell whether you are sincere or not. I remember one manufacturer who said to me, "You know, we tried all that once. We put on a big picnic for all the men. Our company furnished all the beer and food and everything. And you know what those fellows did at the picnic—they started to organize a union."

I suppose some manufacturers would say that we have thrown away all the prerogatives of management at our plant. But I'll wager we have more influence in our plant by reason of respect than they have in theirs by reason of power. In the first place, we keep everyone informed. Each day we post figures and charts in the plant showing our daily production, our orders on hand, and our schedules. Everyone is interested, of course, since the over-all production ultimately is reflected in their wages. Each morning at 10 o'clock we have a meeting at which all the workers and departments are represented, and anything can be brought up for discussion. Thus everyone knows what is going on.

Then we confer with the union representatives on everything we plan. We even have a union representative on our board of directors. No one is hired, fired, transferred, or promoted without conferring with the union. We do the same before changing the price of our shoes, and did recently when we decided to expand our plant. A worker has a right to know what is going on in the business and have some say about it. It is just common sense.

Mr. KEYSER. But what about the rights of the stockholders?

The responsibility of management is as much to the employees as to the stockholders. After all, the employee has a risk as well as the stockholder. He has his whole life tied up in his job—his risk in the success of the company is even greater than the average stockholder's. And so likewise he should share in the prosperity of the company for the risk that he takes, over and above what he gets in wages for the work he performs. When you get right down to the truth, management is perhaps the largest factor in producing profits, and perhaps the management ought to be rewarded proportionately. I'm not speaking now of those self-perpetuating managements who always vote themselves good fat salaries. Often the managers who cry so loudly that they must protect the stockholders' interests are the very ones who violate the stockholders' rights themselves, by withholding earnings from them beyond the needs of conservatism and using the money to expand the business without even consulting the stockholder. By right, they should really distribute most of the earnings and then ask the stockholders if they want to reinvest in expanding the business. But that's getting off onto another subject.

Mr. KEYSER. What kind of union do you have at your plant?

Mr. NUNN. It is an independent union. I know that is always looked upon with suspicion, but that is the way the men want it. One time the AFL came in and wanted to organize the plant. We told them to go ahead and even told them they could use our hall if they wanted it. But they didn't get to first base. Personally I can't see this business where organized labor gathers together all the plant unions on one side and then the trade organizations of employers gather all the companies together on the other side and they array themselves against each other—in battle formation. It really should be cut up, so that each company and each union is working together in each plant to produce the goods, in competition with other plants, and with wages geared to production and price, so that the wages are stable in relation to prices, and proportional to productivity.

Mr. KEYSER. This shoe industry is a comparatively stable industry. Do you think your methods could work successfully in other industries?

Mr. NUNN. Yes, I do. Some industries could not work as steadily. But workers can only earn a share of production and their income could be paid weekly, regardless of how a man works. He has to live on his annual income and he is better off to receive the same pay check each week rather than a widely variable one based on the hours he works each week.

But there is no formula or plan which will solve the basic management-labor difficulties. What is necessary is a completely new viewpoint—a broader understanding of the fundamental relationship which should exist between management and labor. Without this change in viewpoint no mere plan will succeed.

New Radar Instrument for Airplanes

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1947

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of May 1, 1947:

SIXTEEN POUND, $130 RADAR PROTECTS AIR LINER IN TEST BY HUGHES—HE CALLS IT FIRST PRACTICAL COMMERCIAL USE—TWA TO PUT IT ON ALL PLANES

(By Ansel E. Talbert)

CULVER CITY, CALIF., May 1.—Howard Hughes announced today the development of a new radar instrument for airplanes which instantly warns a pilot of his approach to a mountain, a building, or another aircraft in any kind of weather.

The instrument both sounds and flashes a warning signal in ample time for a pilot to take corrective measures. These, in most cases, will consist of immediately putting an aircraft into a climb while simultaneously executing a 180° turn. Mr. Hughes said he was certain that the device will act to eliminate crashes into mountains in fog, and such accidents as flying into high buildings in fog, as has happened twice in New York City in recent years.

The new warning indicator was displayed today by Mr. Hughes to a group of newspaper observers in the *Star of the Adriatic*, a Trans-World Airline Constellation. Then, with the observers aboard, Mr. Hughes entered the pilot's cockpit and took off from the airport of the Hughes Aircraft Co. here on a series of flight tests above the Topatopa Mountains to the northwest.

The equipment installed on the *Star of the Adriatic* sounds a warning signal when the plane is 2,000 feet from an obstacle, and a second signal at 500 feet. In addition to the horn signal, the long-range warning flashes an amber light, while at 500 feet a red light flashes. The instrument was set for these distances after discussion with pilots and personal tests by Mr. Hughes, but the settings can be changed.

The device picks up obstacles ahead, to the sides and directly downward, Mr. Hughes explained.

Development work was undertaken by the Hughes company after TWA recently concluded a year's research program on the use of radar in air-transport operations.

During today's tests Mr. Hughes put the *Star of the Adriatic* through all maneuvers

suggested by his guests as a test of the ability of the device to locate obstacles. It picked up foothills and mountain peaks within the limits of its range setting, and Mr. Hughes then demonstrated the corrective maneuvers. A bridge and a ship were picked up in flights over water.

Ye Shall Know the Truth About Greece and Turkey

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, gradually the American people will be told the truth underlying President Truman's new foreign policy. As part of my remarks, I am including herewith an article by Mr. Philip J. Allen which appeared in the May 14 issue of the Christian Century. Mr. Allen served as a chaplain in the recent war and was stationed in the European and Mediterranean areas. He worked in and out of Rome in the Air Transport Command, and his duties required him to visit the airfields at Trapani, Erakleion, Araxes, and Athens. He is now teaching sociology at the University of Chattanooga, Chattanooga, Tenn. Members of the House will, I am sure, be interested to get the very valuable information contained in Mr. Allen's following article:

LET'S GET THE TRUTH ON GREECE

(By Philip J. Allen)

Congress, as I write, is on the point of rushing through its endorsement of President Truman's policy of "containing" Russia by extending aid to Greece and Turkey. The President presented this as a means of dealing with a totally unforeseen crisis. Suddenly, without any warning, Britain had served notice that it would have to pull out of Greece. Just as suddenly, the United States had to decide whether it would move in to keep the Russians out. And just as suddenly, Congress must act to implement that decision. Any disposition Congress may have had to secure more factual information before committing the Nation to a course that may prove disastrous has been swept aside by the demand for speed. This was a bolt out of the blue, and we must counter it by unloosing another lightning bolt.

But was it a bolt out of the blue? Was it a totally unexpected emergency? Or is this entry of the United States into the struggle for control of the eastern end of the Mediterranean something that someone high in authority in this country has seen coming for a long time, planned for and worked toward? Has the United States actually been preparing to intervene in Greece ever since the end of the war? And is the pressure now being put on Congress only a method of regularizing and financing a policy which was agreed on and started long ago?

THINGS CONGRESS SHOULD KNOW

Of course, I do not know the answers to such questions. But I have seen enough in Greece with my own eyes to make me ask such questions. And what I know, of my own personal knowledge, suggests certain things that any Congress with an appreciation of its responsibilities should be finding out. I believe that Congress should be asking why new military installations were constructed in this strategic eastern Mediterranean area by the United States Army long after need for them had passed.

Congress should investigate why two American airfields were built on the Greek mainland, at Athens and Araxes, after the war was over. It should find out why another field was built on Crete, at Erakleion, and another on Sicily, at Trapani, after the fighting was over. I am not talking about the laying out of landing strips only, but the erection of concrete structures for permanent living quarters. And I speak of only four of these air bases, although I have heard of others, because these four I personally know were built after the German surrender.

I was in Crete in December 1945, fully 7 months after the war in Europe had ended. The airfield at Erakleion had just been completed, except for the minor finishing touches which were still being applied. A skeleton crew of a captain with a dozen GI's were keeping things going, aided by about a dozen natives. I cannot imagine what military value the field could have had at that time. A cargo plane, C–47, went there from the Athens headquarters twice a week, simply to carry mail and other supplies.

In the same month, both the airfields at Araxes and Athens were in process of completion. United States Army engineers were working frantically to get the job done. By February 1946, the majority of the concrete structures, including a beautiful permanent chapel, were about finished at Athens. Much speculation circulated on the reasons for building such permanent structures at American cost in that foreign country after the war had ended. But questions were discouraged, and the work went on.

WHY WERE AIR BASES BUILT?

The airfield at Trapani, Sicily, was completed late in the fall of 1945. When I last visited there in January 1946, it was being maintained by an officer, a half dozen GI's and a group of natives. Only one plane a week visited Trapani, a C–47 from the Rome headquarters, sent for the purpose of carrying a few parcels of mail and "orders from higher headquarters." The Trapani GI's obtained their food and other supplies from our Navy installation at Palermo, 100 miles away. That airfield at Trapani could not possibly have had any military value at that time. It had even less value than the fields at Araxes or Erakleion. Just why were these airfields built and maintained by the United States Army, after the war had ended?

It may, of course, have been that orders from higher headquarters, issued months or even a year and more earlier, had decreed that such airfields should be constructed, and that those orders were never rescinded, even after the war had ended. It would not be the first time orders had been carried out in the Army long after reason for them had expired. Other factors, too, may have entered the picture. It was charged by some that a number of high-ranking officers in the Air Transport Command were also top civilian air-line officials. We were, therefore, building these airfields for the later benefit of American civilian air lines. The amount of truth in this allegation can be ascertained only by careful investigation.

WAS IT TO BOLSTER STATUS?

Another possibility suggests itself as an explanation for the building of these airfields. They may have been needed to enhance somebody's status. It is the commanded who give status to the commanders, and the more of the former, the higher the status of the latter. Hence the never ending cry for more men sent up by commanders to echelons above them. And when more men do arrive, cries are sent up for more material facilities with which to meet the needs of the men in this command and to accomplish the mission.

It is possible, therefore, that the unnecessary construction of military installations overseas after the war ended may be explained partly by the desire of local commanders to entrench themselves or to enhance their status. The status and prestige of the commanders under whom the airfields at Athens, Araxes, Erakleion, and Trapani were built would certainly be enhanced. This would especialy be true if upon their completion, the cry for more men to maintain them and accomplish the mission found a responsive ear.

One or more of the above reasons may explain the building of these airfields. But since the President proclaimed his new foreign policy, to start with our rushing to the aid of Greece, I have thought a lot about those postwar airfields that puzzled us who watched their building so much. What relation do these installations have to the containment of Russia? Is it possible that the new policy existed in the minds of persons in high places as early as 1945? It is at least something Congress should look into.

RECENT OIL DEALS

Finally, consider the recent colossal oil deals in the Middle East involving the Standard Oil Co. of New Jersey, Socony-Vacuum Oil Co., Standard Oil of California and the Texas Oil Co. Did the Persian plum offered to Standard Oil of New Jersey and Socony-Vacuum by the British betray a fear that England felt no longer able to ward off the Russian bear unaided? Or could the ripping of oil pipe lines by Jews who charge Britain with favoring Arabs in exchange for Persian oil have been an additional reason why the British Government-controlled Anglo-Iranian Oil Co. has turned to the United States for badly needed help? All along, Britain seems to have worked on the theory that if she could succeed in attracting American investors, official help would also be forthcoming from this side of the Atlantic. And her calculations appear to have been correct.

Admittedly, private American investments in the Middle East are now heavy. The Arabian American Oil Co. is said to have a quarter of a billion dollars invested in Saudi Arabia. In addition, a huge pipe line, two-and-a-half feet in diameter, spanning a thousand miles of Arabian desert, has been contracted for. The Geneva works of the United States Steel Corp. and the Consolidated Steel Corp. of Los Angeles are to do the pipe-fabricating job.

Exactly how long these recently hatched American oil deals in the Middle East were in process of incubation I do not know. But is it possible that the eastern Mediterranean airfields I have spoken of were constructed by the United States Army after the war was over in full knowledge of the impending oil transactions? Also, is it possible that the airfields were built without the knowledge of Congress? If so, Congress should set out to dig for the facts, for only so can we avoid pursuing a blundering, costly course. What is more important, the American public should be let in on the facts and help decide the course to pursue. For when the die is cast, the policy and course is ours, not the President's, not the oil companies', and certainly not Britain's. We pay the bills. We do the dying. We should know.

Time for Action Is Now

EXTENSION OF REMARKS
OF
HON. DAVID M. POTTS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 9, 1947

Mr. POTTS. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith for inclusion in the Appendix a copy of an editorial in the Brooklyn Tablet of May 3, 1947, with respect to communism. I concur entirely in the thoughts as therein expressed. It follows:

TIME FOR ACTION IS NOW

Amidst the misery of millions of people in the stricken nations of Europe, the Balkans, and Baltic states and the pessimistic outlook for the future, there is one fact that stands out. It is that the world has no hope for peace unless and until Russia withdraws her forces of aggression, her agents striving for the destruction of Christian civilization, and ceases her plottings. Whether it is in Poland, Germany, Austria, Finland, Hungary, Yugoslavia, Czechoslovakia, or Rumania, the cry heard on all sides is: There is no peace, no liberty, no chance for freedom as long as Russia is here. Lithuania, Latvia, Estonia, and eastern Poland have been liquidated by Russia; Greece and Turkey must be protected against Russia; France and Italy are threatened by Russia; China and Korea are in the throes of civil conflict because of Russia's machinations.

In his message delivered Monday evening Secretary of State Marshall stated the Moscow Conference failed because of Russia and in his specific report on the inability to make progress in Austria, Germany, and elsewhere he blamed the Soviet. Two years after the end of the war peace still has not come and millions of people are in a desperate condition because one powerful nation endeavors to promote and maintain chaos in order to bring about communism. The objectives of the war have been almost completely lost.

The time is opportune for the United States to take a consistent, sincere, firm, united stand in its dealings with Russia and with communism, for otherwise not only will we be untrue to civilization and the guarantors of world enslavement, but we will insure more depredations and future warfare. The stand we must take—and it should have been taken years ago—is twofold.

First, we must do everything in our power to prevent the totalitarian Soviet state from enslaving additional nations abroad and we must strive to unite with mankind everywhere to restore liberty to those nations now suffering under the dictatorship of a minority ruled and directed by Russia. This means we should give every possible kind of support to the victimized and should not help in any way the puppet tyrants who were installed by and are directed from Moscow.

Secondly, the time has come for President Truman to translate into action the position he recently announced on Communists in the United States Government. Not only should we spend the money asked to protect Greece and Turkey from Red fascism, but the President must prove his sincerity by banning all material contributions to the Soviet state and by throwing out of office, and refusing to appoint again, the Communists and Communist stooges in the State and other Federal departments and in the employ of the American Government in foreign countries, who owe their first allegiance to Moscow. They have not only hampered and sabotaged the American program abroad, making our professed war aims ridiculous, but they are actually selling into slavery and slaughter countless Christians whose one crime has been their opposition to the Red dictatorship.

The people of the world, including the United States, have placed their hopes in President Truman. They witness, and in many cases suffer, far worse miseries under the Communists than they did under the Nazis. For this reason they want no treaties, whether in Italy or elsewhere, which will give Stalin or his stooges the opportunity to conquer and destroy nations, but instead they want clear-cut support to those who fight for freedom and national existence. And at home they will insist the President and Congress throw out the Communists in key positions who have abused the authority entrusted to them to further Russian rather than American objectives. The hour is late and the President must act rather than talk.

H. R. 3285

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 8, 1947

Mrs. DOUGLAS. Mr. Speaker, I have introduced H. R. 3285, providing an immediate $500-a-year pay increase for all Federal employees, because they need it to regain their prewar levels of income and because our economy needs the support of the market for consumer goods which such an increase will give.

Fairness to the million and a half Federal employees, comprising about 2.5 percent of the Nation's working force, requires such an increase. It is overdue. Federal workers' median salary increased from $1,620 in January 1941 to $2,148 in February 1947, an increase of only 33.8 percent, while during the same period the average wage in manufacturing rose from $1,385 to $2,433 a year, an increase of 76 percent. The increase in the durable-goods industries for the same period was from $1,585 to $2,557, an increase of 61 percent.

The economic squeeze has been particularly severe for Federal workers between January 1946 and March 1947, when the cost of living rose steeply with no salary increase whatever. As against the 33.8 percent increase in Federal salaries, the cost of living has jumped 61 percent since January 1941.

This is too rugged. It is unnecessary and shameful sweating of our civil servants, particularly in view of an expected surplus this year and of private corporation profits after taxes running at the rate of $17,000,000,000 for the current year. It is out of line with last year's 18.5 cents an hour wage increase pattern in private industry and the present 15-cent-an-hour pattern.

My bill is based on the assumption that it is not in the national interest to force employees out of Federal employment in order to earn a decent living. I assume that these workers perform useful and essential public services. This assumption may seem a little old-fashioned, in view of the slurs and abuse heaped upon them day after day by some of the Members of Congress.

The flat $500 increase is admittedly an emergency measure. But it is fairer than a percentage increase which would give most to those who need it least and least to those most in need. Later a careful adjustment of salaries for all grades and classifications can be made.

Federal employees are also consumers and would consume more if they were paid more nearly decent wages. An increase such as this bill proposes would immediately flow almost 100 percent into the market for consumer and durable goods, thereby toning up the faltering demand which is already alarming economists and businessmen who fear the piling up of inventories until they become top-heavy and topple over into a recession.

I know that Federal employees will be advised to wait and make the best of their present salaries until prices and the whole cost of living falls as supply catches up with and passed demand. This is the old NAM line. It will be offered by industrialists whose corporations are piling up record-breaking profits after taxes, and by Members of Congress who recently voted themselves flat salary increases of $5,000 a year—10 times the amount this bill proposes for the rank and file of Federal employees. The advice simply will not wash.

Jewish War Veterans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a report of the Resolutions Committee of the Sixteenth Annual Encampment of the Jewish War Veterans of the United States, Department of Massachusetts, on May 4, 1947, at the Copley Plaza Hotel, Boston, Mass. In my opinion this report contains a great deal of information in which we as Members of Congress are interested. I know that the members of this committee, all of whom are highly respected in their various professions, have given much of their time and study to these various problems which affect not only the people of our own United States but peoples of other nations. I feel certain that this report is of such importance that it should be read by each and every Member of Congress from Maine to California.

As we convene we look back upon almost 2 years since the cessation of hostilities in a struggle which gave promise of solution of problems, some inherent and more artificially created by dictators but which in the main have yet to be solved.

Principally among them may be listed:

I. DISPLACED PERSONS

The plight of homeless, stateless persons of all creeds to whom the end of hostilities

has brought no peace nor resting place. These persons total almost 1,000,000 souls. Among them are Catholics, Protestants, Jews and some of other faiths. It has been estimated that of these unfortunate people some 40 percent or more are of the Catholic faith, 30 percent Protestants and 30 percent Jewish and others. Their plight should be the concern of the entire world. Certainly their plight and the solution of their problems should be the prime concern of the United States of America upon whom has been thrust the leadership in any movement of alleviation. This problem is so far uppermost in the minds of all thinking people that your committee has been virtually deluged with written resolutions in varying terms but meaning the same thing, giving expression to those things about which we know all too well, the plight and condition of these displaced persons all seeking some means of aid to the unfortunates.

We therefore report the concensus of these resolutions: That the Jewish War Veterans of the United States of the Department of Massachusetts in convention assembled on the 4th day of May 1947—

(a) Favors the immediate admission to the United States of America of 100,000 displaced persons without regard to race, creed or color and without regard to origin.

(b) The enactment of legislation now pending in Congress under the so-called Stratton bill and favored by the Honorable Earl Harrison to permit a total immigration to the United States of America of 400,000 displaced persons over a period of 4 years, using up the so-called unused quota of immigration accumulated during the war years.

II. PALESTINE

There have been presented to your committee a great number of resolutions on the subject of Palestine.

(a) The Jewish War Veterans of the United States nationally has previously indicated its position with respect to this matter. We of the Department of Massachusetts now reaffirm the stand taken by the national organization favoring the establishment of a free and independent state in Palestine for the Jewish people. We favor the establishment of such a state without prolonged further investigation. We particularly call attention to the need for the immediate admission to Palestine of 100,000 Jews—a demand four times made by President Truman and a position taken by the Commission appointed by Great Britain and the United States without dissent. We believe that further study of this particular problem is no longer needed.

(b) With further regard to Palestine, we urge upon the United Nations the wisdom and the practicality of seating within the conference of the United Nations Committee the delegates of Jewry to represent Jewry in Jewish problems.

(c) The Jewish War Veterans of the United States, like all other veterans who have fought and have seen combat, abhor war and violence as a solution of world problems. We urge the United Nations to recognize the need for and to undertake immediate and final action designed to remove the causes which have aroused violence in Palestine.

(d) We do not favor the attempt to solve the Palestinian problem by force, violence, or terrorism. We are, however, deeply conscious of the plight of a people which arouses emotions which lead to force. We advocate the further study of conditions in Palestine seeking for the removal of impelling conduct on the part of mandatory powers, including breach of supposedly faithful promises, particularly the breach of that solemn promise contained in the Balfour Declaration.

(e) We particularly urge upon the United Nations the necessity for the removal of partisan troops of any single nation from Palestine.

III. CONDITIONS AT HOME

Hate organizations

Your committee has been presented with a number of resolutions bearing upon conditions within the borders of our own United States. Among these are the continued and renewed hate movements as evidenced by the organization of the Columbians, the activities of the Ku Klux Klan, and numerous other organizations of that ilk.

We favor legislation designed to destroy combinations which act to foster or spread hate and which act to arouse disunity within and among the people of America and to pit race against race and creed against creed. In line with such legislation, we favor legislation outlawing the use of the mails by such organizations, combinations or persons for such purposes.

We favor the denial of the franking privilege when used to spread insidious hate propaganda.

Dies committee

The Jewish war veterans of the United States are convinced that our country can be an agency to bring peace to the world only by adhering to the democratic principles laid down by our Constitution. We are opposed to any and all ideologies, foreign or domestic, which are alien and opposed to the system of Government as established by our founding fathers. And we therefore oppose ideologies such as communism, nazism, and fascism. Under our Constitution which guarantees freedom of speech, necessarily including freedom of thought, we oppose any nation or state activity through the setting up of governmental bodies which have the power by its method of procedure and investigation to detract from those rights so guaranteed. However, freedom of speech and of thought do not mean abuse, but words, literature or any other means which tend to incite race against race, religion against religion, or color against color. We therefore favor Federal legislation outlawing propaganda in any form which is designed to or has the effect of the creation of hates and incitements.

We view with some concern a trend to question the thinking of American citizenry. We are fearful of any trend which might result in the ultimate establishment of a thought police. We therefore favor the abolition nationally or in States of commissions or bodies of inquiry such as the so-called Dies committee.

We in America are fully and aptly implemented under our Constitution and laws to deal with treason. The event of our recent world war has neither diminished nor enlarged our legal machinery for that purpose.

We cannot help but recall the dangers which accompany the fear to express one's views. We recall with positiveness the oft-repeated assertion that within the framework of our own laws there lies the means of peaceful solution of our problems through legislation. Such solution can only be the result of interchange of ideas. We do not favor the process of witch hunting. This in no way conflicts with our stand to destroy hate organizations. We recognize the right of persons to freedom of speech—written or oral—but we also recognize the difference between orderly conduct, slander, libel, and the incitement to violence.

We urge the promotion of Brotherhood Week and any program designed to foster the idea of friendship among all races, creeds, and colors, recognizing that understanding and friendship among individuals are the very foundation of universal peace.

National FEPC and education

We favor the national enactment of the so-called Fair Employment Practices Act.

We urge upon nonsectarian institutions of learning the recognition of our free principles of democracy and to abolish where there exists, without legislation, any so-called quota system for admission requirements.

We urge the support of the Brandeis University at Waltham, Mass., sponsored by Jewry and open to all races, creeds, and colors without the establishment of a quota system.

Veterans' rights under GI bill

Our educational facilities and institutions are taxed to their limit and many war veterans cannot enter. Recognizing the fact that many veterans because of economic necessity, age, or previous educational attainments cannot and do not desire at this time to take advantage of the GI bill of rights, so far as education is concerned, the Jewish War Veterans feel that this clause was meant to be taken advantage of by all veterans who so desire. We feel that the educational benefits so conferred is a property right which ought to be permitted to be assigned by veterans to one of their children so far as tuition only is concerned.

Veterans' housing

We favor the legislative attempt at a solution of the housing problem for veterans, specifically the so-called Taft-Ellender-Wagner bill now pending in Congress.

Whereas the Massachusetts Department of Jewish War Veterans has participated in the organization and development of the Massachusetts Allied Veterans' Housing Council;

Resolved, That this convention endorses the purposes and activities of the Massachusetts Allied Veterans' Housing Council and urges intensified effort in its program of a united attack by all veterans' organizations of the housing problem in order to achieve effective action by private enterprise, and by Federal, State, and local governments; and this convention urges all posts to join local allied veterans' housing councils and to support Massachusetts Housing Week, May 9 to May 15, 1947.

National defense

We strongly urge upon the Congress and upon the President of the United States the maintenance of an adequate protective armed force, implemented, if necessary, by universal military training, until such time as the United Nations has been implemented and until such time as international security against aggression has been assured.

Antilynching laws

We advocate national legislation designed to abolish the vicious practice of lynching by whomever and wherever practiced.

Review of certain courts-martial cases

We urge the further consideration and review of the cases of Michael DeBartolo, of Squantum, Mass., and Frank A. Barbato, of Tomkinsville, N. Y., with a view to ascertain with finality whether or not complete justice was done in their cases.

Education for armed services

Since American forces will remain in foreign occupied territory for some time to come, and since contingents of American troops will be included in the United Nations military force, we recommend that the United States Army and Navy provide to all men and women in our armed services a compulsory course of education and orientation of the advantages of our democratic form of government over totalitarian forms of government. The history of aggression of former enemies.

IV. UNITED NATIONS

Many resolutions have been presented to your committee dealing with the question of the United Nations. It is the consensus of opinion—

(a) That the United Nations be recognized as the first step for world unity.

(b) That the underlying principles of a United Nations be remembered and maintained.

(c) That all actions designed to further world unity through the United Nations be fostered and promoted.

(d) That all means to implement the purpose and ideals of the United Nations be quickly advanced.

(e) We recognize and approve the wish of the vast majority of the people of Massachusetts seeking the strength and the support of the organization of the United Nations.

(f) We urge the full recognition of the Jewish Agency as the legally representative group before the full assembly of the United Nations with full power to make representation on Palestinian problems.

V. PUBLIC WELFARE

That the Jewish War Veterans go on record and urge Congress by nonexclusive legislation to expedite research work on cancer and heart disease by—

(a) Appropriation of sufficient funds to cover all research work that can be expected to produce useful information or results.

(b) Scholarship and fellowship grants to universities and colleges to prepare personnel for this specialized work and guarantee jobs to successful scholars at completion of formal training.

(c) Establish an all-out research program that will utilize the facilities of our great industrial laboratories, as well as hospital and university equipment.

(d) Organize an education and information program for the general public to make them research conscious.

VI. CERTIFICATE OF MERIT TO ARTURO TOSCANINI

We recommend to our national organization the award of the certificate of merit to Arturo Toscanini for his unselfish labors and devotion to the cause of humanity in general and for his great efforts on behalf of refugees in particular.

VII. HENRY MONSKY, IN MEMORIAM

On Friday, May 2, 1947, Henry Monsky of Omaha, Nebr., president of the supreme lodge of B'nai B'rith, passed away.

His life was one of exemplary and unselfish devotion to the highest ideals of Americanism and Judaism. The causes for which he drove himself unsparingly to his untimely death were for humanity at its highest level, without regard to race or creed or color.

The Jewish War Veterans of the United States of America, department of Massachusetts, in convention assembled in Boston, Mass., on May 4, 1947, joins his world of friends in mournful tribute to his memory and expresses its deep-felt loss of a true son of Israel and a good American.

And be it further resolved that copies of this resolution be forwarded to the organization of B'nai B'rith and to the members of his family.

Committee on resolutions: Joseph H. Cinamon, chairman; Milton Cook, Jackson J. Holtz, Oscar J. Toye, Lewis Weinstein, David Lasker, Jack B. Herman, Lawrence Fisher, Saul B. Levitan, Meyer Rubin, William Gilman, Jack Kaplan, Arthur J. Swett.

The foregoing report was read to the convention in regular session. Each item as read was debated by the delegates. The foregoing report contains all the resolutions passed by vote of the assembly.

After the passage of the foregoing as the resolutions adopted by the convention, it was regularly moved, seconded, and unanimously passed that these resolutions shall be the basis of department and post activities during the coming administrative year and that regular reports of progress be required at each monthly meeting of the council of administration.

Ways to Industrial Peace

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, May 16 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, last evening the Honorable Lewis B. Schwellenbach, Secretary of Labor, delivered an address entitled "Ways to Industrial Peace" before the National Textile Seminar, Shawnee-on-Delaware, Pa. The address dealt with legislation relating to labor relations, now pending in conference in the Congress.

I believe that his very timely remarks should receive the widest possible circulation, and therefore I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since this is a National Textile Seminar, I am going to encroach upon your time by reviewing a little not-so-ancient history. No doubt many of you are more familiar with these events than I am, for your industry was so directly concerned in them.

I have in mind the first industry committee and first wage order issued under the Fair Labor Standards Act, which established a minimum wage of 32½ cents an hour for covered employees in the textile industry. This rate became effective on October 24, 1939—the same date on which the general minimum under the Fair Labor Standards Act increased from 25 to 30 cents an hour.

Perhaps some of you here tonight served on that first industry committee or appeared during the extended hearings which began in October 1938 and terminated on May 22, 1939. In any event, the chairman of that committee would need no introduction, for he was Donald M. Nelson, who later became Chairman of the War Production Board. He, with six other public representatives, seven employer representatives of the textile industry and seven representatives of labor, made up the full committee.

The situation which they faced is well described in the report and recommendation filed by the committee. I quote:

"The task which confronted the committee was not an easy one. For almost two decades the textile industry has been recognized as a distressed industry. It has been beset with a fluctuating price structure which throws the industry rapidly from profit to loss. Overcapacity, competition with products of low-wage countries, and increasing competition from substitute fibers and materials are some of the factors that make for instability in the industry. The committee recognizes that wages in the textile industry have been for a long time among the lowest paid by the major manufacturing industries of the Nation, and that the textile industry's instability may well be attributable in part to the regrettable tendency of some of its members to depress its chronically low-wage standards. The committee has reason to believe that its recommendation of a minimum wage of 32½ cents an hour will tend to give greater stability and general improvement to the industry."

In case any of you are growing restive, let me hasten to say that I do not intend to review the work of that first industry committee. Nor do I want to leave the impression that I am singling out the textile industry for special mention. When the Fair Labor Standards Act was passed we had many low-wage areas in our economy and they were not confined to the textile industry.

That is why the first general minimum under the act was set at 25 cents an hour. A few years earlier, in July 1933, figures on average hourly earnings in the southern branch of the cotton-textile industry showed that an appreciable number of workers—3.8 percent—earned less than 10 cents an hour. More than 13 percent earned less than 12½ cents an hour.

When the Textile Industry Committee began its task, wages in cotton textiles averaged 36.6 cents an hour in the South and 44.6 in the northern area. It was estimated that the new minimum would bring wage increases for 120,000 workers and add less than 4 percent to manufacturing costs.

Yet, with the conditions which existed then, the committee was properly concerned over the recommendation it should make. One other excerpt from the report illustrates this rather well. Again I quote:

"To illustrate the effect on total cost, let us take a well-known print cloth; 39 inches 80/80, 4.00, used in vast quantities in the house-dress field. It is now selling (below cost) at about 6 cents per yard. The estimated increase in production cost, due to a 32½-cent minimum, would, we believe, be about one-quarter of a cent for the gray goods manufacturer."

I am not going to question the propriety of that wage order or the caution which the committee displayed. Back in 1938 we were less clear about the contribution that mass purchasing power can make in a soundly balanced economy. We had scarcely begun to glimpse the immense productive capacity that would open out under the impact of total war.

But I do want to remind you that industrial relations, like all other economic and social relationships, do not take place in a vacuum. They mirror past prejudices and fears no less than they reflect current pressures and anxieties. Neither collective bargaining nor any other phase of employer-employee relationships can be separated from a much broader background. A background which often includes the whole economic environment. This was obviously true of the reconversion period after VJ-day.

During those anxious and uncertain months we carried out the most tremendous industrial and military demobilization in the Nation's history. We also relaxed or lifted completely a wide range of wartime controls which had affected or governed much of the Nation's manpower, facilities for production, and economic life in general. To a very large extent, these controls limited or replaced the normal processes of collective bargaining.

Moreover, and this is very important, many of these wartime controls served to interrupt collective bargaining in just those areas of the economy where labor and management were new to collective bargaining, where the scars of recent strife were still plainly visible. I need not tell this gathering that real collective bargaining calls for the display of collective wisdom, understanding and restraint. It calls for mutual trust and respect, just as any successful human relationship does.

All too often in the months that followed VJ-day, these essential ingredients were lacking from the industrial scene. Fortunately, they are much more prevalent today. And it is my belief that we can expect much smoother sailing along the industrial front—provided we maintain a sound economic balance.

Without in any way minimizing the seriousness and heavy cost of the industrial

disputes that came after World War II, I do want to point out that the path which we chose, and chose deliberately, was to abandon war controls and restore the free pattern of life. With storm clouds darkening the industrial front, that was not an easy choice. But surely events have shown that it was a wise course—the only course for the people of a free nation.

A very recent report by the Labor Committee of the Twentieth Century Fund puts this so clearly that I would like to quote it briefly:

"The fact of the matter is that our system of industrial production, of which we are certainly not ashamed, is now based upon a broad foundation of successful collective bargaining. The failures of collective bargaining, relatively few in number, are news; the successes are volume production. There is probably much more to be learned from an adequate study of the causes of industrial peace than from any consideration of the causes of industrial war. From this fact we are entitled to take heart for the future of collective bargaining; and it justifies continued confidence in and support of those processes. * * *

"The sound conclusion to be drawn from the Nation's undoubted preference for genuine collective bargaining and free enterprise, and from the fact that free enterprise as it exists in this country today has been built up on generally successful, even though immature collective bargaining is this: A basic criterion of the value of any proposed legislation is that it should be helpful to genuine collective bargaining, not harmful; that the legislation should be calculated to build up creative conditions of labor peace on the foundations of industrial self-government."

Both as Secretary of Labor and as an American citizen I endorse that approach to labor relations and labor laws. Moreover, I feel very sure that the great majority of our people favor such an approach. Nor do I imagine there would be much disapproval among members of this audience.

By the same token, I feel confident that you will agree with me on the controlling importance of over-all economic conditions. We need to establish an economic balance which will encourage full, sustained production and distribution, with its essential corollary, a broad base of real mass purchasing power. Within that healthy framework there will be ample room to turn collective bargaining into collective wisdom—to substitute economic facts for economic force. By contrast, a limping economy beset with unemployment and uncertain profits leaves little room for reasonable or free adjustments. It is my belief, and certainly the history of labor relations in the textile industry bears this out, that the very lack of sustained economic stability has been one of the chief barriers to successful collective bargaining.

Granted that the most fundamental task before us is to gain an economic balance and stability which will promote the wise use of all our vast resources in men, materials and machines; and granted that the decisions which we reach and the programs which we adopt must fit the patterns of a free society—how then shall we appraise some of the current bills which affect labor and collective bargaining?

Before I attempt to answer that question, I want to jog your memories once again. From the first beginnings of the American labor movement the things which unions asked for, including the right to organize, always met strong resistance—they were denounced in many quarters. Then, after each gain had been won, historians and people generally looked back and agreed that labor's so-called demands were justified and necessary, that they brought a new element of strength and stability to our way of life. But quite naturally, perhaps, it is much easier to recognize such things in retrospect.

Now it is common knowledge that many of the legislative proposals which are before Congress today were offered as a means of curbing labor and restoring equality at the bargaining table. I ask you in all earnestness, are such curbs needed to give us a better economic balance? Is there a real danger that labor, through the process of collective bargaining, will demand and get too large a share of the national income? A share so large that industry could not do its part in maintaining the flow of goods and services?

Figures dealing with the current distribution of the national income do not indicate anything of the sort. They indicate a downward trend in labor's share. This is a difficult and complicated subject, for by and large, the wage-price-profit relationship is the three-legged stool on which our economy rests. That very fact imposes a great and joint responsibility upon both management and labor. It is beyond my province to equate these factors, but a recent statement of President Truman's is pertinent. He said:

"Profits in the aggregate are breaking all records, although profit margins vary greatly in individual cases. In 1946, corporate profits after taxes were 33 percent higher than in 1945. In the first quarter of 1947, they ran even higher. These figures are total figures and do not, of course, apply to every industry or every business."

In commenting on labor's position, the President said that a counsel of moderation has generally been followed by wage earners and their leaders.

Thus I do not feel that I am engaged in special pleading when I question the wisdom of legislative proposals which confessedly are designed to weaken labor's position at the bargaining table.

One set of proposals seeks to prevent industry-wide bargaining and provide other restrictions which will limit the scope of a given union agreement within an industry. The textile industry, and more particularly the men's and women's clothing industry, has had considerable experience in this field. You know how flexible such contracts are and what a wide range of problems and conditions they are capable of meeting. Do you not share my belief that these bargaining systems have brought more stable industrial relations? Just as the wage-and-hour law did much to eliminate the wage-cut, price-cut cycle which plagued so much of industry a decade ago.

The declared purpose of restrictions on the scope of bargaining is twofold. The first seeks to prevent complete or widespread shut-downs caused by a labor-management dispute; the other seeks to protect employers within an industry from the economic pressure which unions might otherwise be able to exert.

Regarding the first purpose, I can find no reason to believe that a ban on industry-wide bargaining will accomplish it. Look, for example, at the steel industry—there was no industry-wide contract when output was sharply reduced early in 1946. There is the further fact that this sort of curb would offer no solution to the problems raised by stoppages affecting local public utilities or transportation systems.

A recent study made by the Bureau of Labor Statistics shows the important industries which now bargain on a national or industry-wide scale, those which bargain by geographic or regional areas and those bargaining within a city, county, or metropolitan area.

The study shows quite clearly that proposals which would narrow the scope of bargaining, either within an industry or a geographic area, would also dislocate established procedures in such industries as glass and hardware, dyeing and finishing textiles, hosiery, lumber, rubber, maritime, metal mining, and paper and pulp. The list could be extended, but it is already long enough to indicate the disruptive character of these limiting proposals.

As for their second purpose—to cut down the economic power of unions at the bargaining table—I do not see how this could promote a better economic balance or improve the industrial climate. On the contrary, I fear the opposite result.

Now let us examine another group of proposals aimed at the closed shop and kindred forms of union security. By banning any contract which links union membership and employment, these bills would forbid the closed shop and seriously impede or block the union shop, maintenance of membership, and preferential hiring.

In other words, the status of about 11,000,000 union workers would be altered or open to question. As of last April, here are the figures, by type of agreement:

	Percent
Closed shop	30
Union shop	15
Maintenance of membership	29
Preferential hiring	3

Coming at the very moment when other restrictive measures are directed against labor, it is plain that such curbs would open a veritable Pandora's box of labor troubles. Union contracts are bread-and-butter contracts, and union security is an essential ingredient. In far too many cases these security provisions were obtained only after prolonged and bitter opposition from employers and employer groups. Given this historical background and the latent hostility toward unions which still exists in some quarters, I am confident that restrictions on union security would be an open invitation to widespread industrial strife.

There is one particular aspect of this matter which deserves your closest scrutiny. That is the vital question of handling grievances—the day-to-day disputes and inevitable frictions that arise when men work together. To the best of my knowledge, every authority in the field of industrial relations favors the inclusion of grievance machinery in union contracts. There is a strong and growing trend toward the creation of better grievance machinery by means of union-contract provisions.

Yet, it is quite possible that through a ban on union security a considerable number of employees in a given establishment would fall outside the union which has done the bargaining and helped to operate the grievance machinery. Where this happened it would wipe out or bypass one of the most important advances that have been made in industrial relations. Surely the industrialist who is seeking better employee relationships will think twice before he abandons a well-tried prescription in favor of a very dangerous cure-all.

Right here I should like to say a word or two about the question of democracy in unions. Certainly, union affairs should be conducted democratically—and not all of them follow this pattern. Yet, here, as in every other phase of human relations, the decisive factor must be the preponderance of evidence. My own experience and a good deal of close observation lead me to conclude that union rules and union practices are not behind other segments of American life in the practice of democracy.

If some union bosses are not attentive to the real needs of their members, it is easy to find their counterparts in political bosses, regardless of party. According to Mr. Edward

G. Flynn, who writes on political bosses and machines in the current issue of Atlantic Monthly, "As long as we have a two-party system of government, we shall have machines."

I would like to remind you that the rank and file of union members are much closer to union affairs than are the electors of most cities. Union members have a much more direct interest and a more direct voice in the way their unions are run than most citizens have in the affairs of their city, where the latter are allowed to vote.

As for the conduct of corporate affairs—well, the average stockholder in a big concern votes by proxy, when he votes at all. Indeed, I know of at least one concern where nonvoting common stock customarily sells above voting shares, though the dividends are the same.

Democracy in unions is not perfect, but it does compare very favorably with its counterpart in other kinds of civic activity. In fact, I thoroughly agree with Joel Seidman, whose book, Union Rights and Union Duties, was published in 1943. I quote:

"The democracy that trade-unionism introduces into industrial life is a vital contribution to the social welfare of the country, second only to the economic gains that collective bargaining brings to workers with relatively low economic standards."

By all means let us encourage democratic procedures in unions. It is particularly gratifying when this urge comes from certain management quarters where a very different attitude prevailed 10 years ago. Frankly, and just between ourselves, I wonder a little bit as I watch some of these people hit the sawdust trail—leaving the Chowderhead Cohens and labor spies behind them.

Before resuming my discussion of labor legislation, I wish to make one point perfectly clear. I have never taken the position that I oppose every bill which attempts to restrict the activities of labor unions. I have said repeatedly, and I say again, that neither employers nor the public should be penalized by the inability of labor unions to agree over jurisdictional matters. Organized labor should be compelled to use the Wagner Act and to accept the decisions of the National Labor Relations Board, not only in reference to disputes between employers and workers, but also in reference to disputes between the various branches of organized labor. Particularly, as President Truman's state of the Union message pointed out, labor should not be permitted to use the secondary boycott as a device to thwart the decisions of the National Labor Relations Board. Legislation now before the Congress goes far beyond this, however—it is like cutting off a man's hand because he has a splinter in his thumb.

Concerning union finances, I think that their transactions should be made public. As a matter of fact, most unions do this already—make it compulsory if you like.

I fully agree that unions should be made subject to suit for breach of contract. Actually, in 35 of our 48 States, unions now are subject to such suits, both in the State courts and the Federal courts. My only objection to legislative proposals on this point is that they would set labor unions apart from everyone else and from every kind of organization in the country. This is accomplished by allowing suits in Federal court, regardless of the amount in controversy and in defiance of the constitutional provisions that jurisdiction of such private suits in Federal courts shall be limited to those controversies in which there is a diversity of citizenship between the parties.

Concerning the vital subject of mediation, I am definitely against the creation of a mediation board because I do not believe that device will promote industrial peace. Here are some of the reasons for my conclusion:

The creation of such a board is bound to interfere with and disrupt not only the voluntary mediation of the Conciliation Service, but a much larger area of successful collective bargaining between management and labor. This would tend to undermine that broad foundation which the Twentieth Century Fund report finds so essential for our economic well-being and for the cause of industrial peace.

Given a mediation board, both sides would tend to carry important issues straight to the board without making any real effort to reach a voluntary agreement among themselves. We saw this perfectly natural human tendency at work during the war. Time and time again, real negotiations between the parties practically came to a standstill, while the principals got ready for the big show in Washington.

Those who know the work of the Conciliation Service realize that last year our Commissioners aided in the peaceful settlement of 13,000 industrial disputes. What's more, in 9 cases out of 10 where Commissioners were called in before work had halted, no stoppage occurred. Last year our conciliators also helped to settle 3,400 strikes. Nearly two-thirds of these had begun before either side called upon the Conciliation Service.

In my view, we would be very ill-advised to upset or bypass this highly useful machinery through the establishment of a mediation board.

And now a word or two about compulsory arbitration. To a good many people this looks like an easy answer to the strike problem. But they overlook the fact that if compulsory arbitration is to succeed in eliminating walk-outs and lock-outs, it must at the same time abolish or restrict the right to contract.

Thus the principle of compulsory arbitration does violence to our whole Anglo-Saxon concept of law. For it must be realized that if an arbitrator writes a contract which through a wage increase or any other provision increases the cost to the employer, it will then become necessary for the arbitrator or some Government agency to look into or determine what the manufacturer may charge for his product. There is no escaping this chain of events.

That is why both labor and management are so opposed to such controls. They know that we cannot preserve our free economy if Government is to dictate the terms of labor-management agreements. Such a process does not lend itself to a little compulsion—it forecasts the end of freedom to contract.

Ten years have passed since the Supreme Court upheld the constitutionality of the Wagner Act. During that period the ranks of organized labor have increased very rapidly—management attitudes have changed and are still changing. Since the Wagner Act was passed, in 1935, a great body of law has developed in interpreting the act and its meaning. To a considerable degree the provisions of this act have influenced the course of collective bargaining itself, as well as the pattern of union recruitment. Thus it is very difficult to know just how extensive or destructive any given change might prove to be.

For that reason I have repeatedly urged the Congress to make this matter the subject of a special study by a commission, as President Truman recommended in his state of the Union message.

And I would strongly recommend that such a study concern itself with the basic causes of labor disputes and industrial peace. Naturally I would recommend the kind of approach that is geared to today's reality and tomorrow's potentiality. I would look forward to the goal which the people of this Nation seek—secure abundance in a world at peace.

Soldiers' Cemeteries Overseas

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Friday, May 16 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Visits to Our Dead," published in today's Washington Post. The editorial deals with the situation in regard to our cemeteries overseas.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VISITS TO OUR DEAD

There is something sacrilegious, almost ghoulish, about the practice now going on of disinterring our war dead and shipping them back to this country for reburial. We are glad that President Truman has suggested an alternative to this painful process in the form of overseas pilgrimages for next of kin. The President's proposal is similar to the procedure advocated editorially by this newspaper on March 13. Mr. Truman expressed aptly the essentially humanitarian and equalitarian considerations involved. "I feel sure," he said, "that if they could see for themselves the care which is devoted to the graves of those who died in the First World War, and to the temporary cemeteries in which their own dead lie buried today, many of the next of kin would prefer that their loved ones should rest forever in the countries where they fell."

Congress has appropriated $210,000,000, or approximately $710 per body, for return of war dead to the United States. We do not advocate repeal of this measure, since the process is already under way. Possibly there are some families to whom the move would be comforting though the renewed grief adds a masochistic note. We do think, however, that from the standpoint of their own eventual satisfaction, next of kin ought to be permitted the alternative of an overseas visit to the graves. We hope, therefore, that Congress will adopt a plan similar to that contained in a bill introduced by Representative ST. GEORGE to make such pilgrimages possible, much in the same way that Government aid was provided for such trips after World War I. Indeed, it is too bad that relatives cannot first make the trips to the neat and inspiring cemeteries where our war dead rest with their comrades, and then decide whether they wish the bodies returned. If this were the case, we are confident that the overwhelming sentiment would be for leaving the graves undesecrated.

The Senator Who Walks Alone

EXTENSION OF REMARKS
OF
HON. W. LEE O'DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Friday, May 16 (legislative day of Monday, April 21), 1947

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Senator Who Walks

Alone," written by Robert W. Akers, editor of the Beaumont (Tex.) Enterprise, and published in the Enterprise of the issue of May 9, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SENATOR WHO WALKS ALONE

(By Robert W. Akers, editor, the Enterprise)

The Texans in Washington stick together—Congressmen, newspaper correspondents, Government officials. Any gathering that calls for the presence of the Lone Star delegation finds them all there, all, that is, except W. LEE O'DANIEL.

The Capital Texas colony now takes this situation for granted. To a visitor who inquires, as I did last month, "Where's Senator O'DANIEL?" the reply is a shrug, a hastily spoken, "Oh, he never comes to these things," a change of subject.

Just when this situation started, I don't know, but I judged it must not have been long after the junior United States Senator arrived in Washington in 1941. It appears the rest of the Texans in Congress quickly concluded he didn't care to "play ball" with them, politically speaking.

It also appears outwardly that this interpretation is all right with Mr. O'DANIEL. He goes his own way and votes his own way. In a large proportion of instances his vote is not cast with that of the Democratic regulars, those who go along with the administration leadership.

These differences of opinion have put O'DANIEL on the back row as far as Federal appointments in the State are concerned. And that, in turn, has led to the recently exhibited antagonism between O'DANIEL and Senator CONNALLY, long-time party wheelhorse, who gets first choice in patronage decisions.

It also means that when delegations come to Washington seeking assistance on Federal matters they head for Senator CONNALLY'S office. The senior Senator's long and loyal service as a Democratic Member of Congress has made him a man of great influence.

In 1948 O'DANIEL will ask reelection and that campaign is likely to be the most critical test ever faced by this unorthodox politician, who has never yet lost a vote contest.

O'DANIEL'S political career has been contradictory. He goes after votes on a mass appeal basis—music, entertainment, shirtsleeved appearances before the crowd, demands for benefits for the old folks, fiery denunciations that bring the familiar cry, "Pour it on 'em, Pappy."

In the Senate, however, he votes like a sound, conservative businessman—which is what he is, in fact. His legislative decisions have obviously been made on a basis of personal conviction and not on party regularity. Because he is a conservative businessman, by background, those personal convictions have been, time after time, contrary to Democratic, especially New Deal, policies. He is with the Republicans on many an issue.

A great many Texas businessmen, lifelong Democrats though they are, will say unhesitatingly, "O'DANIEL'S doing a good job up there. He has a common-sense attitude and he votes his personal beliefs."

So 1948 will bring a dramatic show-down. Will Texans, traditionally insistent upon Democratic regularity, return for another 6 years a Senator who has paid scant attention to party policies? An O'Daniel victory would be not only a tribute to his personal popularity but an acceptance of senatorial representation that deviates from the strict party line.

Opposing the junior Senator are expected to be Coke Stevenson, also an economic conservative, and LYNDON JOHNSON, who came within a hair's breadth of defeating O'DANIEL in a special senatorial election in 1941. JOHNSON, who represents the Austin district in Congress, has strengthened his Statewide political fences since his return from war service and obviously hopes to move forward.

State-wide polls indicate that O'DANIEL has lost much strength since he won by a comfortable margin over James V. Allred in the regular election of 1942.

The Senator says he is not worried by straw votes; that he is confident of reelection when the balloting really counts, and he continues to be the Senator who walks alone. He is out of the Republican councils, because he is a Democrat, and he is out of the Democratic councils because of an aggressively independent attitude.

Do I think he'll be reelected in 1948? I wouldn't even guess now. But, just on a basis of his perfect election-winning record, I certainly wouldn't bet against him.

The Palestine Problem

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Friday, May 16 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, at the recent special session of the United Nations General Assembly called to consider the Palestine problem, three splendid statements were made by the spokesmen for the Jewish people.

These arguments, presented by Dr. Abba Hillel Silver, of Cleveland, president of the American section of the Jewish Agency for Palestine; by Mr. Moshe Shertok, head of the political department of the agency; and by Mr. David Ben-Gurion, the chairman of the executive committee of the Jewish Agency, set forth fully the historic right and justification of the Jewish people to establish a homeland and a Jewish state in Palestine.

The three statements comprise a magnificent presentation of the Jewish case and a splendid review of the historic American support of this great cause.

I commend these statements to the attention of all fair-minded people interested in a just solution of one of the world's most pressing problems, and I request their publication in the CONGRESSIONAL RECORD for the information of the Congress and the country.

Inasmuch as the statements are greater in extent than is permitted under the rule, I have secured from the Public Printer an estimate of the cost of printing them, which will be $426.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT BY DR. ABBA HILLEL SILVER, MAY 8, 1947

I should like to say at the outset that were Mr. David Ben-Gurion, chairman of the Jewish Agency for Palestine, here this morning, he would be making this statement. Unfortunately, the arrival of Mr. Ben-Gurion has been delayed. He will be here tomorrow, and I hope that in the course of the deliberations he will have an opportunity to participate here.

Permit me to thank the Assembly of the United Nations for granting the Jewish Agency for Palestine a hearing on the question which is before this committee. We are grateful for the opportunity to take counsel with you in the matter of constituting and instructing a special committee of this body, which is to study the problem of Palestine and to bring in recommendations for the future government of that country. We trust that our participation in these deliberations will be helpful and will prove to be a contribution to the just solution of this grave international problem which this international community is now earnestly seeking.

Such a successful solution will prove a blessing not only to Palestine and to all its inhabitants, to the Jewish people, to the cause of world peace, but it will also enhance the moral authority and prestige of this great organization for world justice and peace upon which so many high hopes of mankind now rest.

PLEASED OVER OUTLOOK

We are pleased that the Palestine problem will now be reviewed by an international body and that the thought and conscience of mankind will now be brought to bear on a situation which heretofore, and for some years now, has been made extremely difficult by unilateral action and by decisions made, presumably within the terms of a mandatory trust, but actually without the sanction or supervision of the international body which established that trust and which defined both its limits and its purposes.

The administration of Palestine has, since the outbreak of the war, been conducted by the mandatory powers as if it were vested with the sovereignty of Palestine; whereas it is assumed to administer that country, of which it was not the sovereign, as a trustee for carrying out the purposes of the mandate, which clearly defined its rights and its obligations.

The problem of Palestine is, of course, of paramount importance to the Jewish people and that fact, I take it, motivated the General Assembly of the United Nations to extend an invitation to the Jewish Agency of Palestine to present its views. We thank all those who so warmly urged our admission for their good will and their gallant action. The Jewish Agency, you will recall, is recognized in the mandate for Palestine as a public body authorized to speak and act on behalf of the Jewish people in and out of Palestine in matters affecting the establishment of the Jewish national home.

It is the only recognized public body in the mandate. It is recognized as such, to quote article 4, "* * * for the purpose of advising and cooperating with the administration of Palestine in such economic, social, and other matters as may affect the establishment of the Jewish national home and the interests of the Jewish population in Palestine and, subject always to the control of the administration, to assist and take part in the development of the country."

Under article 6, the Jewish Agency is entitled further to cooperate with the administration in permitting "* * * close settlement by Jews on the land"; and, by article 11, it is given a preferred status in respect to the construction and operation of public works and the development of the natural resources of the country.

The Jewish Agency, which we have the honor to represent, therefore, speaks not merely for the organized Jewish community of Palestine, the democratically elected National Council of Palestine Jews, who are today the pioneering vanguard in the building of the Jewish national home; it speaks also for the Jewish people of the world, who are devoted to this historic ideal, for it was charged, by the same article 4 of the mandate, "* * * to secure the cooperation of all Jews who are willing to assist in the establishment of the Jewish national home."

I have spoken of "the Jewish people" and "the Jewish national home." In defining the terms of reference of the committee of inquiry which you are to appoint, and in all the committee's future investigations, these, in my judgment, should be regarded as key terms and basic concepts. They were the key terms and the basic concepts of the Balfour Declaration and of the mandate under which Palestine is, or should be, administered today.

To proceed without relation to them would be to detour into a political wilderness as far as Palestine is concerned. To treat the Palestine problem as if it were one of merely reconciling the differences between two sections of the population presently inhabiting the country, or of finding a haven for a certain number of refugees and displaced persons, would only contribute to confusion.

BALFOUR DECLARATION CITED

The Balfour Declaration, which was issued by His Majesty's Government as a "* * * declaration of sympathy with Jewish Zionist aspiration," declares:

"His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people."

The mandate, in its preamble, recognizes "* * * the historical connection of the Jewish people with Palestine" and "* * * the grounds for reconstituting"—I call your attention to the word "reconstituting"—"their national home in that country."

Those international commitments of a quarter of a century ago, which flowed from the recognition of historic rights and present needs, and upon which so much has already been built in Palestine by the Jewish people, cannot now be erased. You cannot turn back the hands of the clock of history.

Certainly, the United Nations, guided by its great principle, proclaimed in its Charter, "to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained," can never sanction the violation of treaties and of international law.

Having this and similar situations in mind, a specific provision, you will recall, was written into the chapter of the Charter of the United Nations which deals with territories which might become trusteeship territories, and which is therefore especially applicable to territories now under mandate. This is article 80 of the Charter, which reads:

"Except as may be agreed upon in individual trusteeship agreements, made under articles 77, 79, and 81, placing each territory under the trusteeship system, and until such agreements have been concluded, nothing in this chapter shall be construed in or of itself to alter in any manner the rights whatsoever of any states or any peoples or the terms of existing international instruments, to which members of the United Nations may respectively be parties."

It is the perspective of your committee of inquiry on the entire problem which, in our judgment, will prove decisive. It will give direction and will greatly expedite its work, and its conclusions will prove of constructive significance, if it will keep the proper perspective always in view.

A generation ago the international community of the world, of which the United Nations today is the political and spiritual heir, decreed that the Jewish people should be given the right, long denied, and the opportunity to reconstitute their national home in Palestine. That national home is still in the making: it has not yet been fully established. No international community has canceled or even questioned that right. The mandatory power, which was entrusted with the obligation to safeguard the opportunity for the continuous growth and development of the Jewish national home, has unfortunately in recent years grievously interfered with and circumscribed it. That opportunity must now be fully restored.

When will the Jewish national home be an accomplished fact? The answer to that question may well be given by the man who was Prime Minister of Great Britain at the time when the Balfour Declaration was issued. I am quoting the testimony of Mr. Lloyd George, given before the Palestine Royal Commission in 1937:

"There would be no doubt," he said, "as to what the Cabinet then had in their minds. It was not their idea that a Jewish state should be set up immediately by the peace treaty. On the other hand, it was contemplated that, when the time arrived for according representative institutions to Palestine, if the Jews had meanwhile responded to the opportunity afforded them and had become a definite majority of the inhabitants, then Palestine would thus become a Jewish commonwealth."

"The notion that Jewish immigration," he continued, "would have to be artificially restricted in order to insure that the Jews would be a permanent minority, never entered into the head of anyone engaged in framing the policy. That would have been regarded as unjust and as a fraud on the people to whom we were appealing."

This same answer could also be given by Mr. Winston Churchill, who was an important member of the Government which issued the Balfour Declaration; by General Smuts, who was a member of the Imperial War Cabinet at the time and who foretold an increasing stream of Jewish immigration into Palestine and "in generations to come, a great Jewish state rising there once more"; by Lord Robert Cecil, and by many others.

QUOTES WOODROW WILSON

American statesmen shared this view of the Jewish national home. Thus, President Wilson, on March 3, 1919, stated: "I am persuaded that the Allied nations, with the fullest concurrence of our own Government and people, are agreed that in Palestine shall be laid the foundations of a Jewish commonwealth."

That the Government of the United States does not now consider the Jewish national home as already established is clearly stated in the letter of President Truman to King Ibn Saud, of Saudi Arabia, dated October 29, 1946. He wrote:

"The Government and people of the United States have given support to the concept of the Jewish national home in Palestine ever since the termination of the First World War, which resulted in the freeing of a large area of the Near East, including Palestine, and the establishment of a number of independent States which are now members of the United Nations."

"The United States," wrote President Truman, "which contributed its blood and resources to the winning of that war, could not divest itself of a certain responsibility for the manner in which the freed territories were disposed of or for the fate of the peoples liberated at that time. It took the position, to which it still adheres, that these people should be prepared for self-government, and also that a national home for the Jewish people should be established in Palestine.

"I am happy to note, declared the President, "that most of the liberated peoples are now citizens of independent countries. The Jewish national home, however, has not as yet been fully developed."

It should, of course, be clear—and I regret that statements made by certain representatives in recent days have tended to confuse what should be clear—that when we speak of a Jewish state, we do not have in mind any racial state or any theocratic state, but one which will be based upon full equality and rights for all inhabitants without distinction of religion or race and without domination or subjugation. What we have in mind by the Jewish state is most succinctly stated in a resolution adopted by the British Labor Party in 1945—now represented by the present Government of the United Kingdom, which requested this special session of the United Nations. I am quoting:

"Here we halted halfway, irresolutely between conflicting policies. But there is surely neither hope nor meaning in a Jewish national home unless we are prepared to let the Jews, if they wish, enter this tiny land in such numbers as to become a majority. There was a strong case for this before the war, and there is an irresistible case for it now."

When your committee of inquiry will come to consider proposals for the future government of Palestine, this inescapable and irreducible factor—the international obligation to insure the continuous development of the Jewish national home—should be kept, in our judgment, constantly in mind. I believe it would be extremely helpful to the committee of inquiry if the mandatory government would present the account of its stewardship of the Palestine mandate to it rather than wait for the next assembly of the United Nations. It would assist the committee in thinking through the problem and at arriving at helpful recommendations for the future government of Palestine.

It is illogical, I fear, to ask the committee of inquiry to consider the future government of Palestine without first making a thorough study of the present government to discover what was faulty in the present administration, what neglect and what deviations occurred to have brought about a condition so dangerous and explosive as to necessitate the convoking of a special session of the United Nations to deal with it.

I believe that the committee of inquiry should most certainly visit Palestine. Written documents are important, but infinitely more instructive are the living documents, the visible testimony of creative effort and achievement. In Palestine they will see what the Jewish people, inspired by the hope of reconstituting this national home after the long weary centuries of their homelessness, and relying upon the honor and the pledged word of the world community, has achieved in a few short years against great odds and seemingly insurmountable handicaps.

The task was enormous—untrained hands, inadequate means, overwhelming difficulties. The land was stripped and poor, neglected through the centuries. And the period of building took place between two disastrous world wars when European Jewry was shattered and impoverished. Nevertheless, the record of pioneering achievement of the Jewish people in Palestine has received the acclaim of the entire world. And what was built there with social vision and high human idealism has proved a blessing, we believe, not only to the Jews of Palestine but to the Arabs and to other non-Jewish communities as well.

That the return of the Jews to Palestine would prove a blessing not only to themselves but also to their Arab neighbors was envisaged by the Emir Feisal, who was a great leader of the Arab peoples, at the Peace Conference following the First World War. On March 3, 1919, he wrote:

"We Arabs look with the deepest sympathy on the Zionist movement. Our deputation here in Paris is fully acquainted with the proposals submitted yesterday by the Zionist organization to the Peace Conference, and we regard them as moderate and proper. We will do our best, insofar as we are concerned, to help them through. We will wish the

Jews a most hearty welcome home. I look forward, and my people with me look forward, to a future in which we will help you, and you will help us, so that the countries in which we are mutually interested may once again take their places in the community of civilized peoples of the world."

Your committee of inquiry will conclude, we are confident, that if allowed to develop uninterruptedly the standards of life which have been developed in Palestine, the concepts of social justice and the modern scientific method will serve as a great stimulus to the rebirth and progress of the entire Near East with which Palestine and with which the destinies of the Jewish national home are naturally bound up.

Your committee of inquiry should also consider the potentialities of the country, which, if properly developed, can, according to the expert testimony of those most qualified to speak on the subject, sustain a population much greater than the present one. Many more projects which will result in great economic and social improvement, not alone in Palestine but in all the neighboring countries, are awaiting development pending a satisfactory political solution.

WOULD INVESTIGATE VIOLENCE

The committee of inquiry should, while in Palestine, also look into the real, the fundamental causes of the tragic unrest and violence which today mar the life of the Holy Land to which our Jewish pioneers came, not with weapons but with tools. They will inquire, I am sure, why a peace-loving community, whose sole interest was in building a peaceful home and future for themselves and their children, is being driven to the pitch of resentment and tension and lamentably driving some of its members to actions which we all deplore.

They will ask themselves, I am sure, why shiploads of helpless Jewish refugees—men, women, and children who have been through all the hells of Nazi Europe—are being driven away from the shores of the Jewish national home by a mandatory government which assumed, as its prime obligation, to facilitate Jewish immigration into that country.

They will also investigate, I hope, how the mandatory government is carrying out another of its obligations, which was to encourage also settlement of the Jews on the land, when, in actual practice, it is today severely restricting free Jewish settlement to an area less than 6 percent of that tiny country, and is enforcing today in the Jewish national home discriminatory racial laws which the mandate, as well as the Charter of the United Nations, severely condemns.

By way of digression let it be said—if it need be said at all—that we are not engaged nor shall we be engaged in any criticism or condemnation of the people of the United Kingdom. We have no quarrel with them. On the contrary, we have the highest regard and admiration for that people and for its monumental contributions to democratic civilization; and we shall never forget that it was the United Kingdom which, first among the nations, gave recognition to the national aspirations of the Jewish people. It is only a wrong and unjustifiable policy which contradicts and tends to defeat the far-visioned British statesmanship of earlier years which we condemn.

We hope most earnestly that the Committee of Inquiry will also visit the displaced persons camps in Europe and see with their own eyes the appalling human tragedy which mankind is permitting to continue unabated 2 years—it is exactly 2 years today since VE-day—after the close of the war in which the Jewish people was the greatest sufferer.

While committees of investigation and study are reporting on their sad plight, and while intergovernmental discussions and negotiations are going on, these war-ravaged men and women are languishing in their misery, still waiting for salvation. They ask for the bread of escape and hope; they are given the stone of inquiries and investigations. Their morale is slumping terribly. A spiritual deterioration, I am afraid, is setting in among them. It is only the hope that tomorrow — perhaps tomorrow — redemption may come that keeps their spirit from breaking utterly.

Most of them are desperately eager to go to the Jewish national home. I hope that the conscience of mankind, speaking through you and through your committee or inquiry will make it possible for these weary men and women to find peace at last and healing in the land of their fondest hopes, and that their liberation will not be delayed until the report of the committee is finally made and the action of the Assembly is finally taken, but that, pending ultimate decisions and implementations, these unfortunate people will be permitted forthwith to migrate in substantial numbers to Palestine.

There is a desperate urgency about this tragic human problem my friends, which brooks no delay. An immediate relaxation of the restrictive measures on immigration into Palestine and a return to the status which prevailed before the white paper policy of 1939 was imposed will not only be a boon to these suffering humans, but will greatly relieve the present menacing tensions in Palestine, will wash out much of the bitterness and will enable the deliberations of your committee of inquiry and of the next Assembly to be carried on in a calmer spirit, in an atmosphere of moderation and good will. We are all eager for peace. We must all make a contribution to achieve it. But the decisive contribution can only be made by the mandatory government.

I hope that I have not abused your patience, Mr. Chairman, and the patience of the representatives of the United Nations here assembled. Permit me to conclude with this observation:

The Jewish people place great hope upon the outcome of the deliberations of this great body. It has faith in its collective sense of justice and fairness and in the high ideals which inspire it. We are an ancient people, and though we have often, on the long, hard road which we have traveled, been disillusioned, we have never been disheartened. We have never lost faith in the sovereignty and the ultimate triumph of great moral principles.

In these last tragic years, when the whole household of Israel became one great hostelry of pain, we could not have built what we did build had we not preserved our unshakable trust in the victory of truth. It is in that strong faith and hope that we wish to cooperate with you in this task which you have undertaken.

The Jewish people belongs in this society of nations. Surely the Jewish people is no less deserving than other peoples whose national freedom and independence have been established and whose representatives are now seated here. The Jewish people were your allies in the war and joined their sacrifices to yours to achieve a common victory. The representatives of the Jewish people of Palestine should sit in your midst. The representatives of the people and of the land which gave to mankind spiritual and ethical values inspiring human personalities and sacred texts which are your treasured possessions—we hope that that people, now rebuilding again its national life in its ancient homeland, will be welcomed before long by you to this noble fellowship of the United Nations.

STATEMENT BY MOSHE SHERTOK, MAY 12, 1947

I am here to reply to the questions which were put to Dr. Silver after the conclusion of his address to the committee. In so doing, I hope I may be permitted also to clear up some of the underlying issues, in order to bring out the meaning of my replies a little more clearly.

I would begin with a question asked by the representative of Poland as to the organization, composition, and functions of the Jewish Agency for Palestine. In the mandate, it was the Zionist organization which was recognized as the Jewish agency, with powers to advise and cooperate with the mandatory administration in matters concerning the Jewish national home and to take part in the country's development.

At the time, the World Zionist Organization, founded 50 years ago, was already 25 years old. Subsequently, certain non-Zionist groups joined in forming an enlarged Jewish agency, but the Zionist organization has remained the main driving force. The World Zionist Organization has today local organizations in more than 60 countries—with a few exceptions, in every country where Jews live.

Within the Zionist movement, as in any democratically organized society, there are parties: the labor party and other labor groups, the center or general Zionists, the Mizrachi or the orthodox religious Zionists, and the revisionists. This party division is reflected in our congresses, which are held once in every 2 years after a general election in all countries. The congress elects our executive, the present executive was elected by the 360 delegates to the twenty-second Zionist congress in Basle last December, who, in turn, were elected by nearly 2,000,000 Zionist voters throughout the world. The executive has headquarters in Jerusalem and branches with resident members in New York, London, and Paris.

AGENCY'S DUTIES OUTLINED

Two things must be stressed. First, the agency is the spokesman, not merely of Jews already settled in Palestine but of all Jews throughout the world who are devoted to the idea of the Jewish national home. The entire Jewish people, I might say, hold the Jewish agency responsible for the success of that great enterprise. Secondly, the agency is not merely an organ of national representation, but an instrument of nation-building, an institution of immigration, development, and settlement. It mobilizes the energies and resources of our people for national reconstruction, and in Palestine it directs large-scale practical development work.

It has been responsible for bringing hundreds of thousands of Jews to Palestine and settling them there. It has carried out an extensive program of settlement on the land. It has stimulated major industrial development. It has supplied guidance and coordination to the vast volume of free initiative and enterprise in the work of Jewish settlement. Our Jerusalem headquarters is divided into departments: political, financial, immigration, agricultural settlement, trade and industry, labor, etc.

During the war the Jewish agency acted, in a way, as a recruiting authority. It mobilized the Jewish war effort in Palestine in the cause of the United Nations. It has supplied 33,000 volunteers for armed service within the British forces. They defended Palestine, served in most middle eastern countries and fought in the campaigns of Africa and Europe. All industrial, technical, and scientific resources of Jewish Palestine were harnessed to the war effort.

So much for the Jewish agency as such. Politically, its primary function has been to uphold and defend Jewish rights under the mandate. Immigration is the crux of the problem and several of the questions put to Dr. Silver bear on that issue. In answering these questions, I must make one basic point clear by way of background.

If it is granted that the Jewish people are in Palestine as of right, then all the implications and corollaries of that premise must be accepted. The foremost is that Jews must be allowed to resettle in Palestine in unlimited numbers, provided only they do not displace or worsen the lot of the existing inhabitants who are also there as of right. If that basic premise is not granted, then there is very little to discuss.

It may sound quite plausible to argue that if the right of the Jews to return to Palestine is admitted on the grounds of ancient history, then the whole map of the world would have to be remade and chaos would ensue. But does the question really arise? Do the descendants of the Romans, for example, claim entry into England? Do they need England? Does their future, their very existence, depend on settling there? Or do the Arabs, for that matter, press to return to Andalusia in Spain? Is it a matter of life and death for them? The analogy is fallacious and misleading.

JEWISH POSITION UNIQUE

The great historic phenomenon of the Jewish return to Palestine is unique because the position of the Jewish people as a homeless people, and yet attached with an unbreakable tenacity to its birthplace, is unique. It is that phenomenon that has made the problem of Palestine an issue in international affairs, and no similar issue has ever arisen.

Were it not for the presence in Palestine today of over 600,000 Jews who refuse to be left in the minority position under Arab domination; were it not for the urge to settle in Palestine, of hundreds of thousands of homeless and uprooted Jews in Europe, in the Orient, and elsewhere; were it not for the hopes and efforts of millions of Jews throughout the world to reestablish their national home and build it up into a Jewish state, then the United Nations would not be faced with the problem of Palestine as it is now. The problem is real and pressing. It cannot be made to disappear by conjuring up nonexistent difficulties alleged to be involved in its solution.

When the distinguished representative from India asks how many Jews from outside there were in Palestine at certain dates—the operating words being "from outside"—I must confess I am somewhat baffled. I can give him the round figures for the Jewish population in those years—50,000 in 1900, 165,000 in 1930, 475,000 in 1939. Now it is about 630,000. Incidentally, there are more Jews in Palestine today than there were Arabs at the end of the First World War. But as to "Jews from outside," I cannot say. In a way, they are all from outside; they are practically all immigrants.

There was but a tiny Jewish community in Palestine prior to 1880. In the early 1880's, the return started, almost simultaneously from Russia and Rumania, from Morocco and southern Arabia, and since then it has been practically continuous. It started because the Jews had always believed it to be their inalienable right to resettle Palestine. That right was subsequently internationally recognized and enshrined in the mandate. But quite apart from the mandate, nothing will eradicate, from the hearts of Jews, the conviction that it is their right to return. So, in that deeper sense, they are not from outside at all, but sons of the country.

By the way, my Arab countrymen make much of the fact that Palestine has already taken in so many immigrants. These immigrants, they said, were received by the Arabs. We are very sorry, but we cannot concede them that credit. Conversely, they say that the Jews have settled in Palestine at the expense of the Arabs. That debit item, too, we cannot admit. There has been no receiving of Jewish immigrants by Arabs nor any settlement of Jews at the expense of the Arabs.

The Jews did not come as guests of anyone. They came in their own right. They received themselves and their brothers; and they did so by their own efforts and at the expense of no one else. Every acre of land we tilled was bought and had to be wrested from wilderness and desolation. Nothing was taken away—not one house, not one job. A tremendous amount of work, wealth, and well-being was presented to the Arab population.

The honorable representative from India also asked what was the age of the Jewish communities in Europe; and whether, since the Hitler regime had been crushed, the Jewish displaced persons would not be better advised to stay in Germany.

As to the age of European Jewry, it is on the whole quite venerable, but age has not made for security. Three-quarters of that Jewry—6,000,000 people—are no more. But let us go back into the past. Jews had lived in Spain for a whole millennium when, in 1492, they were dispoiled and expelled, and only those who gave up their Jewish identity and became Christians were allowed to remain. Jews have lived in Poland since the eleventh or twelfth century, but in the seventeeth they were the victims of ferocious massacres. Then there were pogroms under the Russian czars in the nineteenth and twentieth centuries; and in the last war, as we have just heard, came the final catastrophe. Nearly all of Polish Jewry—3,000,000 men, women, and children—were wiped out by the Nazis.

In Germany, the beginnings of Jewish settlement are traced back to the fourth century. But just six centuries ago, most of the Jews in Germany were destroyed in a wave of frenzied persecution which swept Europe. Then, by the twentieth century, German Jews had reached the pinnacle of emancipation and were largely assimilated. Yet they were hurled down into the abyss of degradation and death. Even converts to Christianity were not spared.

ANTI-SEMITISM SURVIVES HITLER

It is true that Hitler is gone now, but not anti-Semitism. He was the product, not the source, of German Jew-hatred. Anti-Semitism in Germany and in many other parts of Europe is as rife as ever and potentially militant and fierce. Some governments tried their best to keep it down, but they have a very hard job in doing so. The very age of European Jewry serves only to accentuate the basic historic insecurity of Jewish life in the dispersion.

The honorable representative of India has also asked whether the Jewish displaced persons would be assimilable in Palestine. The answer is "Yes." They would be perfectly assimilable in the Jewish community there—the one Jewish community in the world with a self-contained economic system and an independent cultural life which is eager and able to receive and absorb them. He asked whether they would not be better assimilable in Germany. The answer is "No." You cannot settle in a graveyard, nor can you build a dwelling out of heaps of rubble.

Actually, most of the Jewish displaced persons are not from Germany itself, but from other countries. They are today in camps, or they otherwise continue as refugees because they cannot be resettled in Europe. They have now waited for 2 years, and in all this time no one has come forward with a solution to their problem. The clear recommendations of the Anglo-American Committee have remained on paper, and, to them, they have proved a mockery.

No one has offered an alternative to Palestine. But even if there were an alternative, they refused to be treated as mere chattels. They appeal to the world to realize that they form part of a people which has a national will of its own. They want to go to the only country where they will feel at home, both individually and collectively. Their problem is inseparable from the problem of Palestine. It is the problem of Palestine.

To treat the issue of Palestine in isolation from the immigration issue would make as much sense as to study the beating of a heart in disregard of blood circulation. A solution for the problem of Palestine which would ignore the Jewish claim and the need for immigration would solve nothing. Whoever undertook to implement such a solution would be driven back by the sheer impact of reality to face the problem of immigration.

I may perhaps interpose here an answer to the question put by the honorable representative of the Union of South Africa. He asked whether we wanted the question of the DP's in Europe examined solely in connection with Palestine, or in its general aspect. Our answer is that we believe that only in Palestine can the problem of these people be permanently and constructively solved, for only there can their lives be rebuilt on secure foundations and their homes become part of the home of the entire people.

The immigration issue is not confined to that of the Jewish displaced persons and unsettled refugees in Europe. Various Jewish communities in Europe are involved, as well as the Jews of the Arab and oriental countries. With regard to these, members of the United Nations have heard during the present session idyllic accounts of the conditions of complete equality and true brotherhood under which they live. The Jewish agency is naturally very intimately acquainted with the position, and the picture as we know it is totally different.

In most of these countries Jews are treated as second- or third-rate citizens. They live in perpetual fear of eruptions of fierce fanaticism, of which there have been tragic examples both in recent years and in the more remote past. Their lot ranges from precarious sufferance to active persecution. All formal statements under duress notwithstanding, their hopes and dreams are centered on Zion, and their youth has no other idea but to join its builders.

INVESTIGATION OF COMMUNITIES URGED

We very strongly urge that the position of these communities should form a part of the committee's investigations. But the most urgent problem is, of course, that of the displaced persons in Europe who are now on the brink of despair.

The present political crisis in Palestine is nothing but a clash between the dire needs of Jewish immigration and the current anti-immigration policy of the mandatory power. We were asked by the representative of India why public servants of the British Government in Palestine are today the victims of terrorist activity. The answer is because the white paper of 1939 is still in force. Terrorism is a pernicious outgrowth of a disastrous policy.

The Jewish agency has unreservedly condemned terrorist bloodshed, and in that attitude it is supported by the large majority of the organized Jewish community. Its harm to the Jews and to the Jewish future is far graver than to the government and people of the United Kingdom. But Jewish efforts to resist and check terrorism are continually frustrated because government action, in pursuance of the white paper, adds fuel to the fire. Our efforts will continue, but the representative of India will no doubt agree that Palestine is not the only country which has been afflicted with this most hateful disease.

Another question was why, in contradiction to the Emir Feisal's (Arab leader at 1919 peace conference) attitude, the Palestine Arabs were now opposed to Jewish immigration. Since that question was put, we have heard a very able exposition of the Palestine-

Arab case which fully covered the point. All I would add is that the uncompromising opposition to immigration now voiced does not invalidate the broader conception and bolder vision expressed in the Feisal-Weizmann agreement, which indicated a way of harmonizing Jewish and Arab aspirations within a wider framework, fully taking into account the independence then promised and now achieved by the Arabs in vast territories.

While I am on the point of promises, may I be permitted to recall that Sir Henry McMahon (British High Commissioner in Egypt during World War I) himself stated that Palestine was never included in the promises made by him to the Arabs, and that this was well understood at the time by the late King Hussein (King Hussein of Hedjaz, Sherif of Mecca in 1915); also that Trans-Jordan, which was originally included in the Balfour Declaration, is today an Arab state.

Finally, the distinguished representative of India asked whether we recognized the distinction between a Jewish state and a Jewish national home. The answer is that we do, but perhaps not quite in the sense in which the question was meant. The establishment of the Jewish national home is a process. The setting up of a Jewish state is its consummation. That such consummation had been intended by the authors of the Jewish national home policy and that a way was definitely left open for its achievement was conclusively proved by the Palestine Royal Commission. The point was fully understood by those responsible for the 1944 statement on Palestine of the British Labor Party executive.

The Indian representative drew attention to the use in that statement of the term "Jewish national home" and not "Jewish state." But may I recall the words of Mr. Hugh Dalton, the present Chancelor of the Exchequer, when reporting on that statement of the executive to the Labor Party Conference. He urged common support, in consultation with the United States and Soviet Governments—and now I quote—"for a policy which will give us a happy, free, and prosperous Jewish state in Palestine." That was only 2 years ago.

The matter has a most vital bearing on the question of Palestine's independence. Unlike other mandates of category A, the declared object of which was to prepare the country for independence, the Palestine mandate has no such clause. Its primary purpose, in the words of the Royal Commission, is the establishment of the Jewish national home. But, of course, the ultimate goal must be independence and the mandate must be terminated.

So if, upon the termination of the Palestine mandate, its original purpose is to be fulfilled, if the future of the Jewish National Home is to be permanently secured, if the national interest of the Jewish people is to be harmonized with other interests and not sacrificed for their sake, then a Jewish state must come into being. A home, in the words of a British statesman, in the debate on the white paper for Palestine, is a place to which one is always free to come back. How is the national home to fulfill its primary functions of being open to Jews in need of it, if it is to remain forever subjected to non-Jewish sovereignty?

WOULD SECURE ARAB MINORITY

An Arab minority in a Jewish state will be secure, if for no other reason, because the state will forever remain surrounded by Arab countries with which it will be most vitally interested to be at peace; also because there will always be Jewish minorities in other lands.

But a Jewish minority in an Arab state will have no such security at all. It will be at the mercy of the Arab majority, which would be free from all restraints. To provide boldly, if I may put it that way, for the independence of Palestine as a country, without placing an equal emphasis on safeguarding the independence of the Jews as a people, is to tear the problem out of its real context and load the dice heavily against the Jews. The whole issue is likely to be vitiated in advance by such an approach.

The question of our living with the Arab peoples and the relationship of a Jewish state with them is, of course, the dominant question of the future. The distinguished representative of Poland has asked, in his second question, whether there have been attempts at collaboration between Jews and Arabs. The answer is, yes, there have been, on both sides. Arabs and Jews have cooperated and are cooperating successfully in the wide and varied fields of municipal, commercial, and labor affairs.

Arabic is taught in all Jewish secondary schools and in a large number of primary schools. The Jewish agency is particularly active in spreading knowledge of Arabic in the Jewish settlements and promoting friendly relations between them and their Arab neighbors. From personal observation and direct experience accumulated over a period of 41 years' residence in Palestine, I can affirm that there is nothing inherent in the nature of either the native Arab or the immigrant Jew which prevents friendly cooperation. On the contrary, considering the admitted great difference of background, they mix remarkably well.

By mixing I do not mean assimilation, for the Jew does not come to Palestine to assimilate to the Arab, but to develop his own distinctive individuality. Nor does he expect the Arab to assimilate to himself. What I mean is cooperation between a self-respecting Jew and a self-respecting Arab, and between the two communities.

Today the issue is overshadowed and practical cooperation is hampered by the political conflict over the country's future. The present official leaders of the Arab states, having achieved practically all they wanted with so little sacrifice, refuse to admit the legitimacy of the national aspirations of another people. At the head of the Arab Higher Committee of Palestine stands a man who, apart from other well-known aspects of his activity, was directly involved during the war in the Nazi policy of extermination of the European Jews.

Nevertheless, the Jews do not lose heart. They come to Palestine not to fight the Arab world, but to live at peace with it. They are not an outpost of any foreign domination. Their ambition is to integrate themselves into the modern structure of reviving Asia. They are an old Asiatic people returning to their home. At the same time, they are anxious to make their contribution to the great work of bridge building between modern Asia and the rest of the world.

PARTNERSHIP OF EQUALITY ASKED

Their intense experience in development within the narrow confines of Palestine is yielding results which may be of value to all who are interested in social and economic progress in the Middle East and beyond. But their true partnership with their neighbors can only be based upon equality of status and mutual respect. They claim what is the natural right of any people on the face of the earth—that as many of them as possible should live together in their own country, freely develop their civilization, make their contribution to the common stock of humanity, and be self-governing and independent. They cannot possibly surrender that claim, and for its attainment they appeal for the assistance of the entire family of nations.

In conclusion, may I answer the question of the distinguished delegation from Colombia on our views regarding the composition of the special committee. We would not differentiate between big and small powers, nor would we suggest the exclusion of any government merely because it happens to have or may develop a policy on Palestine. Having a policy does not necessarily mean being directly concerned as an interested party. But we believe that parties directly concerned should not serve on the committee. That should exclude the United Kingdom, for reasons put, if I may say so, with unanswerable cogency by the distinguished representative of the United Kingdom himself. We would also definitely exclude the Arab states, unless it were agreed that the committee should contain one Arab and one Jewish member.

STATEMENT BY BEN-GURION, MAY 12, 1947

I am grateful for the opportunity afforded to me to make a few supplementary remarks to the statement made by my colleague, Dr. Silver, on behalf of the Jewish Agency for Palestine.

First of all, I would like to try to clarify further the nature of the problem which the mandatory power has placed before the United Nations, as this is essential for defining properly the terms of reference of the special committee. Last Friday, the representative of the United Kingdom, on behalf of his Government, declared that they tried for years to settle the problem of Palestine and had failed. They have, therefore, brought the problem to you in the hope that the United Nations would find a just solution.

This statement is open to misunderstanding. The mandatory power was not charged with discovering a solution to the Palestine problem and its failure was not in its inability to find the right solution. The mandatory power was charged by the League of Nations with the carrying out of a definite settlement. That settlement was set out and determined originally by the United Kingdom herself and subsequently confirmed by all the Allies and associated powers in the First World War, as well as by the Arabs through Emir Feisal and the Syrian Arab Committee. It was later embodied in the mandate approved by 52 nations and made international law.

The terms of that settlement, as decreed by the conscience and the law of nations, are common knowledge. It is the restoration of Palestine to the Jewish people.

At the time the United Kingdom took over the mandate, the problem of Palestine had been clearly adjudicated and settled. The failure of the mandatory government, as admitted by the British representative, was a failure to carry out the settlement agreed upon and entrusted to it by the nations of the world. The failure became manifest with the introduction of a policy set forth in the white paper of 1939, which violated the most essential terms of the mandate and vitiated its entire purpose.

The white-paper policy, as you know, was condemned by the permanent Mandates Commission of the League of Nations as incompatible with the mandate and with the pledges repeatedly given by the mandatory government itself. It was also denounced by the most eminent political leaders of the United Kingdom itself, including all the prominent members of the present Government of the United Kingdom, as a breach of faith. Only recently the white paper was again unanimously condemned by the Anglo-American Committee of Inquiry. The white-paper policy is responsible for the misery and deaths of a large number of Jews and for cruel acts of expulsion of Jewish refugees.

It is responsible for establishing in Palestine a police state without parallel in the civilized world. It is responsible for the introduction in Palestine of racial discrimination against Jews in land legislation. This is the real nature of the failure of the mandatory power.

Therefore, I venture to suggest that the first problem facing the United Nations is how to set right that failure and to insure that international obligations toward the Jewish population in Palestine are faithfully fulfilled.

The second point to which I would like to invite the attention of your committee is the fact that in Palestine you are faced not merely with a large and growing number of Jews, but with a distinct Jewish nation. There are Jews and Jewish communities in many countries, but in Palestine there is a new and unique phenomenon—a Jewish nation, with all the attributes, characteristic resources, and aspirations of nationhood. This nationhood springs from a long history and an uninterrupted connection for 3,500 years with its ancestral soil.

CANNOT ARREST PROGRESS

Palestine, which for the Jewish people has always been and will always remain the Land of Israel, was in the course of centuries conquered and invaded by many alien peoples, but none of them ever identified its national faith with Palestine. The Jewish nation in Palestine is rooted not only in past history but in a great living work of reconstruction and rebuilding, both of a country and of a people.

The growth of this nation and its work of reconstruction must not and cannot be arrested—and this, for two reasons. One is the existence of large numbers of homeless Jews for whom there is no other salvation in the future except in their own national home. The second is that more than two-thirds of the land in Palestine is still wasteland, uncultivated, unsettled, and believed by the Arabs to be uncultivatable. The history of our settlement in the last 70 years has shown that this land can be and is being cultivated by us.

This is not because we are more skilled or more capable than others, but because this is the only soil in the world which we call our own. We are not, like our Arab neighbors in possession of vast underpopulated territories, like Iraq, Syria, Arabia, etc. We must therefore make use of every bit of free land in our country, even desert land.

Another observation is this: We are told that the Arabs are not responsible for the persecution of the Jews in Europe, nor is it their obligation to relieve their plight. I wish to make it quite clear that it never entered our minds to charge the Arabs with solving the Jewish problem, or to ask Arab countries to accept Jewish refugees. We are bringing our homeless and persecuted Jews to our own country and settling them in Jewish towns and villages. There are Arab towns and villages in Palestine—Nablus, Jenin, Ramleh, Narnucka, Libia, Terschicha. You will not find a single Jewish refugee in any of them. The Jews who have returned to their country are settled in Petah Tiqva, Rishon le Zion, Tel Aviv, Haifa, Jerusalem, Dagania, the Negev, and other Jewish towns and villages built by us.

The return of the Jews to their country is a work of self-liberation and self-reconstruction, which is contributing to the reconstruction and liberation of the country as a whole.

My fourth and last remark is this. We have no conflict with the Arab people. On the contrary, it is our deep conviction that historically the interests and aspirations of the Jewish and Arab peoples are compatible and complementary. What we are doing in our country, in Palestine, is reclaiming the land, increasing the yield of the soil, developing modern agriculture and industry, science, and art, raising the dignity of labor, insuring women's status of equality, increasing men's mastery over nature, and working out a new civilization based on human equality, freedom and cooperation in a world which we believe is as necessary and beneficial for our Arab neighbors as for ourselves.

A Jewish-Arab partnership, based on equality and mutual assistance, will help to bring about the regeneration of the entire Middle East. We Jews understand and deeply sympathize with the urge of the Arab people for unity, independence, and progress, and our Arab neighbors, I hope, will realize that the Jews, in their own historic homeland, can under no conditions be made to remain a subordinate, dependent minority as they are in all other countries in the Diaspora. The Jewish nation in its own country must become a free and independent state with a membership in the United Nations. It is eager to cooperate with its free Arab neighbors to promote economic development, social progress, and real independence of all the Semitic countries in the Middle East.

I most earnestly suggest to your committee that the real, just, and lasting solution of the problem before you is a Jewish state and a Jewish-Arab alliance.

The Situation in Palestine

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Friday, May 16 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Stealing a March," published in this morning's Washington Post. The editorial deals with recent developments in Palestine and the Soviet attitude.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STEALING A MARCH

It is ironical that while the State Department has been counseling neutrality about Palestine the Soviet should have come out with a clear expression of its policy. It is a policy of alternatives. If a dual, democratic Arab-Jewish state proves impossible to bring about, then, says Mr. Gromyko, Russia would back a partition of Palestine between Arab and Jew. This was, of course, the conclusion of the famous British Peel report of 1937, and we ourselves have seen no plan that could improve upon it. Discarded at the time by the British, the report has gained more weight as time has gone on, particularly in view of the intervening Arab-Jew bitterness. Certainly there could be no settlement along the lines of the cantonization of Palestine heading up to a British Raj which was fathered by Britain's Mr. Morrison and our Mr. Grady. The British no less than the Americans must have been stunned by Mr. Gromyko's desertion of the sidelines.

Neutrality has hitherto been commended on the grounds that nothing must be done to injure the susceptibilities of the Arabs lest we thrust them into the arms of Russia. The whisperers in Whitehall and the State Department have been working overtime on this theme. If the Arabs were left enraged, it is said, they would promptly embrace communism, and the Russians at a stroke would extend their sway even to the Moslems of India. The case wasn't even plausible. A united Arab world is more of an invention than a fact, even about Palestine, with the Lebanese stranger to the Saudi Arabians than to New Yorkers. Besides, they are run by pashas, landlords, and feudalists who would shudder at the thought of leaning on Moscow. They know more about the Russians than their apologists. If Russia were to bestride the Middle East, the men who are now running the Arab League would be the first to be liquidated, perhaps on the ground that they had taken the place of the old Zionists as British agents. Mr. Gromyko exposes the hollowness of these whispered warnings of Arab-Soviet flirtations.

Actually the Russians in recent years have felt they had more in common with the Palestinian Jews. This is natural enough. In the first place, it is obvious now that the Zionists are no longer what the old Bolshevists used to charge, viz, "the lackeys of British imperialists." Secondly, the advanced and progressive Jews of Palestine hold out much more promise to the Soviet Government than the backward Arabs controlled by the feudal cliques of kings and effendis. Moscow cannot forget the contribution that Jewish Palestine made to the war effort of the Allies. It was an invaluable workshop and Russia has a profound respect for the kind of technician that manned it.

But, aside from the fruits of Palestine industry, Palestine occupies a position of singular strategic importance. It is the virtual link between the three continents, lying on the Mediterranean within close touch of the Suez Canal, and it serves as the outlet and inlet for the trade of that area, chiefly Arabia's oil. Moreover, Zionist leadership is predominantly Russian in national origin. It seems to us, therefore, that there is nothing surprising in the Russian gambit at Flushing Meadow. Aside from discomfiting America and Britain, Russia may be disclosing where her interests really lie. At any rate, it is the kind of affirmativeness that long ago should have been forthcoming out of the State Department.

Resignation From Congress

EXTENSION OF REMARKS
OF
HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 15, 1947

Mr. D'ALESANDRO. Mr. Speaker, on May 6 last, I was honored by my fellow townsmen of the great historic city of Baltimore by being elected their mayor. As I am to be inaugurated next Tuesday, I, therefore, arise to tender my resignation as a Member of Congress, in which distinguished body I have had the honor to serve since 1938. Last November the voters of the Third Congressional District of Maryland elected me for the fifth consecutive time by an overwhelming majority. Naturally, I am deeply grateful to them, as I am to the men and women of Baltimore who have chosen me to serve as their chief executive for the next 4 years.

Baltimore is a historic city filled with a rich heritage and a lofty tradition which entwines and threads about the Nation's early history. It is a thriving, prosperous municipality of more than 1,000,000 inhabitants. Situated on the Patapsco River, with the commanding Chesapeake Bay right off the city, a figurative stone's throw from Washington, the Nation's Capital, it is the gateway between the North and South. It has had a glorious past in the realm of culture, business, education, and patriotism. With the

realization of the planned improvements scheduled during the next 4 years, I am confident that it will have a wonderful future. In the character of its people—and I know it well—there is no room for prejudice, bigotry, hatred, or malice. There is, however, a fierce pride in the glory and achievements of the matchless contributions which many of its sons and daughters have made in the formation, preservation, and future greatness of our country.

My native city of Baltimore was incorporated in 1797, a decade after our founding fathers struck off at Philadelphia that immortal document—the Constitution; a little more than two decades after the immortal Jefferson was inspired to write the Declaration of Independence, and George Washington set forth as the head of the Continental Army to wrest independence for 4,000,000 people who were destined 171 years later to assume the leadership of the world. Now, I propose to return to my native city, humble in spirit, fully appreciating the magnitude of the task in this postwar era, but determined with strong resolution to devote all my time and talents to help make Baltimore one of the preeminent cities of the Nation.

It has been my pleasure, while a Member of Congress, to serve under two great Presidents, Franklin Delano Roosevelt and Harry S. Truman; and three eminent Speakers, Messrs. Bankhead, Rayburn, and Martin. I have been the recipient of much kindness at their hands. I shall always cherish to my dying day the strongest sentiments of deep and abiding friendship made while a Member of this body. Since I have been a Member of this distinguished body, I can truly say that I have never questioned the motives or integrity of any Member who may have differed with me on any political, economic, or social question of the day. And I can say, in all candor, that I have never favored any colleague except with gladness nor have I ever opposed any except with sadness.

As I leave here, I think of the critical problems which face our country in this hour. Our Nation, the guardian of democracy, is ascending the watchtower of the world in order to be prepared to safeguard the rights of free peoples. Two opposing philosophies are battling for the souls of modern man, democracy versus communism. This communistic assault upon mankind would chain, bind, and strap the bodies, minds, and souls of men and women while the forces of democracy, as we practice it, would give dignity to the human personality, endow it with rights which no government can take away, because God and not a human institution has bestowed them.

Sumner Welles, a fellow Marylander of mine, recently said:

> The American people have entered the Valley of Decision. If the United States makes full use of the opportunity afforded by its position, its power, and its resources, it can determine the destinies of humanity. It can save western civilization.

With all my heart, I am convinced that divine providence has shaped our destiny so that we can become the liberator of mankind. It is no easy task. It is an uphill struggle. I am sure that wise leadership here in Congress, in the State Department, and in the White House will bring about the high destiny that America must fulfill. It would be helpful if every American were to daily recall the words of Thomas Jefferson:

> I have sworn upon the altar of God eternal hostility to every form of tyranny over the minds of men.

And now I close with the fervent wish that we shall never give away the secrets of our atomic bomb until and unless security for us and the world is established. It was the product of the genius of our scientists, our engineers, our industrialists. We must be the guardians of its safety if we and our children are to live in this world. The future of the world and of ourselves lies within our grasp. We can defeat the much-discussed recession which economists so glibly talk about. We can do it by work, by production; for the more we produce, the less will be the cost of living; the more things we can buy, the easier will be the building of our reserves—spiritual, financial, and physical.

Fellow Congressmen, I return to my city of Baltimore enriched by my service and experience in this Chamber. I leave the pyramid of government to return to its base—the city. When the base, or the city, is strong, sound, and durable, the government at the top will be stable and enduring. There, in Baltimore, the metropolis city of Maryland, I shall labor in the interests of its people, confident that you will labor with vision and courage to set our Nation's problems aright.

The Persistent Dream

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Friday, May 16 (legislative day of Monday, April 21), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "The Persistent Dream," which appeared in the Washington Star on Friday, May 16, 1947. I think it is one of the best editorials on the subject of a United States of Europe within the framework of the United Nations that has been written, that has come to my attention, this year.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PERSISTENT DREAM

It is not a new idea that Winston Churchill preaches in calling for a United States of Europe. His latest address, formally launching a campaign in Britain to that end, is simply an eloquent affirmation of faith in an ancient dream. More important, it is a somber warning that the time is at hand when the peace of the Continent and the world demands that the dream take on substance; that it be translated into reality; that action be started on it now; not 10 years from now, or a century from now.

Nothing could be easier, of course, than to raise the usual realistic objections to this dream. It has had great and brilliant sponsors, off and on, for centuries past, but still the nations of Europe have seemed to cling more jealously than ever to their separate sovereignties. Politically, economically, historically, they have developed among themselves such rivalries, such antagonisms, such hates that the thought of uniting them has the appearance sometimes of being a wholly unattainable ideal for practical men in a hard and perverse world.

Yet it is a fact that the dream is persistent and that the movement to realize it is stronger today, and more widespread, than at any time in history. Mr. Churchill is not the only voice crying in the wilderness of unconnected and clashing sovereignties. His successor, Prime Minister Attlee, is on record as warning that the Continent must federate or perish. In France, in Italy, in the Lowlands, and elsewhere the same note is being sounded in mounting volume. The Government of Russia may be flatly against the idea, but Europeans are for it in ever-increasing numbers. Indeed, even in the New World, here in our own country, there is a great and growing sentiment for it, a sentiment summed up in the pending Fulbright-Boggs resolution to have Congress declare for a United States of Europe within the framework of the United Nations.

This dream persists for a good reason. In Mr. Churchill's words, divided Europe, because of its fragmentation into lands pulling against each other instead of together, has led itself and much of the outside world "into the pit of squalor, slaughter, and ruin." Today, as never before, there is a compulsion to unite, politically and economically, for common survival. The realistic objections are, in fact, unrealistic; worse, they add up to a defeatist invitation to catastrophe. A federated continent may be long in the making, but men with faith, every friend of a civilized and lasting peace, will keep on striving for it against all odds.

Democracy's Western Frontiers

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include herewith an article from the Cleveland Plain Dealer by Ralph J. Donaldson. Mr. Donaldson was a member of the first party of newspaper editors and publishers to visit the Far East on a tour conducted by the War Department. He is an associate editor of the Plain Dealer and has been a member of its reportorial and editorial staffs for more than 25 years. His articles will be inserted in the RECORD in the order in which they appeared in the Cleveland Plain Dealer.

UNITED STATES STRUGGLES TO SET UP DEMOCRATIC BAR TO COMMUNISM IN ORIENT

(Article 1)

What is perhaps the most stupendous program of social, economic, and political reform in the history of the world has been undertaken by the United States in the Far East as an aftermath of World War II and as an antidote to Russian aggression and the spread of communism.

Today the western frontiers of democracy are in Japan, where a defeated nation of 78,000,000 people is in the process of being

liberated from feudalistic bondage and is being taught the principles of democracy and freedom by its conquerors.

The frontiers are in the southern half of Korea, below the thirty-eighth parallel, where 19,000,000 former subjects of Japan have become, in effect, the confused and bewildered wards of the American Government.

And they are in the Philippines, where a nation of 18,000,000 people has achieved full independence as a republic after 49 years of American tutelage.

AMERICANS BEAR COST

The program in Japan and Korea is costing the American taxpayers millions of dollars. And we still have a moral obligation to assist the infant Philippine Republic to attain full stature among the free nations of the world.

But our interest in the Far East is not entirely altruistic. On the contrary, we have a terribly practical reason for giving moral and financial backing to the Philippine Republic and for attempting to establish democracy and freedom in Japan and southern Korea.

The blunt fact is that these countries now stand as ideological barriers against the spread of communism.

If democracy flourishes where its seeds have been planted, these countries will become an example to the teeming millions of Asia of the benefits and advantages of a free way of life and an inspiration to seek a similar goal.

RED THREAT IS EVERYWHERE

But if democracy should fail, it would be replaced by communism. There is no doubt about that. The threat of it looms ominously everywhere in the Far East. And where communism dominates, the iron curtain shuts out not only ideas and information, but also commerce with the rest of the world.

Consequently, if we intend to develop a profitable foreign trade with the Far East, which has vast possibilities for the future, it is to our interest to keep that part of the world on this side of the iron curtain.

The same logic applies equally to China. But we do not have the kind of responsibilities in China that we have in Japan, southern Korea, and the Philippines.

The story of what we are doing in Japan and Korea is fascinating and amazing. It has never been completely told to the American people, largely because the economic and social changes that are taking place in these countries have been overshadowed by the day-to-day political developments and reports on the progress of military occupation.

As a member of a party of newspaper publishers and editors who were invited by Secretary of War Robert Patterson to make a tour of the Far East, I have had an exceptional opportunity to see at first hand what is going on in that part of the world and to talk with some of those who are responsible for carrying out the reform program and who are affected by it.

Our party of nine newspapermen and two conducting officers left Washington, January 21. We returned February 25, after flying more than 25,000 miles in a special C–54 plane of the Air Transport Command.

ALL DATA REVEALED

On orders from General of the Army Douglas MacArthur, GHQ in Tokyo opened the book and let us look through it. Information of all kinds was made available for background purposes, regardless of previous military restrictions.

We each had personal conferences with General MacArthur and we were given what amounted to classroom lectures by the heads of the various sections of GHQ regarding their activities. In the Army they call this "briefing." But there was nothing brief about it. It was complete and thorough and supplemented by various charts and documents.

Later we toured Japan on the special train maintained by Lieut. Gen. Robert L. Eichelberger, commander of the Eighth Army occupation forces. We went from Tokyo to Hiroshima, where we talked with survivors of the atomic bomb, stopping en route at Kobe, Osaka, and Kyoto.

KOREA FOUND IN TURMOIL

After 16 days in Japan, we flew to Seoul, Korea, where we spent 3 days in conference with Lt. Gen. John R. Hodge and members of his staff and interviewing and being interviewed by Koreans who are unhappy and resentful because their country is split in two parts and because they have not yet been granted the independence they had been promised.

From Seoul we flew to Nanking, China, for an off-the-record conference with Generalissimo Chiang Kai-shek. Then came a day in Shanghai, and a brief look at one of the world's most amazing and crowded cities, where millions of people are engaged in an intense and apparently frenzied daily struggle just to exist.

From Shanghai we flew to Manila, which still bears ghastly scars of savage fighting. And then we headed for home by way of Guam, Kwajalein and Honolulu. It will be my purpose in subsequent articles to describe what we saw and learned on this trip.

Globe-Girdling Gas Bag

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 16, 1947

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD an editorial which was published in the Daily Times, of Mamaroneck, N. Y., April 18, 1947, entitled "Globe-Girdling Gas Bag":

GLOBE-GIRDLING GAS BAG

At first glance, the curious spectacle of a former Vice President of the United States barnstorming through Europe in jaundiced opposition to the policies of the President in whose Cabinet he recently sat would seem to be extremely dangerous to this country's best interests. There is possible danger that foreign audiences may not realize the degree to which Mr. Wallace and the remnants of the New Deal have been discredited over here, both at the polls and in the White House.

Yet it would be entirely contrary to our doctrines of free speech and free travel for our citizens to revoke Wallace's passport. That would be to play directly into Wallace's hands and make him the martyr he would like to consider himself. Let's not dramatize the gentleman any more than he has himself done. For he thrives upon headlines.

Perhaps the common sense thing to do is to give Wallace all the bombastic rope he wishes, trusting that those who shape public opinion in foreign countries are sufficiently well informed not to prove gullible. Already we have witnessed this gratifying result in British newspapers and it is likely the same opinion will be reflected in other nations excepting Russia. There, we may be sure, Mr. Wallace will be played for all he is worth by the Communist-dominated press and radio. But the rest of the world already is so keenly aware of misrepresentation of truth from these sources that the propaganda can be discounted in advance.

While that attitude seems to take care of the foreign repercussions of Wallace's self-exploited one-man crusade, the effect here at home may be of a more positive and of a more concrete nature. At the least, it can only arouse sympathy for President Truman that, beset as he is by momentous problems, he must also suffer, like the Ancient Mariner, from the vagaries of this wandering albatross.

As a matter of fact, we are inclined to the view that Henry Wallace, despite contrary intent, may actually build support here and abroad for President Truman's foreign policies. It would not be the first time that a President was admired for the enemies he had made. For so transparent is Wallace's strategy, so well known is the cause for his personal jealousy, that his attack may prove not only a boomerang upon himself but a potent weapon for Truman in 1948.

We are not among those who cry out that this man is giving aid and comfort to a very potential enemy and that in this aspect his appeal for opposition to American principles borders closely upon the treasonable. Rather, we are convinced that this incident will enhance abroad the good opinion of America, as a country so great it can look with indifference upon a former high official striking with all his might against a policy highly approved by a large majority of our citizenry. That proves surely that we are indeed a democratic Nation sworn to preservation of individual liberties.

And, we repeat, as for the effect here at home, so likely is this junket of Wallace's to prove of political benefit to the man he attacks that we really think President Truman should personally pay all expenses. Wallace, if he keeps on as he is now going, can easily prove to be the best political asset Mr. Truman possesses.

Address by Hon. Alexander Wiley, of Wisconsin, Before Graduating Class of National Service Officers

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, on Saturday it was my pleasure to deliver an address before the tenth graduating class of national service officers conducted by the Disabled American Veterans and other veterans' organizations in the American University. I ask that the text of my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TRANSFORMATION OF THE INDIVIDUAL AND THE NATION

I am grateful for this opportunity to be with you at this inspiring and unforgettable moment in your lives.

One of the real pleasures here tonight is to meet so many of my old friends connected with the American University, with the Veterans' Administration, the Disabled American Veterans, and other veterans' organizations.

MEANING OF THIS OCCASION

These exercises, as you know, mark the culmination of the 10 classes of academic

training for national service officers conducted by the veterans' organizations and the Veterans' Administration with the aid of this splendid educational institution. You gentlemen, comprising a group of 70 graduates, are the last of some 400 men in 10 classes which have had this wonderful training to prepare yourselves in the service of our Nation's veterans.

I am thrilled to be with you here tonight for many reasons.

My primary reason is that it gives me the opportunity to extend my warmest congratulations to all those who have participated in this grand project. They have sown well and they have reaped well.

FELICITATION OF DAV

I want to first congratulate the officers and members of the DAV—the Disabled American Veterans—which inaugurated and initiated this program nearly 3 years ago and which sponsored so many of the trainees.

Some time ago in the United States Senate it was my pleasure to deliver an address on behalf of the $10,000,000 national service fund of the DAV. It is this fund which was designed to maintain the payment of the national service officers. The need for adequate funds for this purpose is as great today as ever, and I am sure that the warm heart of the American people will continue to support this fund in ever greater amount.

Here is an opportunity to use money for a great mission serving those who gave their finest effort for America on far-flung battlefields.

I am reminded of the inscription on a sign which was paraded in Washington after the Civil War. The sign read: "The only national debt that America can repay is the debt that we owe to our ex-servicemen."

I am reminded, too, of Calvin Coolidge's words: "The nation which forgets its defenders will itself be forgotten."

PRAISE OF VETERANS' ADMINISTRATION

Yes; I want to congratulate the DAV and AMVETS. I want also to congratulate the Veterans' Administration under the able leadership of Gen. Omar Bradley. It required initiative, enterprise, and sound planning to design and execute this program. These qualities the Veterans' Administration supplied in abundant measure. May I invite particular attention to the work of my fine friend, Guy Birdsall, who, as you know, did such yeoman work in helping to draft Public Law 16, under which this program operates.

UNIVERSITY'S FINE WORK

Next I want to add a word of sincerest congratulation to the American University and its distinguished president, Dr. Paul Douglass, whom I am privileged to count as friend. Here in this project, as in many others, Dr. Douglass has shown his ability to utilize a great university for the up-to-the-minute needs of America in this age.

THE GRADUATES' ACCOMPLISHMENT

Last, but not least, I want to congratulate all of the current graduates and all those who have preceded you in this course. All of you, as required under Public Law 16, are service-handicapped veterans who have dedicated your lives to the service of your buddies.

Your courage is proved not only by your outstanding wartime records and by this peacetime activity, but by the fact, I understand, that a number of those who have taken this course have gotten married during the training period. Perhaps the greatest sign of courage is that a number of them have also become fathers during this period or are papas-to-be. Lawd, there ain't nothing you and I can't do.

WHY THIS OCCASION IS INSPIRING

I have said that this is a thrilling and inspiring occasion for me, too, and I should like to cite some of the reasons why it is such.

THE VICTORY OVER DISABILITY

1. You men are demonstrating that a physical disability can be not only overcome but indeed rendered meaningless by a triumphant spirit or a noble mission. We recall the words of the Good Book: "Be not conformed to this world; but be ye transformed by the renewing of your mind; that we may prove what is the good and acceptable and perfect will of God."

You men have transformed yourselves, and you are going out to transform others. I recall the other words of the Good Book: "Cease ye from man whose breath is in his nostrils." Cease ye from man who feels physical limitations, who feels mortal sickness, who feels discouragement, and rise to the man of unlimited spirit, unlimited power. What a job—not only to transform self, but to transfer that power and vision to others.

You men are demonstrating the exultation of growth and freedom. I recall a verse:

"Today I am free—and why?
Because I laid away the shell of yesterday,
and with tomorrow's sunrise I hope
To lay away the shell I grow today.
New sky lines burst upon my view—
I know it is the law of life to grow.

"So open wide, ye windows of my soul.
I fear no more—the quest is on,
A hunter for the spiritual goal,
The glory of a God enraptured man.
Gone are the gods of yesterday—
Narrow creed, superstition, hate and woe!
Gone, with other dreams that limit me.
Today, today I am free!"

You remember the Persian proverb: "I was common clay until rosebuds were planted in me."

You are following the inspiring steps of countless others who have demonstrated that physical handicaps can be rendered meaningless. We recall Thomas Alva Edison, the immortal inventor, who suffered the handicap of deafness.

You are following the example of Helen Keller, or of the other great inventor, Steinmetz, the little hunchback, who, were he attempting to enter the United States today as an immigrant, would not even be allowed to be admitted because of his physical impairment.

You men are being transformed by the renewing of your minds and you will transform others. I have seen this happen in the United States Senate too, and in the House of Representatives. I have seen blind legislators and crippled legislators, men without use of their legs or their arms or their sight, who have tapped the invisible source of all power and have emerged triumphantly in the service of their Nation. With Browning, they "counted life just the stuff to try the soul and strength on." Verily, you are called unto a high calling as leaders of men to inspire, to enthuse, and give rebirth to your fellow men.

THE GRADUATES' BUILDING OF OTHERS

I am thrilled, too, for another reason, and that is that you gentlemen are builders and sustainers of the Nation. You not only fought for it, you continue to sustain it.

In your jobs, you are going to make sure that veterans receive the full benefits to which they are legally entitled and which they might otherwise lose because of lack of information or misinformation or technical faults of their claims. With these benefits, the veterans will be better able to serve themselves and their Nation.

In the job of placement officers, you are going to build lives, to locate men in positions which fit their capacities and utilize their every available talent. In so doing, you will be adding productive workers to the economic bloodstream of our country.

THE HANDICAPPED VETERAN IN INDUSTRY

We know that 30 to 40 percent of handicapped veterans have had no previous job experience at all. One hundred percent have had no recent job experience. Thus, adequate training is necessary to bring them up to the starting line, so to speak, where they will have a relatively fair opportunity to show their talents alongside other workers.

Less than 10 percent of our disabled veterans are totally disabled. That means 90 percent are in a position, given the appropriate conditions, to do gainful work.

The handicapped veteran has more than proved himself in American industry, whenever he has been given the opportunity. We know that statistics show that the handicapped veteran, when adequately placed in employment, has a finer production record and a smaller record of disabilities than the average worker. Why? Because he has been psychologically conditioned to practices of safety; yes, because he is anxious to show his stuff in the factory or in the office, just as he showed his stuff on the battlefield. He is eager to cooperate, to learn, yes, to support himself.

You and I know this incontestable truth: that the American disabled veteran wants opportunities, the chance to work, remunerative, appropriate employment, rather than to become a mere recipient of any dole. The disabled veteran wants to live and grow in the American way—through gainful work. What greater service can we perform for any man than to help him, like the Good Samaritan, to help himself, displacing fear with fearlessness, doubt with courage, sadness with joy, dejection with exultation? That is what you men are doing, you builders of men.

IMPLEMENTING CONGRESS' WORK

But you are doing something else also in which I take great inspiration. You are going out in this new profession as combination attorney in fact, special advocate, missionary, preacher, teacher, public relations expert, doctor, fulfilling the mission of the United States Congress in insuring the welfare of our Nation's ex-servicemen. In so doing I know you will be adequate to the responsibility of inspiring faith in our Nation's highest legislature among any men whom you meet who may have been poisoned by doubts about the work of the Congress.

I know that the Congress wants to and will in fact be true to its trust to America's veterans. My own Judiciary Committee, for example, is considering codification of all United States laws, including veterans' laws, as a step toward streamlining the law and making it more understandable. I know that Congress will insure adequate funds for veterans' medical services—the finest medical service in the world for the finest young men in the world, the cream of our youth. I know that Congress is going to assure adequate physical and vocational rehabilitation for America's disabled veterans, assuring the most scientific appliances, and the most up-to-the-minute training.

SECOND-INJURY LEGISLATION

I know Congress is going to encourage American industry to give abundant opportunity to handicapped ex-servicemen. I am proud indeed that my own State of Wisconsin has some of the most advanced legislation on the statute books for veterans' welfare. I refer, for instance, to Wisconsin's so-called Second Injury Law. It has set up a public fund which is drawn upon in those instances where an employer has hired a handicapped veteran and where that veteran has suffered a new injury which was aggravated by his old injury. This fund, by its very existence, encourages employers to hire handicapped men. Actually, statistics show that it has been drawn upon only in an infinitestimal amount and has thus constituted a great aid, at insignificant expense, to the people.

One of your great champions in the House of Representatives, Mrs. EDITH NOURSE ROGERS, of Massachusetts, has introduced H. R. 2713 at the DAV's request, to assure Federal reimbursement "to any employer, insurer or fund of amounts of workmen's compensation" paid on account of injury suffered by service-disabled veterans. I am going to introduce companion legislation in the Senate.

CONCLUSION

My friends, I have said that this occasion is one for congratulations of all those, particularly the DAV, the Legion, the VFW, AMVETS, the Veterans' Administration, the university, who have participated in planning and executing this program, principally of congratulations to you men. You are going out to transform others as you yourselves have been transformed, to build and sustain the great values of America, to dedicate yourselves in selfless activity on behalf of your buddies.

Seeing you men here tonight gives me renewed courage that America can transform itself so that it too can be adequate to its responsibilities to its veterans, to all of its citizens, and to its own destiny in our time and in time to come.

You are raising a standard for all to see and follow; for you know that "life means to transform in light and flame all that we are or meet with."

Good luck and God bless you.

Josephus Daniels—An American

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Drew Pearson entitled "Josephus Daniels—An American" which appeared in Sunday's newspapers.

Mr. Daniels served with distinction as Secretary of the Navy for 8 years throughout the Woodrow Wilson administration, and made a great record as American Ambassador to Mexico during the Roosevelt administration. This article is in commemoration of his eighty-fifth birthday and pays just tribute to a great American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOSEPHUS DANIELS—AN AMERICAN

(By Drew Pearson)

When the last surviving member of the Woodrow Wilson Cabinet achieves the lusty age of 85, and when on that birthday he still writes a daily editorial and keeps his sense of humor and his same sane philosophy on life, and when he is just as great an inspiration to his neighbors and to his family and the Nation as Josephus Daniels—that's news. And it's more important news than anything I could dig out of a Cabinet meeting or salvage from the back door of a congressional committee room.

So today, on his eighty-fifth birthday, I'm going to write about Josephus Daniels.

One reason I like Josephus Daniels is because, though he's held high position, has "walked with kings," been flattered by admirals, been taken up on the mountain, he's never lost the common touch. He has remained just the same.

His story is a story which perhaps could happen only in America. His father died when Josephus was 2, and his mother opened a millinery store to support her three sons. From this, Josephus Daniels rose to become Navy Secretary in World War I and to hold that post longer than any other man in history.

The years between had not been easy. Later his mother was appointed postmistress at Wilson, N. C., and put Josephus and his brothers to work in the post office. His job was to light the fires, clean out the building, and distribute mail. Finally he got permission to set up a little newsstand in one corner of the post-office lobby, and at the age of 18 he branched out as editor of the Wilson (N. C.) Advance. From then until this day Josephus Daniels has been, first and last, a newspaperman.

BALL CLUB MANAGER

This was one of the taunts hurled at him when he was Navy Secretary. Daniels had riled the admirals by proposing revolutionary reforms. He had banned wine and liquor from the officers' mess. He insisted on promotion from the ranks and inaugurated the practice of making 100 enlisted men eligible each year for the Naval Academy. He also pushed education for enlisted men.

In fact, Daniels was such an enemy of the brass hats that finally they stirred up charges that he was a meddling Sunday school teacher and political hack whom Wilson was rewarding for past favors. Today, however, fair-minded naval officers who look back on the Daniels regime admit that on the whole he probably did more for the Navy than almost anyone prior to Franklin Roosevelt.

Josephus has said, with that boyish grin of his, that, as Secretary of the Navy, he achieved two of his greatest ambitions: to be manager of a big baseball team and to hear a brass band play every day. The Navy gave him a number of service teams and brass bands galore.

It is significant that Daniels, Sunday school teacher that he was, was far ahead of his time when it came to the airplane and to the unification of the Army and Navy. As early as 1926, when Douglas MacArthur had helped convict Gen. Billy Mitchell of insubordination in advocating air power, Daniels defended him.

"Mitchell," he said, "was sincere in his desire to promote aviation, and perhaps hit no harder than was necessary, to wake up the country."

A few years later, Josephus uttered these prophetic words which, of course, his old friends in the Navy didn't like at all:

"The real need in preparedness is to abolish the offices of Secretary of War and Secretary of the Navy and substitute a Secretary for National Defense with subsecretaries in charge of each department. That would synchronize defense operation under one head and would have the advantage of preventing a great deal of duplication and inefficiency which prevails under the present system."

It took more than 15 years for others to come around to this view in the present Army-Navy merger now before Congress.

FIRST LOVE LAST

When Josephus Daniels finally resigned as American Ambassador, as he neared the age of 80, most people would have considered him entitled to rest. He had seen his country go through virtually four wars—the Civil War, which was raging when he was born; the Spanish War, the First World War, in which he played a vital part, and the Second World War, which was just beginning.

Instead, Josephus went back to work—back to his first love, newspapering. And every day of the week, Josephus gets up at 5 or 6 in the morning, bats out his daily column or editorial, comes home for a short rest after lunch and then sits down in the afternoon to work on his book.

I saw him not long ago at the funeral of another great North Carolinian, Max Gardner, and Josephus looked as sprightly as any youngster there.

In this impatient and intolerant world, Josephus Daniels has contributed fourscore years of serene and unselfish service. And his friends hope that he will be batting out those wholesome editorials and doing these same thoughtful things for his neighbors for many more years to come.

President Alemán's Visit to the United States

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. CHAVEZ. Mr. President, some days past I made a short address in the Senate with reference to the visit of President Alemán, of Mexico. I have received a letter from the Ambassador of Mexico to the United States and one from the Honorable Josephus Daniels. I ask unanimous consent that the two letters may be printed in the Appendix of the RECORD.

There being no objection, the two letters were ordered to be printed in the RECORD, as follows:

EMBAJADA DE MEXICO,
Washington, May 13, 1947.

The Honorable DENNIS CHAVEZ,
Senator for the State of New Mexico,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR CHAVEZ: On pages 4569 and 4570 of the CONGRESSIONAL RECORD of last Tuesday, May 6, I had the pleasure of reading the timely statement you made in connection with the recent visit of His Excellency Miguel Alemán, President of Mexico, to the United States.

While I was not at all surprised, for, indeed, you are well known throughout both our countries as the great humanist who loves and understands the people of both nations and constantly labors for their mutual understanding and cooperation, this excellent statement of yours records for the future, in the minutes of the Congress, the great importance of the visits of President Truman to Mexico and President Alemán to the United States as an important demonstration of the intimate relationship that happily exists between our respective Governments, the genuine representatives of the two peoples.

Accept, my dear Senator CHAVEZ, my congratulations for your brilliant statement and my sincere appreciation of the kind concepts enunciated therein.

Very cordially yours,

ANTONIO ESPINOSA DE LOS MONTEROS,
Ambassador of Mexico.

THE NEWS AND OBSERVER,
Raleigh, N. C., May 14, 1947.

The Honorable DENNIS CHAVEZ,
United States Senate,
Washington, D. C.

DEAR FRIEND: Your cordial words of commendation of my service in Mexico was another evidence of your friendship which you

know I fully reciprocate. I thank you for sending me a copy of the CONGRESSIONAL RECORD containing it.

Among the happiest days of our stay in Mexico was when you and Mrs. CHAVEZ came down. My wife held your beloved in sincere friendship, and so do I.

With an abrazo to her and affectionate regards to you,

Faithfully,

JOSEPHUS DANIELS.

Nomination of Philip Perlman

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. TYDINGS. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from last Saturday's Baltimore Sun, pertaining to the nominee for Solicitor General of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. PERLMAN SHOULD BE CONFIRMED BY THE UNITED STATES SENATE

In an ideal world, perhaps, men who will take part in public affairs would have no interest whatever in private affairs. Specifically, Mr. Philip Perlman, the Baltimore lawyer whose nomination for Solicitor General of the United States is now before the Senate for confirmation, would have had no private clients. His extraordinary legal reputation would have been made solely on the basis of his disinterested and gratuitous advice to mayors, governors, and public officials generally.

But thoughtful people know that, in the real world, the man who devotes himself to the public service still has to have a private source of income. If he is a competent lawyer, his talents will be sought out by important corporate interests. Inevitably such corporate interests will have dealings with officials and legislative bodies. On occasion, such a lawyer will find himself facing a conflict of loyalties. Of course, it is not only lawyers who have such conflicts. Nearly every man who concerns himself, however indirectly, with public affairs, has to face such a conflict at one time or another.

The specific criticism made of Mr. Perlman before the Senate subcommittee now considering his appointment is that, while he was acting as adviser to Governor Lane at the last session of the general assembly, he was also representing the Baltimore Transit Co., which opposed certain measures up for passage. These measures were passed by the assembly but vetoed by Governor Lane. The inference is that Mr. Perlman improperly used his influence with the governor and that his client, the transit company, thus benefited at the public expense.

The Sun is in a reasonably good position to comment on this criticism because it argued before the legislature in favor of the measures which the transit company opposed and later urged, however unsuccessfully, that Governor Lane sign them.

The important factor here is that there was no secrecy about what was going on. Mr. Perlman was openly representing the transit company in this matter. He and his clients had a case and, to many honest and disinterested citizens of the community, it was a good case. Punitive taxes on our public transport system could well harm all of us. The basic issue was whether the city be given larger taxing powers over the transit company or its powers should be limited. The Sun argued in favor of a greater measure of power for the city. The Governor decided in favor of restriction, presumably because Mr. Perlman and his clients presented a more convincing case.

It so happens that we still regard our position as the sounder one. But it is certainly no reflection on Mr. Perlman, nor on the Baltimore Transit Co., nor on the Governor, that their conclusion was different. Some United States Senators, coming from communities where the public utilities are still in the rapacious stage and where corruption is automatically suspected, may take another view. Undoubtedly some people in Maryland, too, suspect everyone who touches utilities. But our observation is that, in general, the local utilities are straightforward, lay their proposals frankly before the public, and abide by the decision reached. The community is reasonably certain that all concerned have acted in good faith.

Clearly that is the view entertained by the whole Maryland delegation in the Congress, both Democrats and Republicans, all of whom have testified to Mr. Perlman's character, as well as to his professional ability. It is our belief that the Department of Justice will be fortunate to command the services of so distinguished a lawyer.

Nomination of Jed Johnson

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Rotten Business," which was published in the Washington Evening Star of May 12, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A ROTTEN BUSINESS

A Senate judiciary subcommittee has opened up a chapter in the official career of Harold Ickes which smells to high heaven.

Mr. Ickes, who yields to no man in the breast-beating school of liberals, found himself with a problem on his hands back in the spring of 1945. Jed Johnson, then a Representative from Oklahoma, was slashing into Interior Department appropriations. If Mr. Ickes is to be believed, Mr. Johnson was doing this for the highly improper purpose of coercing the Interior Department to do his bidding. So Mr. Ickes, who is nothing if not resourceful, hit upon the idea of enticing Mr. Johnson out of Congress with an offer of appointment to the Federal bench. There was, of course, the consideration that if Mr. Johnson was not worthy of being a Representative, he was still less worthy of a place on the judiciary. But Mr. Ickes, in the best tradition of his own peculiar brand of liberalism, was able to rise above this obstacle to his scheme. He went to the late President Roosevelt, stated that he did not consider Mr. Johnson qualified to serve on the bench, and then proceeded to persuade the President to make the appointment.

That particular deal fell through because Mr. Johnson was not ready to leave Congress, and he stayed on until the voters retired him. Now, however, someone has induced Mr. Truman to send his name to the Senate for another judicial post, and we find Mr. Ickes, recast in the role of good citizen, virtuously opposing his confirmation.

This is more than an incident which reflects a disdain amounting to contempt on the part of all concerned for the proper place and function of the Federal judiciary. It is, in fact, as thoroughly rotten a piece of business as has come to light in many a day.

Housing Needs

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial entitled "Americans Without Homes," published in the New York Times of May 13, 1947, urging the enactment of the Taft-Ellender-Wagner housing bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICANS WITHOUT HOMES

New York City needs between 75,000 and 100,000 new homes. That is to say that many families need homes. The national need is a good deal more than a million, but that figure was set early this year by President Truman, Housing Expediter Creedon and National Housing Administrator Foley as desirable and attainable in 1947. The first claimants on these non-existent homes are veterans. A Census Bureau survey made last summer, announced last March, showed that between 30 and 40 percent of married veterans are living in rented rooms or "doubled up" with relatives. The situation is growing worse instead of better. Over the week-end the Bureau of Labor Statistics reported that the number of new dwellings started in this city had dropped from 2,650 in April, 1946, to 650 in April, 1947. Figures for other cities cannot be much different. Translated into human terms, as they should be, they stand for broken promises, broken families and frustrated lives.

A good part of this lag is due to the inability of builders to produce houses at prices the buyer or renter can afford to pay; and a good part of that inability comes from archaic methods in the housing industry, plus an increase in building trade wages with no increase, and even a decrease, in man-hour productivity. If housing were organized on a permanent footing, with a long-term program, these difficulties might be ironed out. The Taft-Ellender-Wagner bill (a revision of the Wagner-Ellender-Taft bill, which passed the Senate last year but died in a House committee) is intended to do this. It cannot do it this year, even if passed before Congress again adjourns. But it offers hope for the future.

The bill is not socialistic. Out of a hoped-for 10-year total of 15,000,000 American homes it contemplates the erection of 500,000 in 4 years with the aid of Federal subsidies. These subsidies would rise to a maximum of

$150,000,000 in 5 years. They would be supplemented by State and city subsidies or tax abatements. The bulk of this vast program would be achieved by private enterprise, with Federal cooperation to provide loans, credit and technical information.

The Taft-Ellender-Wagner bill does not have priority in Congress. It will need support from people who believe in the American home—as who does not when the statement is made in that form? The Citizens' Housing Council yesterday made public a list of 100 community organizations in New York City, representing all religions and many interests, which are behind it. Behind such organizations in the Nation are millions of people, many of them tormented by the absolute impossibility of a decent home under present conditions. Surely Congress should listen to these voices.

MacArthur Plans for 1,000 Years and Vast United States-Far East Trade

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include herewith the following article from the Cleveland Plain Dealer by Ralph J. Donaldson:

MACARTHUR PLANS FOR 1,000 YEARS AND VAST UNITED STATES-FAR EAST TRADE

(Article 3)

The dominating personality of the occupation and rehabilitation of Japan is General of the Army Douglas MacArthur. He is the real ruler of Japan, as everyone knows, including the Japanese.

Sometimes visitors who have had the privilege of talking with General MacArthur and listening to him tell of his plans for the future of Japan come away with the impression that they have had an audience with a chief of state, a benevolent ruler more powerful than the Emperor ever was before the occupation.

In some respects they are not far wrong. But to explain how this impression is created it is necessary to understand that MacArthur, as the saying goes in the Army, wears three hats.

First of all, he is CINCFE, an abbreviation which stands for Commander in Chief of All American Forces in the Far East. When he is wearing this hat his major commands include the American Eighth Army, the ground force which is occupying Japan; the United States Naval Forces in the Far East (NAVFE); the Far East Air Forces of the United States Army (FEAF); the United States Army Forces in Korea (USAFIK); the Philippines-Ryukyus Command (PHILRYCOM); and the Marianas-Bonins Command (MARBO).

Then he puts on another hat and becomes SCAP—supreme commander for the Allied Powers in Tokyo. In this capacity he not only bosses the Allied land, sea, and air forces which are occupying Japan, but he issues directives to the Japanese Government and sees that his orders are carried out.

Finally, in relations between Japan and other governments, MacArthur represents IJG—the Imperial Japanese Government. He is the government, in other words. Diplomatic missions from other countries are accredited to him, rather than to the Japanese Government, which is not permitted to have diplomatic relations with other governments. All communications between the Japanese Government and other nations pass through SCAP.

Someone said jokingly that MacArthur ought to send a diplomatic mission to Washington to establish closer liaison between SCAP and the American Government. It might not be a bad idea, at that.

Thus, it is necessary, when talking with MacArthur, to know which hat he is wearing. If he uses the personal pronoun in discussing the necessity or desirability of negotiating a loan or arranging for food imports from the United States, he is speaking in his capacity as the actual ruler of Japan, rather than as the commander of a military occupation force.

When he talks of his program for the future of Japan, he is speaking as the supreme commander for the Allied Powers who is charged with the duty of instigating economic, political, and social reforms which will make Japan self-sufficient economically, give her a stable and representative government, and establish the rights and dignity of the individual Japanese citizen.

But regardless of which hat he is wearing, MacArthur does not fail to impress his visitors and to cast a spell over them. He has the same boundless optimism for the future and the same supreme confidence in his own ability to perform miracles that he had in the darkest days of the war.

HIS VICTORY PLAN WON

When the Japs were threatening Port Moresby and Australia was under air attack, other generals were thinking only of defense. But MacArthur was thinking only in terms of attack, and the plans that he formulated in those days were later carried out as soon as he had the men and equipment to do the job.

Today MacArthur is thinking in terms of the future—not the next 3 or 4 years or the next decade, but the next 1,000 years.

He sees Japan today as a nation which is ripe for inculcation in the democratic way of life and the principles of Christianity. Today he believes the Japanese people are the most pacifistic on the face of the earth.

They were oppressed by their own war lords in peacetime as well as during the war. Today they are battered and beaten and disillusioned, but they have had a glimpse of what freedom can be like, and they are determined to have it permanently.

In the Japan that MacArthur is building for the future the people will control their own government, there will be no expensive military establishment to drain away the resources of the country, workmen will be paid fair wages so that they can live decently and their products will not compete unfairly with those of other countries, and the rights of individuals will be respected.

In such a Japan, MacArthur believes, the opportunities for trade with the United States and mutual profit are virtually unlimited. Horace Greeley advised the adventurous and pioneering youth of America to go west. MacArthur advises them to keep on going in the same direction until they come to the Far East. There lies the future of America, he believes.

If we establish a real democracy in Japan and encourage the spread of democracy in the rest of Asia, MacArthur sees the time coming when the principal trade routes of the world will be across the Pacific, with the raw materials of Asia being transported to America to be processed into finished products and being returned for sale to the people of the Far East.

It is against the background of this vision of the future that the events now taking place in Japan must be interpreted.

Old Stuff (and Nonsense)

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Old Stuff (and Nonsense)," which appeared in the Washington News of May 1, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OLD STUFF (AND NONSENSE)

Labor-union leaders aren't too smart in screaming that legislation they oppose would bring on chaos, disorder, depression, regimentation, and slavery.

And they aren't at all original.

Down through the ages, the beneficiaries of status quo and special privilege have always raised just such cries against proposals for change.

In our own country, it wasn't so long ago that workers who wanted protection for their right to organize unions were denounced by employers as anarchists plotting to undermine the foundations of society.

Plenty of statesmen, and even preachers, defended chattel slavery as an institution ordained by God for the uplifting of inferior races.

The Government-owned postal system—many businessmen thought—would mean the beginning of the end for private ownership of property.

Pure food and drug laws were sure to wreck businesses and starve our people. Pasteurized milk was an assault on the freedom and the very existence of dairy farmers.

Regulation of railroads and public utilities was certain to destroy free enterprise. Antitrust laws would spell stagnation for industry and permanent unemployment for millions.

Equal suffrage threatened our noble womanhood with degradation. Laws against child labor would deprive parents of the direction of their children and wipe out the incomes of widowed mothers.

Federal regulation of stock exchanges and security issues was an open invitation to national disaster. And only recently the National Association of Manufacturers saw in Government control of atomic energy a dark plot to socialize patents and stifle invention.

All this doesn't mean that Congress can afford to ignore the danger of going too far in writing labor legislation. It does justify belief that legislation can be written to regulate unionism in the public interest with no such disastrous consequences as the union politicians are predicting.

This on the basis of past experience. For all this old hokum about chaos, disorder, etc., has been used before. And the things that were going to bring destruction became law and were accepted, while the dire prophecies that greeted them are almost forgotten.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Echoing Richard Whitney," which was published in the Washington News of May 19, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECHOING RICHARD WHITNEY

Bill Green, Phil Murray, and other union bosses are denouncing the Hartley and Taft labor bills with equal vehemence. Though the measures are in many ways dissimilar, both are called vicious proposals to enslave labor.

Such language is all too reminiscent of what we heard 13 years ago from Richard Whitney, then president of the New York Stock Exchange, about the truth-in-securities and the stock-exchange control bills.

"Those measures," said Mr. Whitney, "were a matter of grave concern to every owner of real estate or securities." They were a "new menace to national recovery." All businessmen should "acquaint themselves with some of these vicious provisions." And more—

These powers are so extensive that the Federal Trade Commission might dominate and actually control the management of each listed corporation. * * * Other provisions * * * will affect listed corporations * * * by destroying the market for their securities.

Yet Congress, in its wisdom, passed that legislation to curb the abuses of Mr. Whitney's Wall Street crowd. His lamentations to the contrary, America went right on doing business in the American way.

So, too, this new Congress, in its wisdom, will pass legislation to check the abuses of the labor bosses. And free American workers will continue to work, or refrain from working, in the old American way.

Land Monopoly

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial which appeared in the Washington Post on Monday, May 19, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAND MONOPOLY

Repeal of the acreage-limitation provision of the reclamation laws, advocated by the Senators from California in respect of Central Valley, would work far more than a mere local injury. It would undermine a long-established principle of land distribution. We have avoided the development of a landed aristocracy in this country because, from colonial days, when Thomas Jefferson first persuaded the Virginia Legislature to abolish the legal devices of entail and primogeniture, American laws have been fashioned to encourage widespread independent family farming. Thanks to such laws, we have escaped the kind of peasantry so prevalent in Europe, and it is not too much to say that independent farming has been the backbone of rural democracy in the United States.

What the homestead laws of the mid-nineteenth century did with respect to unappropriated public lands, the reclamation laws, first enacted in 1902, did with respect to private lands made arable as a result of public improvements. In order to prevent monopoly and its twin evil, speculation, the reclamation laws place a ceiling on the amount of water, developed at public cost for private benefit, which may be made available to any single landowner. The maximum is the amount of water necessary to irrigate 160 acres, or 320 acres for man and wife. Large landowners who want the benefit of irrigation water made available by public works are required to sell their holdings in excess of this amount at valuations held to be reasonable by local boards.

Prof. Paul S. Taylor of the University of California has estimated that the water to be provided as a result of Federal construction of dams in the Central Valley will give the holder of 320 acres an annual subsidy ranging in value from $3,200 to $8,000, depending upon the amount of water he requires. But in Tulare and Kern Counties, Calif., he says, some 20 landowners own about 360,000 acres and the value of assistance conferred upon them if the acreage limitation were repealed might run as high as $8,000,000 a year. Furthermore, the sales value of their land would be multiplied. It would be, in our judgment, altogether improper to utilize a Federal project, paid for out of tax revenues from the entire country, for the enrichment of a few fortunate individuals.

Even more urgent, however, is the consideration that land reclaimed through the reclamation laws should be used to give independent families, veterans' families especially, a stake in agriculture. The great Federal undertaking in the Central Valley should benefit not a few but many families.

The Howl for Housing

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Los Angeles Daily News of May 7, 1947, by Ralph E. G. Harris, who points out that the present housing shortage in California is estimated to be 743,568 units and calls for modernization of the so-called housing industry and for immediate passage of the Taft-Ellender-Wagner housing bill.

The editorial follows:

THE HOWL FOR HOUSING

Despite the play given other news, housing refuses to take a back seat. The reason this is so, as everyone knows, is that millions of Americans (including at least a million Californians) desperately need a place to live. And when people need something desperately that something shapes into a persistent, nagging issue no glut of other events can push aside.

This week, for example, the O'Gara report has found its way into print. Meanwhile, the Senate Banking and Currency Committee has reported out favorably (by a narrow 7–6 vote) the Taft-Ellender-Wagner housing bill. Thus, on both State and National levels, housing is carrying on and reviving itself as perhaps the primary domestic postwar issue.

The O'Gara report is recent stuff. It has been compiled by the joint senate-assembly committee, headed by Senator Gerald J. O'Gara, of San Francisco, as the result of hearings conducted throughout the State since mid-February of this year. What it offers is a trenchant recapitulation of a Statewide disaster toll—the toll inadequate housing has taken in juvenile delinquency, public health, welfare, morals, and, most of all, unhappiness in the lives of thousands of individuals. What the O'Gara report says to all citizens is that California's housing crisis should make them sick. It should make them sick that this great Commonwealth and this great Nation, with their immense resources and wealth, should bow down before selfish lobbies or give way to ennui and indifference, while masses of simple, decent citizens are deprived of the minimum benefit our vaunted technological progress and know-how can and should make possible—the benefit of a roof over their heads.

But the O'Gara report also says there is no single or simple cause for the State housing shortage—estimated at 743,568 units—and therefore certainly no simple or single solution. As nearly as a single cause can be assigned, however, the so-called building industry must share major blame. Actually we have had no building industry, as we Americans are accustomed to understand the noun "industry." We have had, instead, a collection of unorganized, primitive hammer-and-hand-saw trades, fouled up in a scarcity labor market they have made for themselves. As an industry, house building is both undercapitalized and hamstrung by woefully inefficient methods. In short, for a nation which but a short time ago had tanks and planes and ships pouring out of its ears, house building is a hold-over from the primitive past.

The way out of primitivism and into modernism is either by evolution or revolution.

Frankly, what needs to be said plainly and understood plainly these days is that revolution is the only way out for housing. If we sit around waiting for evolution, the homeless may as well start building sod houses or igloos.

Today, with millions unable to find decent shelter, with families increasing faster than low-cost housing can be built or financed by the old methods, there's only one road open: the road to a total revolution in residential construction and community development.

This is precisely what the old fogeys in the housing and real-estate business fear. Knowing their time-tested procedures will produce profits for a few and houses for a few in a snug little scarcity market, they measure the future by their fears and label as socialistic any attempt to meet the problem on a heroic scale.

The National Housing Commission Act, reintroduced at this session of Congress by Senators TAFT, ELLENDER, and WAGNER, is an attempt to deal with a big problem in a big way. Essentially, the bill has a dual aim: to encourage maximum building by private enterprise (through a variety of inducements

to individual investors), and to provide Government-financed low-rent housing not attractive to private investment.

The maximum cost of the T-E-W program is estimated at $150,000,000 per year.

The O'Gara report recognizes California's housing disaster is the result of national factors. It stresses the need of Federal assistance.

Soon, the T-E-W bill will reach the floor of the Senate. Its fate there will depend upon how many Americans—including, it is to be hoped, a host of home-seeking Californians—get up on their hind legs and howl.

There are still housing and real estate lobbyists who are howling that no Federal housing program is needed. Can the voice of the people drown them out?—R. E. G. H.

Political Contrast

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I desire to include in the RECORD an editorial that appeared in the St. Louis Post-Dispatch on May 15. It seems to me after reading this editorial that somebody is indeed very, very small. It follows:

POLITICAL CONTRAST

President Truman, Democrat, repairs old slight to a predecessor, Herbert Hoover, by signing bill to rename Boulder Dam in honor of former Republican President with whom that great public work is identified, and Republican-controlled Missouri House banishes to a committee that rarely meets a resolution calling for acquisition of a portrait of Mr. Truman for the State capitol.

Somebody is mighty small and that somebody is not the Missourian in the White House.

Pastor Niemoeller's Farewell Message to the American People

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1947

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including a letter from Pastor Martin Niemoeller to Rev. Frederick J. Forell, of New York City.

God-fearing Americans of every faith will be deeply impressed by Pastor Niemoeller's sobering appeal.

The letter follows:

NEW YORK, *May 8, 1947.*

REV. F. J. FORELL,
New York, N. Y.

DEAR BROTHER FORELL: Some months ago I came to the United States at the invitation of the Federal Council of Churches, as you know, and I am profoundly grateful to them for all the opportunities afforded to Mrs. Niemoeller and myself of fellowship with the Christians and Christian churches in this country; and we hope that our visit may have strengthened the feeling of Christian solidarity.

Now we are preparing to return to Germany, and in this moment it is a great encouragement, indeed, to learn that Christian friends here have formed the Emergency Committee for German Protestantism. More than once I have been asked to give a farewell message to the American people; now it seems most appropriate to convey this earnest word to you and through you as secretary of this new and important committee.

Certainly I have met with astonishing interest in the fate of central Europe and with real concern about what happens to the people in Germany today, but, on the other hand, I have met also with such an extraordinary amount of indifference and even vindictiveness, and with so many misleading statements on the present state of the spiritual as well as the physical conditions in Germany, that I feel rather at a loss what to do.

Thus, I thought it best to write you and to ask you that you might give this letter, or its contents, to such pastors and Christians in this country who really care. There is no sense in stirring the press, but there may be, after all, some sense in stirring the hearts, for the one hope which I brought to this country and which has not been shaken, but strengthened, is hope in the love of Christian fellowship.

And, once more, this does not mean the same thing that it was to me 5 months ago. I have learned a great deal about the difficulties in this country connected with church cooperation and Christian organization. But I, myself, will never break with a fundamentalist because he believes in things in which I do not believe, and I never will separate from a liberal because he does not believe in things in which I do believe. But I shall stay a brother to everybody who puts his only trust and hope in my Lord and Saviour, Jesus Christ, and I am sure that the rest will be taken care of by God's Holy Spirit, according to the promise of Christ. I must say a similar thing with respect to political convictions.

I can't deny anybody being a Christian because he is opposed to my political or economic views, and I cannot even dissociate myself from radicals on both sides, for whom I feel responsible as fellow human beings, on whose behalf Christ died, as He did for me.

I have met lots of Christian people of all sorts of creeds and denominations, of all sorts of political and economic views, who really are concerned about what is happening in the world today and who wish to do everything to help make good what has been destroyed by men's greed of power and by men's self-righteousness. It is to such people that I appeal.

All Europe today is in a state of complete break-down; with few exceptions the nations suffer from hunger and obvious starvation, aggravated by the consequences of the worst winter for nearly 150 years. As far as I can see, there is no country in whole Europe today, where the situation is more discouraging than in Germany itself.

The winter in Berlin has been the very worst since 1799. You have heard that in Berlin during the last months more than 2,000 people have frozen to death, according to the reliable report of Bishop Dibelius. I have similar reports even from the Ruhr, where people died from cold right on top of one of the world's most productive coal supplies. My own daughter-in-law spent this winter on her sickbed, only a few miles from the Ruhr, the temperature never exceeding 5° below freezing point.

Who will answer for this misery? God knows. But, who will help to overcome it? That responsibility is ours.

And even now, the despair is growing. When I left Germany in the beginning of December, the food ration was nominally 1,500 calories—that is, three-fifths of a normal minimum; but actually it was only 1,200. Today it is once more 1,550, but according to a report of the Associated Press, published in Staatszeitung of May 4, many people in the British zone received, during the last weeks, only 900, and for this week, only 700 calories. That means less than the lowest ration ever heard of in a Nazi concentration camp, and I guess that even the normal plain breakfast in this country contains considerably more than that amount.

In any case, 700 calories are only a quarter of the normal British food ration, which is blamed to be absolutely insufficient in an article of New York Times of May 7. This situation means starvation in the strict sense, but yet it means more.

Since the end of hostilities and the unconditional surrender of the German nation to America and her allies, at least 6,000,000 Germans have disappeared. During the Moscow Conference it was reported that only some 800,000 to 900,000 German prisoners of war are left in Russia, instead of the estimated number of about three and one-half to four millions; and according to a member of the Hoover delegation, instead of 10,000,000 evacuees from the eastern provinces and countries, taken over by Poles and Czechs, only five and one-half to six millions have arrived in the western zones.

People who know these facts and are facing now the general starvation in the western zones can't help thinking that this whole development is nothing else than the Morgenthau plan put into action, with the tendency to exterminate a whole nation to its very roots. It is impossible that out of this seed of renewed hatred anything good can result. People have hoped that, with "unconditional surrender," the victorious nations would take the responsibility for those who gave themselves away into their mercy. In fact, the responsibility rests with the victors, but only little hope is left that this responsibility may be realized.

In the judgment of my suffering people, my trip to America will appear as a failure, and I shall have to answer for it, when they will ask me: "Is that all you spent 5 months abroad for—that we are starving now on 700 calories instead of 1,550 as at your departure?" What shall I tell them?

But I must speak a word to my Christian friends and brethren, and to this end I am writing you this letter. I know that it will be impossible to overcome the European disaster just by Christian relief work, in spite of all efforts. Unless there will be a change in international policy, nothing of real effect can be achieved. These are facts, and it is of no value to argue about them. And yet, there is one thing that can be done, and one need which might be overcome, if only Christians will begin to see the issue and to do what they really can do.

People who are suffering today and who are facing the death of starvation—and that means many people in Asia and in central Europe, and practically the whole of Germany's population—are not only facing physical death. In a way we have done so all the time Hitler was in power, when every sense of security had gone because of the Gestapo's rule of terror.

But people are being convinced now that the whole propaganda for democracy has been an illusion, worse even than Hitler's propaganda. For everybody knew or soon came to know that Hitler personally did not admit any authority superior to himself; but the Western Powers propagated human and Christian principles, and asserted that they were fighting for the validity of these principles. This faith has been utterly shattered, and, what is even worse, with this faith the trust in any truth and humanity has been

destroyed. The result is Nihilism, and the dying people today die cursing God and man.

According to the understanding of people maddened by unparalleled suffering, all contributions of the victorious powers to keep the food supply on a level of about 1,500 calories, are made only in order to hide the actual extermination of millions behind the screen of insufficient help. Thus, it is not only their body that dies; it is their soul which becomes ruined and lost; for they starve in hatred and vindictiveness with a last unspoken curse in their hearts. It is this terrible distress that makes me speak and cry for help from my Christian brethren in this country.

I am pleading: send personal parcels with food and personal letters to everybody you know. Maybe, you may save lives in doing so; but that is not even my main concern. You may bring a last glimmer of hope into a soul in despair; you may help one man or woman to cease cursing and regain faith in God and man; you may become God's messenger of Christ's love and help people to die at least in peace, reconciled with earthly suffering and grief.

As soon as I shall be back in Europe I shall send over hundreds and hundreds of addresses and have them distributed through my friends to parish pastors, who will hand them over to all who wish to help.

May God bless you, dear Brother Forell, and all you do in order to mitigate the suffering of people who have paid more than eye for eye and tooth for tooth for their credulity in a new "savior" and may our one and only Saviour have mercy upon us.

Yours in His service,

MARTIN NIEMOELLER.

Time Is Running Out

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I respectfully submit a copy of an editorial from the New York Times of date May 9, 1947, as follows:

TIME IS RUNNING OUT

Congress seems to think it has a good excuse not to consider universal military training at this session in the failure thus far of the President's committee to report to him its conclusions. The President's assurance that the report will soon be made and that he will again try to obtain congressional action indicates that this excuse soon will be shot out from under our national legislature.

We hope that the President's announcement will stir the committee to some action soon. As Paul H. Griffin, national commander of the American Legion, noted yesterday in urging the President to call the attention of Congress to this legislation, even a preliminary report by the committee would be preferable to further delay. After hearing 200 witnesses at 14 meetings, the committee must have some idea of what its report will be.

The question is too important to be permitted to go by default, even if the committee does not immediately report to the President. Universal training is one of the legs of the three-legged stool on which our national security depends, as General Marshall pointed out in his last report as Chief of Staff, in October 1945. It is the democratic way to prepare for national defense, it is the efficient way, it is the necessary way. The Eightieth Congress has no more important duty than to frame, to consider, and to enact some system of military training of America's young men. Time is one element that once lost never can be recovered.

The Greek Program

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 19 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Greek Program," which appeared in the Washington News of May 19, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE GREEK PROGRAM

The $300,000,000 the United States will spend in Greece under the Truman program will be divided equally between civilian and military outlays. Civilian expenditures will be apportioned thus:

For consumer goods and to control inflation, $80,000,000; for roads, railways, and docks, $50,000,000; for seeds, fertilizer, pesticides and farm equipment, $20,000,000.

This is at least half the answer to Henry A. Wallace's assertion that we should be sending trucks and tractors to Greece, instead of guns and bombs.

Yet, without troubling to correct false impressions he previously has created, Mr. Wallace, at Austin, Tex., again denounced the Truman doctrine, saying:

"The people of Norway, Denmark, and Sweden want tractors, plows, fertilizer, and power equipment, not bombers and fighters to use against a friendly neighbor."

Of course, no one has offered to send the Scandinavian countries bombers or fighters to use against anyone. And they haven't asked us for farm equipment. But if they want it they can get it, and on most favorable terms. Mr. Wallace, who should know this, misrepresents the situation to further his pro-Soviet propaganda.

Half of the American fund for Greece is allocated for military defense measures. But for defense against whom? Against the Yugoslavs, Albanians, and Bulgarians, who are conducting an undeclared border war against the Greeks at the behest of Mr. Wallace's friends in Moscow.

The entire $300,000,000 could be devoted to the economic rehabilitation of Greece if the Slav-Communists, whom Mr. Wallace defends, would call off their dogs of war.

Robert Kirkland Henry

MEMORIAL ADDRESS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. ROBERT KIRKLAND HENRY, late a Representative from the State of Wisconsin

Mr. MICHENER. Mr. Speaker, our acquaintance and association with the late Representative ROBERT K. HENRY, of Wisconsin, was entirely too brief. One term in Congress is not usually long enough to take the measure of a Member, but BOB HENRY was an exceptional man. He was personable and to know him was to like him. He had plenty of ability, plus excellent judgment. He was in the prime of life when he came to the Seventy-ninth Congress. With a splendid background of public service, he had the know-how that qualified him to render effective service to his country, his district, and his constituents, and he never overlooked any of them.

BOB HENRY was a favorite with his colleagues on every committee on which he served. He always did his task well. It is just too bad that so promising a career should have been so abruptly terminated. We were all not only shocked, but grieved, when we heard of his passing. I became well acquainted with him upon his entry into Congress because of a mutual friend who had resided in my district, and who knew BOB HENRY well.

The country can ill afford to lose men of his type, especially at this particular time.

Mr. Speaker, I want to pay this slight tribute to the life and character of a distinguished public servant. He has left a splendid heritage, and we sorrow with his family.

William James Gallagher

MEMORIAL ADDRESS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM JAMES GALLAGHER, late a Representative from the State of Minnesota

Mr. HAGEN. Mr. Speaker, no man who has been a Representative in Congress, within my memory, has come from more humble circumstances than our late departed friend, WILLIAM J. GALLAGHER, who represented Minnesota's Third Congressional District from January 3, 1945, until his untimely death last September.

At the time he was elected he was a $25.48 a month city pensioner in Minneapolis, having arrived at an age when most persons quit active work. He was elected by 2,112 votes and came to Congress in January 1945.

He was unique in that he made very few speeches while here, but those that he did deliver attracted widespread attention and were given front-page spreads by newspapers over the entire Nation.

Mr. GALLAGHER was born in North Minneapolis in 1875 and attended the Franklin, Hawthorne, and Lowell grade schools and was graduated from North High School in 1894. In 1895 and 1896 he was an editorial employee and proofreader for the National Single Taxer, a magazine then published in Minneapolis. He remained a firm disciple of Henry George, the single-taxer, and held his single-tax views to the last.

From 1897 to 1899 he was employed by the Freeman's Labor Journal in Spokane, Wash., before returning to Minneapolis, and it was on this paper that he acquired his prolabor viewpoints, which he also held until his death.

Later he worked as a trucker and clerk in Minneapolis for various railroads and for a while contributed to the Iron Trail, a monthly pulp-fiction magazine for railroad workers.

In 1919 he became a street worker for Hennepin County and adopted the same line of work for the city of Minneapolis in 1927, retiring on his moderate pension in 1942.

While holding these humble jobs, he several times filed for office, and in 1930 was nominated as a Democrat for Congress from the old Tenth District of Minnesota, but withdrew in favor of the Farmer-Labor Party nominee, Erling Swenson. In 1922 he ran for State representative from the Thirty-fifth District and lost by 101 votes, and he also failed in his race for the same office in 1924 and 1926.

To those few who sometimes foolishly derided his humble workingman background, Mr. GALLAGHER retorted: "A workingman is just as capable of doing a first-class job in Congress as a Member of any other group."

He won his membership in this House in the 1944 primary and general election campaigns with an expenditure of "less than $200" which he earned working part time as a janitor. He was married in 1936 to Mrs. Mabel Pearson and is survived by her and her two daughters, Mrs. Theodore Newman and Mrs. Russell Thomson, all of Minneapolis.

All of us who served with him from Minnesota recognized his fearless championship of the causes in which he believed and his utter devotion to the rights of the working people of Minnesota and the Nation. He truly had the common touch, was proud of his humble beginning and his humble occupations and really and sincerely was a "friend of man."

We mourn his loss, but his brief and meteoric career goes to show that in America, the opportunity to serve is available even to those in the humblest walks of life.

Robert Kirkland Henry

MEMORIAL ADDRESS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. ROBERT KIRKLAND HENRY, late a Representative from the State of Wisconsin

Mr. KERSTEN of Wisconsin. Mr. Speaker, last November ROBERT K. HENRY was overwhelmingly reelected from the Second District of Wisconsin to the Eightieth Congress. He had made a brilliant record in the Seventy-ninth Congress. Only a few days after his triumph, the angel of death visited him. As another year rolls around none of us now knows how many will receive that same visit. Let us all hope that when that time comes we will have the same spirit, courage, and excellence of earthly record that BOB HENRY had.

William Bernard Barry

MEMORIAL ADDRESS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM BERNARD BARRY, late a Representative from the State of New York

Mr. CELLER. Mr. Speaker, in the 11 years in which WILLIAM B. BARRY served the Fourth Congressional District of New York, he served ably and diligently. His passing, at the age of 44, was a loss to all of us.

It had been my good fortune to know him well, to know the perception and intelligence he brought to his congressional work and to know his sympathetic approach to the problems of his constituents. Many a time we talked about the issues on the floor of the House and I remember well how he searched for the answer, how he considered the will of his constituents and how carefully he examined each question as it arose.

His training before he came to the House of Representatives stood him in good stead. As member of the New York State Bar, member of the district attorney's staff in Queens County, special United States attorney, member of the Democratic executive committee of Queens County, he acquired invaluable experience which equipped him to meet the demands his congressional duties placed upon him.

BILL was a hard worker and as such gained the respect of all. BILL was warm and kind and as such gained the affection of all. He was too young to die, but the years of his life were fruitful. We are grateful that he did once walk among us.

We extend to Mrs. Barry and her children, Jane and Brian, our keenest sympathies and offer the good name that was and is his for the consolation it must bring.

Fred Barthold Norman

MEMORIAL ADDRESS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. FRED BARTHOLD NORMAN, late a Representative from the State of Washington

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement concerning the Honorable FRED NORMAN, Member of Congress, who died April 18, 1947:

FRED NORMAN

The death of FRED NORMAN has deprived the Pacific Northwest of the services of a man who long was active in political, commercial, fraternal, and social affairs. He was not a native of Washington, but he came to this State so early in life that he never was allegiant to any other part of the country. Mr. NORMAN moved to western Washington from the Middle West 46 years ago, and established his residence in Pacific County. For years he worked as a farmer, logger, mill hand and ship builder, thus acquiring intimate knowledge of the problems confronting the men who perform some of the most arduous tasks in the State. Becoming interested in politics as a young man, he campaigned for a position with the Raymond City Council in 1916 and was elected. Subsequently he was elected to the State legislature, first as representative and then as senator. He energetically supported legislation benefiting labor, agriculture, war veterans, and senior citizens, and he devoted his attention to the improvement of roads. Mr. NORMAN was elected to the United States House of Representatives in 1942, and was sent back to Congress last year by the voters of the Third Congressional District. He died less than 4 months after he was sworn in as a Member of the Eightieth Congress.

Representative NORMAN did not often appear as a speaker on the floor of the House, but he earned the reputation of an industrious and efficient member of all committees to which he was assigned. He personally attended to thousands of requests received from the residents of nine counties. Congressman NORMAN was familiar with conditions throughout the district he represented, and he strove constantly to protect the interests of all areas, and to obtain Federal assistance whenever he deemed it necessary. FRED NORMAN, a man of high principles, was genuinely respected by his colleagues in Washington, D. C., regardless of their party affiliations, and his constituents regarded him as the most conscientious delegate ever sent to the National Capital.

Fred Barthold Norman

MEMORIAL ADDRESS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. FRED BARTHOLD NORMAN, late a Representative from the State of Washington

Mr. HORAN. Mr. Speaker, it is perhaps but natural on this Memorial Day that we look for and appraise the lives of our departed colleagues in terms of what they meant in the society in which they moved.

I think each of the five whose memory we observe today spells out one of the most glorious portions of any definition of America. None of them could have been called career statesmen. All of them rose from the ranks, so to speak, and became recognized in their local and regional society, and eventually found their way to the Halls of Congress, there to represent their friends and neighbors in the business of protecting and promoting a progressive America.

Certainly this was true of Mr. GALLAGHER, Mr. BARRY, Mr. HENRY, and Mr. GERLACH. Particularly it was true of Mr. NORMAN, a member of our Washington State delegation.

Perhaps we would say that FRED was quiet, reserved, and sincere. Certainly we would say that he was extremely honest, and perhaps again note in passing that his tireless industry was his most outstanding characteristic.

He was born in rural Illinois, came West at an early age, and as one of the leading newspapers in his district editorially noted, his life story was typically American.

The Aberdeen (Wash.) Daily World goes on to say:

He came up the hard way, as the saying is. He was a logger in the woods, a worker in a shingle mill at Union, and he became a carpenter—he held a card in the carpenter's union to the day of his death. With his savings as a worker and his own energy as his capital, he became a businessman and a successful one. But his real love and his real life were centered in government. His great ambition was to go to Congress. He worked mainly for that purpose, and years before his first entry as a candidate he put money aside to defray his campaign expenses, so, as he once expressed it, he would be under no financial obligation to anyone should the voters approve his ambition by their votes.

FRED and our other four colleagues are gone, but I think it eminently fitting that we today review and appraise their contribution to America, for they do exemplify the spirit of our Republic.

It was David Starr Jordan who once said that Rome endured so long as there were Romans. America will endure as long as there are Americans in spirit and in fact.

Today as we pay our last tribute to our departed colleagues, we should be able, through looking back, to look forward with reassurance.

William Joseph Gallagher

MEMORIAL ADDRESS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM JOSEPH GALLAGHER, late a Representative from the State of Minnesota

Mr. O'HARA. Mr. Speaker, by custom and by legislative act, today has been designated as Memorial Day for our deceased colleagues who have passed to the Great Beyond since our last memorial services.

I first became acquainted with WILLIAM JOSEPH GALLAGHER at the beginning of the Seventy-ninth Congress. His election attracted a great deal of attention in Minnesota, and it exemplified the democracy of a great Republic. His biography in the Congressional Directory read as follows:

WILLIAM J. GALLAGHER, Democrat, of Minneapolis, Minn.; born in Minneapolis, Minn., May 13, 1875; high-school graduate; workingman; married; elected to the Seventy-ninth Congress on November 7, 1944.

The succinctness of this statement fails to indicate the kindliness and warmth of feeling which he had for his fellowman. Those who knew him during his brief service in Congress liked him and affectionately called him BILL.

In the closing days of the session it was obvious that his health was failing. His friends urged him to seek rest and medical attention but he insisted—as do many Members in similar condition—that he must stay on the job while important legislation was under consideration in the Congress. His concern was for his country and for those who are oftentimes referred to as the "little people."

I am sure I speak for the membership of the Seventy-ninth Congress when I say sincerely that our associations and memories of that Congress are richer and more human for having known BILL GALLAGHER.

Robert Kirkland Henry

MEMORIAL ADDRESS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. ROBERT KIRKLAND HENRY, late a Representative from the State of Wisconsin

Mr. MURRAY of Wisconsin. Mr. Speaker, it is with deep sorrow that I join with my associates in paying tribute to the memory of our departed friend and colleague from Wisconsin, ROBERT K. HENRY, who was taken by death after the completion of one term in the House and before he was privileged to serve the second term to which he was successfully elected last November.

I am sure that I express the sentiments of everyone when I say that Wisconsin has lost one of her most distinguished sons and America one of her most loyal citizens. Those of us who worked with him knew of his utter disregard for his physical limitations in his endeavors to conscientiously serve his district, State, and Nation.

No higher tribute can be paid to ROBERT K. HENRY than to say that he was one of Wisconsin's most highly respected public servants.

Those of us in the Wisconsin congressional delegation and his many other friends here in the House of Representatives will long remember him as a true friend and able colleague. Our sincerest sympathy goes out to his bereaved wife, to whom he was deeply devoted and who contributed so much to his success in his public career.

Robert Kirkland Henry

MEMORIAL ADDRESS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. ROBERT KIRKLAND HENRY, late a Representative from the State of Wisconsin

Mr. O'HARA. Mr. Speaker, it was with deep sadness that I learned of the death on November 20, 1946, of my good friend, ROBERT KIRKLAND HENRY. He served in the Seventy-ninth Congress and died shortly following his reelection to the Eightieth Congress.

In the 2 years he served in the House of Representatives he endeared himself to the Members and was recognized as a conscientious, courageous and sound, practical legislator. BOB had a fine mind and was accustomed to approach any problem on an unbiased plane and to obtain all the facts before arriving at a judgment. When his opinion was formed, he had unlimited courage in backing it up. He was always courteous, helpful, and sincere in his relationship with his fellow Members, and he gave his constituents as able and conscientious service as any congressional district could possibly have.

His death was a great shock to me and to his legion of friends. His passing is a loss not only to his friends but to his country as well.

William Joseph Gallagher

MEMORIAL ADDRESS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM JOSEPH GALLAGHER, late a Representative from the State of Minnesota

Mr. BLATNIK. Mr. Speaker, we are meeting here today to honor the memory of our departed colleagues—to listen to the roll call of those who have been taken from us during the last year. I am sure that the House will grant me the indulgence of this moment to pay tribute to a great American and beloved friend, the late WILLIAM J. GALLAGHER, who represented the Third Congressional District of Minnesota in the Seventy-ninth Congress. His untimely death on August 13, 1946, was a great loss to his Nation, his State, and the district which he so ably represented.

WILLIAM GALLAGHER knew the problems of the common people intimately and from first-hand experience. He was born on May 13, 1875, the son of a workingman. He was a worker all his life, first as a newspaperman and later as a manual laborer on the railroad and

on the staff of the Minneapolis street-maintenance department, from which he retired in 1943. In 1944 he was drafted by the Democratic-Farmer Labor Party to make the race for Congress, and his party's choice was upheld by the people. After a life of toil as a common workingman, WILLIAM GALLAGHER thus reached the highest legislative council of his Nation in keeping with the cherished American tradition. As a Congressman he spoke for the common people—his philosophy reflected their desires and aspirations.

WILLIAM GALLAGHER was loved and respected by all who had the privilege of knowing and working with him. His quiet devotion to duty, his firm adherence to principle, his passionate desire for social justice, and his love for mankind evoked admiration from everyone. On the occasion of his death a great national weekly said:

> WILLIAM GALLAGHER had about him a quality of humility and back street sense that compelled respect and even a warm feeling of unreasonable affection from his fellow Congressmen and plain citizens alike.

I can think of no greater tribute.

We shall miss him greatly in the days ahead, and remember him for his honesty, sincerity, and human kindness. My deepest sympathy is extended to his family.

Robert Kirkland Henry

MEMORIAL ADDRESS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. ROBERT KIRKLAND HENRY, late a Representative from the State of Wisconsin

Mr. DAVIS of Wisconsin. Mr. Speaker, my distinguished predecessor from Wisconsin's Second District, the Honorable ROBERT K. HENRY, was a man who earned success in every field he entered—as a banker, as a State administrator, and as a Congressman. It was my good fortune to have known him as a friend.

It was with a deep sense of humility and full appreciation of his abilities that I came to Washington to carry on for him. In the short time I have been in the House of Representatives, everything I have heard about him has served to strengthen the high opinion that people of Wisconsin's capital district held of ROBERT K. HENRY. On every side here in Washington, I have been told he was a sincere public servant, a man of honest convictions, and a gentleman of courtesy and friendliness. We are glad that you too came to know ROBERT K. HENRY in his 2 years in Washington as we knew him in his lifetime back home.

Many things went into the making of the character of ROBERT K. HENRY, but chief influence was his close contact with people in all walks of life. As a young man, he labored alongside workingmen. In later years, he was the confidant and counselor of farmers, businessmen, and industrialists. In public office, he came to know municipal, State, and Federal administrators. From this exchange of many viewpoints, from this varied experience, he charted his course as a Member of Congress.

Pressure groups soon learned that this man was not one easily influenced; they discovered he had a mind of his own, and his convictions were not based on shallow reasoning. He once expressed it this way, and I quote:

> Most voters don't belong to pressure groups. I think a Congressman should use his own good judgment when voting, and if this judgment is no good, the voters have a chance to replace him at the end of 2 years.

That ROBERT K. HENRY acquitted himself well in public office, is shown by the fact that he was never a one-termer in any position he filled. For five successive terms he was city clerk of Jefferson, Wis. For two terms, he was treasurer of the State of Wisconsin. He was appointed to the State banking commission, and reappointed in 1941, resigning from that office to become Congressman from the Second Wisconsin District. He was reelected to a second term just 2 weeks before his unexpected and untimely death. The people had examined his record as a public servant, found it good, and endorsed it by their support at the polls.

When his death ended his exemplary career as a spokesman for our people, newspapers of our State were unanimous in their eulogy of ROBERT K. HENRY. In closing, I would like to include part of an editorial from the Waukesha (Wis.) Daily Freeman, which was typical of the editorial comment upon his passing:

> The death in Madison of Congressman ROBERT K. HENRY is a great loss to the second congressional district. BOB HENRY was one of us, he talked our language and he consistently acted in our best interests. But his untimely death means more than that. It means the House of Representatives has lost one of its most able Members and the Nation one of the greatest exponents of American democracy ever sent to Washington from the Middle West. He was a man of integrity and sound judgment, patriotic and sincere * * *. He was a servant of the people who had dedicated the last 30 years of his life to doing the work which must be done in the public interest.

William Bernard Barry

MEMORIAL ADDRESS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM BERNARD BARRY, late a Representative from the State of New York.

Mr. KEFAUVER. Mr. Speaker, I wish to pay tribute to the life, character, and congressional record of WILLIAM B. BARRY, who passed away on October 20, 1946.

I had the privilege of becoming well acquainted with BILL BARRY shortly after I came to the House in 1939. He was a capable legislator. He gave much and intelligent study to the many governmental problems which came before the Committee on Banking and Currency, of which he was a member. He was always forthright and courageous in presenting his viewpoint regardless of the political consequences. BILL BARRY was a young man in the prime of life and the Nation suffered a great loss with his passing.

Fred Barthold Norman

MEMORIAL ADDRESS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. FRED BARTHOLD NORMAN, late a Representative from the State of Washington

Mr. JONES of Washington. Mr. Speaker, it is most fitting that we of Congress should set aside this occasion to honor the memory of those with whom we have served and whose contributions to this body and its function are impossible of true evaluation.

It is an occasion of particular significance to me, for it provides an opportunity to express, in some slight measure, my affection and esteem for my late colleague, the Honorable FRED BARTHOLD NORMAN, of the Third District of Washington.

Four and one-half months ago, FRED NORMAN and I came to Congress together, I as a freshman Member and he with the knowledge and experience garnered through a previous term as a Representative of the people of our State. FRED NORMAN was not oblivious to the difficulties involved in my lack of experience, and in a hundred kindly ways assisted and counseled me.

That was just one of his attributes—consideration for his friends and colleagues.

This fine and desirable quality would be expected of a man like FRED NORMAN, however. His entire lifetime was spent in considering and studying the thinking of the other fellow, particularly those whom he represented here and on other occasions when he served his friends and neighbors in elective office.

It was my good fortune to know FRED NORMAN over a period of many years. We were associates when he held the position of State senator some 20 years ago. We were affiliated and active in the Republican Party together when he held office in his county. And I was familiar with and interested in his accomplishments when previously he served as United States Representative from his district.

FRED NORMAN was a quiet and unassuming man who almost bordered on shyness. He cared nothing for pomp and ceremony, lived an almost Spartan-like existence, and devoted his full time and energies to the interests and needs of his constituents.

That he should attain the position of Congressman was natural to his friends and close associates. It was his goal and ambition many years and a position for which he prepared himself by study of his people, study of his district, and study of the organization, functions, and history of Congress.

It has been said by the newspapers in his district that few men have known more of the people and the area he represented. And few have enjoyed the trust and faith placed in him by his neighbors, because they knew, above all else, that he was a sincere and honest man, devoted to their problems and needs.

Many men were more adroit politicians than FRED NORMAN. Many were much more adept at evading issues and carrying political water on both shoulders. Few could match his forthrightness and courage or his unyielding determination to abide by his convictions.

There are among us many Members more skilled at oratory than was FRED NORMAN. But there are few who could equal him in sincerity and constant effort to work for and accomplish those things he deemed right and just.

I know the people of my State and my colleagues of the Washington delegation feel keenly the loss of FRED NORMAN. This Congress and this Nation need men of his caliber and qualities. And so, with sorrowing hearts and warmest personal recollections, we bid him today an official and affectionate farewell.

William Bernard Barry

MEMORIAL ADDRESS
OF
HON. JOHN J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM BERNARD BARRY, late a Representative from the State of New York

Mr. DELANEY. Mr. Speaker, when the news of the death of my good friend and pal, BILL BARRY, was received, it came as a great shock.

I have very pleasant memories of the many years of friendship which existed between Bill and myself, and it brought real sadness to me when I heard of his sudden departure. Of course, death is no respecter of persons, young or old. He cuts ruthlessly and indiscriminately through our ranks, and some of our best men and women fall before his merciless sword.

It is fitting and proper that we should pause in the midst of our arduous labors and exacting duties to acknowledge our respect and affection for men of the type of BILL BARRY. Little attention will be paid to what we say here, but none can forget the patriotic spirit—the fine spirit exemplified by Bill for his bereaved widow and his two lovely children. On these three the burden has fallen heaviest, but I am sure that God will in His own way take care of them.

At the funeral services in Queens County the affection and love of the many attending the requiem mass was evidenced by both their presence and devout manner. Real sorrow and regret was painted on every face, and I know that deep in their hearts they felt they had lost a good and true friend.

BILL BARRY was no political accident because he served for many years in the House of Representatives, and that was a real test of his true worth. It is difficult to be elected to the House of Representatives and much more difficult to return and remain a Member. Rarely do weak men enter these portals, and only those who are capable and conscientious can remain very long. Here the true measure of a man is justly and unmistakably taken.

While BILL BARRY has gone to a better home and his trials and tribulations of this wearisome world are through, still his memory will always remain fresh in the minds of those who were closely associated with him both in his home and in the Halls of Congress.

I am sure that the good Lord will take care of him and will keep a watchful eye on those who were so abruptly deprived of his fatherly care and devotion.

L'ENVOI

When Earth's last picture is painted, and the tubes are twisted and dried,
When the oldest colors have faded, and the youngest critic has died,
We shall rest, and, faith, we shall need it—lie down for an eon or two,
Till the Master of all good workmen shall set us to work anew.

And those that were good shall be happy: they shall sit in a golden chair;
They shall splash at a 10-league canvas with brushes of comets' hair;
They shall find real saints to draw from—Magdalene, Peter, and Paul;
They shall work for an age at a sitting and never be tired at all.

And only the Master shall praise us, and only the Master shall blame;
And no one shall work for money, and no one shall work for fame;
But each for the joy of the working, and each, in his separate star
Shall draw the thing as he sees it for the good of things as they are.

We miss you Bill, but we will not forget you.

Robert Kirkland Henry

MEMORIAL ADDRESS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. ROBERT KIRKLAND HENRY, late a Representative from the State of Wisconsin

Mr. TABER. Mr. Speaker, ROBERT KIRKLAND HENRY came here with a background of clear thinking and real effective and well-balanced legal ability.

He had courage and character and was devoted to his work and to his country. No man, in the short period that he was permitted to serve in Congress, made a more favorable impression upon the membership of the House.

In his committee work and on the floor what he said was given the earnest attention of our membership, and his thinking was so clear that his influence was widespread in the Congress.

We all will miss him, but we are glad that a man of such fine character was able to be with us.

William Bernard Barry

MEMORIAL ADDRESS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM BERNARD BARRY, late a Representative from the State of New York

Mr. ROONEY. Mr. Speaker, the sudden and untimely death of our late respected colleague, Representative WILLIAM B. BARRY, of Queens County, N. Y., brought not only passing sadness but genuine grief to all of us. Regardless of political affiliations, he had the admiration and respect of all who knew him, and particularly of the Members of Congress from the State of New York who were so intimately associated with him. He was intensely devoted to the interest of the people he represented and possessed a most unusual knowledge and grasp of the problems of his congressional district and State.

BILL BARRY leaves to those who mourn him the record of a distinguished legislator and the memory of a lovable character. I learned on countless occasions the true warmth of his heart and the kindliness of his spirit. It was an honor and privilege to have known him. To his good wife, who was his constant companion, professional associate, and helpmate for so many years, and to his children, I offer my sympathy.

His district, and the Nation have sustained a great loss, and I as a friend shall miss him and treasure forever my friendship and association with him.

Carter Glass

MEMORIAL ADDRESS
OF
HON. THOMAS B. STANLEY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. CARTER GLASS, late a Senator from the State of Virginia

Mr. STANLEY. Mr. Speaker, on May 28, 1946, the Honorable CARTER GLASS departed this life and thus was ended the long and distinguished career of a great man and true American statesman. The

Commonwealth of Virginia and the Nation honor the memory of a noble public servant.

Born at Lynchburg, on January 4, 1858, in the great Piedmont section of his beloved Commonwealth of Virginia, Senator GLASS was destined from young manhood to become an outstanding public figure. Educated in private and public schools and in the newspaper business, he was elected to the Virginia Senate, 1899–1903, and the Virginia Constitutional Convention, 1901–02; the United States House of Representatives for 10 terms; served as Secretary of the Treasury in President Wilson's Cabinet; and in the United States Senate from 1920 until his death.

Among many notable achievements, Senator GLASS excelled in the field of finance. He maintained a lifelong interest in fiscal problems and was recognized as an expert in monetary affairs. His speech in support of the Federal Reserve Act will go down in history as a masterly analysis of a most difficult and intricate subject. His work in behalf of the Federal Reserve System gained for him the title "Father and Defender of the Federal Reserve" and won everlasting praise from his warm personal friend, Woodrow Wilson, who appointed him as Secretary of the Treasury on February 2, 1920.

American agriculture owes much to the able work of the beloved Senator GLASS in support of the Federal Farm Loan Bank System.

In politics, Senator GLASS was a stanch party man and fought valiantly for the Democratic Party. He was a delegate to every National Convention since 1892. He paid strict allegiance to his party's principles and was a true Jeffersonian Democrat. His brave and courageous fight for the Presidential ticket in 1928 was typical of many notable contributions to his party's cause.

Although Senator GLASS was not privileged to attend college, he was awarded honorary degrees by Lafayette College, Washington and Lee University, the University of North Carolina, Yale, Princeton, Dartmouth, William and Mary, Wesleyan, Tufts, Columbia, Hamilton, New York University, and Lynchburg College. He was a member of Phi Beta Kappa of William and Mary College and served for 8 years as a member of the board of visitors of the University of Virginia.

In the United States Senate, his keen intellect, sound judgment, unimpeachable character, great courage, colorful personality, and high qualities of statesmanship, were manifested time and time again throughout his long and notable career as a Member of that body. He filled many important posts in the Senate, and served as chairman of the great Committees on Appropriations, and Banking and Currency. He was elected as President pro tempore of the Senate on June 10, 1941, and held that high honor until January 6, 1945.

It was a great privilege and honor to have known Senator GLASS and to have been one of his many friends. I pay sincere tribute to his memory and am proud of his wonderful record of honest, courageous, and able public service.

Fred Barthold Norman

MEMORIAL ADDRESS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. FRED BARTHOLD NORMAN, late a Representative from the State of Washington

Mr. ANGELL. Mr. Speaker, in common with my colleagues, I was grieved and shocked when the news reached me that our colleague, FRED NORMAN, of the Third Congressional District of Washington, had gone to his reward.

The district of our late colleague lies just across the Columbia River from my congressional district. It was my privilege to have known him intimately during his service in the Seventy-eighth Congress and recently while he was a Member of the Eightieth Congress. Many of our problems of the Northwest were mutual, particularly the development of this great waterway for reclamation, irrigation, navigation, and hydroelectric power. FRED NORMAN was a good legislator, faithful to the trust imposed upon him and ever mindful of the people of his district. He was an exceptionally hard worker and could always be found at his post of duty while the Congress was in session. I always found him ready and willing to cooperate in all questions having to do with the welfare of the people of the Northwest, as well as the entire Union.

FRED BARTHOLD NORMAN was born and reared on a farm in Clark County, Ill., the son of Dr. A. Howard and Pauline Barthold Norman. He migrated to Pacific County in Washington in 1901 where he had varied experience as a farm worker, in logging camps, sawmills, and in the shipyards. The people of his district early recognized his ability and dependability for public service. He was elected as president of the Southwest Washington Good Roads Association, director of the White Pass Cross State Highway Association, and also a member of the Shingle Weavers Union and United Brotherhood of Carpenters and Joiners; at one time he was president of the A. F. of L. Central Labor Union of Wallapa Harbor, which office he occupied for 10 years. He was also a member of the West Union Farmers Grange with over 20 years' service and belonged to many social and fraternal organizations. He was elected to the Seventy-eighth and Eightieth Congresses.

Mr. Speaker, I know I express the sentiments of all of our Members who were privileged to know our late colleague, FRED NORMAN, when I say that he occupied a high place in our respect. We will miss him in our deliberations. His own State of Washington and the Northwest and the Nation at large will miss a loyal public official. I extend to his widow and children my personal heartfelt sympathy in his passing.

William Bernard Barry

MEMORIAL ADDRESS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM BERNARD BARRY, late a Representative from the State of New York

Mr. HEFFERNAN. Mr. Speaker, the sorrowful news of the death of our colleague, Hon. WILLIAM BERNARD BARRY, on October 20, 1946, made many hearts heavy. The House of Representatives and the State of New York have lost a respected public official. I have lost a good friend.

By his splendid record of service, his sterling character, ability, and courage, BILLY BARRY has left a fine heritage to his gracious wife and lovely children.

May it assuage their grief to know the high esteem in which he was held by his colleagues, and how deeply we feel his loss.

Address of Speaker Joseph W. Martin, Jr.

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOSEPH W. MARTIN, JR., Speaker of the House of Representatives, before a gathering at the Rice Hotel in Houston, Tex., and broadcast over the stations of the Mutual Broadcasting System on Saturday evening, May 17, 1947:

ADDRESS OF HON. JOSEPH W. MARTIN, JR.

It is a very great privilege to come before this large and enthusiastic gathering of Texans who are interested in the preservation of the vital ideals of Americanism. I have always heard since I was a boy that when Texans are interested in anything, they demand action. Well, we've got to have action for Americanism—and plenty of it is needed for Americanism in our Nation today. Certainly there is no State in the Union whose history and tradition cause their people to have a deeper and more earnest devotion to Americanism—and to do more about it—than the people of the Lone Star State.

As one honored by being entrusted with the post of Speaker of the House of Representatives, I want, on this occasion, to pay a sincere tribute to those two able, distinguished, and patriotic sons of Texas, John Nance Garner, and SAM RAYBURN. Each in his turn served with fidelity and devotion the public welfare in the Speakership. It has been my high privilege to serve under both of these great Americans.

I do not come to Texas to attempt an eloquent oration, nor to make a partisan address. My mission is to promote in whatever degree I may a better understanding between two great parts of the United States. Through friendship and closer association,

your section and mine may become more fully aware of, and sympathetic with, the aims and aspirations of the other.

You Texans always do things in a big way. That has to be so, for you have the biggest State in the Union. You have the biggest ranches.

You have the most magnificent distances.

You have the deepest oil wells.

I understand the only reason you don't have towns bigger than New York is because you don't want to clutter up the view.

Bigness—that's Texas.

We need all the drive, and enthusiasm, and grit, and determination you've got in Texas to help in a big way to put our country back on the track of American progress and keep her there.

There is still under way, and undercover, a determined drive to destroy our American system of free constitutional government, free economy and free society. There are those who would attempt to overthrow our whole grand American system at the first opportunity. They will do it by persuasion if possible; they would do it by force, if persuasion fails. By hook or crook, if they can, they will destroy our American governmental, economic and social system. Texas will help us see they don't.

These subversionists are constantly claiming our American system is too slow and cumbersome. In a modern world, they argue, we are unable to hold our own. They insist we must have some form of statism, or a dictatorship of the proletariat. That kind of propaganda actually fools some people.

Let's look at our America of today and see what our system has produced in peace and in war.

The American people have always been a peaceful people. We have in 170 years, under our American system, achieved the greatest progress of any people, in any period of time, anywhere on the globe. Other nations have had a 1,000 or 5,000 years in which to accomplish the progress we have attained in America in 170 years. The reason we did it and they didn't, is because of our American system of government by consent of the governed. Ours is a free, competitive economy in which small business is the foundation upon which rest big business and mass production.

Ours is a free agriculture. We protect the right of men to own and cultivate their own land. Thereby, we have maintained the foundations of an independent electorate. Who is more independent in his views than a farmer? Religious and political freedom, and a free press—for the greater part small press—have been the bulwarks against any successful encroachments, in the past, by those who would rule us instead of serve us.

American youth is today standing at the threshold of literally a new world of adventure and riches in the realms of chemistry, mechanics, and statesmanship in the rebuilding of a shattered world. What a challenge. What an opportunity.

And American boys and girls will go forth eagerly to meet it.

When the First World War came on, we were unprepared because we had no hostile intentions against any people anywhere in the world. But when we finally had to get into it, we were able to do it in a hurry, and made ourselves the decisive factor in that First World War. During and after that war, many billions of American dollars in goods, and services, and energy poured out of this country to help the rest of the world.

When the Second World War came on, we were again unprepared because we are a peaceful people.

Under our peaceful policies, we had achieved in America the highest living levels, the highest wages, the best working conditions known. We enjoyed the greatest individual comforts, the greatest degree of individual liberty and opportunity ever attained on this globe. Nothing comparable was ever achieved by any other people.

Previous to the war just ended Japan had prepared for war for 40 years. Italy had been driven by Mussolini for 20 years. Russia was getting ready for the struggle for 20 years. Germany had been driven by Hitler for 12 years preparing for the conflict they knew was to come. What happened when America had to get in?

We had to fight two wars, one in the Atlantic and one in the Pacific; the latter almost lone-handed and unaided. We poured scores of billions of dollars' worth of machines and munitions of war into Europe to aid our allies, including eleven billions to Russia. We sent millions of men and women to help them. At the same time, we poured other millions of troops and scores of billions of dollars' worth of war machines and munitions into the Pacific struggle. All this was done by cooperation under free enterprise, by free labor and free agriculture and free citizens in the United States. In 3 years we had overtaken the preparations of our enemies, and allies, and were fighting an offensive war, as we marched down the road to victory. In that period we had a national election without disturbing our war efforts in the least.

For a time the American people yielded up some of their constitutional liberties to facilitate the war effort. But when the war was over they promptly voted, last November 5, to return to our traditional American system. They demanded an end to waste and bureaucratic regimentation. They called for the restoration of every factor of government to the control of the people. That demand is being met; that desire is being fulfilled by the Eightieth Congress today. And we Republicans are being helped by sturdy American Democrats who are thinking first of the welfare of their country.

After the war was over America was besieged, and is still being besieged, by every country in the world for help to feed their starving peoples, and for money to rebuild their shattered agriculture and industries. We have poured out more than $9,000,000,000 in loans to 58 different countries. We are still generously aiding in saving the world from chaos by feeding starving millions.

That is the incomparable record of America. If other governmental systems are so much better, I would like to ask, why do they have to come to the United States to rescue them from the aggressions of despots; to finance and help fight their wars; and then to help feed them and rebuild their countries afterward?

When anybody tries to say our American system isn't the best system in the world, incomparable and unsurpassed, he simply disregards the plain facts.

We who are proud of our citizenship in this, the greatest nation the sun ever shone upon, must realize—and I believe we do—that greater than our loyalty to any single section of the country, or to any particular party, must be our loyalty to the Nation itself. The high resolve of every true American is and always must be "My first concern my country's welfare."

Events which have transpired in the world since the first and second global wars have placed upon America the responsibility of world leadership. Our resources, combined with our military and economic strength, have given us an unequaled opportunity to direct the future of the world. This great responsibility to all humanity must be wisely discharged.

We must build a better and stronger America, so we may do our full part in helping humanity to achieve a better world.

I want to take this opportunity, if I may, to dispel some of the fog and clear up some of the misrepresentations which designing propagandists have deliberately sent through the press and over the radio.

The Eightieth Congress had barely been organized—in fact, some of the Members had not even received their office assignments—before the propagandists in Washington began to chant about the failure of the Congress to do something. Some of the propagandists forgot what every real newspaperman knows should be the true objective of every press or radio reporter; that is to distribute the facts fairly, and honestly, and impartially. Only through a zealous guardianship of those ideals of a free press and a free radio can we maintain in America an independent, honest press and an independent, honest radio qualified and capable of constructively criticizing the Government.

These propagandists, some of them desirous of destroying our American constitutional system of checks and balances, knew well enough we were organizing the Eightieth Congress under a completely new system. That reorganization plan, of necessity, had to be studied, and its working parts carefully adjusted.

These propagandists knew that in reducing the committees of the House from 49 to 19, a complete restaffing of those consolidated committees would be necessary. They knew every committee had to have a new chairman. They knew every committee had to be set up with new personnel. They knew this would require time. But they neglected to present these facts. I am proud to say the Eightieth Congress met its severe test with dispatch. It was actually functioning on a schedule as fast, if not faster, than some previous Congresses which did not have to labor under the additional difficulties of a new reorganization plan.

Of course, we knew some of these propagandists were trying to drive us into hasty action in the hope we would slip into unwise action. We refused to do this. The Eightieth Congress simply would not be stampeded. The Nation was still in peril. Grave problems, an aftermath of a destructive war, were before us. It was an hour fraught with grave dangers for the whole world. We resolved to give every proposal careful and searching consideration. That we are doing, and will continue to do. Our purpose will be to do that which is best for our country and the world regardless of political consequences.

We knew it was natural enough for some of the New Dealers to remain blind to the fact a new day had dawned in America. They had long been accustomed to having legislation prepared by some of the inside clique downtown and passed by a subservient Congress without any changes. They found it difficult to realize that on November 5, 1946, the American people voted to return to our traditional system of government in which the Congress is a co-equal, coordinate branch.

The New Dealers mistook for delay what actually was an orderly return by the Eightieth Congress to our traditional system of governmental functioning—committee hearings, debates, amendments, the only system by which, in a republic, right decisions may be reached.

I have been asked to again define the objectives and achievements of the new House of Representatives. Let me outline some of them briefly:

We Republicans promised last fall we would drive the Communists out of their key positions in the Government. We are keeping our promise. The Communists in this country are hunting cover. They will be driven out of those posts in Government where they can bore from within, and operate effectively to destroy the foundations

of our American system. When that job is completed, the Congress must be given the major credit.

You and I can recall how last year responsible administration officials emphatically denied there were any Communists in the Government at all. Now the President wants $25,000,000 to use in driving them out. There must have been an awful lot of Communists in the Government, and they must be firmly entrenched, if anybody believes they need that much money to oust them. No such amount of money is needed, of course. To spend such a sum would simply put a lot more people on the Government pay rolls to waste more tax money, and keep up the tax rates on the people. We are reducing governmental pay rolls. We are reducing the tax burden. Let us turn the job of ousting these Communists in the Government over to J. Edgar Hoover and the FBI. Give him complete charge, and we can get the job done without spending this great sum of money. He is the man who can, and will do, this job if given a free rein.

Let me say something to you right at this point. We Republicans do not want the Communists or their fellow travelers to campaign next year for the Republican ticket. We do not want to be under any obligations to them. They will get no invitation from us.

We intend vigorously to do what we can to remove them from the Government, from the labor union, the schools, and other places of advantage where they have entrenched themselves to destroy real Americanism. These people must not be left in positions of advantage where they can destroy our economy, our prosperity, our freedom, and our progress.

We promised the American people a reduction in Government spending. That meant there would have to be deep cuts in the waste and extravagance of an overswollen political bureaucracy permitted to grow before and during the war into unprecedented proportions. The Appropriations Committee of the House is proceeding to cut those wasteful bureaucrats off at the pocketbook.

There will be keen disappointment and much wailing by many people who will not want to see ended their happy days of power, spending, and extravagance. But the job must be done if we are to protect the savings of the thrifty people of this country; it must be done if we are to maintain the obligations of pensions and allowances to our veterans; it must be done if we are to keep faith with the social-security holders and the retired employees; it must be done if we are to curb inflation; it must be done if we are to have an America which is alert and able to go forward to an expanding prosperity and better days for all our people.

In the face of a national debt of $258,000,000,000 and certain fixed charges which cannot be reduced, drastic cuts must be made in the regular appropriation measures if we are to restore the fiscal policies of this Nation to a sound basis. The House has shown its determination to maintain the solvency of the country by the cuts it has made in the appropriation bills already passed. The figures speak for themselves. Reductions made by the House below administration requests include the following: 45.3 percent in the Interior appropriation bill; 5.3 percent in the Labor-Federal Security bill; 21.8 percent in the Treasury-Post Office bill; 22.2 percent in a deficiency appropriation bill for 1947; and 23.3 percent in the bill for the State, Justice, and Commerce Departments and the Judiciary. This can be done without injuring any necessary services.

We Republicans promised a substantial cut in withholding and other income tax. The House has passed the bill in the form that certainly fulfills that Republican promise.

It will be passed in the Senate, and if it becomes a law, it will aid in preventing a severe depression. No people can long endure in peacetime staggering under the confiscating wartime taxes. Now is the time to remove this barrier to business expansion, more jobs, and more of the good things of life for all the people.

Another promise was the enactment of a labor-relations bill to insure real collective bargaining and give fair play and justice to all. It is our intention and desire to protect the right to work as well as the right to strike. We believe both of these rights are essential to real Americanism. Another objective in the labor bill is to safeguard the interests of the public against irresponsible actions, and to end the highly dangerous racketeering of the New Deal labor political combine. It certainly has been an unholy alliance which threatened the recovery of the country. Both branches of Congress have acted. The final draft will be hammered out in conference.

We want to see every worker in America has a good job at good wages and the right to enjoy industrial peace, which is essential to progress and prosperity for all the people.

Congress has also passed a bill outlawing billions of dollars in portal-to-portal suits, which could have plunged the economy of this country into chaos and disaster.

Before the Eightieth Congress has become history, you will see every promise made by the Republicans and approved by the voters translated into legislation, and presented to the President.

The quality rather than the number of laws passed by Congress will determine whether or not the Congress is performing its duties to the Nation in a satisfactory manner.

Let me say to you there is one very great danger which perhaps overshadows all other dangers and problems which confront us at this time. The subversionists who are intent upon wrecking our American system of government, economy, and society have not ceased their attempts to destroy your confidence in your Congress.

The Congress is the people's special instrument of control over their Government. So long as the people maintain their faith in their Congress and send men of high character to it, just so long will the Congress maintain its power and authority to legislate the people's will into law and action. Just so long as the checks and balances devised by the wise founding fathers are maintained in America, just so long will we successfully resist all attempts to destroy our American system, desecrate our American way, and reduce us to serfdom under some alien despot.

Anyone who knows anything about the history of Texas knows that before the day ever comes when Americans will bend the knee and bow their heads to the rule of a despot, the plains of this magnificent State will run red with the blood of patriots who would rather die free than live in slavery.

In conclusion, let me say to you our American system will never be overthrown so long as we maintain the vigilance which has always been alert in Texas to preserve our liberties, and to keep unimpaired and untarnished for our posterity the priceless heritage of freedom and plenty our forebears sacrificed so much to leave to us.

This has been a grand visit to a grand State, "deep in the heart of Texas." I shall always remember with real pleasure your gracious and unstinted hospitality.

I go back to Washington with my heart warmed in the knowledge we are working under God's guidance as one people for your America, my America—our America.

Army and Navy Merger

EXTENSION OF REMARKS
OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20 (legislative day of Monday, April 21), 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able editorial entitled "The Militarists," published in the Chicago Tribune of the edition of Saturday, May 17. The editorial refers to and discusses statements by Representative NORBLAD, of Oregon, and the Senator from Wyoming [Mr. ROBERTSON] concerning the bill providing for the merger of the armed forces which is now being considered by committees of the two Houses.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MILITARISTS

Congress at last seems to have noticed the dangerous campaign of the military and naval hierarchy to build up an empire within the United States coequal, if not superior, to the civil government. In the last few days two Republicans, Representative NORBLAD, of Oregon, and Senator ROBERTSON, of Wyoming, have challenged the ambitions of the militarists. Mr. NORBLAD emphasized the grossly inflated officer establishment of the services and their arms, and Senator ROBERTSON pointed out some of the more dangerous implications of the Army-Navy merger bill.

Maj. Gen. Willard S. Paul, Army director of personnel and administration, was compelled by Mr. NORBLAD to admit that the ratio of officers to enlisted men is now 1 to 8, whereas it was 1 to 16 during the war. The general had not expected to have to defend the perpetuation of rank when he came before the Armed Services Committee. He was there to ask for something more—the right of the Army to retire regular officers at the highest rank they held during the war, rather than to pay them retirement allowances according to the grades to which they would revert. He argued that if this were not done, many men who held the wartime rank of major generals would be retired with the pay of colonels or less.

"The trouble," rejoined Mr. NORBLAD, "is that the colonels and lieutenant colonels are still major generals. Reductions in rank have been few."

General Paul could not argue the statement. The Army has 556 generals—168 more than the entire number in World War I. It has 35,554 field officers and 99,556 junior officers. The Navy is keeping up with the General Joneses by maintaining 263 admirals and 47 commodores, 15,163 senior officers of the rank of lieutenant commander through captain, and 33,972 officers in the grades of ensign through lieutenant. The Marine Corps is holding on to 51 of its 72 wartime generals, and the Coast Guard to 14 of its 23 admirals, although before the war no Coast Guard commander ever achieved the rank of admiral.

The pay of the officer establishment of the Army and Navy alone is acknowledged to be $934,000,000. With special pay, the total would exceed a billion dollars. The addition of the Marine and Coast Guard officer pay roll would put the figure at a billion and a quarter.

These figures demonstrate that the Army and Navy brass are beyond all conscience. There appear to be 10 times as many general and flag officers as can be justified. It would be interesting to have a list of the admirals who ever came within airplane range of the Japs and of the generals who were under German or Japanese fire. A compilation of this kind might prove that the fighting at sea was largely done by aviators and submarine sailors below the rank of captain, and that the land fighting was largely directed by temporary officers and reservists who did not reach high rank.

Congress could also determine, with profit, how many officers with prestige rank are now detailed to quasi-diplomatic duty. They are all preeminently expendable. Cocktail-drinking soldiers in various capitals deserve no recognition whatever from the country.

Flagrantly grasping as are the proclivities of the services in hanging onto the prerogatives of the big brass, the Army and Navy are not content. Senator ROBERTSON has charged that the service-merger bill carries the seeds of military dictatorship. It would establish a single department of military forces under a single, all-powerful super-secretary. It would establish a permanent staff corps of militarists, suspiciously like its authoritarian prototypes, according to the Senator. It would provide for the eventual domination by professional militarists of all civilian agencies of government in the event of war. Its provisions for a central intelligence agency set no limits to the authority or functions of the agency either at home or abroad.

This is the barest outline of the vast and vague powers which would be conferred by this bill. It is plain that the scheme must be subjected to the most searching public examination. "The military continually seeks to extend its influence," Senator ROBERTSON has remarked, "and to take unto itself many of the prerogatives of the executive and legislative branches of our Government." If the country wants to avoid handing over its management to a military politburo, it will firmly impress upon the militarists the fact that the services are an adjunct of government, not the masters of government.

Americans Must Keep Informed on World Affairs

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. HAGEN. Mr. Speaker, never before in the history of this country has there been such an urgent need for information and historical knowledge concerning world affairs. America has been thrust into a position of world leadership. It has become her destiny to capture the minds of the people throughout the universe and lead them into the paths of democratic freedoms. Failure to accept this responsibility can result only in a victory for those forces which are advocating totalitarianism.

Like all Congressmen, I receive literature from many sources setting forth the viewpoints of one group or another relative to international affairs. These reports are usually highly colored and cannot be depended upon from the standpoint of objective analysis.

The other day I had occasion to read a report, published periodically, called American World Intelligence, edited by Dr. Christopher Norborg. Dr. Norborg is a well-known author and university professor, and formerly on the staff of the University of Minnesota. During World War II he was associated with the Office of Strategic Services and was considered an outstanding expert on European affairs. He was chief of the northern European section of the United Nations Relief and Rehabilitation Administration, during 1944 and 1945.

His forthcoming book Operation Moscow is destined to arouse wide discussion. It is Dr. Norborg's opinion that the next 12 months will tell the history of international reconstruction or of man's doom. The atomic age permits no folly.

Because I feel that Dr. Norborg's logic is so well founded, I take this opportunity to pass along some of his comments:

Stalin's flat rejection of Secretary Marshall's earnest plea for cooperation is comparable only to Molotov's 1939 deal with Hitler and Ribbentrop.

Moscow 1947 is about to duplicate Moscow 1939. In the fateful fall of that year Moscow rejected any alliance with the west. In spite of Tehran, Yalta, and Potsdam, Moscow is once more rejecting the cooperation of the victorious west. Stalinist geopolitics still holds: He who dominates Germany rules Europe.

A few weeks ago Moscow published a revised Stalin biography in which the Russians are told that the Soviets could have won World War II without the assistance of England or America.

The Kremlin has long since informed its citizens that it was the Soviet Army which crushed Japan. And now Soviet Prof. Eugen Tarle warns that if the western powers do not behave, the Soviet armies will move to occupy all Europe.

What is behind all this? The Soviets have 44 fully equipped divisions in Europe, ready to march. They are counting upon a Communist underground army throughout Europe, estimated at a minimum of 2,000,000 partisans, to rise in Red revolution. The Soviets possess vastly improved V-1 weapons of enormous range. They are far advanced in bacteriological warfare. In fact, had it not been for the atom bomb, the Soviet armies would have marched to the Atlantic and the Mediterranean.

The Soviet rulers are ruthless gamblers. At present their own homeland is an economic and industrial vacuum. They will, therefore, have to live on other nations for some years. Sweden, Iceland, and Switzerland have already rushed to the Kremlin's assistance. The other west European peoples have suffered and lost too much to be of much immediate help. Their own reconstruction programs are tremendous. Their dislike of dictatorship is deep.

The leader of Soviet foreign policy is Molotov. The men behind the scene are Beria and Lozovsky. With a secret service system of 200,000 agents outside the Russian borders, the Kremlin is today the best informed empire seat in the world.

Do not, however, overlook the fact that the Soviets are uncritical, dogmatic, and self-assured to a fanatic degree. This Soviet psychosis is the supreme danger to the rest of the world.

Moscow may be exceedingly well informed. Its judgment is notoriously poor. The Soviets are, therefore, apt to overrate their own strength. World War III may become the inevitable result.

The Nazi dictator threatened that if he went down, he would drag all Europe with him in the abyss. The nihilists of the Politburo seem intent upon making that threat good. That is, if the Christian nations let them. Precisely for these nations, the true meaning of the recent Moscow Conference is that an issue has been drawn. It is now up to the United States and the other democratic nations together to follow a policy which is moral, strong, and consistent enough to build a powerful peace.

SPITZBERGEN FEARS

With summer coming to the Arctic, the dispute between Norway and the Soviet Union with regard to joint military safeguard of that strategic island may again break into the open. The fact that Moscow last season prevented Norwegian seal hunting expeditions from entering the White Sea revealed that the Soviets are aware of the strategic significance of the Arctic in this atomic day and age. If the Norwegians intended to send military patrols to Spitzbergen this summer, they were not talking.

THE SOVIETS LEAVING THE UN?

Informed observers expect to see the Soviets leave the United Nations by September, if not before. The Soviet move will probably not come in the form of any official break with the UN. It is thought more likely that Moscow will order Mr. Gromyko to stage a dramatic walking out to be followed by the announcement that the Soviet UN delegate has been called home for consultation.

Such a tactic would serve the Kremlin well, since the Politburo could insist that the Soviet Union was still a member. As a veto power, the Soviet Union would claim that the UN Security Council could not operate in Russia's absence.

When this incident happens, the other nations will have to make up their minds whether the United Nations shall get down to real work. The prospects for a constructive and tough attitude on behalf of all non-Soviet nations as to making UN work are growing better.

KOREAN DISASTER

A well placed native intelligence observer writes concerning the situation in Soviet-occupied northern Korea:

"The people in the north have been suffering and starving since the very day of liberation on August 15, 1945. This has been three or four times worse than anything that happened before.

"The Soviet soldiers came into Korea from the Manchurian front. They have lived off the land. They take food, clothing, musical instruments, watches, pens, and money. The Russians are moving all Korean machinery to Russia.

"It is like a battlefield here. No one can tell of tomorrow. Danger comes at any moment. There are riots and strikes by the Communists in southern Korea. You can never believe anybody because even your brother can be a Communist. As soon as you are discovered by somebody as being against the Russians or against the native Communists you are arrested and you don't know where you are going. Morality is broken. Ideas are confused. We in Korea may have to have a civil war between the left and the right.

"However, in Pyeng Yang, the capital city in Northern Korea, all churches are full of Christians. The more the Communists persecute, the stronger the Christians become."

When Secretary Marshall recently reopened the Korean issue in Moscow, he may well have called the signals for an intense battle in the Far East. Korea is a potential Ruhr. It flanks the Sea of Japan. Its fisheries are immensely rich. Korea bids fair to become a dangerous bone of contention between China and the Soviet Union.

The 1943 Cairo Declaration found Roosevelt, Churchill, and Chiang Kai-shek calling for the liberation and eventual independence of Korea. In 1945 the world forgot to look when the Twenty-fifth Red Army moved into Korea, down to the 38° latitude. Another incredible, and perhaps fatal, concession had secretly been made to Moscow.

In spite of the 1945 Moscow agreement on Korea, all cooperation between United States and Soviet occupation authorities has been broken since May 8, 1946. North Korea is stripped. The Communist leader, Kim-Il-Sung, reigns supreme as Moscow's agent. Even in American-occupied Seoul the Communist paper, Dok-Lip-Sinpo, is propagandizing for Moscow. Inflation and unrest stalk the land.

The Koreans are fiercely nationalistic. They demand independence immediately. They are not inclined to wait another 36 months. Their leaders, Syngman Rhee, Mansik Cho, Kynsik Kim, Kim Koo, Yongjeung Kim, and others insist that Korea needs neither American nor Soviet soldiers.

Mr. Molotov has accepted the American invitation to seek a settlement on Korea. When the Soviet delegates meet with the Americans (and Koreans?) the world will see whether the Kremlin is more cooperative in Seoul than in Moscow.

Individual Rights Are Supreme in the United States

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Paul E. Belcher:

INDIVIDUAL RIGHTS ARE SUPREME IN THE UNITED STATES

(By Paul E. Belcher)

What American wants to be told what he may eat? We insist upon and have available a wide selection of foods. Most of us choose our calories with care and discrimination. As a people we enjoy varied and palatable meals. Even they whose very lives are known to depend upon adherence to a strict diet frequently refuse to follow the advice of their physicians. Yet, in many parts of the world, black bread and a thin potato soup must be eaten regularly. In much of the Orient every day's fare consists of rice or nothing.

What American wants to be told what goods he may buy? With us the right is final to buy what we like and to decline everything else. We need state no reason for our action. No superior power can force us to purchase our assigned share of something because that something has been produced for our use. Everyone over here who makes or has goods for sale assumes the risk of loss which will surely occur if the public cannot be voluntarily persuaded to acquire those goods.

What American wants to be told where he shall live? If we like country life, we live in the country. If the city is appealing, we establish ourselves in some urban community. No one tells us where to live any longer than it takes us to find a place that suits us better. In much of the world the people must live where their respective governments allow them to live or where their economic status compels them to exist.

What American wants to be told where he can go? Occasionally, we consign our neighbors to Hades in a figurative sense, but, in fact, we regard the entire country and all of its territory as part of our back yard. We go and come in peacetime where and when we please. We answer to no one. Even our borders can be crossed with ease. As Americans, most of us believe that we have a moral right to visit any part of this globe at any reasonable time. Some even contemplate a trip in outer space. What Russian in his homeland is accorded similar privileges? A single one would be a novelty.

What American wants to be told where he shall work? Forced labor is limited to penal institutions in the United States. Not even in wartime has an American civilian ever been required by law to work anywhere if he did not wish to do so. We induce the individual to work with high pay and other emoluments. Millions of people in other parts of this world would never have the faintest dream that they could refuse to work where they were told to labor or that they could quit when they felt like it.

What American wants to be told what his recreation shall be? We consider our free time as our own. Each can follow his own dictates. We reserve the right to accept or reject every proffered amusement. We decry censorship. We call the umpire a bum on the ground that we dislike a decision he makes. Entertainment provided by our employers may be safely passed up. But not so in many other countries.

What American wants to be told what he shall do with his money? Our money is our own and we can do with it practically what we please. We were not required by law to buy Government securities before, during, or after the war. We can handle our funds in accordance with approved commercial usage or carry an accumulation of greenbacks in our pockets. We can save our earnings for tomorrow or spend them all today. We can keep our property intact or dispose of it unhampered by autocratic paternalism. The state is not our sole heir.

What American wants to be told that he has no economic future? Those would be fighting words. Every one of us has the right to better his position if he can do so. Opportunity is open to all. There are no closed contests. Whether we are laborers or merchants, professional men, or anything else, is largely our own choice. Within the limits of our respective abilities we can move from one class into another, either up or down the economic scale. This right could hardly be said to be applicable in many other nations.

What American wants to be told that he must do anything affecting his economic life? The answer is both immediate and positive: There is no such American. None exists because our heritage has been the individual economic freedom inherent in our system of free enterprise.

What other economic system anywhere, at any time, has ever provided the people within its jurisdiction with similar economic freedom? We exalt every human being. His right of selection, in the economic sense, is absolute. All must yield to his voluntary choice. He, collectively, governs every economic trend. Under what other kind of economic system has the individual, as such, ever been considered of the slightest importance?

Work of the Last Session of the New York Legislature

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 20 (legislative day of Monday, April 21), 1947

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered over NBC on Thursday evening, May 8, 1947, by the Honorable Paul E. Fitzpatrick, chairman of the Democratic State committee of New York, in reply to a recent speech by Governor Dewey, on the subject of the last session of the New York State Legislature.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

My fellow citizens, thank you for letting me into your homes tonight. Your invitation, I know, is impelled by a great American custom—that of hearing the other side of a strictly partisan story. You want to give yourselves a chance to get the true facts before making up your minds. That fairness is what makes America great. That's why I welcome this opportunity to tell you what really happened in Albany at the last legislative session.

Governor Dewey recently gave you his views on what he considered the achievements of the last legislative session. Tonight in the time allowed me I shall voice the views of the Democratic Party about what was done and what was not done. When I refer to the Governor's actions and his policies on legislative matters I do so advisedly because never before in our history have we seen such a complete abdication of the legislature's functions at the dictation of a governor. This abject surrender of the legislature has been gradual over a period of several years, but it has finally reached the point where the Republican majority is merely a rubber stamp for the Governor's will. Issues of vital importance to all the people were decided under what amounted to gag rule. If you have listened to the Governor's recent speeches you will see why he did not trust the members of his own party to expound his views in the legislature.

In one speech the Governor sought to explain the reasons for a near-break-down in our educational system due to the notorious underpayment of our teaching staff. In a separate speech the Governor sought to justify an antistrike bill so punitive in character that it justifies the epithet "yellow-dog legislation." Tonight I shall bring these two issues into their proper relation of cause and effect.

The Democratic Party first began to urge the legitimate claims of teachers for higher pay more than 3 years ago. But how did Mr. Dewey meet this pressing problem—the problem of a living wage for our teachers? Following his usual technique, simply delaying tactics, the Governor appointed another committee.

So, after the lapse of several years during which the teachers suffered from notoriously inadequate pay while the distinguished committee deliberated leisurely, the committee brought forth a conclusion which the Governor grudgingly admits was correct, namely "that the school teachers had real ground for dissatisfaction with their pay." But to cover up the delay and the

admission of injustice to the teachers, their pay raise was integrated into a promotional system. On the merits of this plan I shall defer to the opinion of the public-school superintendents. At the New York University Educational Conference on April 18, 1947, the system for merit-rating public-school teachers adopted at the Governor's dictation was called impracticable and unworkable by a three-fourths majority. More than half of them opposed the law even in principle.

These teachers suffered a great injustice. The Governor gives a glowing account of what was belatedly done to rectify this situation, but tomorrow's pennies will not buy bread for yesterday. Glib talk about complicated formulas for merit rating, morale, and the benefits of education generally will not obscure the fact that a faithful body of civil servants was treated shamefully. Finding no hope of decent and fair treatment the school teachers in Buffalo went on strike for a decent living wage. In anger and retaliation against the teachers, and acting on the principle that you must never forgive those you have injured, the Governor dictated the vengeful Condon Wadlin Act.

Before I discuss this particular example of the Governor's spite, may I stress the fact that the Democratic Party completely disavows the right to strike on the part of public employees whose activities are intimately associated with the health and safety of the people. President Roosevelt, President Truman, Mayor O'Dwyer, and other great Democratic spokesmen have consistently and forthrightly voiced these principles. These principles were in the law before the Condon-Wadlin bill was enacted. This the Governor was forced to admit and when pressed for a reason for the new legislation he said that unless the law was restated "we should go on to an increasingly chaotic condition."

The previous law had never proved deficient before the Governor's own administration of it. There had never been a strike of public employees under a Democratic administration. The reasons why the Governor failed in his own administration of the law is best seen in the teachers' strike in Buffalo. Instead of dealing promptly and forthrightly with the ever-increasing injustice of a less-than-living wage for the teachers, the Governor passed the problem on to his committee—which pondered over it several years, while the teachers waited in vain for a decent living wage to which, on the Governor's own admission, they were entitled.

If the principle of no right to strike was, as Dewey admits, already in the law, we may well ask what was the reason for the enactment of the Condon-Wadlin law.

The motives are twofold:

1. New and punitive penalties were added, which surpass in severity anything since labor fought its way out of the "yellow dog" contract humiliation.

2. The Governor put himself in competition with Senator TAFT for the extreme reactionary delegates to the Republican National Convention in 1948.

The law does nothing to eliminate the causes which produce strikes. It provides no machinery for hearing grievances. It was not constructive. It was punitive only.

In his speech, the Governor used the words "chaotic condition" in speaking of the labor situation. If he had in mind the strikes in Buffalo and Rochester I would remind him that those cities have Republican administrations. I would also remind him that the city of New York employs 185,000 and there has never been a strike on the part of the public employees of New York City.

The words "chaotic condition" could, with more truth, be applied to the Governor's fiscal policies. As we have seen, these fiscal policies have put the local governments in a strait jacket, and the Buffalo and Rochester strikes were primarily due to the inability of the local governments to provide living wages for their civil-service employees.

You will remember that when Herbert Lehman retired as governor he left to his successor a fiscal plan and tax system which produced the greatest surplus in the history of any State in the Union. During the war years and thereafter, the sources of the State's revenues expanded. This was not true of the sources of local revenue, chiefly the real-estate tax. As a result, the local governments were not able to increase the pay envelopes of public employees commensurately with the rise in living costs. The Democratic Party suggested an equitable sharing of the State's surplus with the municipalities, but the Governor insisted that the surplus was a "trust fund" for returning veterans. Of the betrayal of that trust, I shall speak later.

The problem of the municipalities was dealt with in true Dewey fashion. After years of delay, with inadequate pay for civil-service employees, the local governments were empowered at the last session of the legislature to levy new and burdensome sales and nuisance taxes. Business and corporate taxes had been reduced. So the way was laid for increasing taxes on those least able to pay, when the cost of living of the wage-earner was already too high. And this at a time when corporate and business reports showed record earnings for all time. An effective method of State collection of taxes has been abandoned and the local governments will be forced into new and untried methods of tax collection.

The county executive of Westchester, a Republican, by the way, criticized the new scheme as follows, "This would be a completely new function to county government and necessitate the establishment of a tax-collection bureau, if the provisions of the law were to be carried out effectively. * * * Education is a State function. If additional funds are required in any county, the State is the proper agency to collect and distribute such funds through State departments and agencies already organized and existing."

Now, why was a new and untried system of tax collection foisted upon the local governments at a time when the State had decreased taxes on those best able to pay? Only because the Governor would rob Peter to pay Paul so as to be able to say before the Republican National Convention meets, "I have reduced taxes." But you, the taxpayer, will pay more taxes. You will pay these special Dewey taxes every time you buy clothing and every time you go to the movies or a ball game. Dewey did not reduce taxes. He shifted them to the wage earner.

The State surplus was referred to by Dewey as a trust fund for veterans. Had the entire surplus of $600,000,000 been devoted to housing for the veterans it would have been the best war memorial that the State of New York could devise. As it is, a small fraction of the surplus has been devoted to emergency housing. The fact is that more than 90 percent of the cost of all veterans' emergency housing has been provided by the Federal Government. And it is also a fact that not one single permanent housing project has been erected in New York State which was not planned and initiated by either Governor Lehman or the Federal Government. The Governor's response to the crying needs of the veterans for housing has been tragic. A major part of the surplus has been allocated to a luxury boulevard, which will compete with veterans' housing for materials and labor. Why? Because road building up-State is the source of the Republican campaign war chest.

So far as the veterans' bonus is concerned, it will be paid for largely by the veterans themselves out of increased cigarette taxes and increased income taxes. With characteristic contempt, he has, in effect, said: "If they want a bonus, let them pay for it themselves." And this at a time when business and corporate taxes have been substantially reduced.

So far as the proposal of the Democratic Party for a great State university is concerned, it has been referred by the Governor to another commission. And the ambitions of thousands of your boys and girls for professional education, medical, dental, and so forth, must be denied, and this, in the richest State in the Union.

In these ways the problems of labor, the veteran, and the taxpayer have been harnessed to the overweening ambition of one man to be President. The craft of the Governor's scheme is best illustrated in one instance which may have escaped general notice. During the last session of the legislature a special law was passed giving the Governor the right to appoint a United States Senator until the election of 1948, if one of the incumbents should die in office. The Governor wanted to make sure that no rival to his own ambitions could be elected in 1947. Any embarrassment to the present United States Senators, one of whom was seriously ill at the time, was ruthlessly disregarded.

In another instance of personal law-making in quest for personal power, the Governor in the closing hours of the legislative session arrogated to himself, in the person of his budget director, powers formerly vested in the commissioner of public works. The Democratic Party—the people's party—opposes the ending of representative government in New York by the Dewey administration. We are opposed to his personal legislation, to his tax policies which increase the cost of living to the wage earner. In his maneuvering for political advantage he wished to say he had reduced taxes, so he strangled the local governments, denied their civil servants a living wage, provoked conditions which goaded them to strike, and then covered up his mistake by foisting the State's responsibility for taxes upon the localities and struck at labor with yellow-dog legislation.

The legislative session of 1947 might well be called Dewey's price for the Presidency—and the price to be paid is the State of New York.

Reorganization of the Executive Branch

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, May 20 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Handicap to Economy," which appeared in the Press, of Evansville, Ind. The editorial relates to the joint resolution which I have introduced in the Senate and which Representative BROWN of Ohio has introduced in the House, providing for the making of a study leading to a reorganization of the executive branch of the Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HANDICAP TO ECONOMY

It is possible that, in some cases, congressional pruning of the Federal budget will go harmfully too far.

But the Government costs so much more than it should that reckless economy is a lesser danger than reckless extravagance. And the heads of Federal departments and agencies of their own accord never will make such savings as are possible and necessary.

So we aren't impressed by the Washington spenders' anguished cries of "woodsman spare that tree!" each time the economy ax touches a bureaucratic bough. Most agencies, we think, can finance their really essential activities with many fewer dollars from the taxpayers.

Yet Congress should know more about what it is trying to do. A good deal of the cutting shows little evidence of accurate information and careful thought. Thanks to the La Follette-Monroney Reorganization Act, the appropriations committees now have more experts and investigators than ever before, and they should be equipped to do a better job in the future.

We believe, though, Congress always will be handicapped in economy efforts unless the huge, sprawling Federal bureaucracy is simplified and its methods brought up to date. The machinery of the Government's executive branch is so complex that the people can't understand it, the President can't supervise it properly and Congress can't control it. It is a baffling maze of duplicated effort, overlapped authority, waste, and inefficiency.

Two Republicans—Senator LODGE of Massachusetts and Representative BROWN of Ohio—have proposed a hopeful remedy. They suggest a thorough study of the executive branch by a bipartisan commission, including six private citizens recognized as autorities on management. The President and Congress would join in naming the commission. It would report in January 1949 on how to substitute modern management methods for the present bureaucratic disorder.

This Lodge-Brown plan, we believe, promptly should be authorized by Congress. The proposed commission's task will be long and difficult, and the sooner it gets started the better.

Once a Water Boy, Always a Water Boy?

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, several years ago I was called upon to address a group of Boy Scouts and their friends. I was requested to base my talk upon an actual experience of my boyhood, which would illustrate the importance of obedience to the orders given by our seniors and those in authority. They wanted my narration to emphasize the fact that young people are frequently put to the test when they are not aware of it, and that the way in which youth responds to such tests frequently enables an employer or the one giving the orders to determine the character of the boy. Hence I chose an actual experience from my own life with a moral that I considered most wholesome. I spoke to those boys on the subject Once a Water Boy, Always a Water Boy? The following is what I said on this subject:

Were you ever a water boy? Have you ever had some menial task to perform, which was not altogether to your liking? During our youth, I dare say the majority of us have been called upon to perform some tedious or irksome act which we, for the moment, considered nonessential, unimportant to us or our superiors.

In the summer of 1908 the director of admissions of one of the largest State fairs in the Middle West, after I had consummated a business transaction with him, asked me how I would like to sell admission tickets at the State fair that fall. I assured him I would appreciate the opportunity. He informed me that all of the ticket sellers were men who had worked in a bank. They were tellers in the larger banks or officers in small country banks. At any rate they were supposed to have had considerable experience in handling money, making change, and the like.

At that time I had been in college 4 years and I thought the association and experience would be beneficial to me. I considered it somewhat of an honor, as well as a privilege, since I had never worked in a bank, to be associated with such men and put on a level with them. Truly, I felt flattered, and it is not so difficult to flatter youth, and particularly college students, who have come to think that they really know enough to take a position by the side of experienced and seasoned men. Later they come to realize that their scholastic attainments alone do not qualify them for many positions for which they had hitherto considered themselves eminently fitted.

I appeared on the opening day of the fair, and went immediately to the administration building where the director who had promised me the job had his headquarters. He greeted me cordially, but told me he was too busy just then to talk to me, and requested me to see him an hour later. When I returned to his office, he said he would like for me to rustle some galvanized buckets and tin cups and see that a cup and bucket were placed in each ticket-selling booth, and that I should get some ice and fill the buckets with water and keep them filled for the ticket salesmen and money changers. About 2 hours later I returned, and, in answer to his question as to how I had gotten along, I told him that I had all of the men supplied with ice water. He expressed approval and remarked that it was rather warm in those booths and that he wanted me to see that the men were kept supplied with ice water all day. At the close of that day's work, he ordered me to report at 7 o'clock the next morning. Upon my arrival, he directed me to continue my services as water boy the second day. At the close of the second day's work, the director asked me how I liked my job. To be sure I wanted to say that I didn't like it, but I had been trained from earliest childhood to do the tasks that had been assigned me, and do them well, without complaining. Hence, I replied: "It is all right. But, of course, it is not what I thought I was going to do when I came over here. Nevertheless, I am willing to do whatever you want me to, since I am already on the ground." His only remark was: "Very well. You see that the boys all have ice water again this morning and come back to the office when you shall have supplied them on your first round." Again, I obeyed orders.

Upon my return to the administration building, the director gave me a badge to pin on my coat lapel, which read "Collector of admissions," and told me in very few words that he was placing me in charge of all the ticket sellers at the fair. He explained that I would be responsible for seeing that the salesmen had tickets, the money changers ample change, and that I would be provided with a conveyance to transport me from one ticket-selling booth to the other and to the office, with two plain-clothes policemen and a private detective who would accompany me everywhere I went.

We had twenty-odd ticket salesmen at the entrance gates and the grandstand. These men were all my seniors, and for fear they might resent my occupying a position superior to theirs the director cautioned me not to disclose to any of them the fact that I had never worked in a bank. It was my duty to give out the tickets to the salesmen, take their receipts therefor, collect the cash from them every hour during the day and bring it to the administration building and turn it over to the treasurer of the fair, and at the close each evening require the return of the tickets that had been distributed, or the balance of the cash therefor. A horse show was scheduled for that night, and the director told me that I would be in charge of the admissions to the horse show and to manage for ticket salesmen at the gates and doors.

Nothing more was said to me about supplying the men with drinking water. But I quickly observed that a substitute had been provided to render that service. When the fair officially closed the director of admissions asked me to approve the time for all of the men who were working under me and wait until they received their money, before filling out my voucher. He then handed me a voucher to sign for the full period of the fair, at the rate of $7.50 per day, whereas the ticket salesmen were paid only $5 per day, which he had promised me the summer before. As he handed me the voucher he said: "How did you like being water boy at the fair?" I merely smiled. He said, "I wanted to see what kind of stuff you had in you, whether or not you would obey orders, submit to discipline, and be willing to do any little task that was to be done. You satisfied my curiosity in that respect, and I was convinced by the thoroughness with which you performed the duties of water boy that you would make good anywhere I placed you. For that reason I put you in charge of the ticket salesmen. I would like for you to be with us next season in the same position."

This incident cannot be appreciated fully, without knowing something of the character of that director of the State fair in charge of admissions. He was a man past middle age, very active. A positive character with a commanding personality, unassuming, but serious-minded, and considered an excellent judge of human nature. He had held public office one or two terms in his home county. He owned or controlled a string of 10 or 12 country banks in his part of the State. He was a practical farmer, owned more than 1,000 acres of the most fertile land in the Mississippi River Valley, and an island in the Mississippi River of some 800 acres. He was a livestock and grain farmer on a large scale and an astute businessman, who enjoyed the confidence and respect of all who knew him. He was eminently fair and of mild and placid manner, but determined to win against all odds, when he considered his position proper and tenable. He had very little scholastic training, but was well educated in the "University of Hard Knocks." He was a man of comparatively few words, but when he spoke, all who knew him understood that he meant what he said.

Again, I was flattered. I left the fairgrounds that closing night feeling more important than I have ever felt since. But I had had a lesson. Fortunately, I had followed my early training, of doing cheerfully, or at least without complaining, whatever was to be done. I had been taught to adapt and adjust myself to the circumstances, and make the best of them, with the faith that eventually we may be rewarded for doing well the little things that need to be done, although they are not altogether just what we might prefer to do.

It was indelibly impressed upon my mind, then and there, that being a water boy once does not necessarily mean that one must continue always to be a water boy. Often it is a step to greater possibilities. The biographies of most great people witness this fact.

Frequently our employers, especially the older generation, in dealing with the younger, use such methods as a test to determine our character, our attitude, and our faith. In some instances we are prone to become impatient and intolerant, which leads to our own undoing. Ordinarily youth does not realize at the time that in such cases he is being put to the test. Occasionally he will revolt, and, without his knowing it, such revolt is the cause of his not being promoted, and ultimately of his losing his position and finding it ever more difficult to obtain another chance. I have known instances where employers have said, after it was too late, if you had not acted as you did, I would not have discharged you, for I had in mind, if you went ahead and did well whatever work was assigned to you, that I would promote you to a position of greater responsibility, carrying more substantial emoluments. We have all known of occasional instances of melancholy and discouragement which follow in the wake of such experiences. Youth is prone to give up too quickly. We are inclined to underestimate the value and importance of such tests of humbleness. After all, in many instances, the little things of life are the ones that count most. Small services well performed, although they may appear to us insignificant and unimportant, frequently convince the employer that eventually the employee will capably and faithfully perform the larger tasks when the responsibility is his to shoulder.

Of course, no one, with ambition, wants to be a water boy always. Much less does one who has had several years of college training feel that he would like to be a mere water boy at a State fair when he thought he was to be and had been promised that he would be put on a level with experienced bank clerks and officers. His vanity shrinks. He is humiliated. But humbleness and swallowed pride, with a determination to make good at whatever task is assigned him, will almost always be followed by a promotion to a position of responsibility that will call forth the greatest possibilities of which one is capable.

Hence, once a water boy always a water boy? No. Not necessarily so. It depends upon the individual, his early training—his breeding, if you please. The answer to the question depends largely upon the individual's own reaction. The future is generally measured by the attitude and disposition with which we go about the performance of any duty that lies before us, the thoroughness and determination with which we attack the problems which confront us in everyday life, be they large or small, and the faith within us that we are measuring up to the responsibilities of our positions. The future is, after all, just about what we make it for ourselves. After having run the gamut of human experiences, will we not have to admit we have been to a very large extent the authors of our own destinies?

Usually we cannot appreciate fully our opportunities until it is too late. In retrospect, we are inclined to think and say that if we had, or had not, done thus and so, things would have been different. We are all good at making excuses for our failures. It does seem at times that fate prevents our advancement, and there are external influences which play a liberal role in molding our futures. But, by and large, he who is faithful in the performance of the smaller tasks of life is undoubtedly better qualified to perform the larger responsibilities, and in no other way can one expect to become successful in the greater spheres of activity. The Great Teacher once said, "* * * he that shall humble himself shall be exalted"; again, in the parable of the talents, "Thou hast been faithful over a few things, I will set thee over many things"; and, on another occasion: "He that is faithful in that which is least is faithful also in much."

Now for His Epitaph

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following editorial which appeared in the Boston Sunday Post, May 18, 1947:

NOW FOR HIS EPITAPH

The day when an ancient debt which the world owes to a champion of freedom, whose daring in behalf of liberty made him not only a notable martyr, but lifted him beyond the boundaries of his own land to enshrine him a fighter for freedom all admire, is beginning to dawn.

Some years hence, the dying wish of Robert Emmet, 25-year-old Irish patriot, expressed as he stood in the dock in Dublin, condemned to die because he led an abortive revolt for justice in his little land, will be fulfilled. His simple yet stirring appeal for someone to write his epitaph will be answered.

Every student of eloquence knows the classic peroration of his address to the dooming bench, which was in fact his own funeral oration: "Let no man write my epitaph; for as no man who knows my motives dares now vindicate them, let not prejudice or ignorance disperse them * * * when my country takes its place among the nations of the earth, then, and not till then, let my epitaph be written."

Come September, it will be a lapse of 144 years in mankind's upward march to freedom since Robert Emmet was publicly beheaded in the streets of Dublin. And last Thursday, in Boston, the drive for a United Ireland was launched again—a campaign to wipe out the unnatural division of the little nation and join all the 32 counties into a solid political and economic unit.

Captain Ireland of Northern Ireland gave impetus to the project which should have much support here in America—an America which so recently fought to free the peoples of Europe from similar dividing tactics as practiced by the Hitlerian dictatorship.

It was by the merest chance, yet it was also an auspicious coincidence that Captain Ireland chose Thursday last for his Boston visit to stir public opinion to right a wrong which is patently contrary to the letter and spirit of the Atlantic Charter which not only Americans, Englishmen, Frenchmen, Hollanders, Belgians and others, but 350,000 sons of Eire bearing arms in British uniforms inscribed in blood on imperishable tablets.

For 100 years ago last Thursday there passed away in Genoa, perhaps the greatest orator that ever lived since the time of Demosthenes, that eloquent Irishman, Daniel O'Connell, scholar and counselor, whose words fired the soul of a conquered but unsubdued people to break century-old shackles of galling and preposterous bondage.

On the part of some Americans of Irish ancestry or other ancestries, there may be misgivings and doubts that Eire at this time should raise the question of the elimination of partition because of timid fears that strife again will be stirred and blood once more will flow in a land which is loved by them for its ruins more than for its rights.

Yet, common sense would indicate that wiping out the artificial barrier between people essentially the same, so that Ireland may become one and thereby stronger to meet the onrush of communism sweeping Europe, should be achieved easily around a council table in a similar manner to the effort now being made to bring long-delayed justice to Palestine.

The English Government, now extending freedom to India and Burma, can hardly argue that nearer-to-home people must be kept apart who were once united. Too recently she engaged in a war to check the divide-and-conquer policy of a foreign government which threatened by such a system to slice up and overwhelm the world.

The English Government now in power, which publicly sets such a store by its championship of the common man and lesser peoples, has an outstanding opportunity to right an ancient wrong with a minimum of dispute and win many friends. If it seizes the opportunity, another contribution will be made to world peace, and the dust of Emmet and O'Connell will rest easier. So will the dust of those other universal champions of human rights, Samuel Adams and Abraham Lincoln, who were akin to them in patriotism because they loved mankind.

Industrial Problems

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. ROBERTSON. Mr. Speaker, two great forces are at work in the United States today to destroy the principle of free enterprise. This Congress has recently passed legislation dealing with monopolistic tendencies of labor, and labor itself will be the beneficiary of that legislation, although the leadership is rebelling against it vigorously at this moment. Time will prove conclusively that Congress acted in the spirit of justice and wisdom in the passage of this legislation and labor—at least the rank and file of labor—will come to recognize that this bill is an emancipation bill taking labor itself out from under the heel of its domineering leadership.

On the other hand we have another force equally dangerous to the free enterprise system and that is the question of financial monopolies. Each succeeding month we see the resources of the Nation concentrate more and more into the hands of a limited number of people. The door is gradually closing on free enterprise. The small businessman is suffering at the hands of labor on one side and at the hands of large capital groups on the other side. It seems to me it is the duty of Congress to deal with monopoly groups in the same manner in which we have dealt with monopoly labor groups.

Under unanimous consent, I include herewith the following speech made by the Honorable Robert E. Freer, member of the Federal Trade Commission, dealing with the question of monopoly as we see it in the United States today:

INDUSTRIAL PROBLEMS AND THE FEDERAL TRADE COMMISSION

I

In the opinion of the average citizen the proper relationship of Government to business is one in which the Government exercises a minimum regulatory control compatible with protecting the public interest, and at the same time exerts a maximum effort

to encourage the general conditions which promote the best interests of agriculture, labor, investors, management, and public generally. To the average citizen, "the enforcement of free competition is the least regulation business can expect," but he wants the respective roles of government and business to be one of cooperation. While enduring wartime shortages he looked forward to days of plenty under a resumption of competitive selling, the resurgence of free enterprise and the relaxation of wartime controls.

To Americans it is a truism that competition fosters self-reliance, independent thinking, initiative, and ingenuity. Free enterprise is the road to business growth. Somehow business decisions made by the many impart resilience and toughness to an economic system.

We meet today on the common ground that our country needs small business; that our country cannot afford monopoly; and that facts indicative of a trend toward economic concentration and consequent lessening of competition should be carefully examined and weighed.

II

More than 1,800 formerly independent manufacturing and mining concerns have been swallowed up through merger and acquisition since 1940. Their combined asset value was $4,100,000,000, or nearly 5 percent of the total asset value of all manufacturing concerns in 1943. Moreover, it was the larger corporations each having assets of over $5,000,000 (in many instances achieved through earlier acquisitions) that accounted for some three-fourths of these recent 1,800 acquisitions.

The war contributed powerfully to the trend of concentration. Government purchases and Government financing of productive facilities were channeled predominantly into the hand of corporations which already occupied positions of dominance. Surplus profits created by such channeling have given a strong impetus to the trend by providing funds for additional wartime and postwar expansion through acquisition of former competitors. Out of $175,000,000,000 of Government-contract awards between June 1940 and September 1944, $107,000,000,000, or 61 percent, went to only 100 of the more than 18,000 corporations receiving such awards. During the war, 68 corporations received two-thirds of the $1,000,000,000 appropriated by the Government for research and development purposes in industrial laboratories.

The level of industrial concentration apparently has been raised by the disposal of surplus war facilities. Six large corporations alone, which had less than 10 percent of all manufacturing facilities in 1939, had acquired 48 percent of the value of the war plants sold as of June 30, 1946.

The most recent information on the wartime growth of concentration available from the Bureau of Internal Revenue shows that the larger manufacturing corporations, those with assets of $50,000,000 or more each, increased their share of total assets from 42 percent in 1939 to 52 percent in 1943.

An even more precipitous increase in concentration took place in the metal products industries—the field most vitally affected by the war. In these industries, corporations with $50,000,000 or more in assets increased their share of total assets from 49 percent in 1939 to 59 percent in 1943, and their proportion of gross sales from 38 to 51 percent.

The effect of war contract awards upon concentration was forecast in 1941 by the final report of the Temporary National Economic Committee. That report had warned that "It is quite conceivable that the democracies might obtain a military victory over the aggressors only to find themselves under the domination of economic authority far more concentrated and influential than that which existed prior to the war" (final report, p. 3). What another war would do to extend and entrench such domination by a few over the many needs no comment.

The degree of prewar concentration in the economy as a whole and in manufacturing industries in particular was stated in the report of the Senate Small Business Committee, submitted in January 1946:

The 200 largest nonfinancial corporations owned about 55 percent of all the assets of all the nonfinancial corporations of the country.

One-tenth of 1 percent of all the corporations owned 52 percent of the total corporate assets.

Less than 4 percent of all the manufacturing corporations earned 84 percent of all the net profits of all manufacturing corporations.

More than 57 percent of the total value of manufactured products was produced under conditions where the four largest producers of each product turned out over 50 percent of the total United States output.

One-tenth of 1 percent of all the firms in the country in 1939 employed 500 or more workers and accounted for 40 percent of all the nonagricultural employment in the country.

One-third of the industrial research personnel was employed by 13 companies.

More mergers and acquisitions in the manufacturing and mining industries took place in 1946 than in any of the previous 15 years. In 1946, the number of mergers was 26 percent above the number in 1945, and 225 percent above the annual average of the years, 1940–41. Years of greatest business activity and high-price levels are the years in which the greatest number of mergers take place. In 1920, the number of mergers increased more than six times over the number during 1919. It may not be irrelevant to note that it was in March 1920 that the Supreme Court handed down its decision upholding the legality of the United States Steel Corp.'s numerous corporate acquisitions and mergers.

Beginning in 1926 the number of mergers substantially surpassed the number for 1920 and increased each year thereafter until 1929 when it reached a record figure. Again it may not be irrelevant to note that it was in November 1926 that the Supreme Court handed down its decision curtailing the power of the Federal Trade Commission to order the divestiture of stock unlawfully acquired whenever the merger was completed by an acquisition of physical assets, even though such assets were acquired as a result of the use of power obtained through unlawful stock acquisitions. In 1943 there began a new wave of mergers, which is still continuing.

The stock-market crash of 1929 which heralded the onset of the great depression was preceded by a great wave of corporate mergers and a wild speculation in their securities. Today speculation in the future of merged concerns, supported by war-swollen profits, is again operating as one of the important causes of the present upward trend in merger activity. This speculation, which stems from the expectation of greater profits resulting from the elimination of formerly competing concerns, leads inexorably to the elimination of our competitive economy and thus to the elimination of the possibility of legitimate speculation.

III

The factual diagnosis showing the relation of such presently unrestrainable corporate mergers to concentration is quite complete. Today's choice is one between legislative action recommended for many years by the Federal Trade Commission to plug this loophole in the present laws against such mergers and inviting a continued concentration leading to a frustration of our declared public policy.

In the present Congress are pending bills to amend the Clayton Act as recommended by the Commission so that acquisition by a corporation engaged in interstate commerce of the assets of a competing corporation also engaged in interstate commerce be made unlawful where the result tends to monopoly. Presently only stock (not asset) acquisitions so tending are unlawful under that act and legal actions against even such unlawful acquisitions easily may be defeated.

IV

In exploring my next point, I feel that it is desirable to make some remarks in passing concerning the Commission's general nature and current work. The Commission was established in 1914, to detect and eliminate illegal trade restraints in their incipiency. Among the restraints of trade, price fixing continues to be the most frequently recurring charge. Others falling in this category are conspiracy to boycott or threats to boycott, coercive agreements, collusive bidding, control and limitation of supply, misuse of patents and licensing agreements for monopolistic purposes, and various forms of basing point, delivered price, and zoning systems designed to eliminate price competition. In essence they are repugnant to our national policy because they are autorestraints on the commercial freedom of the parties to the detriment of the consuming public.

The basic legislative intent is that competition by individual traders must be fair as well as free. Congress wished to preserve and foster legitimate competition, but at the same time to outlaw all jungle-type excesses inherent in the struggle to get business. These laws, therefore, aim to rid our economy of evil effects flowing from individual caprice and excess of competitive zeal as well as unlawful group activities. This approach to the problem was reflected in section 2 of the Clayton Act, which proscribes discriminations in price between customers entitled to the same general treatment if such discrimination injures, prevents, or destroys competition with the grantor or the recipient, or the effect may be to lessen competition or create a monopoly. The payment or receipt of brokerage by or to the other party to the transaction is made unlawful, as is the granting of allowances or facilities on terms not proportionally equal. Other practices unlawful under the Clayton Act, which emphasize the individual approach to the end that competition be fair and free of restraints, are reflected in the banning of full line forcing and tying contracts.

The Commission is also directed to eliminate deceptive acts and practices. Deception is harmful to the best interests of both consumers and scrupulous business. In this field of the Commission's work are matters involving false and misleading advertising of commodities through misrepresentation pertaining to composition, quality, purity, origin, or attributes. The Wheeler-Lea amendments to the Federal Trade Commission Act empower the Commission to eliminate the dissemination of false advertisements for foods, drugs, cosmetics, and therapeutic devices. The Wool Products Labeling Act, popularly known as the "truth in fabrics law," requiring informative labeling of certain fabrics also is administered by the Commission.

In the Commission there is machinery under which Government and business can cooperatively evaluate and discuss commercial practices. During the past 2 decades more than 150 industries have participated in trade practice conferences, and this phase of the Commission's work presently is receiving greater emphasis. To the greatest possible extent consistent with the public interest, the aim is to avoid the necessity of a multiplicity of formal legal proceedings. This cooperative method of wholesale prevention and elimination of practices which involve the theme of unfairness without resort to the mandatory remedies against in-

dividuals, will implement a broader program of formal proceedings to prevent monopoly and to eliminate group restraints on competitive freedom. Investigations into complaints of unlawful conduct will be made increasingly on an industry-wide basis and the aim will be to eliminate all unfair trade practices and illegal restraints of trade found in any such industry simultaneously wherever possible and under either procedure on an industry-wide basis. It is hoped that the results will inspire further confidence in the Commission's effectiveness in both fields.

V

One of the most pressing problems confronting industry and government at the present time is the matter of the present high price level. This is a subject which has received the earnest consideration of the President and of the Congress to an increasing degree in recent months. It is an elementary proposition that if price levels remain artificially high, the net result is a restriction of the real purchasing power of the consumer. The ideal situation, of course, is one in which wages and incomes remain at the highest possible level and prices at the lowest level consistent with the ability to pay high wages and earn high income. It is also a maxim of economics that under free competition and under the inexorable pressure of the law of supply and demand an artificially high price structure must in time fall of its own weight through failure of purchasing power to keep up with prices.

In the earlier days of our American economy of free enterprise, prices were highly sensitive to slight fluctuations in purchasing power and very few lines of commerce were dominated by enterprises sufficiently large as to have the ability to control and manage price levels. To illustrate, in an industry having 25 small manufacturers, all approximately of equal size, no one of them was sufficiently powerful to maintain an artificial and uneconomic price level, hence prices necessarily rose and fell with and accurately reflected purchasing power among consumers.

I have mentioned to you some of the problems which confront the American public as a result of the accelerating increase in corporate mergers. I feel very strongly that one result of this increase in corporate mergers and the concentration in fewer and fewer corporate hands of market controls has been to remove prices of many products from the arena of free competition.

The same result, namely, the removal of prices from the free play of competition, is obtained when members of an industry agree together to manage the market through restrictive contracts, patent licensing policies, or outright understandings to fix prices. A good many situations of this type can now be reached under the antitrust laws by the Federal Trade Commission and the Department of Justice. The Commission has had numerous cases in the past few years involving this type of combination to control markets.

It has always struck me as a phenomenon of the business world that perfectly respectable men of the highest integrity and character have no hesitation about entering into a gentleman's understanding with their competitors to avoid the free play of competition in one form or another With few exceptions, these men are representative of the highest type of our citizenry, and they would be the first ones to complain bitterly about any unwarranted Government regulation of their business. And without exception these men are against monopoly and the fixing of prices as an abstract proposition of law or economics.

I appreciate full well that competition is very often a ruthless process which appears to work many individual hardships, particularly when there is a buyer's rather than a seller's market. Yet I know of no force which can be substituted for the free play of just this competition to regulate business in the public interest. Certainly all experiments looking toward permitting business to regulate itself in the sense of establishing private or even semipublic code organizations to control prices, markets, and all phases of business enterprise have failed. Nor has the Government demonstrated great ability to do that type of job. The plain truth about the matter is that men, either in government or business, have human limitations which make for inevitable serious mistakes in judgment about managed pricing which would not be made if the production and prices in that business or industry had been subject to "regulation" by the forces of free and open competition. American business is so complex and so inextricably interwoven and interlaced that there is, in my opinion, no body of men sufficiently wise or skilled to plan in advance the varied decisions that the economic necessities of free and fair competition produce naturally and with sufficient flexibility to meet any unexpected changes in market conditions.

We saw several phenomena in the great depression which indicated the inflexibility of those segments of basic industry which either by concentration of production in a few hands or by gentleman's agreement among the major producers were able to maintain the high boom price levels in a period of economic distress. These industries suffered at least as much as those in which competition forced distressed prices, and the fact that they elected to curtail production and employment rather than to reduce prices contributed directly to delaying the swing of the economic pendulum by further curtailing not only the aggregate power to consume all products but also by discouraging potential buyers from consuming their goods.

Now we are on the other side of the mountain. There are present indications that prices have outrun purchasing power. Those industries and businesses which are sensitive to the play of free and open competition will have their prices adjusted to the market as an inevitable matter. However, in those industries in which concentration has led to a managed market or where understandings to restrict or prevent competition are employed, prices may or may not adjust themselves, depending on the personal judgment of the market managers. To the extent that they elect not to reduce artificially high prices, a human blunder may be made by a few which can cause a great deal of economic suffering to the many.

I do not believe in or encourage the philosophy that it would be proper in these inflexible industries to regulate them and thereby to force price reductions by Government fiat. I do not believe that the human beings in the Government are any better equipped mentally to make such decisions of managerial discretion than are the human beings in business. The only advantage suggested for the Government making such decisions rather than private monopolists is that presumably the motivating force in the decision would be the interest of the public as a whole rather than any private or selfish interest.

If any of you think it strange that I should be resisting the principle of over-all Government regulation of business, I remind you that the basic concept of the Federal Trade Commission Act, as well as of the antitrust laws in general, is that there should be a minimum of regulation of business, and a maximum of individual freedom to compete under simple rules designed to keep competition clean and prevent artificial and monopolistic restraints or collusive agreements which suppress and eliminate the natural regulatory forces of competition.

VI

I am personally convinced that the most pressing problem facing the public today is the preservation of free and fair competition as the primary regulatory force in business. Unless businessmen themselves help to halt the forces tending toward monopoly and the vesting of control in a few hands, they will find themselves inevitably heading away from the free enterprise system which is the keystone of our American way of life. Free and fair competition is the alternative to either domination and regulation by private groups of capital or that of a paternalistic state similar to those which have arisen abroad as a substitute for the forces of the free market.

As I mentioned earlier, most businessmen will agree with this statement of mine as an abstract proposition. Yet many of them see nothing inconsistent between this proposition and their own gentleman's agreement with their competitor allocating territories in which they each will have exclusive privileges or territories or a tacit understanding that neither will raise or lower prices without consultation. To preserve competition as a primary regulatory force in America requires something more than this sort of lip service. The requirements are not too complex. They appear to be that the laws against unfair and monopolistic practices must be universally observed in letter and in spirit and that the obvious deficiencies which hamper adequate enforcement of those laws must be corrected by legislative action.

Final Passage of H. R. 3020, Hartley Labor Bill, Urged

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of a letter from a prominent citizen of Guthrie, Okla., not in my congressional district, expressing in no uncertain terms his views and what appears to be the prevailing sentiment of the people in Oklahoma with reference to the Hartley labor bill, H. R. 3020, recently passed by the House by an overwhelming majority.

It will be noted in this letter that the author says that many members of the labor unions have expressed their approval of this bill and their hope that it will be passed in the Senate and signed by the President.

Undoubtedly, the general public is strongly in favor of the passage of this measure, and its final passage is urged, notwithstanding the fact that the President may veto the bill.

It will be remembered that the bill passed the House by a majority of more than sufficient to override the veto of the President, if the President should see fit to veto the measure. There were more democrats who voted for the measure than there were democrats who voted against it. The same was true with reference to the republican Members of the House who voted on this bill.

The letter referred to is as follows:

GUTHRIE, OKLA., *April 23, 1947.*

Hon. GEORGE SCHWABE,
House Office Building,
Washington, D. C.

DEAR SIR: I want to compliment you on voting for H. R. 3020, which is the labor regulatory law recently passed by the House. I

am in touch with quite a number of communities of Oklahoma and assure you that your action in this matter met with almost the universal approval of all voters in these districts. As a matter of fact, I have had many members of labor unions express their approval of this bill, and their hope that it will be passed in the Senate and signed by the President.

I presume from the newspaper reports that the President will veto this bill if it goes to him in the present form, and I assure you that those whom I have discussed this matter with—and they are many—are strongly of the opinion that Congress should override the veto.

There is no doubt but what many of the labor-union leaders are communistic, and also entirely antagonistic toward the form of Government we have in the United States. These leaders should not be permitted to head organizations that wield as much power as the labor unions have had during the past several years. Legislation such as is contained in H. R. 3020 should be placed on our legislative books as soon as possible.

Again thanking you for your stand recently taken in this matter, and trusting that you continue to support this bill, even though it is necessary to override the President's veto, if this should come.

Address at Memphis Cotton Carnival

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. DAVIS of Tennessee. Mr. Speaker, during May of each year there is held in Memphis, Tenn., the Memphis Cotton Carnival. It is truly a week of pleasure combined with the very real recognition of the part that cotton plays in the economy of the Nation. Hon. Hugo Dixon, a highly successful businessman, was selected to reign as king. His queen was the very charming Betty Crump, daughter of Mr. and Mrs E. H. Crump, Jr., and the granddaughter of our most distinguished citizen, Mr. Crump, Sr.

The carnival has attained national prominence. While there is a profound dignity in connection with the large royal court and its functions, it is so democratic that the people from the Midsouth join with Memphians in active participation in all of its many-varied activities and events.

Following an annual custom, all of the luncheon clubs combine their weekly meeting into one large luncheon during this festive celebration. This year the Gavel Club, which sponsors the city-wide luncheon, honored me by an invitation to deliver the annual address. Many kind friends have requested a copy of my speech, and under leave granted to extend my remarks in the RECORD, it is reproduced as follows:

Twenty-five years ago I made my first appearance before a luncheon club in my city. Almost annually since I have had the honor to speak to each of your clubs. In all of that period of time none of you has ever seen me refer to notes. Today, however, stations WREC and WMC have generously made their facilities available to the Gavel Club and to the Cotton Carnival Association. My time is, therefore, restricted. To cover a wide area of thought, precise and minimum language is required. I shall not be able to tell some stories which many friends have requested.

I assure you that no courtesy which has ever been extended to me is more appreciated than this invitation to speak to such a representative group of my fellow citizens, which has not only filled this adequate room to capacity but which has overflowed it.

Particularly happy am I to be at home during Cotton Carnival Week, when the people of the Midsouth take time to recognize the very definite part that cotton plays in the economic structure of the Nation.

This is a time we review historically the efforts of the past, mingle in good fellowship with our neighbors from throughout the Midsouth, count our many blessings, and in the springtime make plans for another summer, autumn, and winter.

I join with you in greeting their majesties, the king and queen of the Cotton Carnival. It seems but yesterday that this beautiful, charming, and truly representative young southern woman, the daughter of a gracious mother and an able father, came to add another star to the influence and usefulness of both maternal and paternal grandparents. I know that her grandfather, our most distinguished citizen, Mr. Crump, is justifiably happy to see one he loves so deeply so beautifully honored by the city for which he has given his very best.

And to his majesty, the king, we pay tribute to one of our newer citizens. By his splendid character, his love for country, and his quiet zeal for the development of industry, commerce, and good citizenship, he has quietly and yet indelibly made for himself and his family a very warm place in our hearts.

We are living in the greatest, the strongest, the richest, and the most effective Nation in the world. Two years after VE-day we find in Memphis an unconquerable spirit to build a still greater city in this strategic location. One has to travel but little to recognize in Memphis all the qualities and resources on which to realize this civic goal.

During the horrible war through which we have just passed we made our substantial contribution to its successful conclusion. We sent more than 50,000 of our men and women into the active service of our Government. On the fields of battle, and in administrative places of tremendous responsibility, we had our active participants. Many failed to return.

In Memphis we built airplane parts, stored and distributed supplies of every type and character to all parts of the world. We conditioned and flew fighter aircraft to every theater of war. We produced at one time more than one-half of the smokeless gun powder needs of our allies, as well as our own.

We were the headquarters for the Second Army which trained thousands of fighting men. The Navy selected Memphis for one of its most efficient and best recognized training facilities. We cared for the sick and the injured.

We built tents, tent poles, and naval craft, and manufactured life rafts; and, for that matter gave some direct or indirect support to almost every phase of the war. Today those facilities still exist in time of peace to maintain in part, or in full, our armed services.

Our transportation facilities are superior. Our climate is excellent. We are surrounded by rich agricultural lands. Almost half of the world's minerals are found within the territory covered by the 16 Southern States.

Under the wise leadership of the carefully selected and able administrators, Hon. E. W. Hale and Mayor James Pleasants, and their colleagues, the honesty, the efficiency, and the excellence of our city and county governments are known in every part of the country.

We are proud of our plentiful supply of good water, the ownership of our public utilities, and the advantageous arrangement we have on all tax matters. We know what the third bridge over the Mississippi means to us as a gateway.

We shall not stop until our harbor development adds hundreds of acres of industrial sites to our front door. We have a clean city, a beautiful city, a city of homes and of character, a city of sound business and good government, a city of fine people motivated by high impulses and with lives dedicated to the common good. We are surrounded by neighbors with equally high ideals and inspired by the same high motives.

So then, let us turn to a brief review of our Southland generally, and then to our world responsibility as a Nation.

Up to 1810, the South led the country in manufacturing. Virginia mined the first coal ever produced in this country. Washington's father was a miner of iron ore, which he hauled to a neighboring furnace. Washington, Jefferson, and others in their day, were earnest advocates of industrial development and many of them were actively interested in industrial enterprise.

It is from the pioneer industrialists of those days that many people of the South have inherited their technical trend of thought and managerial ability.

History tells us the struggle we were caused to make upward from the devastating effects of civil war. But the furnace fires were relit. The rebuilding of the South's cotton mills and the diversification of agriculture were begun.

In 1900 the value of the South's manufactured products totaled a billion and a half dollars. By that time its manufacturing industry had displaced agriculture in leadership.

By 1945 the value of manufactured products had risen to twenty and one-half billion dollars. In manufacturing growth the South has shown a 1,200-percent gain, while the rest of the country was showing 900 percent.

Meanwhile, the products of southern agriculture. so necessary to successful industry, had grown in value from $1,000,000,000 in 1900 to $6,000,000,000. This was due mainly to the diversification of farm crops, the increase in livestock on Southern farms, and the better grades of that stock.

The demand made upon Southern farms for raw materials for the chemical industry is destined to make the South the center of chemical manufacturing.

The southern farm is a part of the South's development, by no means to be overlooked in any discussion of the Nation's future economy.

In fact, almost every day we find some new discovery from southern farm byproducts that is proving indispensable to industry through the magic of science.

In many cases private plants have been showing the way in research. Producers are now taking their problems to scientists who are making two blades of grass grow where there was only one before, and sometimes none.

However. too little thought has been given to cotton research. At this very moment the House Committee on Appropriations is considering a plea for additional funds for the establishment of adequate laboratories to study new uses for cotton. The National Cotton Council of America, with its headquarters in Memphis, is doing a perfectly splendid job in presenting this matter to the National Legislature.

I shudder to think that rayon and paper have invaded the cotton field to such an extent that paper went into two and one-half million pounds of bags, towels, gun tape, facial tissue, napkins, and spun products in 1945 in competition with cotton.

Thirty-one additional uses removed another four and a half million bales from our cotton markets. This has been caused by industrial research.

There is no foreseeable limit to the losses cotton will suffer if the disparity continues. As long as cotton lags behind in technology, the cotton farmer will be wrestling with this fundamental handicap which will weaken his competitive position, eat away his markets, and depress his income.

In time of war, cotton contributed substantially to the military strength of the Nation. We know today that it is the most useful fiber in existence.

Resources of all southern banks, trust companies, and savings institutions have increased $20,000,000,000 since 1940. Our banks today are eager and prepared to advance money for the furtherance of enterprise. No longer is the South mainly dependent upon northern capital.

Construction is expected to break all previous records. Contracts already awarded in the South during the first 3 months of 1947 totaled $341,000,000.

The Blue Book of Southern Progress reveals that the South manufactures 22 percent of the Nation's goods. It produces 48 percent of the Nation's wealth. It cuts 45 percent of the Nation's lumber. The South produces 38 percent of the total electricity used in the country.

The South produces three times as much natural gas as all the other States combined. We have in the South one of the most modern tin smelters in the world.

A home industry started in the South to make bedspreads has now become a multimillion-dollar business. Hunko, Bruce Flooring, Plough Chemical, and Hunter Fans are multimillion dollar businesses. The Memphis Firestone Co. is the largest plant under one roof in the world manufacturing automobile tires.

There are approximately 40,000 manufacturing plants in the South today. Most of the raw materials for these products come from our own area.

In spite of this, however, many raw materials and farm products are still shipped outside the South for processing. Even more important, most of its presently processed products are shipped elsewhere to be manufactured into finished articles.

There is no reason why airplanes, automobiles, electric motors, steam engines, radios, and precision tools should not be completely finished in our own territory. The South is now ready to adopt and nourish enterprise of this kind.

Our social structure is now ripe for the development of industry which will convert into finished products all of our natural resources.

There is growing discontent of the manufacturers in the overcrowded areas of the North and East. This dissatisfaction stems from many causes, not the least of which are subversive labor influences, work stoppages, high taxes, and discriminatory State legislation.

The South offers advantages to industry that cannot be equaled in other sections of the country. It has the raw materials, a favorable climate, an abundant supply of loyal, intelligent labor, a diversified economy in both agricultural pursuits and industrial enterprises, ample electric power and transportation facilities—and, above all, an increasing desire to capitalize on these assets.

Now, what of conditions in Europe?

Two years after VE-day and its liberation the wasted continent bewails its insecurity. Political quarrels divide its leaders. Economic evils beset its peoples. War has ended, but there is no peace.

Yet, on the outer edges and the back reaches there are signs of recovery.

Much of the prolonged convalescence from war sickness has been due to elemental shortages—shortages of food, clothing, and shelter. These have been supplied in the main from the United States.

Europe will be strong again when it can, for the most part, feed, clothe, and house itself. Signs of recovery, by that formula, first appear in the farms, fields, and forests.

The recital of the troubles of Europe's peoples—the woes of the little man—from north to south and east to west differs only in the language in which it is spoken.

Britain, its coal supplies shorter this year than ever before, its rations cut below wartime levels, its housing inadequate to serve millions now out of uniform, grumbles most noisily.

The scene is definitely optimistic in Yugoslavia. Here the people have spent 2 postwar years in an all-out fight for reconstruction.

Denmark does well by comparison—as do the other Scandinavian countries. Bread is rationed. The shop windows are full, but the goods appear to be of inferior quality.

Sweden was rocking along in its usual plump fashion until a dollar crisis forced an import shut down. Now, the Swedes seem confused.

Norway has made a remarkable come-back. Across the Odor and Neisse, the Poles, like the Yugoslavs, are busy rebuilding homes, industry, and farms. Through UNRRA, and other outside aid, they have avoided a food crisis. Inflation still grips the cities.

Political disagreement is rife and Poles are waiting to see just how many of their liberties are insured by the new constitution now being drafted. On foreign affairs the Poles are united in a demand that Germany be forever kept impotent and the southern boundaries of the New Poland remain unchanged.

France, in typical French fashion, is a tempest In the cities the black market is the most important factor. Against it, the Government is bringing its weight to bear slowly, but steadily. Dealings in foreign currency are becoming less and less lucrative. Prices ostensibly have been lowered 10 percent, but there is a definite inflation. Politics is the spice of life.

Italy is bitter about her fate. Despite her eleventh-hour switch over to the Allies, Italy knows the taste of defeat in the loss of colonies, territory, naval might, and reparations. She is still host to American and British soldiers—and wishes they would go home.

Germany is vastly unhappy. For most of the war the German lived well, so he feels the hunger and misery today most sharply. He is preoccupied in a search for clothes, shoes, and shelter.

Few Germans feel like working hard because their wages, virtually worthless, buy little and are slashed deeply by taxes. In the cities the ruins stand grim and foreboding. The Great Powers let the months go by without agreement on his future, and the German tends to forget that Hitler and the Nazis were responsible. Today he blames the democracies for his troubles.

Russians feel politically better because of the stature their nation has assumed in world councils.

Unemployment is unknown in the land of the Soviets. Encouraged by the successful, though costly, results of the war, the country remains under the domination of about 3 percent of its population. Under this socialistic and highly communistic state, there is no real proprietorship, no home ownership, no freedom, nor individual initiative. In all of the public utterances of its leaders, we have grave forewarnings of their deep-rooted ideology. All too well do we know how thoroughly their agents have sought and are now trying to indoctrinate communism in our own great country. I wish time permitted a more thorough treatment of Russia and our relations.

So it is 2 years after this horrible war. We find noisy complaints in the crowded cities across the whole of Europe. We still have general discomfort and privation for millions. Yet men closest to the soil and the sea have high hopes. The little man works and waits for a peaceful security.

Today we are entering an area in which we in the United States, whatever we might wish, find ourselves in a new position and with a new role in the community of nations. That position is the position of the most powerful nation on earth. That role is a role of service and leadership—the only role that befits a leading player on a world stage.

The tragedies of history are the tragedies for the misuse of power, and historians never tire of pointing out that the decline of nations and civilization inevitably and logically fall from the fatal possession of great power without the exercise of great leadership.

Through the wise use of power we can—we must—profit by the lessons of history. We must not for a moment relax our vision. Power must not for a moment be left idle like money in an old sock. It must be used constantly and wisely to fortify the friends of peace everywhere in the world, and thereby to fortify ourselves.

We must be willing to face hard, cold, disagreeable facts. We can afford to and must hold our idealism and our principles high, but we must keep our feet firmly planted on the ground and not be afraid to recognize facts. This is no time for moral anesthesia. The lessons of history must not be too soon forgotten.

It is high time that America paused for a moment to take stock, to ask ourselves whither our folly is leading us; and, most importantly, to count our many blessings. The race of selfishness is on, and it is being run at breath-taking, neck-breaking speed. The dust it has stirred up seems to have blinded us to the reality that of all the peoples in the world we are the most fortunate. But are we humble and grateful? The answer is a tragic, but emphatic "No."

Instead of prayerfully thanking the Great Provider who has seen fit to make this a land of plenty, we thoughtlessly cram our garbage cans daily with food for which the dying plead, but in vain. America should take heed. We are not immune to drought. Nature has not endowed us with a positive guaranty against famine. And "Willful waste, depend upon it, brings almost always woeful want" may be words more true than poetry.

Pressure groups are on the march. Those who possess an unfair advantage over others fight to keep what they have and strive to acquire more. We have more food than any other country on earth and more money than we know how to use wisely. But we are not satisfied. Instead of realizing our good fortune and being thankful for it, we fight each other for more.

We contrive black markets to circumvent fair prices, oblivious to their awful consequences in the destruction of character and the disrespect for law and order which they engender.

I know of no time, since you elected me to represent you in Congress, when the Members were more studious in approaching the Nation's problems.

After the war those who think at all recognized that the cost of government had to be reduced and the reduction had to be made quickly. The President himself took more than $5,000,000,000 out of current budget demands before submitting it to the Congress. Many in the House think that it can be reduced by an additional six billion. The Senate has suggested a reduction of four and one-half billion.

It is not easy to reduce the national budget. Two out of every three dollars to be spent in the next fiscal year, under the budget submitted by the President, will be necessary to do only three things: (1) Support our armed forces, (2) to pay the interest alone on the public debt, which provides no reduction in the debt itself, and (3) to take care of promised assistance to veterans of all of our wars. The rest of that budget must pay for all other Government services.

Democrats and Republicans alike have long come to expect many of these services from their Government. Some of the services are more economical in the long run than would be their elimination from our national life.

In the next 60 days it must be decided whether the country will have tax reduction alone, or tax reduction with debt retirement. If we get tax reduction without taking it from Government spending, or if we get it without some corresponding curtailment in the huge $250,000,000,000 national debt, I think we will be open to the charge of unsound fiscal policy.

Budget cutting will be necessary to cover one or both of these steps.

If we had the same efficiency and expert planning in our Federal Government which we have in our city and county governments in Memphis, thousands of unnecessary employees might be released, services combined and concentrated, and still other services discontinued.

We must put the house of our National Government in order with sound business principles of economy and efficiency.

It is to be hoped that during this session we will be able to see a substantial payment on our debt and at the same time afford some tax relief.

Much depends on the total national income at the end of this fiscal year and the prospects for its continuance into the next fiscal year.

John L. Lewis has been a national figure for many years. He blazed an unfair trail for the honest working man. Lewis has committed an almost irreparable injury to labor, and of course industry and the people of America have suffered. Unfortunately, other high ranking labor leaders have followed on through with him. The people are demanding some correction. The great majority of Congress recognizes this fully. The pendulum went too far. It is bound to swing back, and I hope eventually this swing will be fair both to labor and to management.

We must find some way to recognize the nobility and dignity of labor, the necessity and the importance of capital and management, and, in a sense of justice and fair play, seek the way to get along with each other.

We must have production if we are to build homes for the veterans, house the millions of others who are without shelter, and construct factories and plants to provide employment.

We cannot be an isolated Nation. To maintain our own strength, our ideals, and our way of life, we must have a firm and fixed foreign policy. We must leave in the corners of our fields something to be gleaned and distributed to the starving peoples of the world.

It is a profound necessity that we aid our allies who are struggling to their feet. We must help our friends in their fight against communism.

No longer in the country should we permit community-property tax assessments in nine of our States and deny that formula to the rest of us.

We must tax cooperatives on the same basis that we now tax other recognized businesses. Cooperatives have a rightful place in our economy. The present inequitable and preferred position they now have must be removed.

Surely, there is much to be done. I feel, as you do, that our country has the character, the intelligence, the resources, and the genius to ever remain great. But, in closing, we must be reminded that our country has been strong because we have been a Christian nation.

Some years ago on an Easter morning, I took my younger son and one of his pals, an English boy temporarily residing in this country, to a sunrise meeting at Arlington National Cemetery. As we sat there in that beautiful amphitheater among some 35,000 people, we watched the beautiful sun break over the horizon in the east.

The services were about to begin. In the distance, the Knights Templar were marching to their places behind a military band which was playing softly "Onward Christian Soldiers."

Almost instantly, there appeared at the box immediately to the right of the speaker's stand an old man in uniform, on the arm of a handsome young military aide. The old gentleman's overcoat, so seldom used, was much too large to protect the frail body on which it hung. Without a spoken word, every man, woman, and child in that vast audience rose quietly to their feet.

This great old soldier stood erect and cast his eyes from left to right and, almost in painful silence, minutes seem to pass as he stood looking over that throng of people. He sat down. I could not help but think that he was acknowledging humbly the quiet recognition of his fellow countrymen for his marvelous leadership in the last war.

I said to these two boys: "You have been privileged to participate in a most dramatic scene. That was Gen. John J. Pershing, the General of the Armies. We just stood in recognition of our admiration, respect, and love for a great soldier. In a moment we shall stand again, but this time in recognition of the great Prince of Peace."

My friends, in deep humility and with earnest sincerity, we must—as individuals—and as a nation—stand up for the great teachings brought us by the Saviour of the World.

We must have the heart and the vision and the will to build our country greater upon the fundamental teachings of the one who gave us the two great commandments: "Thou shalt love thy neighbor as thyself," and "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind."

When Will Congress Put Teeth in Federal Mine Inspection Law?

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. PRICE of Illinois. Mr. Speaker, 2 months ago a great tragedy shocked the Nation—111 coal miners lost their lives in an explosion in Mine No. 5 at Centralia, Ill.

A great wave of indignation swept the country over circumstances that led up to the disaster. Congress, rightfully, was disturbed. So much that in those first few days following the tragedy one would be led to believe that it would act with unusual rapidity to put teeth into the Federal Mine Inspection Law—correcting an error of omission of a few years previous when it deleted enforcement provision at the time of the passage of the law.

I am not going into the details—the whys and the wherefores for the deleting of the most important provision of an act of such a nature. It is enough to comment that the Congress seemed to recognize its error on the morning after the Centralia disaster. We are 2 months away from mine No. 5—yet no action has been taken on recommendations that the Federal Government be given the authority to properly enforce the provisions of the Federal Mine Inspection Law.

On April 1, 1947, the gentleman from Indiana [Mr. LANDIS] introduced H. R. 2907, a bill to amend the act relating to safety in coal mines. This legislation would put the teeth back in the Federal Mine Inspection Law.

One would have thought this bill would be granted the right-of-way and would have the earliest possible consideration of the Congress.

I understand the bill has been referred to a subcommittee of the Committee on Education and Labor and is awaiting hearings. What hearings are necessary in the light of years of study on this matter and in the light of many disasters which have occurred in our Nation's mines for the lack of such legislation? Personally, I feel that what the coal miners desire to see in this instance is less hearings and more action.

I cannot urge upon the Members of Congress too strongly the necessity for immediate action in this matter. It isn't like considering a question suddenly thrown upon us—this is a matter which the majority of us believe should have been settled long ago.

While we plead for prompt action in Congress, we also recognize the great responsibility of the States. In this connection, I include with my remarks these four recommendations of the St. Louis (Mo.) Post-Dispatch to make mines safe:

First. Take inspectors out of politics.

Second. Outlaw political contributions by coal companies and all other corporations.

Third. Make failure to comply with State safety laws a felony.

Fourth. Bring the guilty to justice.

And, in further connection with the subject of attempting to place responsibility for mine disasters, I also include an editorial from the St. Louis (Mo.) Star-Times of May 19, 1947. It follows:

NO REAL FAULT TO FIND?

Except for possibilities inherent in two indictments suppressed pending arrests, it begins to look as if the Centralia mine disaster—which killed 111 men—may be written off as just one of those unfortunate things for which nobody really is to be seriously brought to task.

Sitting in Nashville, Ill., the Washington County grand jury yesterday returned four indictments—the two which were suppressed and two others in which the Centralia Coal Co. was accused of neglecting to comply with the State mine safety code. In case of conviction, the latter two might result in fines of quite as much as $500 each.

Will public indignation tolerate such an ending of a case whose every aspect is surcharged with the odor of scandal? If men could be sent to prison in connection with an accidental circus tent fire a few years ago, will not punishment be demanded in a case in which expert testimony has shown violations of responsibility to have been so much more flagrant?

Has nobody been moved by the vain pleas of the doomed miners to Governor Green to save their lives? Has nobody been impressed by the testimony of State and Federal mine inspectors as to the gross neglect of safety provisions in Centralia No. 5? Has nobody been moved by the story that inspectors were asked to solicit funds for the Illinois Republican political machine?

It was bad enough that the Republican majority members of an Illinois legislative investigating committee should undertake to wield the whitewash brush even when its Democratic members walked out in protest. Illinois politicians are callous, but one had hoped that the machinery of the law would work for an accounting from those whom political togas were ready to cover up. It is not known what manner of evidence was presented to the grand jurors—but in view of what already is in the public record about the Centralia tragedy, the indictments are a bitter disappointment. On the face of things, justice will stand side-tracked if no more intensive effort is made to place responsibility where it belongs.

Nor will such a failure be forgotten—at least not by the miners. If in the future they balk sullenly, it will be in good part because the official community has shown such indifference to what happened in mine No. 5. The seeds of resentment will be planted deep. And their growth will be speeded by water used to wash guilty hands.

Postal Service Politics

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. BRADLEY of California. Mr. Speaker, the brazen efforts of some postmasters to discredit this Congress have been mentioned several times in the House, but I think it well that such efforts on the part of civil-service employees of the Government be given all practicable publicity. I believe also that the quick grasp of the real situation by our newspaper editors should be given due publicity, for it is only by recognizing the true value of the press, and by acknowledging our appreciation therefor, that we can expect such understanding of our efforts as is set forth in the following articles from the two largest newspapers of Long Beach, Calif.:

[From the Long Beach (Calif.) Press-Telegram of May 9, 1947]

POSTAL SERVICE POLITICS

Fifty-eight substitute postal clerks and 34 substitute carriers have been dropped from service in Long Beach.

Working hours of 80 clerks have been reduced from 8 to 4 daily.

The post office will be closed Saturday, and there will be no Saturday mail deliveries.

A population of more than a quarter of a million is deprived of adequate postal service. The clerks and carriers laid off were needed to handle efficiently the enormously increased volume of Long Beach mail, up 30 percent above the estimates for this year.

The local curtailment of postal service followed the Post Office Department's reply to the request for an additional $30,000 to maintain full service here that the Long Beach office must operate on funds already allotted. The postmaster here had no alternative. Other cities of the country are similarly affected.

When the public asks why it is deprived of the service to which it is entitled by the failure to retain a sufficient postal force in Long Beach, the answer given is "politics."

It is politics.

But whose politics?

An effort is being made to pin on the Republican Congress the responsibility for cutting down the postal service. The propaganda is that the GOP majority in Congress forced the curtailment by failing to appropriate enough money to run the post office properly.

Congressman BRADLEY, of Long Beach, makes known the facts of the case. The deficiency appropriation needs for postal service had not been submitted to Congress prior to reduction of the postal force here, although the President yesterday did ask for an additional $10,924,000 to operate the Post Office Department until June 30.

Neither Post Office Department nor Budget Bureau, an agency working under the President, had made requests for deficiency post-office appropriations in time to prevent the cutting down of service in Long Beach.

The Post Office Department at Washington is responsible for the partial break-down of local postal service. Apparently it preferred to wait for the exhaustion of the fund, in order to play politics with the situation by charging Congress with false economy, rather than to take whatever action was necessary to carry on efficient service.

It is pertinent to remark that Postmaster General Hannegan also is chairman of the Democratic National Committee.

[From the Long Beach (Calif.) Independent of May 11, 1947]

CURTAILED POSTAL SERVICE

A favorite trick of bureaucratic government is for a department to curtail some vital service to the people so as to amass public opinion in favor of giving that department more money. When the department is called upon to curtail expenses and cut down personnel, it is the more important services the public is told must be curtailed. No effort is made to cut down nonessential expenses so as to cut down the tax burden on the people. An example of this pressure method was demonstrated here by the postmaster telling the people postal service must be drastically curtailed.

The inference was that Congress had refused to provide funds to pay the cost of greatly increased service to a growing population. It is apparent no request had been made for these funds to Congress. But strangely enough postmasters in separate sections of the country put on this pressure simultaneously at a time when the Post Office Department was about to make its plea for additional funds.

The postal service has always operated at a loss due to the subsidies it grants newspapers, magazines, catalogs and hundreds of other types of mail carried at second-, third-, and fourth-class rates. But the losses are probably much greater than necessary due to the fact that postmasters are strictly political appointees chosen for party loyalty rather than for their executive ability. The Postmaster General is usually the political boss of the party in power. The postmaster jobs are usually his payoff for party loyalty in each community.

The recent announcement of postmasters throughout the country that service must be curtailed because of a lack of funds is an example of political expediency. The Post Office budget is about to be passed. Fearing a cut in funds, it appears the people were to be shocked into demanding that the Post Office Department be given all the money for which it asked. It is perfectly timed. But it is almost too obvious to be convincing.

Each department of government is jealous of its powers. To cut off employees reduces the power of executives and the political favoritism that builds machines. We are told requests for additional funds here have been refused, so many services must be curtailed. At the same time our Congressman WILLIS BRADLEY and Senator BRIDGES point out that no request for additional funds had been made. But 2 days later the President did ask for additional funds. It appears the local postmasters were to put on the pressure at the psychological time.

The people, who are called on for more taxes to pay its deficit, have a right to expect a thorough investigation of these pressure methods. It has occurred in other Government departments seeking to maintain expensive services and staffs. It is the natural tendency of bureaucratic government which if allowed to go unchallenged will bankrupt even a rich nation. Private business is finding it necessary to curtail its expenses because the economic system is stabilizing. Government agencies must do likewise because the people cannot continue paying high taxes and maintain high purchasing power.

Meantime Long Beach with its increased population must have increased postal personnel. But the increased population means proportionately increased income. Thus the post office department is at fault if it fails to provide adequate funds. The local postmaster would have had much more sympathy from the public had his sudden curtailment not been announced simultaneously with blasts from over the Nation, some of which came from localities that have not had the population increase we have had. The public cannot help but feel that it was a well-planned campaign to pressure Congress into granting budget increases sought by the Post Office Department.—L. A. C.

[From the Long Beach (Calif.) Independent of May 8, 1947]

CHAMBER DEMANDS POST OFFICE INQUIRY

A congressional investigation of post office department activities was demanded last night by the Long Beach Chamber of Commerce following a drastic curtailment of local postal service by Postmaster Howard K. Goodwin.

A telegram sent by the chamber to Congressman WILLIS W. BRADLEY charged the curtailment was "political shenanigans" and urged the Representative to ask a complete investigation.

Goodwin announced Wednesday that Saturday carrier service was being discontinued and that the main office and all branches would be closed on that day because of the lay-off of 92 substitute carriers and clerks.

FUND REQUEST REFUSED

The discharges were necessary, the postmaster said, because a request for an additional $30,000 to operate the local office until July 1, the end of the fiscal year, had been refused by the Post Office Department.

In an earlier telegram, Congressman BRADLEY wired his local office that curtailment of postal service was a "move to discredit Congress."

Goodwin said he had "no comment" to make on BRADLEY's telegram. He could not be reached after the chamber communication had been made public.

BRADLEY said that Congress was not involved in the shortage because "the administration has not requested deficiency appropriations to cover supposed needs." (President Truman later asked Congress to appropriate $10,924,000 for the remainder of the fiscal year, however.)

LESS THAN 1 PERCENT

The local Congressman also pointed out that the 1948 post office appropriation bill passed by the House was cut less than 1 percent, the smallest of any yet passed.

The chamber telegram, signed by Manager D. W. Campbell, also charged that in addition to the Saturday shut-down, "no second-, third-, or fourth-class mail is being delivered."

"Just talked with Postmaster Goodwin," Campbell continued, "who states 'through lack of funds it has been necessary for me to curtail mail service in this city.' I asked

if he had requested additional funds, but he did not answer."

Goodwin previously told reporters his request had been turned down.

The 92 carriers and clerks, mostly veterans, were discharged this week, the postmaster said.

Battleship "Oklahoma"

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. STIGLER. Mr. Speaker, recently the dismantled battleship *Oklahoma* took its final plunge in the Pacific. It was on its way from Pearl Harbor to the Pacific coast to be salvaged. Those of us who live in Oklahoma deeply mourn its loss.

Under leave to extend my remarks, I am including the following editorial which appeared in the New York Times under date of May 19, 1947, entitled "Farewell to the *Oklahoma*":

FAREWELL TO THE "OKLAHOMA"

The plunge of the dismantled *Oklahoma* into the ocean deeps marks the last ripple from the churned and bloody waters of Pearl Harbor. If it was a kind of second death for the old battleship it was at least free from the cruel slaughter that darkened her first.

The *Oklahoma* was launched under an unlucky star. That was way back in 1914, on the eve of the First World War. She and her sister ship, the *Nevada*, were then the pride of the American Navy. Both were superdreadnaughts which had everything, the most powerful arms and armor the time could supply. Both survived two wars, the *Nevada* after fearful punishment to close a glorious career at Bikini, but the *Oklahoma* only as a tragic cripple. She never fired a shot in anger. The only brush she ever had with another vessel was with a railroad barge in Bremerton harbor. Under the surprise attack at Pearl Harbor she went down in 11 minutes, her hull pierced by five Japanese torpedoes. Many of her crew fell at their battle stations or drowned in their bunks. The Navy was determined to raise her and did, but it was too late to refit her for a war in which she had become hopelessly obsolete.

Perhaps it is better for the battered hulk to drowse forever in lonely waters than to be pecked to pieces on the scrap-heap. Poets and old warships themselves seem to think so. Britain's famous fighter, the *Warspite*, and our *Oklahoma*, both on their way to the breaking yards, appeared bent on dying at sea. In the 31 years since she was commissioned the *Oklahoma* trained many thousands to avenge her from other decks. All who are left alive will mourn the ship that never had a chance.

Taft-Ellender-Wagner Housing Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters and telegram all supporting Taft-Ellender-Wagner housing bill:

THE AMERICAN
VETERANS COMMITTEE, INC.,
Cambridge, Mass., May 17, 1947.

Congressman JOHN KENNEDY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN KENNEDY: The Cambridge Chapter of the American Veterans Committee has voted unanimously to reiterate its stand in favor of the Taft-Ellender-Wagner bill, and to oppose the Wolcott bill in the House of Representatives.

Our chapter is grateful to you for the deep concern you have shown in the disaster proportions of the present housing emergency, and for the courage to suggest doing something about it. We hope that there will ultimately be enough of like mind to constitute a majority, and we hope, somewhat more apprehensively, that this occurs before it is too late.

Sincerely,

ROBERT G. CONLEY,
Chairman, Housing Committee.

CAMBRIDGE VETERANS HOUSING COUNCIL,
Cambridge, Mass., May 15, 1947.

Congressman JOHN F. KENNEDY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN KENNEDY: The Cambridge Veterans Housing Council wishes to express its appreciation of your interest in and understanding of the critical nature of the housing emergency, as evidenced by your attending the MAVHC rally of May 11, 1947.

Our Council, composed of Posts of the American Legion, Veterans of Foreign Wars, Jewish War Veterans, AMVETS, and AVC, is strongly in favor of the Taft-Ellender-Wagner bill and opposed to the Wolcott bill. We wish to be so recorded and to urge your continued efforts in our behalf.

Sincerely,

CHARLES B. JOSEPH,
Chairman.

Representative JOHN F. KENNEDY,
House of Representatives,
Washington, D. C.

Cambridge AMVETS Post, No. 33, strongly supports Taft-Ellender-Wagner Housing bill.

FRANCIS L. MCCANN,
Adjutant.

Army Waste Charges Confirmed by Servicemen on the Job

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, some weeks ago I charged that we had entirely too many civilian employees in the War Department and that there is and has been a tremendous amount of waste in the armed forces, even since the cessation of hostilities. Apparently what I said, and it appears in the CONGRESSIONAL RECORD, met with some approval in the Pacific area. The following is a clipping from the Pacific Stars and Stripes of April 9, 1947. Several of these clippings have been sent me by boys in the service at Tokyo and other places in Japan. Some of these are War Department civilian employees and some of them are military personnel.

SCHWABE CHARGES TAXPAYER MONEY WASTED BY ARMY—REPUBLICAN OF OKLAHOMA HITS ARMY FOR USELESS SWIVEL-CHAIR OPERATORS

WASHINGTON, April 9.—Representative GEORGE SCHWABE, Republican, of Oklahoma, said today there are "thousands of swivel-chair operators" in the Army who are not needed.

"If they are not dropped, and if this waste and extravagance is not eliminated by our armed forces," he said in today's CONGRESSIONAL RECORD, "it is the duty of Members of Congress to see that they are eliminated as fast as such conditions come to the attention of Congress."

SCHWABE contended that extravagance by the armed services continues at an inexcusable rate even to this late day.

He quoted a letter from a lawyer friend saying he was employed by the War Department to be an attorney in the Philippine Islands or Japan.

SCHWABE said that upon reaching Manila the attorney was immediately declared surplus and told to return to the United States. Several other lawyers, he said he was told, also made the trip, only to be informed they were not needed.

"If the public could only begin to realize, and if the taxpayers were only made aware of the typical extravagance of the War Department such as was narrated in the letters from my friend, I think the people would change their minds and insist that their representatives in Congress take steps to eliminate many forms of waste and extravagance now indulged in by the Department," SCHWABE said.

The following is a letter from a War Department civilian employee in Tokyo, who sent me the above clipping, and it shows how some of them feel about the waste and extravange that is altogether too apparent there. I quote:

Note enclosed clipping from local papers. I'm surprised they printed it here.

May I wish you every success in stamping out this waste and inefficiency. I am a War Department civilian employee here and the waste and bungling are, I feel, far in excess of normal and reasonable. Top-rank visitors over here don't see the junk piles and storage depots and lots full of damaged, unidentifiable, abandoned, and misused stuff left to rot while many units are in want and more is ordered for replacement.

Hence, I think I am justified in saying that the Army waste charges have been confirmed by men on the job.

The Oath at the Elbe

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. SABATH. Mr. Speaker, what has happened to our country?

It was such a short time ago, just 2 years, that our newspapers were filled with blazing headlines as the Allied armies swept victoriously through France and the Lowlands into Germany, while from the east our Russian allies came across the Polish plains, through the Carpathian Mountains, and up through the Danube Valley and squeezed

our Nazi enemies as we squeezed from the west.

Who now remembers the meeting at the Elbe?

I do for one; and I am proud to say that a resident of my congressional district is Joseph P. Polowsky, who on April 25, 1945, was one of the six American soldiers to cross the Elbe River in a small boat to meet our allies, the Russians, on the eastern shore.

Mr. Polowsky has written touchingly and intelligently of that meeting under the title of The Oath at the Elbe. His story is a stirring plea for peace and understanding.

Under consent granted me, I insert his article in the CONGRESSIONAL RECORD and urge the Members, who are now so forgetful of the exaltation of victory, to read it and bring back some of that great spirit we seem to have lost:

THE OATH AT THE ELBE

Two years ago, April 25, 1945—the day of the opening of the first session of the United Nations Conference in San Francisco—six American soldiers crossed the Elbe River in a small boat, signalizing the military junction of two great allies of the Second World War: the United States and the Soviet Union. The 6 American soldiers, members of a 28-man infantry patrol under the leadership of Lt. Albert Kotzebue, of Houston, Tex., having left the forward American lines west of the Elbe the previous afternoon with the mission of finding a common meeting ground with the Russian Army, thrust through the 30-mile no-man's land between the Russian and American lines. At 11:30 in the morning, April 25, Lieutenant Kotzebue's patrol—followed later in the day by two other American patrols—successfully contacted the forward Russian lines on the east bank of the Elbe. A half hour later, at noon, the river crossing by the six American soldiers heralded the link-up of Gen. Courtney H. Hodges' United States First Army and Marshal Ivan S. Koniev's First Ukranian Army, successfully consummating a great common American and Russian endeavor and unity of purpose and interest.

April 25, 1945, the historic day of the military junction of the two great allies in Europe, the day of the opening of the first session of the United Nations in San Francisco, marked a high point in American-Russian relations. The 2 years which have elapsed have seen a precipitous deterioration of relations between the two great wartime allies. The disappointments and misunderstandings of the past 2 years have charged the atmosphere with distrust and recrimination. The remembrance of a happier day when, as trusting wartime allies, they met on a common field of battle, met with hope and enthusiasm at a common conference to help set up the postwar structure, has been almost forgotten.

Unless some great positive and wholehearted demonstration of conciliation, trust and confidence takes place in the near future, the issues which separate the nations will become irreconcilable. A great primary act of enthusiasm and confidence which can ease the present tension and reverse the present ruinous trend must come from the remembrance, celebration and regeneration of the spirit of a spring day in 1945 when they met, with high expectation, as brothers at the Elbe and in San Francisco.

We must, all of us—Americans, Russians, and all other peace-loving peoples of the world—ardently hope that April 25 will be set up as a day of friendship and conciliation among nations, and that it be celebrated by all men and women of good will in all countries and areas.

On April 25, 1945, addressing the delegates meeting in session at the first United Nations Conference in San Francisco, President Harry S. Truman of the United States said:

"We approach our task humbly, but with united resolution. The prayers of the people of the world are with us. They are spoken in many tongues and in the words of many creeds. But they are as one voice, rising from the tragedy and suffering of war, in prayer for lasting peace.

"Thus, fortified, and with the guidance of Almighty God, we must and shall fulfill the purpose for which we have come together."

Approaching their task humbly but with united resolution, the American and Russian soldiers grouped at the Elbe on April 25, 1945, were also attempting to fulfill the purpose for which they had come together.

On the evening of April 22, 1945, a last German engineer platoon, retreating in panic westward, had blown the span over the Elbe at Strela. A half hour later a civilian wagon train of some 200 old men, women, and children, streaming westward, and stopped by the blown bridge, had encamped for the night, huddled in a 200-yard radius semicircle about the bridgehead. At 1 in the morning, April 23, the advancing Russians saw lights flickering at the bridgehead from a 2-mile range. Believing German military units were engaged for a last stand, they heavily bombarded the bridgehead with artillery and mortars. At dawn the Russians fanned out north and south of Strela to mop up German remnants.

At 11:30 in the morning, April 25—2 days later—Lieutenant Kotzebue's patrol reached the west bank of the Elbe at Strela. Upon being recognized by the Russians on the east bank of the Elbe, they prepared for a crossing. The span over the Elbe was, of course, blown. The only means available for the crossing was an old wooden boat moored to the shore. The Elbe, flooded by spring rains, was a swift-running river. In order to avoid being swept downstream when making their crossing, the Americans moved the boat some hundred yards up the stream in order to be swept by the river into a 50-yard remnant of the bridge jutting out from the east bank of the Elbe. Achieving their objective, the six American infantrymen raced over the remains of the span jutting out from the east bank, crossed the river at noon, and were greeted by the Russians.

The greetings took place in the midst of some 200 corpses of old men, women, and children. After the preliminary greetings, they, all of them—Americans and Russians—looked down at the bodies and fragments of bodies—especially the body of a child with blue eyes and long brown hair clutching play crayons in one hand and a doll in the other.

At this historic moment of the meeting of nations, all of the soldiers present—Americans and Russians—solemnly swore that they would do everything in their power to prevent such things from ever happening in the world again, and that the nations of the world would and must live at peace.

The time has come for the nations of the world to reaffirm that solemn oath at the Elbe.

As one of the six American infantrymen to make the boat crossing over the Elbe 2 years ago, as one of the American and Russian soldiers to take the oath at the Elbe, I believe I voice something of the thoughts and feelings of all of us in this critical hour.

I therefore call upon the nations of the world for a new birth of conciliation and friendship, that the oath sworn on that hallowed blood-soaked ground shall not have been taken in vain.

JOSEPH P. POLOWSKY.

April 15, 1947.

The American Way

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. ROONEY. Mr. Speaker, under the permission granted me, I include in my remarks the following editorial entitled "The American Way" which appeared in yesterday's New York Post:

THE AMERICAN WAY

Wherever American GI's went in Burma, England, France, Iran, and even Germany, one sight never failed to stop them and turn their minds from war—a ragged, hungry, wandering child. GI Joe emptied his pockets, gave away his K ration, handed over his spare undershirt.

He was doing what comes naturally to tough young Americans unspoiled by soft living. Right out there in the wreckage, where the mines had just been cleared to the shoulders of the roads, GI Joe knew he'd find a way to feed and clothe himself, just as he'd dodge those snipers. He knew, too, that the child huddled against the wall couldn't. It was just as simple as that.

Those children are an awfully long way from Washington. In the lobbies of the Senate and the House, impressive with marble, mahogany, and plush, decorous with polite page boys and low voices, it could have been easy to forget.

Somehow or other, some echo of the spirit of GI Joe did get there, though. The conference committee voted 9 to 1 to appropriate the full $350,000,000 that President Truman asked for relief and earmarked $40,000,000 of it for the United Nations international children's emergency fund. Now all that's needed is a final vote of Congress. Then the help to 20,000,000 kids can begin.

Congress, however, has a long way to go before the Members can go home satisfied that they've done as good a job in their field as GI Joe did in his. There are many objectives to be taken and positions to be consolidated. And the only death or injury the Representatives and Senators need fear as punishment for failure is political.

Right now in Europe are 850,000 people who are living in camps of jerry-built wooden barracks, Nissen huts or patched-up houses behind barbed wire. They're called "displaced persons."

Some of our legislators in Washington think they know a great deal about them, and most of it just isn't so.

Some think most of these people don't want to go home because they like living in comparative idleness in these camps, eating mass-cooked food, wearing clothes that don't fit, surrounded by a hostile population, with no family life worth mentioning and no future. Those who stay cannot face religious, racial, or political hate. They want free air to breathe, just as did the fathers and grandfathers of many of us who now are called not displaced persons but Americans.

Others think these camp dwellers are Communists or criminals. That is not so. Soviet Russia and her satellites fought in the Refugee Committee of the United Nations a year ago to force most of these men and women to return to Soviet-dominated or conquered areas. Many, far from being criminals, have records of having fought for years against the darkest criminal organization of history—the Nazi organization.

Still others believe that only displaced persons from northern Europe can be of

any use elsewhere. That, of course, is the Nazi doctrine, and the record of every community in America refutes it.

Least sensible of all, some of our legislators think this country has no need for our share of these people, they who are farmers, heavy workers, skilled artisans, domestic servants, anxious and eager to tackle hard and dangerous tasks, just as immigrants to this country have done for generations.

For a long time now we have been asking Congress to open the doors to some of these people. We have urged Congress to get the United Nations International Refugee Organization going and, as our part, pass the Stratton bill to admit 400,000 immigrants—less than half the number of Europeans who could have entered under the quota system if Hitler's war hadn't blocked the way. Recently, the Herald Tribune, in a powerful and irrefutable series of editorials, has called for this simple act of justice.

Now, on June 4, the House Judiciary Committee has scheduled a hearing on the bill. Every organization that has faith in our country's traditions of freedom and opportunity should insist upon being heard in favor of this bill. That's the American way.

Footnote on Inflation

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call the attention of the House to two interesting and informative dispatches by the Associated Press. These two stories appeared on the same day and on the same page of the Washington Post issue for Sunday, May 18.

The first article is as follows:

NET INCOME OF 322 FIRMS AVERAGES 112.9 PERCENT OVER 1946

NEW YORK, May 17.—Net income averaging 112.9 percent above that of the like 1946 period has been reported for the first quarter of 1947 by 322 of the companies having common stock listed on the New York Stock Exchange, a compilation in the exchange's monthly publication disclosed today.

This improvement was shared by 261 of the reporting companies. Of the remainder, 48 showed some profit while not performing as well as a year ago, and 13 reported no profit.

The publication pointed out that the results cover only about one-third of the total of listed corporations on the exchange.

The second article is as follows:

ACTIVE STOCKS DROP TO NEW 2-YEAR LOWS

NEW YORK, May 17.—The stock market today emerged from its heaviest losing week since last September with a further nosedive to a new average low for better than 2 years on the broadest and most active Saturday dealings in 15 months.

As in the Friday relapse, and preceding downward sessions, selling was attributed mainly to growing apprehension regarding a possible substantial business recession later in 1947. Other liquidating factors included skepticism over wage-price problems, labor legislation, tax relief, and international affairs. Good dividends and earnings virtually were ignored in the majority of cases.

Today's losses, running to 2 or more points, were shaded here and there at the close by a little short covering and a bargain-buying and a handful of pivotals managed to show modest advances. Dealings were lively throughout. Transfers of 980,000 shares compared with 240,000 a week ago and were a top for a 2-hour stretch since February 16, 1946. The week's total of 6,138,045 shares was the largest since the period concluded April 19. Last week's figure was 3,702,771.

The Associated Press 60-stock composite was off 0.8 of a point, at 58.5, a low since January 25, 1945. It was the widest Saturday dip since last January 11. The week's loss of 3.6 points was the most severe since the first week in September. It was the broadest brief session since February 8.

Mr. Speaker, briefly, if comment is necessary, it seems that all is not gold that glitters in today's profit picture. Swollen inflationary profits, too, can be bad for the long run safe operation of our profit system.

Sale of Government-Owned Merchant Vessels

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. WELCH. Mr. Speaker, in accordance with the unanimous consent given me to insert in the CONGRESSIONAL RECORD two excerpts from H. R. 1425, introduced in the Seventy-ninth Congress, "to provide for the sale of certain Government-owned merchant vessels, and for other purposes," together with a recent newspaper editorial which appeared in the San Francisco Examiner, entitled "A Maritime Debacle," I include them herewith.

I invite the attention of Members of Congress to the subsections from H. R. 1425 because they indicate the policy of the United States Maritime Commission under the administration of Admiral Land when he was Chairman of the Commission, a policy which is being continued now, to the everlasting detriment of the American merchant marine.

Mr. Speaker, because of my association with merchant-marine matters, I was appointed by the President to be a representative of this country at the international maritime conference held in Seattle a year ago. I was a member of the Committee on Merchant Marine and Fisheries for 20 years and have a high regard for the chairman and members of that committee with whom I served for many of those years. Nothing I may say at this time is to be considered a criticism of that committee or any member of it, for it has worked hard throughout the years.

Following World War I we virtually destroyed the American merchant marine by disposing of ships to foreign competing nations without regard to our own requirements. The result was investigation and scandal of conditions obtaining in administration of our merchant-marine policies, negative as they were. Finally Congress passed a Merchant Marine Act designed to restore the American merchant marine to the important place it requires in our national economy and national defense. World War II began before that policy could be fully implemented, and the result was the spending of billions of dollars in the mad race to build ships—billions that were far greater than they would have been with a proper development of our international merchant shipping in peacetime.

Following the cessation of hostilities in World War II we follow the same disastrous policies that came into effect after World War I. We fail to heed the lesson taught us by that bitter experience. First, the Maritime Commission under Admiral Land prepared the draft of H. R. 1425 which would have actually given American ships in some circumstances to foreign nations in competition with American shipping. In all other instances foreign purchasers could have bought the ships at a lower price than American purchasers could. The Committee on Merchant Marine and Fisheries rejected this proposal, yet almost the same effect is being produced by the policies still being followed by our State Department and the Maritime Commission.

Section 3 (d) of H. R. 1425, Seventy-ninth Congress, first session, provided as follows:

> The purchaser of a vessel under this section shall, subject to the provisions of the act, pay to the Commission if the vessel is purchased on the basis of prewar foreign cost not less than 25 percent of the purchase price of such vessel or if the vessel is purchased on the basis of prewar domestic cost not less than 12½ percent of said purchase price. The balance, if any, of such purchase price shall be payable within not more than 20 years under amortization provisions satisfactory to the Commission requiring periodic payments (but not more favorable to the purchaser than 20 annual equal installments), with interest at 3½ percent secured by a preferred mortgage on the vessels sold and otherwise as the Commission may determine.

Section 4 (e) of the same bill, as recommended by the Maritime Commission, reads as follows:

> Payment of the sales price for vessels sold under this section shall be made upon such terms and conditions as the Commission with the approval of the President shall prescribe. In connection with sales to noncitizens, the Commission is authorized to avail itself of the services of any other agency of the United States Government with duties or powers in respect of extension of credit or financing services, and any such agency is authorized to extend such facilities and services to the Commission or to the purchaser for the purposes hereof.

Notwithstanding the rejections of those proposals by the Merchant Marine Committee of the House of Representatives, the following newspaper editorial clearly shows that the Maritime Commission continues to follow policies inimical to our merchant marine.

Mr. Speaker, at the International Maritime Conference held in Seattle last year we endeavored to elevate the standards of foreign nations in their merchant-

marine operations to a comparable basis with those maintained in our merchant marine. We were wholly unsuccessful. Now we are disposing of our ships to those nations who opposed elevating their standards simply because such increased costs of operation thus entailed would take away from them the unfair advantage they now hold over American shipping. When we sell our ships to them at any price, their low operating costs put those ships into unfair competition with the best ships we can produce. It must be stopped for it is the same principle that was laid down in H. R. 1425 of the Seventy-ninth Congress, which, I repeat, was recommended by the Maritime Commission at a time when it was completely dominated by Admiral Land.

The article from the San Francisco Examiner of May 9, 1947, follows:

A MARITIME DEBACLE

Possessed of the largest and finest merchant fleet in the history of the world at the end of the recent war, the United States is permitting it to fall into disuse and decay in large part, and is disposing of it to competing foreign maritime nations in much of the remaining part.

It is a dismal picture, as Maritime Commissioner Raymond S. McKeough reports, and one which illustrates an amazing incapacity of American Government and particularly American bureaucracy to learn from experience.

The United States permitted the same maritime debacle to occur after the First World War, and foreign nations virtually monopolized world trade in consequence of our governmental and bureaucratic bungling.

Now it is happening again, says Mr. McKeough, in the same way and for the same reasons.

The only major maritime activity in which the United States is presently engaged, he charges, is that of transporting relief to destitute countries, a transient enterprise at best and of dubious advantage to American shipping interests.

"Right now 1,400 American ships are engaged principally in transporting relief cargoes," the Commissioner states.

"This, however, is a short-lived trade.

"As the needy countries recover, they will meet their own needs or use their own ships.

"This is not far off.

"We will not be able to recapture this commerce.

"As the foreign countries complete new ships they will throw the ships they have bought from us on the world market.

"This will further lower tonnage rates, and it is already impossible for us to meet the rates they offer."

The deterioration of the American merchant marine is strikingly emphasized by the record of foreign purchases.

Out of a total of 950 American ships offered for sale on March 1 of this year, 620 went under foreign flags.

Since then, foreign operators have bought an additional 363 Liberty ships in the United States, and 85 Victory ships, and 50 tankers and 122 smaller vessels.

"We have created maritime nations where none existed before," bitterly asserts Mr. McKeough, ironically citing the example of land bound little Switzerland which is now operating 10 cargo carriers in ocean trade in competition with America.

"Australia, South Africa, and China are now operating their own ships and rapidly expanding," he discloses.

"The Argentine has become an active competitor, as has Brazil.

"Colombia, Peru, and Mexico will transport their own freights.

"Panama has grown to be the sixth ranking world maritime power."

The impending American maritime debacle is a national disgrace and is becoming a national scandal—and if it is not dealt with adequately and immediately, it may eventually prove to be a national disaster.

Can We Bail Out Europe?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. REED of New York. Mr. Speaker, I have referred to the blank checks to be drawn on our taxpayers to supply the black market of Europe and Asia. Why fatten the standing armies of foreign countries to the impoverishment of and danger to our own people? It is time for the Congress to come to its senses and legislate for the United States. Under leave to extend my remarks I am inserting an editorial and an article, both of which appeared in the Wall Street Journal of May 20, 1947, as follows:

HELP OR IMPOVERISHMENT?

Elsewhere on this page Mr. Chamberlin writes under the heading "Can We Bail Out Europe?" What he says seems to us to deserve emphasis, particularly at a time when foreign policy is being studied and planned.

The various loans and grants that this country is making to other nations are expressed in terms of dollars. But those dollars are a call on American goods and commodities. They are then a contribution to high prices. To continue lending and giving on the scale of $5,000,000,000 a year is to furnish sustenance for an inflation, to be followed by a bust.

A depression in America would be a blow, not only to America but to the rest of the world. It is precisely this development which the rulers of Russia and their Communist allies in other countries are expecting and on which they are counting. If it comes there will be nothing to oppose them. Unless it comes, they will be a bewildered lot of people; already the picture of a prosperous America contrasted with conditions in Russia is causing even her closest satellites to wonder if they have not tied themselves to a poorhouse.

The American foreign policy can be no stronger than America. The greatest asset we can have abroad is the picture of prosperity at home.

This year the world, by its own labors, will pay for only a little more than half of what it receives from the United States. And that contribution has supported only a very low standard of living. To suppose that this country can continue contributing on such a scale is fantastic. To suppose that it cannot only continue but increase its contribution to a point where starving, ill-clothed people can, by that means alone, be raised to some standard of security is fantastic to a degree.

We are not proposing, nor does Mr. Chamberlin, that American contributions be suddenly stopped. But they must be made on a selective basis. They must go to those things which will enable people of other countries to find employment, to produce, to trade, and so to support themselves.

On such a basis this country can raise the well-being of other nations as well as its own. By indiscriminately pouring out its goods it will impoverish all.

CAN WE BAIL OUT EUROPE?—DOLLARS CAN HELP ONLY TEMPORARILY, BUT PERMANENT CURE FOR CONTINENT LIES IN SELF-HELP AND SELF-RELIANCE

(By William Henry Chamberlin)

Simultaneously with the acceptance of the Greco-Turkish aid bill there is a growing volume of suggestions that the United States will soon be called on to adopt an emergency peacetime lend-lease system for Europe. Our foreign-trade balance is abnormally and unhealthily favorable, running at the rate of about $16,000,000,000 of exports against about $8,000,000,000 of imports.

At this rate European countries will soon run out of depleted dollar and gold reserves. Then, so the argument goes, in order to save our foreign trade and in order to stave off political and economic collapse in Europe, we should step into the breach with new grants for Europe, perhaps to the amount of $5,000,000,000 a year.

The first part of this argument deserves very short shrift indeed. To make our own taxpayers finance exports to foreign countries (either directly through taxes or indirectly through an increased burden of Government debt) is bad economics. It is a road not to prosperity but to national impoverishment and ultimately perhaps to national bankruptcy.

One of the silliest and most inaccurate statements sometimes made by hostile or envious foreigners is that America enriched itself out of the last war. We are, to be sure, richer in paper money; but no one in his right mind thinks of this as a source of wealth. We are very much poorer in solid and permanent national assets, in high-grade iron ores, in lead, in oil, in vast stands of timber in the South and West.

Our ideal in foreign trade should be to sell abroad, in goods and services approximately the equivalent of what we may take from abroad in goods, services, and investments. Far from rejoicing in the present huge favorable balance of trade, we should regard it as a danger signal. If we cannot bridge the gap between exports and imports by purchasing more foreign products we should not object if foreign countries cut down their purchases here. The present boom in exports is a strong contributory cause of high prices (especially of farm products) and inflationary maladjustments.

While there is no rational case whatever for taxing ourselves in order to send surplus exports to foreign countries, there is a strong case for doing whatever may be feasible to bail Europe out of its present sorry plight. Since the war, with the fearful ruin and devastation which it wrought, the European Continent has been haunted by two spectres. There has been the possibility that the Soviet Union, by a mixture of military force, propaganda, and fifth-column infiltration, might bring the whole European Continent under its domination. In such an eventuality we should be exactly where we would have been if Hitler had won the war in 1940 or 1941.

There has also been the possibility that the part of Europe which remains outside the sphere of Soviet control would sink into a permanent state of destitution, misery, hunger, and low productivity. To combat the prospect of either a Communist Europe or a broken-down Europe is certainly a proper, indeed an imperative, goal of American statesmanship.

RELIEF FOR PUMP PRIMING

But the writing of an annual $5,000,000,000 lend-lease check is not a hopeful method of achieving this objective. What Europe needs more than anything else is self-help and self-reliance. These qualities will not be cultivated by the assurance of a large-scale permanent American dole.

Most probably some loans and some outright grants for relief and emergency pump-priming purposes will be required. But first

of all every effort should be made to develop and utilize European resources which are lying fallow because of nationalist short-sightedness, unwise economic policies, and vindictive peace arrangements.

Consider the European coal situation. Before the war there were practically no American coal exports to Europe. Last year European countries bought 20,000,000 tons of American coal at the uneconomic price of $22 a ton. During the current year these purchases may run as high as 30,000,000 tons. This heavy drain of dollar reserves could be eliminated by a substantial upturn in Ruhr coal output.

Such an upturn could take place if there were a serious attempt to revive the German nonmilitary industries. Up to the present time there has been much talk, but little practical work in connection with such a revival. The benefits of the fusion of the American and British occupation zones have been nullified by sterile bickerings between the American and British military government authorities. Red tape multiplies and hunger and low production continue.

What is needed in Germany, as everywhere, is more reliance on individual initiative. A military government, however ably staffed, is not, by its nature, a suitable agency for reviving production and foreign trade. If denazification persecution of businessmen, industrial managers, and engineers (apart from legal prosecution of the few who may have been individually guilty of specific acts of brutality) could be promptly and completely quashed, if established German firms, instead of being treated as public enemies, were given an opportunity to resume trade contacts in Sweden, Switzerland, and other countries, the German and the European economic picture could be changed immensely for the better within a short period of time.

FRENCH WHEAT SITUATION

Consider again the peculiar French wheat situation. France is normally a self-sufficient country in wheat. It scarcely seems fair or reasonable to expect the United States to underwrite indefinitely the failure of successive French governments to work out price and distribution policies which will encourage French farmers to grow wheat as they did before the war.

American public opinion should remain alert to the many storm signals in Europe. But it should not be stampeded into the false belief that this country can or should write out blank checks to make up for every failure of collectivist economics in Europe and for the impossibly high cost of making vengeance, not general European recovery, the leading characteristic of the peace settlement. American aid to Europe should be careful and discriminating (there should be no woolly subsidizing of hostile Communist-dominated regimes) and should go hand in hand with practical programs for revising the many follies of the Potsdam and level-of-industry agreements and for encouraging European countries to practice every means of self-help before turning to Uncle Sam as the unfailing horn of plenty.

Your Congress

EXTENSION OF REMARKS

OF

HON. HAROLD F. YOUNGBLOOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. YOUNGBLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over radio station WJR, Detroit, Mich., on last Saturday night, May 17, 1947:

In approaching the microphone tonight to say good evening to the people of Michigan, especially in the Detroit area and the Fourteenth Congressional District which I have the honor to represent, I am indeed grateful for the opportunity to participate in the Your Congress program. I wish to speak to you on a number of related subjects, particularly the high cost of living and to tell you some of the things that are being done by the present Congress to lower prices. I also want to tell you about some of the actions of the present administration that have resulted in permitting the cost of living to get entirely out of hand.

I am serving my first term in Congress. In Washington they say a first termer comes fresh from the people. I want always to have that approach—from the people's viewpoint rather than from the Washington viewpoint of looking out to the people and trying to plan their lives for them. The collective wisdom of all our people is far greater than the knowledge possessed by any small group, no matter how highly placed they may be in our Government. It is the voice of the people that counts.

Right now the voice of America says to the Government at Washington:

Do something about the high cost of living.

Reduce the high price of government.

Lighten the tax burden.

Enact into law fair labor legislation to diminish industrial strife.

Toss out of the Truman administration Communists and other alien-minded radicals.

And the voice of America says to Washington: Apply the principles upon which the United States was established to dealings with foreign countries so that we can have lasting peace.

In one way or another all of these demands by the American people have a bearing upon the cost of living.

Let us consider them in more detail. First, the high price of government. The Federal Government's annual budget was only $4,500,000,000 when the Democrats were voted into power in 1932. They increased it to an average before the war of $10,000,000,000. The President last January, when we were again at peace, submitted to Congress a budget calling for expenditure of $37,500,000,000 during the fiscal year beginning July 1.

During the depression years of the early thirties, the people were led to believe that the Government at Washington could remedy all of their ills.

That, of course, is not true. Actually, the Government is a pauper. Uncle Sam goes around with hat in hand seeking donations from the people. When he spends more than he receives he must borrow just like an individual has to do. And that adds to the public debt and to the interest charges, which the people must pay.

During the war it was necessary to spend and spend and spend. We did not stop to count the cost. But I have no doubt that a lot of money was wasted. Congressional committees are now trying to find where money was wasted and to check charges of fraud and graft. These committees and the investigators are stymied at every turn by the Truman administration.

Through these years of huge expenditures, prior to the war and during the conflict, there developed in our country a spending psychology. I interpret last November's general election as notice by the people that they wanted to stop that psychology.

Reduction in taxes logically follows. When the Government takes less money from the people to maintain necessary governmental agencies and by virtue of termination of unnecessary bureaucracies, the need for revenue shrinks.

That is why the Congress is passing a tax reduction bill. As the measure is now shaping up, it is a fair bill. It gives the largest percentage of relief to the little fellows with small incomes and without undue hardship to those in the higher brackets.

The people know that during the last 14 years there has been an increase in Federal taxes nearly every year. Taxes have gone up by leaps and bounds. The present Congress proposes to reverse that trend. It proposes to reduce the total of Federal taxes about $4,000,000,000.

I do not need to stress the point that with the enactment of this reduction into law, workers will have more take-home pay and will be better able to meet their cost of living.

It is also axiomatic that a lowering of taxes will free initiative to invest in business enterprises and thereby help produce goods.

It is my considered judgment that our present tax structure is punitive in character. Under it, business initiative by little fellows has been stifled. Venture capital has all but vanished. Economists say that our present tax structure channels business into monopolies.

So we must have tax reduction—a lightening of the present back-breaking burden.

Now regarding labor legislation. The American people served notice last election day that they had had enough of the industrial warfare that is rapidly wrecking our national economy. They know instinctively that another year of strikes and sky-rocketing prices must end in a disastrous depression.

We must bring order and sense out of chaos in labor-management relations. When the Wagner Act was passed we were told that it would diminish industrial strife.

But there were three times as many strikes in the first 10 years under the act as in the 10 years prior to its enactment. In 1946 there were more strikes than ever before. Surely it cannot be logically contended that the Wagner Act diminished labor disputes that ended in work stoppages; that caused halts in production.

We want no punitive labor legislation. What the people want is a bill of rights under which the public interest, all of the people, is paramount.

You perhaps will recall the campaign of 1946 when the Republican Party, of which I am a member, promised, among other things in its platform, the enactment of a labor-relations bill, a bill to insure real collective bargaining; to protect the right to work as well as to strike; to safeguard the interests of the public, and to end the racketeering of the New Deal-labor leader combine.

In adopting the Hartley bill by a 3-to-1 vote, the House passed just such a bill, and I am proud to say that I was one of the 308 Members who voted for it. I stated publicly in defense of that vote that I would not retract an inch on my policy on labor and after the un-American demonstration last month by a minority of CIO pirates who picketed my home here in Detroit, I further stated that I would vote to override a Presidential veto of the labor bill.

It is very significant to me that the loud outcry against the Hartley bill comes from so-called labor leaders, and not from the rank and file of union members. Public opinion polls which I have read and my own congressional mail indicate a very strong support of union members for labor legislation designed to eliminate dictatorial and arbitrary control over union policies and practices as now exercised by some of these alleged labor leaders.

I do not agree with anyone who says that labor unions in order to present their case must be aided by violence, coercion, and intimidation. Labor unions with just causes do not have to resort to violence. Enlightened labor leaders know that is true.

Nor do employers with a just cause need aid from spies and intimidators to obtain justice.

The fact is, my friends, that in direct ratio to the degree of power available, Republican campaign promises have been, and are being, kept. Because there is a large working majority in the House, and because House rules are conducive to a greater degree of party control, the House has acted more promptly than the Senate. Indeed, with the exception of a few individual appropriation bills which have not yet been reported, the House today has approved legislation covering almost every detail of the legislative program approved by the people last November.

Because of the smaller Republican majority in the Senate, and also because that body operates under different rules, and moreover has been preoccupied with other essential subjects during most of the weeks it has been in session, progress toward the enactment of the party program there has been slower. But, in no single instance has the Senate rejected any part of the party program, and there is no reason for believing that it will do so. Every step it has taken with respect to that program has been in the right direction. There is no reason to doubt that when the present session of Congress adjourns, both the Senate and the House will have taken every step in their power to keep the promises made to the people.

It is, of course, possible that some of the efforts of the Republican Congress may be defeated temporarily by a Presidential veto. Republicans do not have control of the Presidency because that was not at stake last fall. Nor do they have the two-thirds majorities in Congress required to enact legislation over a Presidential veto.

Hence, if parts of the Republican congressional program should be defeated by the vetoes of a Democrat President, that is something which can be corrected only by the voters next year.

It is quite natural for the Democrats to seek partisan advantage from the fact that a Republican Congress, faced with a Democrat President and a hostile entrenched bureaucracy, experiences some difficulty and some unavoidable delay in translating its program into law. Moreover, the Democrats still have control of the vast propaganda machine entrenched in the executive departments and bureaus. They are using that machine in every possible way to discredit the activities of Republicans.

It is quite understandable that they should do this. They are fighting a last-ditch struggle to retain their places on the Federal pay roll.

In the last analysis, the welfare of all the people is at stake. The need is very urgent—the resort to veto power to please the clamoring minorities would be a vicious blow to what the people generally are demanding—a reduction in the cost of living.

My concluding thought and hope tonight is that peace and tranquillity in this great country of ours will again prevail and bring happiness to those whom we love and cherish.

Gold Star Pilgrimage Bill

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF, May 17, 1947:

Dear friends of the Triple Cities and my congressional district, President Truman recently called for approval of the provisions of the gold-star pilgrimage bill which I introduced in the House in January 1945, and which I am once again proposing to Congress.

The Hall measure reads as follows: "A bill to provide for pilgrimages of gold-star mothers, sisters, and wives to the graves of their sons, brothers, and husbands, who died in the service of the armed forces of the United States during World War II and who are buried in foreign lands.

"Be it enacted, etc., That there are authorized to be appropriated such sums as may be necessary to enable the Administrator of Veterans' Affairs, under such regulations as he may prescribe, to provide for, as soon as possible, and to pay the necessary expenses of, pilgrimages of mothers, sisters and wives of servicemen who died during World War II and were buried in foreign lands, to their sons', brothers', and husbands' graves."

Every Gold Star Mother, sister, and wife of the recent war should be given the chance to visit the grave of her loved one, if it is at all practicable and possible.

The practice of bringing home remains of veterans who fell in battle is now being followed to some extent in accordance with the wishes of the individual family. But most people seem to prefer that graves of the fallen be left unopened. Many would rather the sorrow, brought on by death, be locked within the mound of earth on that far-off shore instead of renewing its pangs by the return of mortal clay.

It is logical and natural that those nearest and dearest to the deceased should want to make a pilgrimage to the place, however remote, yet hallowed, where he fell fighting for his flag and his country.

After the First World War several thousand Gold Star Mothers visited their sons' graves in France at Uncle Sam's expense. They set the precedent which ought to be observed at the present. I hope Congress will not hesitate in providing funds and the authority with which to make similar pilgrimages possible in the near future.

I feel sure that all veterans' organizations in America along with their auxiliaries will be strongly in favor of the plan as outlined in my bill. The Gold Star Mothers, sisters, and wives ought to be considered and included in any mass pilgrimage which finally takes place.

How soon action is to be forthcoming in this regard will depend upon the sincerity of all who give lip service to the relatives of these dead heroes. Let us then arouse ourselve to our duty. The Hall bill provides for these pilgrimages of Gold Star mothers, sisters, and wives to the graves of their closest ones, who died in service during World War II, and are now buried in foreign lands. There should be no delay in our making such a measure the law of the land.

During the week Congress has talked a lot about voting money for American broadcasts to foreign countries. These broadcasts are known as the Voice of America and call for large outlays of public funds to broadcast messages to Russia, and other European nations in native languages.

The idea of forwarding America to other nations is excellent. Any way these broadcasts can build up American form of government and our high standard of living and lofty ideals of citizenship, I am for.

But I was informed that uncomplimentary references to our country are being made in such broadcasts. Making Americans out gangsters, ready to shoot each other on sight, gives us a black eye abroad. Such tactics must stop before I will vote any more funds for the Voice of America.

Thank you.

Comments on the State Department's Informational and Cultural Program

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting herewith a newspaper article entitled "House With an Ax" which was published in the Washington Post of Saturday, May 17, and which has to do with the fine qualities which the Honorable William Benton, Assistant Secretary of State, has, and which I believe should answer the attacks which have been made on him in carrying out of the State Department's information and cultural program. I would like to call to the attention of the House the fact that the five signatories are all members of the Committee of Economic Development and have intimate knowledge of Mr. Benton, his ideas and his abilities. I am also inserting a letter received just this morning from the American Legion as well as a copy of resolution 97, passed by the national executive committee of that body which met in session in Indianapolis, Ind., in the first part of May of this year. As the House knows, intensive hearings are now being carried on by the Subcommittee of the House Foreign Affairs Committee on the bill, H. R. 3342, introduced by Hon. CARL MUNDT, of South Dakota. This is a bill to enable the Government of the United States more effectively to carry on its foreign relations by means of promotion of the interchange of persons, knowledge, and skills between the people of the United States and other countries, and by means of public dissemination abroad of information about the United States, its people, and its policies.

Mr. Speaker, I think the carrying on of this program is vitally important to this country in these precarious times. I feel also that while mistakes have been made, the kinks will be ironed out as the program establishes itself. I am further of the opinion that all things considered, Bill Benton in his 20 months as Director of the Service has done an outstanding job in laying the ground work for the telling of America's story to the entire world.

We must have some means to oppose the discriminatory and unfair statements which are being put out over the air by other countries against us and, in my opinion, the only feasible means at the present time that we can use to counteract this is the continuation of the program now under way under the

capable and sound leadership of Assistant Secretary of State, Bill Benton.

Mr. Speaker, under unanimous consent, I am inserting the above-mentioned article and also a news story carried in this morning's Washington Post:

[From the Washington Post of May 17, 1947]

HOUSE WITH AN AX

Your editorial of May 7, House With an Ax, ends as follows: "Refusal to reinstate the information program of the State Department also had less to do with economy than with policy. The objection seems to have less to do with the idea than with the man responsible for its execution, Assistant Secretary Benton. We hope that Secretary Marshall will take the hint, and then renew his request. The program's the thing, not the man."

We are five of the men who have worked most closely with Bill Benton in various civic activities. We have, of course, followed his career since he has been in Government.

His record of merging and amalgamating three wartime Government agencies—those headed by Messrs. Nelson Rockefeller, Archibald MacLeish and Elmer Davis—and reducing personnel from roughly 11,000 to 3,000 in the space of a few months—is an achievement in administration of which the State Department can well be proud.

The kind of criticism that is now being leveled at Bill Benton is the kind of thing that keeps responsible and able people from going into Government work. It may be an effort to "save face" on the part of those who questioned the need for the OIC. The sudden decision that the operation is important, but that there must be something the matter with Benton, is an old and familiar pattern in government, and one that we protest in this case. Benton's record as a businessman and an administrator is well known to those in the business community.

He is one of the most successful independent businessmen in the United States; one of us can speak with special authority on this subject because Mr. Hoffman serves as a member of the board of directors of the Encyclopedia Britannica and of Britannica Films and knows of the extraordinary progress these companies made under Benton's leadership in the last 5 years.

He combines with this business experience a background in education (8 years as vice president of the University of Chicago), in broadcasting, in publishing, and in educational motion pictures. He has experience, skill, and enthusiam, and he has an Americanism rooted in boyhood in Minnesota and Montana that has found expression in every phase of his thinking and his career.

Bill Benton is the top man in the country for this job. It would be difficult indeed to find anyone who matches his initial qualifications for administering America's international information and cultural program. And it would be tragic, for the sake of a political maneuver, to waste the 20 months of experience he has acquired in mastering an assignment that is as new and unfamiliar to our country as it is necessary.

PAUL G. HOFFMAN,
President, Studebaker Corp.
RALPH E. FLANDERS,
United States Senate.
ERIC A. JOHNSTON,
President, Motion Picture Association.
WALTER D. FULLER,
President, Curtis Publishing Co.
MARION B. FOLSOM,
Treasurer, Eastman Kodak Co.

WASHINGTON.

THE AMERICAN LEGION,
Washington, D. C., May 19, 1947.

Hon. MIKE MANSFIELD,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN MANSFIELD: The American Legion at the meeting of the national executive committee, held May 5–7, 1947, at Indianapolis, Ind., considered the situation relative to the dissemination of American information to countries overseas.

Appreciating the seriousness of the situation and efforts of the State Department to remedy this, they adopted the attached resolution which I am enclosing for your information with a request that it be included in your record of hearings as the established position of the American Legion on this vital subject.

Sincerely yours,

JOHN THOMAS TAYLOR,
Director, National Legislative Committee.

[Enclosure]

CONTINUED WORLD-WIDE DISSEMINATION OF THE OPERATION AND PROGRESS OF AMERICAN DEMOCRACY

Whereas it is vitally necessary that the peoples of the world be fully and constantly informed of the operation and progress of American democracy and of the unselfish aims and purposes of the United States of America in opposing the encroachment of tyrannical and totalitarian ideologies by some nations beyond their own boundaries: Now, therefore, be it

Resolved, That we urge the continuation of world-wide dissemination by our Government, through international radio, motion pictures and otherwise, of the fundamental facts of the American form of government and way of life and of the basic character and objectives of our foreign policy.

[From the Washington Post of May 20, 1947]

UNIVERSITIES, LEGION BACK "VOICE" PLAN

The American Legion and the heads of 10 American universities let President Truman know yesterday that they are behind the State Department's Voice of America broadcast program.

The educators wrote:

"As educators interested in intercultural relations as the foundation of world peace, and as Americans concerned to have a fair picture of our country presented abroad, we strongly endorse the program of William Benton, Assistant Secretary of State, and urge that he and this program receive your full support."

The signers were Harry Woodburn Chase, chancelor, New York University; Arthur R. Compton, chancelor, Washington University; John Dickey, president, Dartmouth College; Father Robert I. Gannon, president, Fordham University; R. G. Gustavson, chancelor, University of Nebraska; Rufus C. Harris, president, Tulane University; Robert M. Hutchins, chancelor, University of Chicago; Charles S. Johnson, president, Fisk University; Alexander G. Ruthven, president, University of Michigan; and George Stoddard, president, University of Illinois.

In a letter to the House Foreign Affairs Committee the Legion urged Congress to authorize "continuation of world-wide dissemination by our Government * * * of the fundamental facts of the American form of government and way of life."

I Am an American Day

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks, I include therein the following resolution adopted by the Peoria County Bar Association, reaffirming faith in Americanism, as a part of the program urged by the Illinois State Bar Association for the observance of I Am an American Day:

Whereas the Illinois State Bar Association has suggested to the various bar associations of Illinois that May 18, 1947, should be observed as I Am An American Day in order to combat the insidious influence of those in our midst who preach foreign ideologies and doctrines and to reaffirm our faith in and loyalty to the Government of the United States; and

Whereas we have fought and vanquished nazism and fascism only to be confronted by an even more sinister foe of American principles and institutions under the red banner of communism; and

Whereas this alien ideology by fifth-column tactics has infiltrated many of our colleges, schools, and churches and has undertaken to mislead both age and youth by deceptively presenting itself in the guise of organizations to promote peace, brotherhood, and the general welfare of mankind; and

Whereas wherever communism is found, there too we find misery, brutality, slavery, despotism, Godlessness, and the sacrilegious desecration and defilement of all religious institutions, and the secret police rather than the secret ballot is the chief instrument of authority; and

Whereas we must not lose by lack of courage and failure to speak out in this crisis the precious heritage that wise and God-fearing leaders of the past have vouchsafed for us to enjoy and treasure and pass on unsullied to posterity; and

Whereas it rightfully has been our proudest boast to be privileged to proclaim to the world, I am an American; and

Whereas this privilege connotes the solemn duty of unwavering loyalty to the United States, its traditions, interests, and ideals and the obligation to perpetuate what Abraham Lincoln aptly described as a government of the people, by the people, and for the people; and

Whereas under the American system of government the people of the United States have realized a greater degree of justice, liberty, equality, and opportunity with higher standards of living, education, culture, religious spirit, and industrial and agricultural development than has blessed the peoples of other nations and forms of government: Therefore be it

Resolved, That the Peoria Bar Association heartily and unequivocally endorses the patriotic suggestion to celebrate May 18, 1947, as I Am an American Day; and be it further

Resolved, That we, as an organization and as lawyers, now renew our pledge of love and loyalty for American institutions and call upon other organizations and individuals to hold high the standard of Americanism and that we assert our vigorous opposition to all ideologies that would undermine and weaken and finally destroy the structure that shelters the American way of life and to scourge from our temple of democracy as Christ scourged its defilers from the Temple of God all advocates, supporters, and sympathizers of communism and other subversive doctrines; and be it further

Resolved, That this solemn and binding resolution be spread upon the minutes of the Peoria Bar Association and copies furnished to all county and city officers, the superintendent and principals of our public schools, the pastors of all churches in the Peoria area, and to the newspapers for the information of the general public.

Adopted May 8, 1947.

VICTOR P. MICHEL,
President.

Attest:

THEODORE B. DURFEE,
Secretary.

Freight-Rate Equality for the South

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial recently appearing in the Nashville Tennesseean, which is published by Mr. Silliman Evans, concerning the recent Supreme Court decision effecting freight-rate equality for the South. The editorial is as follows:

LOOK AWAY IN DIXIE LAND

Dixie Land moved closer to the day of freedom from its colonial status yesterday when the Supreme Court by a 7 to 2 decision upheld the ICC order lowering freight rates in the South.

Equality in the national transportation picture is not yet a reality. The ICC order raised official territory rates 10 percent and lowered southern and western rates by the same amount. This does not yet wipe out all of the estimated 39 percent discrimination under which the South has so long labored. But the principle has been confirmed. We look confidently to the future when class goods can move freely in and out of the South without any tariff discrimination.

Southern manufacturers, one and all, be they producers of shoes, breakfast cereals, candy, platform trucks, or the most highly finished steel goods, have long been up against the iron wall of class rates which permitted northern producers to deliver goods to comparable destinations at lower rates.

The most vicious aspect of this condition has been the inability even to start manufacturing of highly finished goods, the kind of manufacturing that adds most to the value of the original raw materials and most to the pockets of workers and owners. Meanwhile, our raw materials have moved out of the region where they should be processed to the North at rates decidedly favorable to the have-not industrial regions. For the raw materials we get pennies. For the finished goods we would have got dollars.

We have abundant labor in the South. We have abundant raw materials—agricultural, mineral, and forest. We have abundant power—coal, water power, gas, oil. We have a great and growing market. One-half of the farmers of the Nation, for example, live in this region. Why should not tractors and other farm machinery be made on the ground with our coal, iron, gas, and other supplies and by our adaptable labor? Many factors have worked against this development. One of the biggest has been the class-rate discrimination. This victory, incidentally, emphasizes the importance of keeping the Sherman anti-trust law pointed at the railroads, a situation over which the carriers are unhappy and are trying to escape from by a law making them an exemption.

It may be added that the railroads serving the South will benefit in the long run from the Supreme Court decision along with the whole region. The development of a balanced industrial-agricultural economy in this nature-favored part of the Nation will mean more business and more prosperity for all.

Address of Mrs. Julius Y. Talmadge, President General of the Daughters of the American Revolution

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. RANKIN. Mr. Speaker, this city of the Nation's Capital is being honored at this time by the convention of one of the most patriotic organizations the world has ever known, the Daughters of the American Revolution.

The members of this organization are probably doing more for the preservation of American institutions than any other group of its size throughout the entire length and breadth of the land.

Last night I listened with patriotic pride to the address of Mrs. Julius Y. Talmadge, president general of the DAR. A finer expression of American patriotism never fell from human lips.

Under permission granted me to extend my remarks in the RECORD, I am inserting that splendid address, which I trust every Member of this House, and everyone else who scans this RECORD, will take the time to read.

The address referred to follows:

I greet you tonight in Constitution Hall—our own Constitution Hall—planned and built, and paid for by the Daughters of the American Revolution.

Every delegate and alternate, every officer who is here tonight feels the inspiration of this occasion. I can see, reflected in your faces, the joy that is in my own heart and the thrill that is in my soul, to see the doors of Constitution Hall open wide once again to welcome a Continental Congress.

This is the first full-sized gathering of our members at national headquarters since before the war. It is a record gathering, for in addition to the full complements of delegates and alternates, many, many members have come to Washington.

Our welcome, therefore, is all the more cordial to those who are our distinguished guests this evening and to all who are taking part in this opening session.

To many of us, however, that joy is tempered by the loss of one of our beloved members, yes, one of our most faithful members, who was so unexpectedly taken from us only a little over a month ago. She is not with us tonight. Divine providence ruled otherwise. But she will live in our hearts and the record of her devoted service to the Daughters of the American Revolution will shine like gold on the pages of our history. I speak of Mrs. John Logan Marshall. I know you join me in paying her tribute tonight.

Yesterday a most fitting prelude to our Fifty-sixth Congress was held at historic Valley Forge, Pa., made immortal by George Washington and his faithful soldiers during the dark days of the struggle of the American Colonies for liberty and freedom.

There, on the Sabbath Day, we reverently dedicated the Memorial Bell Tower. I know those who made the pilgrimage will always remember the event. We returned to Washington, last night, tired but happy in the realization that the stately Memorial Bell Tower will soon be constructed. It will be another of the many lasting monuments erected by our national society.

The keynote of this congress is Americanism. If our country ever needed to put its accent on Americanism, it needs to now. And so I have chosen as the title of this address—The Eagle's Wings. The American eagle is the symbol of our strength, of our protection, of our courage, of our ability to soar high and surmount any obstacle, any crisis.

The United States of America, the domain of the American eagle, has become the greatest nation in the world. That is an actual fact. We, however, are just beginning to grasp the full significance of what this means and have not yet sensed the responsibilities which this place in the sun entails.

Our own national society, likewise, has grown in strength and in power, more so than most of us realize. We now have over 156,000 members. Our membership is steadily increasing, and as our society grows, its responsibilities increase.

Thus this Fifty-sixth Continental Congress is a very important gathering. We have many serious problems to consider. There is much to review and there is much to plan in advance. A new administration will be elected.

Will the policies which have carried our society high on wings of achievement in the past, even through the strife of the dark war years, endure? Will we continue to march forward in unity, a proud, fearless and true organization?

Your answer to that resounded to the rafters of Convention Hall in Atlantic City a year ago when we met there. Your answer, I trust, is still as emphatic this very minute in Constitution Hall.

The National Society Daughters of the American Revolution will endure as a vigorous, forceful organization only so long as it remains true to the ideals on which it was founded. It will disintegrate if it becomes a house divided. We must always be prepared to meet with complete unity the forces who oppose us. It is necessary to remember this, because war brought a spirit of unrest not only to nations, but to individuals. The world is in a state of irritation. And nations, and individuals, when irritated are apt to become quarrelsome. Peace for America has not meant serenity under the eagle's wings.

This administration, born during the war, was never one of appeasement. We had seen, only too clearly, the terrible consequences of such a course. We substituted another word for appeasement, action.

Neither did we adopt a policy of silence in the face of criticism. We have been quick to reply to those who attacked our society. We have been frank and we have been honest in meeting any situation either external or internal which demanded clear, wide-open explanation or exposition. Daylight never harmed anyone.

We have never departed from the objects of our society as set forth in our constitution and bylaws. Now, perhaps, more than at any other time in the 56 years of the existence of the Daughters of the American Revolution, we should devote ourselves in particular to the third objective in our constitution:

"To cherish, maintain, and extend the institutions of American freedom, to foster true patriotism and love of country, and to aid in securing for mankind all the blessings of liberty."

This Nation of ours is really at a crossroads. Decisions now in the making will govern the course of our great country in the years to come. Millions of people are oppressed and millions of others suffer hunger and distress. Right now human beings are being killed in strife and in warfare in a world supposedly at peace.

America is a strong country because it has many resources, tremendous productive capacity, and because its citizens enjoy the highest standards of living. Because we are strong we are called upon to help other nations less fortunate than ourselves.

The spreading wings of the American eagle cover much of the suffering in the world and protect many of the oppressed who cry in agony for help. And the American eagle has flown far overseas to bring relief to the weak. Can we grasp the full significance of those outstretched wings which we see upon the silver pieces of our currency, together with the word "liberty" and the message, "In God we trust"?

These wings are emblematic not only of power and of might. During the war they were extended upward until they formed a V—the V for victory which came at last when we were prepared and were able to turn our screaming eagle loose upon the dictator war lords. Now they are spread widely to shield suffering humanity.

This afternoon many of us learned once again the lesson of preparedness as brought out at the National Defense Committee mass meeting. I need not enlarge upon this except to say the Daughters of the American Revolution will always stand for a defense adequate to protect us from attacks from any nation whatsoever in the world.

We must keep the wings of the eagle strong and be ever watchful against any weakening of our naval or of our military strength. It is our best insurance for peace. It is actually the best insurance for peace in the entire world.

Our society has consistently advocated adequate national defense throughout the years. We have seen the evil effects of disarmament. We have seen treaties violated and we have been attacked because we were unprepared. Therefore, we look with suspicion upon suggestions no matter from what source, which would whittle down our armed strength below the safety level.

Our stand on national defense and the preservation of our system of Government is one of the reasons Communists oppose the DAR. I assure you this feeling is mutual.

Our organization should stand behind every movement by our Federal and State legislatures to outlaw communism. We should tolerate no one in public office who is secretly working to overthrow our Government and substitute the totalitarian system of a foreign power. The spread of communism in this country must be stopped. It can be stopped if we emphasize that the only ism in this land is Americanism.

Every Daughter of the American Revolution should constitute herself a committee of one to oppose by every means within her power the infiltration of communistic teachers in our schools and colleges and to combat the spreading of communistic poison in the minds of our young students.

During the past year our national society has been the target of only a few feeble attacks by communists, fellow travelers, and those who oppose our society because of political or publicity advantage. Can it be that at long last they have learned that we not only can take it but we can give it back?

One of the best ways to combat subversive activities is to build a better citizenship, especially among those of the rising generation. That has always been one of the main objectives of the Daughters of the American Revolution.

Let us give youth a chance. The least we can do for our young people of today is to provide every educational advantage for them. Let us equip them with the tools with which they can work.

We can point with pride to the approved schools program of the DAR society. This program has grown steadily until it is now one of the most important of the society's projects. Our two DAR schools in the southern mountains, Tamassee and Kate Duncan Smith, entirely supported by DAR funds, have enabled hundreds of underprivileged boys and girls to secure an education. There is where the eagle flies high, for these mountain boys and girls are sturdy Americans.

We should carry our educational program, however, into every city and town in the country. Let us do something when opportunity presents itself, to help the girl and the boy around our own corner.

If our young people stray into the ranks of communism, if they become radicals, if they stray from the rugged path of American citizenship, we have but ourselves to blame. Let us not condemn every juvenile delinquent as bad. In many cases the girl or boy only needs guidance.

Youth faces today a world of confusion, a world falling apart. We must provide opportunities for our young men and young women to make a decent living, to have good homes and to live in security and peace. If we fail in this, we are not keeping the eagle's wings strong. We are not demonstrating Americanism.

Our society emerged from World War conditions stronger than ever before. It is as though the fires of war tempered our great organization and welded it more solidly. How shall we use our strength, our vigor? What should be our chief activity?

The national society is working to build a better citizenship. Our whole program of activities is geared to this for we have national committees covering the fields of education, of Americanism, naturalization, conservation, homemaking, and others. Through these programs we can keep our eagle flying high.

To do this we must have solidarity. We must devote ourselves to our chapter activities. A chain is no stronger than its weakest link. Our national society is no stronger than its chapters. The chapter is the unit, and the worth of our society is judged by the service rendered in the community by our more than 2,500 chapters.

After all, what is the Society of the Daughters of the American Revolution? Is it a patriotic society operating from buildings of white marble located in the Nation's Capital? It is more than that.

Is it an organization to promote social gatherings? It is not that at all.

The Daughters of the American Revolution is an army of women citizens of all walks of life working to preserve and protect our cherished institutions in order to make this a better country in which to live and in which to find security.

With all the uncertainty about us, we must stress Americanism; we need a great spiritual awakening. We need faith. Faith in our country, faith in our national society, and faith in ourselves will enable us to demonstrate the type of citizenship so much needed in our everyday life today.

And when I say faith I mean a fighting faith, a faith based upon the determination to stand for what we know to be right. The faith which inspired the immortal John Paul Jones, who with wounded men and a sinking ship, sent back the defiant answer when asked to surrender: "Surrender? I have not yet begun to fight."

Let this be a fruitful meeting. May we plan wisely and well. May we remain true to our ideals. May we be proud of the American eagle in the knowledge that we are doing our part to keep the eagle's wings great and strong.

These past 3 years have been eventful. Without your unfailing support I would have been in the valley of despair many, many times. But your abiding faith gave me the strength to rise above all of the trials and troubles and to stand with head held high even against unwarranted attacks.

Out of all the tempest we have emerged stronger than ever before. We pass the torch to another bearer, knowing that it will be carried to greater heights and that the circle of its light of Americanism will ever expand.

And so I come to the close of my final keynote message to you as your President General. I am grateful for all you have done in behalf of this administration. I appreciate the great privilege I have enjoyed in being surrounded by such a splendid group of officers, committee chairmen and workers.

More than everything else, I cherish the real friendship so many of you have shown for me as the weeks and months passed by. That friendship has not been written in the sands, but is engraved in our hearts.

It is as enduring as the inscription carved in the stone above the entrance of this Constitution Hall. It was uttered by George Washington at the Constitutional Convention of 1787. I quote it:

"Let us raise a standard to which the wise and honest can repair.
The event is in the hands of God."

The time has come to say—not farewell—but thank you from my heart.

Western States Need Boxcars Now

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. McDONOUGH. Mr. Speaker, the postwar development of the West is being jeopardized by the continuing shortage of available boxcars for shipping at the western railroad terminals. This shortage, aggravated by lack of new cars and inadequacy of old equipment, has become critical in California and other Western States, and perishable agricultural crops are endangered because of this lack of shipping facilities, crops which are necessary to the well-being of the Nation.

This situation has been brought to the attention of the Interstate Commerce Commission repeatedly, and western industry and agriculture have pleaded for relief. While a boxcar shortage does exist at this time and new cars are not available, relief could be provided for western shippers if the Interstate Commerce Commission would act to bring boxcars now owned by western railroad companies back to the west coast for use.

Instead of taking some action which would require that these cars be returned to the railroad companies which own them, eastern railroad companies are permitted by the ICC to keep these boxcars and use them for shipping freight back and forth throughout the Eastern States for a nominal rental for each car of $1.15 per day.

The Interstate Commerce Commission has the power to act in this crisis. The Commission can adjust the rental rate on boxcars belonging to western railroad companies which are being used by eastern companies to the extent that it will no longer be profitable for an eastern company to retain such cars for their own use.

The present situation is unfair and discriminatory to western railroads and to western shippers. Western mills and manufacturers are producing merchandise that is needed in every part of the Nation, and it is ridiculous for the ICC to deny them shipping facilities by its indifference to the situation.

Statistics show that most of the eastern railroads have a percentage of boxcars on their lines equaling the total number of such cars owned by them plus an additional number which are being held on their lines but are owned by the western railroads.

Of the western railroads only one line, the Southern Pacific, has a percentage of boxcars on its lines equal to the number of such cars owned. The other lines such as the Great Northern, Northern Pacific, Santa Fe, Union Pacific, and Burlington have a lower percentage of boxcars on their lines than the total number of cars which they own.

The present strangulation of western industry and agriculture due to lack of boxcars at the western railroad terminals must stop. The Interstate Commerce Commission is empowered to act and can bring immediate relief by adjusting the rental rate on freight cars, making it more profitable for eastern companies to return the cars to the West for reloading instead of bottling them up on the eastern lines.

The consumer goods produced in the West is needed in every State in the Union. Many products are still in short supply, and western manufacturers want to send their products out to the national market on equal terms with eastern producers.

If the Interstate Commerce Commission refuses to act in this matter, then I believe it is time for Congress to take some action to prevent further discrimination against western industry and agriculture.

The World After the War

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. ROONEY. Mr. Speaker, I seriously question the justice and advisability of ratification of the Italian Treaty. I think any fair-minded American will concede that this proposal with its indefensible vicious Trieste and reparations provisions was executed by our former Secretary of State solely in order to appease the Soviet Union. It should not be acted upon at least until the terms of the settlement of the German and Austrian problems are agreed upon with the Kremlin.

The Italian populace, that suffered such undeserved misfortunes under the dictatorship of Mussolini, is in plain justice entitled to the sympathy and moral support of the American people. This proposed treaty leaves the Italian people—including their innocent women and children, who had no part in the war—impoverished, bereft of valuable territory, and incapable of resisting the aggressions of Communist-dominated Yugoslavia.

If we are sincere in our efforts to prevent the spread of communism, we should seriously consider the dangerous situation in Italy. She must have substantial help at this time. The following article entitled "Italian Reds Work Toward Day They Can Take Over Country," by Constantine Brown, published in the Brooklyn Eagle of May 17, 1947, accurately portrays the present dilemma of the Italian people:

THE WORLD AFTER THE WAR
(By Constantine Brown)
ITALIAN REDS WORK TOWARD DAY THEY CAN TAKE OVER COUNTRY

The Italian Cabinet crisis deeply concerns not only the Italian people, but the whole Western World.

The problem goes deeper than the apparent cause—the desperate economic and financial situation. It is the beginning of a struggle which may lead to violence between the so-called nationalist forces—rightists and moderates—and the Communists, supported by the left-wing radicals.

The American Government is following the troubled situation with greater interest than it displayed when France's Premier Paul Ramadier decided to reshuffle his cabinet and rule without the support of the Communists.

Both Houses of Congress have approved the $400,000,000 loan to Greece and Turkey. This loan was dictated more by strategic than economic considerations. A major crisis in Italy, which would bring about civil strife sooner or later and permit Palmiro Togliatti's Communists to take over the Government, might jeopardize plans for improving our strategic position in the eastern Mediterranean.

Italy is situated in the center of that sea and so long as she maintains a liberal form of government the danger of war as the result of Slavic expansion to the west will be small. But if the Italian Communists are able to establish themselves in the Italian Government, the situation will become precarious.

The Italian people will rally around a strong man. Unfortunately, only elder statesmen, important figures in the period of World War I, are being mentioned as possible heads of the government. Ivanoe Bonomi and Francesco Nitti were able men in an entirely different world from that of today.

The political methods of these two former leaders are those of other generations, when the world was not confronted with the complicated problems of today. They withdrew into their shells when Benito Mussolini came to power on the strength of a brand of totalitarianism which was mild compared to that which has developed in Europe since the end of World War II.

The Italian Communists are not yet prepared to take over the reins of government, and their activities will be handicapped by the continued presence of Allied forces in Italy. Mr. Togliatti is said to be relying on his former Comintern colleague, Marshal Tito, to make Italy Moscow's No. 1 satellite in western Europe. And so long as the Allied forces are stationed on the eastern borders of Italy no effective contact with Yugoslavia can be made.

The policy of Mr. Togliatti is to be as active as possible and swell the ranks of his party. He aims to prevent Italy's economic and financial rehabilitation, either by his participation in the government or through the action of the C mmunist members of the National Assembly. He intends, however, to wait until after the Americans leave Italy to achieve his avowed aim of rising to power.

Mr. Togliatti is aware that his strength will prevent any Italian politician, and particularly those aged leaders now mentioned for the premiership, from correcting Italy's economic chaos.

Current Labor Legislation

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 15, 1947

Mr. SCHWABE of Missouri. Mr. Speaker, the remark is often heard these days that the labor bill now pending in Congress is the most important piece of legislation before us at the present time. Surely all would agree it ranks very high on the list of pending bills.

The effects of labor legislation on our domestic economy are indeed far reaching. The greater portion of the cost price of commodities purchased by farmers, and townsmen alike, is labor. The farmer who buys some steel fencing must pay more for the fencing if wages are increased; or if he purchases lumber the greater portion of the cost price consists of labor. In today's issue of a Washington newspaper I read that some bricklayers in Washington are receiving as high as $23 per day during the week and $38 on Saturday. Of course, a prospective home purchaser balks when the real-estate man quotes the price of a new house.

Labor-management relations are extremely involved and controversial; naturally they would be, having to do with human relationships. Citizens have been demanding labor legislation quite some while. Strikes have been more pronounced year by year. Abuses such as jurisdictional strikes, boycotts, and mass picketing have been put up with until the public demands relief, and above all, the public dislikes so much power to reside in one man such as John L. Lewis that would enable him to suddenly, without warning, shut down an entire industry, thus paralyzing the Nation and tying our economy into a knot.

There are those who thought all we needed to do was for the new Congress to meet and some Member of Congress make a motion from the floor that a labor bill be passed but it is not quite so simple to pass a piece of major legislation. Hearings were held by the House Committee lasting 2 months, more than 2,000,000 words of testimony was heard from witnesses from all parts of the country. Rank and file union members desired relief from dominating labor bosses. Employers demanded freedom of speech and freedom to hire whomsoever they chose, without regard to union

membership. A similar process of holding hearings and determining what would be the wise course has taken place before a Senate Committee and now both Houses have passed their bills.

Next in order will be for a conference committee consisting of ranking members from the Committees on Labor of the Senate and House to get together and iron out the differences between the bills of their respective bodies. The principal item in controversy has to do with industry-wide bargaining, which is specifically outlawed by the House bill but which was omitted in the Senate bill by a vote of 44 to 43. The outcome of this particular item will decide whether Mr. John L. Lewis will retain power to bargain for all his miners in a Nation-wide or union-wide fashion. The House bill provides that each employer shall bargain with his own employees. Such a provision would break up the tremendous power now in the hands of Mr. Lewis.

The ban on industry-wide bargaining is the one thing that puts a crimp into Mr. Lewis; it is the one thing that he cannot overcome. All other provisions of the bill he could get around one way or another, but the ban on industry-wide bargaining breaks the strangle hold or monopoly enjoyed by his powerful organization.

Many employers and many industrialists enjoy industry-wide bargaining for they, too, have a monopoly but it is the fundamental duty of the Government to break up monopoly whenever and wherever it is to be found, whether in industry or labor.

Competition could be more fully restored by bargaining on the plant or shop level but it is a step in the right direction to place it on an employer-employee basis. It is pretty well agreed that such an arrangement would be fair both to management and to labor and would not allow a decided advantage to either.

To my way of thinking a bad feature of the Senate bill is their dependence on court injunctions as a method of settling strikes in vital industries. When we resort to injunctions, Executive seizure, or compulsory arbitration, we end up with governmental determination of wages, which is arbitrary, inefficient, and authoritarian, or totalitarian in principle. It should be fundamental in our thinking that we rely on natural economic laws such as keen competition and the rule of supply and demand as a method of arriving at a fair wage. No governmental board or agency has yet found a way to determine what is a fair wage. Political determination of wages will mean a return to governmental fixation of commodity prices. Surely we do not want to bring back the vicious OPA. The only safe and sound course is to break up industry-wide bargaining.

Any scientific approach to a labor-management relations bill that would promote harmonious industrial relations should be one which would cause sustained production and an ever-increasing standard of living for our people. The only way individuals can enjoy the use of more commodities is for a greater over-all production of those goods and supplies. Industry-wide bargaining is inefficient in that marginal producers are subsidized while efficient producers are allowed excessive profits. Today we find such unevenness and such injustices existing; actually we are experiencing many businesses folding up and quitting while others are making huge excessive profits. What is a fair wage in one part of the country may be an excessive wage in another. Only by accident do we happen to have what approximates a fair wage in some instances. Also, bargaining Nation-wide takes little or no account of technological progress and it does not properly reward individual or group effort. A damper is put on initiative and self-enterprise. A national wage pattern means less rather than more production. Therefore it tends to further scarcity and high prices. It does little good to appeal to business to lower prices while at the same time we continue such an uneconomic practice as industry-wide bargaining.

As unions have developed the last few years and become more and more powerful through the closed shop, the union shop, maintenance of membership, the check-off, and other forms of union security, there has been a tendency for strikes not only to occur repeatedly, but for these strikes to be more and more paralyzing to the Nation as a whole. Finally we have come to an impasse where various labor barons can speak for their entire industries. We agree something must be done about it, that we cannot leave it to the house of labor to correct its own abuses. Our people are looking to the House of Representatives and the Senate and the President. We say the public interest overshadows the interest of any one industry. For example, the welfare of 140,000,000 people is more important than an increase of wages for less than half a million miners, and so we sanction Executive seizure and Government operation of the mines. We permit court injunctions to make the miners work, and last summer, if you will recall, the President asked the Congress for permission to draft railroad workers into the armed forces to make them work, but all these things are no permanent solution. There is one thing which overshadows the public interest and that is individual or private interest. Our individual liberty and freedom is more important even than the public safety and convenience. The only way and the best method for safeguarding both public and private well-being; for labor, capital, and management to share equitably and fairly the fruits of an ever expanding, dynamic economy, is to place our reliance on economic forces rather than political forces for determination of wages, hours, and working conditions. Therefore, I contend that the Senate has made a mistake by strengthening the provision allowing for court injunctions and deleting the item in the House bill which places a ban on industry-wide bargaining. The latter method would restore competition which is the keystone of our free-enterprise system and, after all, the best regulator of prices, both of wages and commodities, the world has ever known.

MacArthur Is Revered as Once Was Hirohito

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include herewith an article from the Cleveland Plain Dealer by Ralph J. Donaldson:

MACARTHUR IS REVERED AS ONCE WAS HIROHITO

(Article 4)

Volumes have been written about the intricate workings of the Japanese mind to explain the attitude of the Japanese people toward General of the Army Douglas MacArthur. In a word, they worship and revere him practically to the same extent that they did Hirohito. If there were to be a contest in Japan today over the election of an emperor, MacArthur could run for it and win, hands down.

The explanation is very simple. Suppose you got into an argument with Mahatma Gandhi and he knocked you cold with a stiff blow of passive resistance. You wouldn't be very proud of that, would you? But suppose you picked a fight with Joe Louis and got knocked out. You wouldn't have anything to be ashamed of. In fact, after you recovered consciousness you probably would go around bragging about it and showing the place on your jaw where the blow landed.

As far as the Japanese people are concerned, MacArthur is the Joe Louis among generals. As a matter of fact, the bigger they build him up in their own minds, the less of a disgrace it seems to them to have been beaten by him. They have now just about reached the point of bragging about how MacArthur defeated them.

HERO BUILD-UP PAYS

There has been some criticism of MacArthur in Army circles because the communiques issued from his headquarters during the war told what he had done, without giving credit to the generals under him who commanded the combat divisions. I do not pretend to know whether these omissions were deliberate or inadvertent. But MacArthur began to learn about the Japanese when he was a young officer, serving as aide to his father, who was an American observer during the Russo-Japanese War. If he deliberately enhanced his own reputation during the war at the cost of slighting others, the result could not have been more fortunate as far as the success of the occupation is concerned.

By the time the war ended, everyone in Japan knew who MacArthur was and was prepared to obey his slightest command. There is not the slightest doubt that his personality and reputation have vastly simplified the problems of occupation. Moreover, the Japanese are grateful to him because he did not inflict on them the punishments and retribution they had every right to expect.

MacArthur leads an austere life in Tokyo. He lives in the American Embassy and drives every morning to his office in the Dai Ichi Building, accompanied only by a chauffeur. He refuses to have guards or escorts, because that might be an indication he was afraid of something, and he is not afraid of anything.

He drives back to the Embassy for lunch, which is generally in the middle of the after-

noon, returns to the Dai Ichi Building and remains there until 7, 8, or 9 in the evening, sometimes later. He has the same routine every day of the year, including Sundays and holidays.

The Japanese know when to expect him, and a crowd gathers in front of the Dai Ichi Building whenever his car with the five-star plate is parked in front of it. This happens four times a day. The people just want to look at the man who is their ruler.

The military police form a lane through which he walks, looking neither to the right nor left. He wears a plain GI uniform with no ribbons or braid and not a single brass button on it. The only insignia is a small circlet of five stars on each shoulder.

When MacArthur first came to Japan, some members of his staff suggested that he summon the Emperor to come and see him. The purpose would have been to humiliate the Emperor in the eyes of his people. But MacArthur refused.

PRESTIGE STRATEGY WORKS

"Let him alone and he'll come of his own volition," he said. That is what happened. Word came from the Japanese Government asking MacArthur whether he would receive the Emperor. The general agreed to do so and the meeting took place.

One of MacArthur's staff begged he be allowed to accompany the general when he returned the Emperor's call. MacArthur replied there would be no opportunity for that.

"If I return that call," he said, "he'll think he is my equal and he is not."

That incident made a profound impression on the Japanese people. The Emperor plays but a small role in the lives of the people of Japan today. But MacArthur plays a very big part. He is the one man the Japanese respect.

In the Diet Building there is a space which somewhat resembles Statuary Hall in the United States Capitol. There are four pedestals in this hall, but only three are adorned with the statues of Japanese national heroes. It is common talk among the Japanese that the fourth pedestal is reserved for a statue of General MacArthur. This may be a subtle form of Japanese humor. Nevertheless it could happen in Japan.

Housing

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette, of May 15, 1947:

APPROVE THE T-E-W BILL

Housing Expediter Frank R. Creedon's latest order relaxing controls on the building of larger houses is designed to lift the construction slump. The order was issued at the behest of builders, and will no doubt bring them some temporary gain. But for the twenty or so million Americans living in crowded or substandard dwellings it means little.

America has not kept faith on the matter of housing—especially with veterans. With $6,000 homes now selling for $10,000 and and $11,000, "homes for vets," a rallying cry during the war, has become a tragic mockery. The final blow came recently when the Government scrapped the last shred of veterans' priority. Speculative builders now—in a rather hypocritical deference to our wartime pledges—are required to give veterans priority on only one house of an entire development.

The trouble with postwar housing in America, as everyone knows, is that it is too expensive. Immediately following the war, builders told us this was because of Government restrictions. You can't, they said, tinker with the inexorable laws of supply and demand. Therefore, Government controls, for all practical purposes, were removed, and Wilson Wyatt was kicked out of office.

Now, 5 months later, prices of basic materials in the construction industry have risen to match what were black-market levels when price controls were on. In the face of an unprecedented boom the construction industry has priced itself out of the market and is now experiencing a slump which could very well precipitate an economic recession—with consequent unemployment—throughout the Nation.

Labor rates in the building trades—a chief cause of the high costs—are at fabulous levels. But despite this, and despite the fact that workers are being laid off because of the building slump, some of the unions are asking for more money, fewer hours, or both.

The pity is that while labor and capital in the construction industry fumble around, nothing is done to remedy the problem of the Nation's homeless and near-homeless. There is now, as there has been for the past many months, only one decent solution. The Taft-Ellender-Wagner bill (a revision of the Wagner-Ellender-Taft bill which died in a House committee last year) would give the construction industry a positive and long-range program. In place of the haphazard building now prevalent, the T-E-W bill would provide necessary incentive for the construction of from twelve to fifteen million housing units within the next 10 years. Under such a program builder, worker, and buyer would benefit.

The builders call the T-E-W bill socialistic. But this is only a charge, and a false one at that. Congress should ignore those who hold personal interests above the general welfare and physical well-being of the Nation as a whole by passing the T-E-W bill at this session.

Seasonal Nonsense

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. KARSTEN of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star:

SEASONAL NONSENSE

In the spring, when the fancy of young men is said to turn to thoughts of love, there will be few to envy the lot of men like Carroll Reece, chairman of the Republican National Committee. For Mr. Reece, whatever his personal inclinations, must bow to the stern call of duty and think, not of love, but of politics.

Evidently this does something to a man. His thought processes apparently become warped somewhere along the line. He loses the ability to think clearly and arrive at logical conclusions. In fact, whether it be attributable to the season or to something else, he seems to stray off into flights of fancy with respect to politics that are very similar to the flights of fancy that bedevil a young man who has fallen in love.

If there are those who doubt this, what other reason can be put forward to explain Mr. Reece's latest attack on the Truman administration? Here is a man, a hardened veteran of the political ring, who would have us believe that Mr. Truman, who is no novice in that field himself, plans to seek reelection on a platform of higher prices. The theory of this seems to be that Mr. Truman will bid for votes by gouging the people and blaming the Republicans.

It is comforting to have Mr. Reece's assurance that "it is inconceivable that the voters will be fooled." He is talking, of course, about the plot that he sees building up in the Truman mind. He might have broadened his statement, however, to say that it is inconceivable that the voters will be fooled by any of this seasonal nonsense.

Address of Dean Alfange to the United Zionists-Revisionists of America

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Dean Alfange at the dinner of the United Zionists-Revisionists of America, Hotel Biltmore, Sunday, May 11:

I told a friend this is the fifth speech on Palestine I am delivering since Monday, and he asked me, "When do you sleep?" I replied that he could find the answer in verse 4, psalm 121, of the Old Testament: "Behold, He that keepeth Israel doth neither slumber nor sleep."

I should be living under the Union Jack, where the sun is always shining. It was revealed that the sun never sets on the British Empire because God will not trust her in the dark.

In his introductory remarks your chairman referred to me as a liberal. Frankly, I am beginning to entertain some very grave misgivings about the meaning of that term. A liberal, as I understand it, is a person who rejects imperialism of every type and totalitarianism of every shade.

A liberal is a person who rejects the double standard of political morality, which impugns the motives of one's own country while condoning those of another. The great need of the moment is for leaders who would meet these tests of political morality and intellectual responsibility. These are no times for political opportunism and political mediocrity.

The decisions we make, the orientations and outlooks we develop during the next few years, will determine our success or failure in the mighty struggle for democratic survival.

Let's now apply these principles to Palestine and the Jewish people.

The public policy of the United States with regard to Palestine has been established by a long line of congressional resolutions and Presidential declarations beginning with the administration of Woodrow Wilson. By the terms of these public pronouncements, our Government stands irrevocably committed to the development of Palestine as a national Jewish home with its concomitant of free and unrestricted Jewish immigration.

Well, if that is our policy—and no one can deny that it is—why do we shirk our responsibility in this most crucial hour in the history of Israel? Why do we hem and haw, duck and dodge and skate around the periphery of the question? If that is our policy, why don't we adhere to it?

If the United States of America would boldly take the leadership in the fight for a free Palestine, Palestine would soon be established as a Jewish state without the pompous mockery of commissions of inquiry and the useless spilling of precious blood. But, why don't we do it? Is it petroleum again? Are we emulating the British imperial practice of subordinating human rights to the rights of private property? Could it be that we have made unsavory commitments to protect our new multi-billion-dollar private oil empire in Saudi Arabia? Or, could it be that those pro-Arab ninnies in our State Department have deliberately misled Mr. Truman and Mr. Marshall? For when the Secretary of State wrote the other day to 30 Members of Congress that "It would be premature for this Government to develop its policy with regard to the substance of this question," he demonstrated an appalling ignorance of the fixed and long-established policy of the United States. It might be well, Senator PEPPER, to call for a senatorial investigation to expose the pro-Arab antecedents of those men in our State Department who head the Division of Near Eastern Affairs, and to determine their fitness to remain in office.

It is about time we stopped kidding the Jewish people with empty promises and fake platform commitments that are never kept. It is a pretty brutal thing to kid a people with their back against the wall. I told Dr. Abba Hillel Silver the other day that if I were a Jew and the spokesman of organized Zionism, I would tell President Truman to fish or cut bait on Palestine—and we all understand what that means in terms of 1948.

I have no faith in a United Nations solution of the Palestine question unless our Government undertakes militantly to advocate the Jewish cause. The United Nations Commission will be the 19th committee of inquiry on Palestine since the Balfour Declaration; and like its predecessors, is not intended to accomplish anything except delay.

The whole proceeding is therefore a sham and a mockery—a mere plea in abatement to allow a faithless guardian to continue the exploitation of his ward; and our acquiescence in this trickery is a confession of moral and intellectual bankruptcy.

There is only one solution to the problem of Palestine—bloodshed, rebellion, resistance, and boycott.

The underground resistance movement is the major front in the battle for a free Palestine. The heroes of the Jewish resistance movement are no different from the American colonists who staged the Boston Tea Party and the Irish Rebels of the 1920's.

Those valiant warriors of the underground are counteracting anti-Semitism throughout the world by portraying the Jew, for the first time in modern history, as a fierce fighter for individual liberty and national freedom.

Let's not apologize for their deeds of heroism and self-sacrifice. Let us encourage them and help them in every way we can.

The second front in the fight for a free Jewish Palestine is the direct and indirect boycott. Let us face the facts. Great Britain is waging an illegal and immoral war of economic and political aggression against the Jewish people.

In the light of this reality, the Jewish people and their friends are fully justified in resorting to a powerful retaliatory measure in the form of a boycott upon all British goods and services.

In view of Britain's betrayal of the Jewish people, why do the Jews continue to support British trade, buy British scotch, travel on British planes and ships, attend British-made movies, and patronize British insurance companies?

I propose that the Jewish people organize an effective boycott upon British goods and services of every type and description. Britain's Achilles' heel is her economic vulnerability. Dart your arrow in that direction and she may yield sooner than you suspect.

The third front in the fight is forced mass immigration into Palestine. Such immigration is not illegal. Only British resistance to it is illegal.

I am speaking as a Christian and as a liberal. Palestine is not only a Jewish issue. It is a world-wide political issue that impinges directly upon the whole problem of democratic self-determination and survival.

We are about to spend $400,000,000 a year to buttress democracy in Greece and Turkey. Why then do we reject an opportunity to make Palestine the greatest bastion of democracy in the Middle East? By supporting the Zionist cause, America could build a mighty fortress of freedom in that critical nerve center of the world without spending a single dollar of our taxpayers' money.

Why don't we do it? Is the Truman doctrine a matter of ideology or is it power politics? Is it because aggression in Greece stems from the east, while aggression in Palestine stems from the west?

I ask. I want to know.

I believe in the Truman doctrine if it truly aims to protect our western way of life from the encroachments of imperialism and the totalitarian ideology. If that be the aim of this new departure in our foreign policy, then the creation of a free Jewish Palestine would be a perfect implementation of the Truman doctrine. I therefore charge that our failure, militantly to support the Zionist cause, is a reflection on the validity of the Truman doctrine and on the sincerity of its sponsors. Frankly, I am beginning to wonder if Mr. Truman himself knows what the Truman doctrine really implies.

The great contest of our times is the struggle of social democracy against the forces of imperialism and totalitarianism.

The feudal lords of the Arab league, who not long ago were shouting their heads off for Adolf Hitler, are not interested in democracy. They are interested only in keeping their subjects in a state of peonage for their own private profit; and their fear of the Jew is a fear of progress, freedom, and enlightenment.

Now, I think it is self-evident that the fate of democracy in the Middle East is inextricably interwoven with the fate of Palestine. But, there is yet another deeper reason why Christian liberals should rally to the Zionist cause.

Anti-Semitism is the breeder of fascism and a menace to freedom. If now that the Fascist tyranny has been crushed, there shall remain in the soil of the earth those seeds and those roots which grow and blossom into bigotry, and hatred, and oppression of man by man and nation by nation, our victory shall be a tragic mockery of all the death and devastation that preceded it. We therefore owe it to the dead and to our own self-interest to eradicate the filthy weed of anti-Semitism from the soil of democracy; and the only way it can be done—mark my word—is by conferring upon the Jewish people the dignity of statehood. So long as the Jews remain without a home, without political status, without a calling card, and an official address, so long shall they be considered the tramp race of the world, an easy prey to the demagogues looking for scapegoats upon whom to saddle their failures and frustrations.

America must assert its great moral authority to bring about just solutions of the great international problems that confront the world; but America must clean its own house first. America to which the world looks for guidance is internally saturated with a bigotry that nullifies its preachments of equality and freedom. There are too many people born in America in whom America was never born.

The practice of restricted hotels, of restricted resorts, and of restrictive covenants upon the use of land is as shameful and odious as the most vicious of the Nazi "verbotens." Anti-Semitism is the syphilis of democracy and must be rooted out in the interest of democratic survival.

I am beginning to despair of the efficacy of the church and the school as eradicators of bigotry. I sometimes feel we should be bold enough and brave enough to try two remedies that were never fully tried before—freedom and Christianity.

The recurrent waves of anti-Semitism, the world-wide apathy to the awful plight of the homeless Jews of Europe, and the failure of our own country to fulfill its moral and legal obligations with regard to Palestine, are by no means the sole concern of the Jewish people. They are the vital concern of every decent man and woman, of every liberal-minded person throughout the world, for they indicate—and all too clearly—that the dead have died in vain; that those lofty ideals for which men fought and died on the battlefields of the world are now yielding, under pressure, to the brutal forces of imperialism and power politics.

So, let us try freedom and Christianity. Let us not press another crown of thorns upon the brow of Israel in His hour of agony and bereavement. Let us apply those elemental principles of justice, morality and fair play to the problems of the Jewish people. We owe it not only to the Jews; we owe it to ourselves, for it is we, the non-Jews of the world, who have created these problems of which the Jews are now merely the victims.

America must take the leadership in the fight for a free Jewish Palestine. It is a challenge to freedom, and a challenge to Christianity. It is a challenge that ought to stir the hearts and souls of men of action. Will we accept that challenge?

Labor and the Closed Shop

EXTENSION OF REMARKS

OF

HON. A. SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. CAMP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by the gentleman from Georgia, Mr. JOHN S. WOOD, Thursday, May 15, 1947:

In my opinion many of the evils present in labor's current attitude toward the public and toward its own members stem from compulsory unionism and its attendant abuse.

Time does not permit me to go into all the ramifications of legislation necessary to correct the many abuses which existing law has permitted to be practiced by certain abritrary labor leaders, but I shall try to cover briefly the problems presented by the closed shop, the jurisdictional dispute between rival union leaders, the secondary boycott and the complete injustice that arises from a labor leader's right to break his collective-bargaining contract with impunity.

Of all of these evils, the closed shop, in my opinion, is the worst.

It is, indeed a sad commentary upon a free democracy for its citizens to suddenly come face to face with the realization that the closed shop, in conjunction with the closed

union, is more powerful than your Government.

Your Government cannot take away from any individual his right to work unless he has been duly convicted of a crime by a jury of his peers. Even then, your Government assumes the responsibility of his keep. But when the leader of a closed shop union becomes displeased with one of his members, the employer of that member must automatically discharge him, and such ex-employee must then find employment outside a labor union or starve.

I regret that the current versions of labor legislation now being considered by your Congress do not end the evils of the closed shop to my satisfaction.

As you know, these provisions permit what is known as a union shop, upon a majority vote of all the employees in a given plant. This means that a new employee must agree to join the labor union within 30 days after his name is entered on the pay roll.

From then on, he is subjected to the whims and dictates of the union leader.

I admit that the Hartley bill goes far to restore other basic freedoms to the worker. Under the bill, it has been argued that the worker no longer has to go to the labor leader to get a job. For my own part, I see little difference between the closed and the union shop from the point of view of the average worker. Sooner or later he must relinquish his freedom to do and say what he pleases in accordance with the desires of a labor leader he has no hand in selecting. Both involve the principle of coercion, which is repugnant to every conception I have of a free democracy.

Let me tell you what I consider to be some of the crimes that have been committed as a direct result of the closed shop and of attempts to force the closed shop on unwilling employees.

Out in Oakland, Calif., a young man by the name of Donald M. Gibson ran a small paint-manufacturing concern with three employees.

The Gibson Paint Co. is typical of the small businesses that make up the backbone of the American economy. This company occupied a room about twice as large as your living room. In the back of the room they manufactured paint; in the front, they sold it. They had no salesmen, no dealers, no delivery truck. Donald Gibson just made and sold paint.

For 10 years, Paint Makers Local, No. 1101, of the giant American Federation of Labor had been trying to organize all three employees of the Gibson Paint Co. They refused to join, although they were told repeatedly by the owners that they were free to do so if they wanted to.

Last fall the paint makers local tried another approach. Their business agent requested the company to fire the three employees, and the union would send three new ones, all good union men. And thus the closed shop would be established. One of the old employees had been working for the Gibson Paint Co. for 20 years, another 6 years, and the third, a returned veteran, just under a year.

The Gibson Paint Co. rejected the demand.

This was the company's first mistake. You see, it felt it had a right to conduct its own business; it felt its employees had an equal right to join or not to join a union.

Now, of course, the company was right.

But we must remember we're talking about labor relations where what is right has nothing to do with what happens.

An A. F. of L. picket was placed in front of this small one-room manufacturing concern. Deliveries of raw materials ceased. The factory closed in 5 days.

In this situation there are no laws to protect the company, there are no laws to protect the workers, and Federal courts are expressly forbidden jurisdiction.

The three workers admitted their defeat and reluctantly consented to join the union.

The business agent brought around a closed-shop agreement which the company signed. The employees paid $75 initiation and business was resumed for 3 weeks.

Then they were called out on strike. Now here are the facts:

1. The employees were satisfied with their earnings and working conditions.
2. There was no labor dispute.
3. No collective bargaining took place.
4. None of the employees wanted to strike.

Yet that small manufacturing plant was put out of business, and this is typical of thousand of cases all over the land.

Let's look at another angle of the closed-shop issue. The ultimate goal of all labor leaders is to get a closed union. This is a labor organization which limits membership in some way, or makes it difficult for new members to get in.

Today, for example, a worker trying to get into the printing trades may find it impossible because in many cases the union has closed its books. A skilled worker trying to get a job in the building trades may be told to get on a waiting list, if he doesn't already belong to the union.

It is this kind of restriction which creates the labor monopolies that deny jobs to many deserving workers.

In Chicago, right after the war, a veteran returned to his old job in his uncle's motion-picture theater. He had operated the projection machine there for 11 years, but while he was away the union had bludgeoned the uncle into a closed-shop contract. The union refused to accept the returned veteran as a member, and his old job was occupied by a good union man. So there he was, out of a job, while his uncle was being sued by the Government for violation of the job-guaranty provisions of the Selective Service Act.

Is there any wonder that we are hearing from all over this Nation an ever louder demand for the abolition of the closed shop and all that it implies?

It is my sincere conviction that a legal prohibition against the closed shop will result in better and stronger unions.

I know this may sound strange to those radio listeners whose ears have been bombarded during the past weeks by the propaganda outpourings of those who desire to perpetuate this specie of labor racketeering. Nevertheless, let us look at the record:

America is the strongest Nation on earth today. In the brief time of its existence its progress and prosperity has no parallel in history. It is built on the principle that every man has a voice in the selection of his leaders, that every citizen may criticize the action taken by his elected representatives, may work for the defeat of those public officials whose actions are unsatisfactory.

No other government can begin to compete with ours in what has been done to better the lot of the individual.

Now, may I ask, What is wrong with applying this same system to the labor unions? A man should be given the right, if he desires, to join a labor union, because he feels it is in his best interests to do so, not from fear, not from want, not just to get a job. And he should have the right to remain a member of that union only because he is satisfied with the way its affairs are directed. He should have the right to support the leaders of his union, or, if he so chooses, to work for such leader's defeat in a fair and impartial election. In short, if a labor union is so impotent as to be unable to furnish to its members sufficient benefits as to attract them into its ranks without coercion, it has, in good morals, no excuse for existence.

This applies the principles that have made America the envy of all the world.

Can anyone in all fairness suggest a sounder base upon which to build strong labor unions?

I would like to talk for a minute about another form of labor racketeering that has grown up under the Wagner Act.

This is known as the secondary boycott.

The secondary boycott is a form of concerted labor activity on the part of one group of workers for the purpose of increasing the power or membership of another union. It consists of a refusal by a group of workers to handle goods produced by another group, either because they belong to no union, or to the wrong union, or perhaps to the wrong local of their own union.

Workers engaging in a secondary boycott seek to coerce their own employer, with whom they have no dispute, to withdraw or withhold patronage from another employer and his workers.

For example, one of the witnesses before the House Labor Committee told of a boycott of prefabricated homes for veterans by the Carpenters' Union of the American Federation of Labor. The reason for the boycott was that the company making prefabricated homes had a collective-bargaining agreement with the CIO.

You see, therefore, the dispute was not with their employers, but with the workers in another State who joined a rival CIO union. As a result the housing shortage in that particular area was intensified.

Let me show you how the secondary boycott operates to raise prices. We have been hearing a lot about high prices recently.

The Westinghouse Electric Manufacturing Co. submitted a bid for $56,000 for panel boards and switchboards for a low-cost housing project in New York. The Westinghouse bid was, by far, the lowest. But Westinghouse has a collective-bargaining contract with the CIO. Yet no electrical products may be installed in New York City which do not carry the union label of the International Brotherhood of Electrical Workers. As a result, the contract went to a local manufacturer charging almost twice the $56,000 specified in the Westinghouse bid.

This Congress must pass legislation to prohibit the secondary boycott. The Hartley bill contains an effective prohibition against this type of labor monopoly, and carries strong penalties for those who violate the law. In addition, protection of the National Labor Relations Act is withdrawn from those workers participating in secondary boycotts, and persons injured may sue for recovery of damages.

These provisions are not antilabor. Just as I am convinced that the abolition of the closed shop will strengthen legitimate labor activities, I am equally convinced that prohibition of the secondary boycott will remove the source of much of the labor-management strife of the Nation.

To the arguments that the secondary boycott is a legitimate and necessary union activity, I say that today there is no justification to resort to the boycott.

Today, unions have legal protection and great power. Prohibition of the secondary boycott will not weaken unions in the pursuit of their legitimate objectives. Such legislation will, however, give the public the protection which it should have. If we fail to outlaw the secondary boycott, we will make a mockery of our belief in a free competitive economy.

Another of the completely unjustified abuses by unions is called the jurisdictional strike. This results from an argument between the leaders of two unions as to which shall have authority over particular workers.

This is the type of dispute which finds the employer completely helpless. If he makes a decision in favor of one union leader, the other union strikes, and vice versa.

This is the type of dispute that has tied up the film-producing industry in Hollywood for almost 2 years. This is the type of dispute that has meant a return of the gangster methods of Capone in the Pittsburgh beer war.

Let's look at the facts behind this particular jurisdictional dispute.

For more than 40 years, 15 brewers in western Pennsylvania have had labor agreements with the International Brotherhood

of Brewery Workers. As a result of continuing difficulties with the A. F. of L.'s teamsters, the brewery workers' union withdrew from the American Federation of Labor, and after a period as an independent organization, affiliated with the CIO.

Almost immediately the teamsters' union went into action. They wanted jurisdiction over those workers who bottled beer. Let me repeat that. The teamsters wanted jurisdiction over those people whose entire job was made up of putting beer in bottles.

These particular workers refused, and rightly so. Since then, the campaign of violence and terrorism which has plagued the city of Pittsburgh is almost beyond belief. Drivers of trucks hauling products made by the offending brewers were waylayed by roving gangs of thugs. Following this rather gentle activity, the teamsters brought out a new type of fire bomb.

You might be interested in knowing how the teamster's fire bomb is made. First, you take a 200-watt bulb, cut off the top, fill it with high-test gasoline, and stuff surgical gauze in the opening. To use, you light the stopper and let it go.

I want to emphasize in connection with the Pittsburgh beer war that there is absolutely no relief under existing statutes. The Hartley bill contains ample remedy, and will, in my opinion, effectively prevent jurisdictional disputes.

Let me go into another matter that points up the glaring inequality of law in dealing with labor unions.

It is fundamental to a stable society that agreements entered into in good faith by the parties must be lived up to by both, or, in case of default, that the party defaulting must be suable in the courts. This is the basic assumption upon which business relationships are built.

It is also fundamental common law that the employer is responsible for his contract, and he may be sued in State or Federal court and held to account.

Yet the right to sue unions for breach of contract is utterly lacking in our Federal statutes, and industry has been singularly unsuccessful in attempting to hold unions to the contracts which they have made.

We all know of hundreds of instances where unions have struck in violation of a contract, have forced employers to increase wages by threatening to strike, regardless of bona fide labor-union contracts with several months to run before expiration.

I am aware that the suability of unions was affected by a court decision several decades ago where a judgment was levied against individual union members so as to create unreasonable hardship. I would like to point out that the Hartley bill does not make it possible for another occurrence of this character. What we provide in the Hartley bill is that the union as an organization is liable for the actions of its members to the extent of its treasury.

The restoration of the common-law principle that holds a person responsible for his own acts in the matter of labor-management relations will go a long way toward preventing irresponsible activities on the part of labor leaders.

In conclusion, I want to warn you against the current highly financed propaganda campaign of the labor czars who have been accorded unprecedented special privilege and arbitrary power under existing law, which enables them to enslave the working masses and penalize the American people.

If you have, by any chance, been listening to their broadcasts, or have seen their paid advertisements, you will realize that they have been unable to make a legitimate attack against any of the provisions of the labor legislation now being considered by your Congress.

Instead, they have resorted to smear tactics unworthy, in my opinion, of an American institution.

In a recent ad, they claimed that your Congress was attempting to make freemen work against their will.

This is not only untrue but the exact opposite is true.

The House labor bill denies illegitimate power and authority to labor leaders, but denies no legitimate right of labor.

I am not advocating antilabor legislation. Rather, I am attacking what are, in my opinion, the worst of the antilabor activities engaged in by organized labor. Without question, labor today ignores the public and acts for a chosen few.

The time has come for your Congress to act.

And I am certain that the action we are now taking is in labor's interest and in the interest of the American people.

Leprosy Research

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item:

AN OPPORTUNITY AND AN OBLIGATION

At its convention here this week, the Louisiana State Medical Society adopted a resolution urging that all treatment and research involving infectious cases of leprosy be confined, as at present, to Carville, site of this country's only leprosarium.

This stand runs directly counter to that of Dr. Thomas Parran, Surgeon General of the United States. Earlier this month, Dr. Parran announced that a treatment center for early cases of leprosy would soon be established at Marine Hospital here. Dr. G. H. Faget, until recently director of Carville, has been named to take charge of the center. Dr. Mason V. Hargett, of the United States Public Health Service, has been assigned to the State health department staff, to direct a research program.

What, then, lies behind opposition to the plans of the Nation's public health chief?

From Biblical times on down, leprosy cursed its victims not only with prolonged physical suffering, but with complete social ostracism. Crying "unclean, unclean!" the leper's fellow man has driven him from his sight.

For ages, medical science has sought to discover curative treatments for the disease. The Public Health Service has engaged in this quest at Carville, where patients come voluntarily but must remain until released. Within the past 5 years, gratifying results have been obtained from the use of sulfa drugs. During 1946, 43 patients were discharged from Carville, their leprosy pronounced arrested or cured. In the words of Dr. Parran, "for the first time in the history of mankind we feel that we can now say to persons who have leprosy 'There is hope.'"

If that is the case, what is there to prevent eradication of the disease in this country? The answer lies in the fact that the leper still bears a terrible social stigma. Consequently, he is most reluctant to seek out treatment. Moreover, the disease is extremely difficult to diagnose in its early stages, and very few physicians are fully acquainted with the symptoms. Thus, those who enter Carville have often had the disease 4 or 5 years. This inevitably diminishes the effectiveness of treatment.

For several months now, a national advisory committee has worked with Dr. Parran on this problem. It was the committee's unanimous decision to seek the establishment of special treatment centers in California, Texas, Florida, and Louisiana, the four States in which leprosy is endemic. The center at Marine Hospital, as well as Dr. Hargett's research work, are designed as testing grounds for the larger plan. The aim: earliest possible diagnosis for a disease which is now susceptible of successful treatment.

Dr. Parran is best known to Americans for his relentless and victorious battle against the public ignorance and prejudice which surrounded syphilis. Through persistence and reason, he enlisted the support of the Nation's press in his crusade against a ridiculous taboo. Today, syphilis has taken its proper place along with cancer or tuberculosis, as a disease to be treated as quickly and sensibly as medical science can do the job.

We are on the eve of a similar war against the taboos surrounding leprosy. The disease is less contagious than either syphilis or tuberculosis. Its victims are much fewer in number than those of any other common disease. An effective treatment has been devised. Yet the pall of ignorance still darkens the leper's path.

The task of lifting that pall falls naturally to the press, in close cooperation with medical authorities. Much has already been accomplished in the past few months. Recently the Times-Picayune published an excellent series of articles on the subject. Other newspapers elsewhere have picked up the challenge, and in all likelihood this trend will be accelerated. A great opportunity exists for all citizens, and for the medical profession in particular, to come to the aid of a sound, just, and humane cause.

Pay Terminal-Leave Bonds in Cash

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. EVINS. Mr. Speaker, as a new Member of the House of Representatives, I have been hoping for an opportunity to vote for any one of a number of bills which have been introduced in the Congress providing for the cash payment of terminal-leave bonds to enlisted men on the same basis as officers. This session of this Congress is said to be more than one-half over and as yet none of these bills have been reported to the House for consideration. I am informed that the House Committee on Armed Services has not even scheduled hearings on any of these bills, including H. R. 3, the Rogers bill, which would authorize the cash payment of these bonds or make the bonds negotiable so that veterans could sell them to anyone who might be interested in holding these securities as an investment. There has been a concerted effort by many Members of this Congress to bring this measure to the floor of the House, and in order to do so it has been necessary for Members interested in the passage of this legislation to petition the committee to discharge the bill and thus bring it on the floor for consideration.

As of today, 100 names of Members of the House appear on this petition. The Members who have signed the petition

include both Democrats and Republicans. All other Members who intend to do so should sign the petition immediately. Cash payment of terminal-leave bonds received bipartisan support in the last Congress and this principle should be adopted by the present Congress. Authority for a veteran to cash any terminal-leave bond which he may hold should be authorized in order that the veteran may have funds to buy a home or to start in business or for investment purposes. The payment of these bonds represents a national obligation for patriotic service performed. Upon separation from the service, officers of the Army, Navy, and Marine Corps were provided with a cash payment for their accumulated terminal leave, and it is only just and fair and right that the same treatment should be accorded enlisted men separated from the service I am informed that when Members of the House agreed in the last days of the Seventy-ninth Congress to accept the pay-in-bonds amendment made in the Senate that it was assumed and expected that the Eightieth Congress would have time to give consideration to legislation authorizing the cash payment of these bonds. Certainly, under the circumstances, hearings should be held as evidence can be presented which would justify favorable action by the Congress in this connection. The paying off of the terminal-leave bonds at this time would effect a reduction in the national debt and also effect a saving of the 2½-percent interest which these bonds draw and which interest over a period of years would accumulate into a further increased and substantial national debt.

The matter of equalizing the rights of enlisted men with officers in this regard represents fair play among our servicemen and is an obligation which the Nation should discharge. Some of our enlisted men may not care to cash their bonds at this time yet many others are presently in need of this money for numerous purposes as indicated and I deem it proper that the Congress effect immediate consideration of a settlement of this obligation. The measure should not only be considered it must be passed and enacted into law.

Destruction of Potatoes

EXTENSION OF REMARKS
OF
HON. DAVID M. POTTS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. POTTS. Mr. Speaker, I have here in my hand a picture appearing in the New York Herald Tribune of Sunday, May 18, 1947, showing a mountain of potatoes in an Alabama field. There are two workers standing on top of the pile and from their size you can get a pretty good picture of the enormous amount of potatoes in the pile. It is said that these two workers are from the Agriculture Department's Production and Marketing Administration and that kerosene was poured over the potatoes to make them unfit for consumption. More than 50 tons were dumped.

Mr. Speaker, this was in Foley, Ala. The same thing has been happening out in Long Island, New York State, for longer than the past year. I understand that it also happens in Maine, and I would not be surprised if it also happens in a number of other places.

In today's market potatoes range all the way from 6 cents a pound to 10 cents a pound. Ask any housewife, and she will tell you that even at those prices the best potatoes are not available. They are either spongy or spotted. People are inquiring as to why prices are so high. The answer from the foregoing is apparent. The administration, which seeks great measures of governmental control over our economy sees fit to destroy tremendous quantities of produce which if put on the market would reduce the cost of living. Potatoes would not then be selling from 6 to 10 cents a pound.

Unification of the Armed Services

EXTENSION OF REMARKS
OF
HON. GEORGE J. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lowell (Mass.) Sun of May 16, 1947:

MERGER DISGUISED

There are some features in the proposed merger legislation which have great merit. These are the establishing by law of:

1. The Joint Chiefs of Staff, whose job it is to determine the over-all strategy of the Nation's armed forces.

2. A National Security Council, the function of which would be to coordinate the military and foreign policies of the Government and to assess and appraise the objectives, commitments, and risks of the United States in relation to our actual and potential military power in the interest of national security.

3. A National Security Resources Board, the purpose of which is to coordinate military, industrial, and civilian mobilization, and to unify all of the policies of the Federal agencies, departments, and bureaus in time of war.

4. The Munitions Board which will operate to coordinate the military aspects of industrial mobilization, and to determine the relative priorities in connection with the military procurement programs.

5. A Research and Development Board, the prime purpose of which is to prepare and conduct an integrated program of research and development for military purposes.

6. A Central Intelligence Agency, the function of which is to obtain, appraise, and disseminate valuable information, not only to the Nation as a whole but for the military forces as well.

These are features which are obviously constructive and should be enacted into law. However, it is not necessary for this Nation to gain these advantages through a disguised merger bill, or to pass an over-all military reform bill, such as this proposed merger bill represents, dressed up as a National Security Act of 1947.

We do not need in the United States a military dictator in the form of the Secretary of National Defense. We do not need a separate independent Department of Air when the whole direction of air warfare is toward closer and more detailed operational integration with both the Army and the Navy. We can get along without military control of the country.

During these days when the Nation is trying to save the people's money by cutting down the expenses of government and the establishing of an over-all economic program, it seems far wiser to make more efficient the military organization now composed of the Army, Navy, Marine Corps, Reserve forces, and National Guard units of the respective States, all of which have stood the test of war, than to create a huge new independent Department of Air, the necessity of which is most doubtful, and which in the end will cost several billion dollars every year just to maintain on an independent basis.

This is not merger and it is not unification which means just about exactly the same thing. If an independent Department of Air were ever to be created, and that is a highly debatable question, the time it should have been created was about 1920, for it was during the war just ended that such an independent Department of Air would have reached its maximum value to the country from the viewpoint of piloted aircraft for strategic bombing purposes. By the time the next war arrives this method of striking the enemy will be obsolete. In fact, it is just about obsolete at the present time.

We strongly feel, after giving no little thought to the matter, that this commonly known merger bill, referred to in dress circles by the brass as the unification bill, and officially disguised as the National Security Act of 1947, should be defeated. It is, oddly enough, a rather complete copy of Hitler's military machine. It is patterned on the old German military dictatorial organization. In our studied opinion it is not worthy of the support of any Senator or Congressman.

We feel, too, that the morale of the Navy and the Marine Corps would be irreparably shattered; that the efficiency of these fighting units would be reduced to a futile minimum, and that the esprit de corps, such as was so notably demonstrated by the marines during the recent war, would be sadly lacking.

Any legislation which deals with the Military Establishment of the United States actually reaches into every home in our land. While all of us want to see our armed forces progress and advance in every manner and way possible, there is no urgency in America for military reform of this drastic and potentially highly dangerous nature. Thousands of ex-servicemen in both the Army, the Navy, and the Marine Corps are strenuously objecting to this proposed military reform bill. Professional officers and men in both the Army and the Navy would object publicly and violently if they were given an opportunity to do so without swift reprisal and jeopardy of their careers. Nonetheless, such as General Vandegrift and General Edson of the Marine Corps have registered their strong opposition to this bill. In view of the importance of this legislation and the tremendous detriment it could and probably would place upon the Nation, if enacted, the Sun respectfully requests all Members of Congress to think twice and count 10 before placing themselves in favor of such an ill-conceived military reform bill, talked of as a merger, and disguised as the National Security Act of 1947.

We might conclude by briefly referring to our casual meeting only this week with a Purple Heart veteran of both World Wars, a man with considerable Army rank. Talk eventually turned to the merger, and we asked his opinion of it.

"Well," he replied, "if this merger bill had been passed while the war was on, we would still be fighting instead of at peace."

Letter From President of District No. 44, International Association of Machinists, Regarding Navy Department Appropriation Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. ROONEY. Mr. Speaker, under the permission granted me, I include the following letter dated May 19, 1947, addressed to the Members of the House by Mr. N. P. Alifas, president of District No. 44, International Association of Machinists, concerning the appropriation bill for the Navy Department which we are about to consider:

INTERNATIONAL ASSOCIATION
OF MACHINISTS,
Washington, D. C., May 19, 1947.

To the Members of the House of Representatives, House Office Building, Washington, D. C.:

MY DEAR CONGRESSMAN: District No. 44 of the International Association of Machinists, organizations affiliated with the A. F. of L., and the railroad brotherhoods, are deeply disturbed by the action taken by the Appropriations Committee of the House in eliminating from the pending naval appropriation bill, H. R. 3493, a piece of labor legislation of long standing, prohibiting elemental stop-watch time study and the premium-bonus system of payment, and substituting therefor ineffectual language.

The language substituted merely prohibits contracts being let for the purpose of installing the objectionable elemental stopwatch time-study practices; and would therefore permit the employment of swarms of time-study men, so-called efficiency experts, job evaluation experts, and other supernumeraries with book knowledge but little practical experience, to introduce some drastic system of shop management. It would also permit existing supervisors and managements to do the same thing.

The evils (from the workmen's point of view) attendant upon the elemental time-study practices and the premium-bonus system of payment which goes with it, have been so clearly presented to Congress, in bygone years, that restatement of the case should not be necessary.

Suffice it to say that this language, which the Appropriations Committee proposes to eliminate from the bill, has been contained in the Army and Navy appropriation bills, annually, since 1915 during both Republican and Democratic administrations. Former Congressman Irvin S. Pepper, Democrat, of Iowa, started the fight against the introduction of the Taylor and similar systems of shop management in the Government service in 1912.

Congressman Harry E. Hull, Republican, of Iowa, and Congressman Frederick W. Dallinger, Republican, of Massachusetts, successfully took up the cudgel in labor's behalf for several years. Senator William E. Borah, Republican, of Idaho, sponsored this legislation in 1913, and presented to the Senate an excoriating report from the Senate Committee on Education and Labor against the practices involved in the stop-watch time-study technique and the premium-bonus system of pay as a means of handling workmen.

In 1945 and 1946 Senator Warren G. Magnuson, Democrat, of Washington, Senator William Langer, Republican, of North Dakota, and Senator Robert M. La Follette, Jr., led a successful fight in the Senate which restored this language eliminated or made innocuous by action of the Senate Appropriations Committee.

We sincerely hope, therefore, that you will support a motion to strike out the new language contained in the pending naval appropriation bill, H. R. 3493, which is found on page 28 beginning in line 7 with the word "No" and ending with the word "employee" in line 11, and substitute the language which has been in the bill annually for 32 years.

Whatever may be said pro and con on the merits of the contention that the Congress received a mandate at the last election to curb labor unions and labor-union bosses, we submit that it would take farfetched reasoning to also contend that a mandate exists to destroy this particular piece of labor legislation.

In private industry, labor unions, through collective bargaining, are in a position to curb or minimize harsh shop practices. In the Federal service employees have no such power.

Government employees neither desire to strike, assert the right to strike, nor have the legal right to strike against abuses of this kind. While there are unions in the Federal service, they are democratically operated. The membership decides upon policy and program, and their representatives attempt to carry them out. There are no union bosses in the labor unions covering members employed in the Federal service. Such labor representatives possess only the right to petition Congress and to employ such powers of persuasion as they might possess, as per this communication.

The prohibition against elemental stopwatch time study and the premium-bonus system of payment applies only to the Navy and War Departments, because these two Departments are the only ones that have indicated a desire to introduce these objectionable practices.

Apparently, from time to time, societies of engineers appear to have sold these two Departments a bill of goods, probably with a view to create some jobs for their members.

Other departments of the Government appear to feel that operating under the per diem rate of pay or upon an annual salary basis, and at times piecework, produces the best results in their establishments.

As a matter of fact, the naval industrial establishments and the arsenals under the War Department, are primarily engaged in repairs and modernization of existing military equipment, a process which does not lend itself to the elemental stop-watch time-study practices and the premium-bonus system of pay.

Managements have told representatives of labor repeatedly that it is impracticable to operate a plant under two or three systems of pay in the same shop, due to the resultant bickering among workmen, and the consequent lowering of morale.

We beg humbly to suggest that if the Congress really wants to do something to improve the efficiency of its military industrial establishments, it would do well to modify some of the provisions of the Veterans' Preference Act of June 27, 1944, under which, from now on, disabled veterans will be at the top of all employment eligible lists, and the preference which all types of veterans receive for retention purposes is gradually forcing out of the Federal service its highly skilled mechanics and other personnel which has the know-how because such discharged employees have had no military service.

Such a move would also make available to the Federal service the other 120,000,000 Americans banned by veterans' preference, among them the skill of our most outstanding mechanics and production workers in the United States; and would give the oncoming generation (practically all of whom are effectively barred from employment through the operation of the above-referred-to Veterans' Preference Act) an opportunity to work for the Federal Government.

Trusting this will receive your favorable consideration and your support for the proposed restoration of the labor legislation eliminated by the Appropriations Committee, I remain

Very respectfully yours,
N. P. ALIFAS,
President, District No. 44,
International Association of Machinists.

Make Our Money Work

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. HORAN. Mr. Speaker, perhaps no better delineation of the relationship between foreign loans and Interior appropriations and development has been made than this editorial from the Washington News.

Under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include it:

MAKE OUR MONEY WORK

Chairman BRIDGES, of the Senate Appropriations Committee, demands that Congress be told how much foreign spending is planned instead of being asked for money in dribs and drabs. His request makes sense.

The administration is seeking $200,000,000 in economic aid for Korea. Italy wants more money. Britain may ask another loan. These and other countries genuinely need help, but we will invite disaster if we go on pouring out millions and billions to meet recurring crises.

Months ago Bernard M. Baruch urged that we inventory our resources and find out how far we are able to go with foreign aid. That should be done now. Beyond that, we must realize that emergency loans to buy food and other necessities will not, of themselves, solve the complex financial problems of Europe and Asia. The hungry must be fed, certainly, but people must get back to work and normal trade must be revived.

We can contribute to world recovery by buying as well as selling on the world market—by exchanging our food and manufactured goods for raw materials to be used by American industry or stock piled for national defense.

We have used up three-fourths of our domestic supply of bauxite, source of aluminum. We need more than 40,000 tons of tin a year, and produce only a few tons. We mine no nickel in the United States, and only about four-fifths as much zinc as we use. Our reserves of chromite, manganese, platinum, mercury, and tungsten are too small for safety. Most of these vital metals are produced by nations in the British Empire, or by others that need our industrial products. Almost every country in the world can supply nonperishable raw materials that we can use.

We can afford to buy and store such materials. We can get them at a fair price by absorbing surpluses not readily salable elsewhere. They will be like money in the bank. As world demand increases for products made from such materials we will be prepared to meet it.

If people are to live, production must be stepped up throughout the world. That can be done by breaking down trade barriers and putting money into circulation—not to be lost on shot-in-the-arm relief financing but to work and earn expanding returns.

Let Idaho Show the Way

EXTENSION OF REMARKS
OF
HON. ROBERT F. JONES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. JONES of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Idaho Statesman:

LET IDAHO SHOW THE WAY

Since the end of the war and the obvious reduction in governmental costs we have all believed that Federal budgets could be reduced, Federal pay rolls trimmed, budgets balanced, taxes lowered, and progress made on the payment of our enormous public debt. The last election, which the Republicans won mainly on the above idea, gave evidence that the public wanted to get back on a normal basis of Government finance.

The Republican Congress convened and heard President Truman's budget request and promptly termed it too high. There was a great deal of speculation over how much the budget could be reduced, and it finally appeared that the Republicans would keep their promises and make a substantial cut in the costs of Government and eventually lower taxes, especially for the smaller-income groups.

Into this budget-reduction picture came the reclamation program and the many projects planned over a period of years but dormant in the time of war. These projects in Idaho are scattered over the different sections of the State, and it was obvious that some of them would be eliminated from the budget if the Federal Government was to make economies. This has been the case. Idaho has lost many reclamation projects it requested, although there is no fair reason for Idahoans to complain if they are serious in their demands for lower public debt and lower taxes.

Governor Robins has joined a group of Northwest governors who have formed a bloc to demand that we receive more reclamation money than the present appropriations give us. We think the Governor, and the rest of the reclamation people in Idaho, should be a little more consistent. There is need for sensible reasoning in the demands for Federal funds for new projects. There is a definite need, in the Governor's case, for his recalling his campaign promises of good government and economy. It is impossible for Idaho or Idaho's Governor or Idaho's reclamation officials to pressure for higher funds and, at the same time, expect reduction in Federal taxes and the Federal budget.

Boise has a reclamation office with an annual pay roll of more than a quarter of a million dollars—$284,930.30 to be exact. To us this seems absurd; and before Governor Robins starts out to secure for Idaho more Federal funds for this agency he should investigate whether or not this Boise office costs is now necessary—whether in the face of the great need for economy with Federal money it might be possible to trim this bureau down. Idaho might set an example in this direction. And Idaho reclamationists might also let the public know what this $284,930.30 pays for. And also, if the Interior Department budget stands as it is now before Congress, and Idaho reclamation funds are reduced, how many of the bureau employees will be eliminated to bring the administrative costs in line?

The Interior Department budget reductions are not too drastic as far as Idaho is concerned. In fact, this State is quite well off, compared to other States. Our congressional delegation apparently has done well in keeping needed projects in the budget and agreeing to the elimination of unnecessary projects at this time. We should let well enough alone and hope that the Senate approves the present budget. And when that is done we should reduce the operating costs of the Reclamation Department in Idaho accordingly in order that the funds coming into the State will be spent for the building of the projects rather than for excess pay rolls.

The Statesman has long opposed an all-out reclamation program in Idaho, opposed it despite the contention of reclamationists that we do not want the State to expand and grow. We continue to oppose the expenditure of Federal funds for reclamation projects on a blanket basis. We are for the orderly development of Idaho land—for development that is sound and can pay back its cost—for development that will not create surpluses to cause future and new Government subsidies—for development that will not soon add to surpluses of the type that caused the 1932 depression. But most of all we are opposed to waste in any agency, and this includes reclamation, and we are also opposed to State selfishness, to State belief that we want the Federal budget cut but we also want everything we asked for.

Let's let Idaho show the way. Let's face the truth. Let's admit that the Interior Department budget is acceptable and so notify Congress, and thereby not run the risk of losing what we have been offered through protesting and demanding more and thereby endangering what we now see possible. Let's set a pace in getting a bureau started on the road to economy. Let's follow the tradition of the first reclamationists in Idaho and come down out of the clouds.

Jewish National Home in Palestine

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include a resolution from the Minneapolis Post, No. 166, of the Jewish War Veterans of the United States of America. These veterans who have valiantly served their country in time of war call upon the United States Government to take the initiative in behalf of the establishment of that Jewish national home in Palestine, which has so long been promised to the Jewish people.

MAY 5, 1947.

Hon. GEORGE E. MACKINNON,
United States House of Representatives,
Washington, D. C.

DEAR SIR:

RESOLUTION

Whereas the British Government has repeatedly violated its obligations as the mandatory of Palestine by repudiating the solemn pledges expressed in the Balfour Declaration and the Palestine Mandate with regard to the facilitation of Jewish immigration into Palestine and the continued development of the Jewish national homes; and

Whereas the seizure and mass deportation to Cyprus of so-called illegal Jewish immigrants constitute a brutal campaign against helpless men, women, and children, completely inconsistent with the principles of the Atlantic Charter; and

Whereas such immigrants embark for the Holy Land as of their legal right, since the white paper of 1939, which bars their entry, was repudiated by the permanent mandates commission of the League of Nations as inconsistent with Palestine mandate—thus making illegal the policy pursued by the British Administration; and

Whereas the Government of the United States of America, through the passage of resolutions in both Houses of Congress, and through planks in the platforms of both major political parties, is pledged to free Jewish immigration into the Holy Land and the establishment in Palestine of a free and democratic Jewish commonwealth: Therefore be it

Resolved, That we respectfully call upon the Government of the United States to take the initiative during the forthcoming special meeting of the General Assembly of the United Nations, in vigorously championing the program for Palestine which it has repeatedly reaffirmed, thereby defeating the British Government's attempt to employ the United Nations session as a maneuver to retain its present Palestine policy; and be it further

Resolved, That we call upon the Government of the United States to insist that the Jewish people, as the party most directly concerned, be accorded full representation in all deliberations regarding Palestine within the United Nations through the Jewish agency for Palestine, the internationally recognized body authorized to speak for the Jewish people; be it further

Resolved, That copies of this resolution go forward to the President of the United States, the Secretary of State, the Under Secretary of State, the American delegate to the General Assembly of the United Nations, and Members of both Houses of the Congress of the United States.

Unanimously passed this 5th day of May 1947, by Minneapolis Post, No. 166, the Jewish War Veterans of the United States of America, Minneapolis, Minn.

BENJAMIN B. BELFER,
Commander.

Tax Legislation

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. ROBERTSON. Mr. Speaker, one of the ranking domestic problems confronting the Eightieth Congress is the matter of tax legislation. A noble start has been made with H. R. 1 in regard to individual income taxes. However, a great many other tax problems need now be considered. Among these, perhaps of first import, is the consideration of corporate taxation. The corporate entity in the system of free enterprise is almost human, and its relation to our system and our people is inseparable. I should like to see some constructive, equitable law presented and passed to lessen excessive tax burden on small business enterprise, and to equalize taxes throughout the business world.

In recent weeks, I have discussed this matter with a very reputable organization which represents a large segment of our Nation's small businesses, the National Small Businessmen's Association, Inc. In a letter from Mr. A. W. Kimball, director of the Washington office of this

organization, dated April 18, 1947, the problem has been presented, and a solution offered. I should like to present their suggestion to the Congress for its immediate consideration and study. I include this letter from the National Small Businessmen's Association, Inc.:

NATIONAL SMALL BUSINESSMEN'S ASSOCIATION, INC.,
Washington, D. C., April 18, 1947.

Hon. CHARLES R. ROBERTSON,
House of Representatives,
Washington, D. C.

DEAR MR. ROBERTSON: A great many members of our association are quite concerned regarding the unfairness of the so-called notch tax and urge that Congress amend the Federal tax on corporate income under the Revenue Act of 1945 so as to do away with the inequities resulting from the notch tax.

The particular phase of this taxing schedule with which we are concerned is that portion on net earnings between $25,000 and $50,000 which is the usual range for small- and medium-sized corporations. The normal tax of 31 percent plus the surtax of 22 percent, or a total of 53 percent, is out of line with the total tax up to $25,000 and the tax on net earnings over $50,000.

The so-called normal tax on corporation net income under the Revenue Act of 1945 is 15 percent for the first $5,000, 17 percent for the net income from $5,000 to $20,000, 19 percent for the net income from $20,000 to $25,000, and 31 percent for the net income from $25,000 to $50,000, and then drops back to 24 percent for net income over $50,000. The surtax on the first $25,000 is 6 percent, and on the portion of net income from $25,000 to $50,000 is 22 percent; and on all net income over $50,000 drops back to 14 percent.

The sum total of the two taxes is 21 percent on net income from 0 to $5,000, 23 percent on net income from $5,000 to $20,000, 25 percent on net income from $20,000 to $25,000, 53 percent on net income from $25,000 to $50,000.

After the net income passes $50,000 the tax drops back to 38 percent and remains at that rate for all net income over $50,000.

Although the 53-percent bracket to which we object applies on all tax returns where the net income reaches or exceeds this bracket, this 53-percent rate nevertheless places a disproportionately heavy burden on the small corporations which have net profits of between $25,000 and $50,000.

In other words, if a corporation has net income of $500,000 the fact that it has to pay 53 percent in the $25,000 to $50,000 bracket doesn't mean much. On the other hand, paying 53 percent in this bracket does mean a great deal to a corporation with net income of $45,000.

It is the opinion of our association that the 53-percent bracket could be made more equitable by placing the corporation tax on a graduation basis in the same manner as income tax. We suggest the following schedule be given consideration: 15 percent for the first $5,000, 17 percent for the net income from $5,000 to $20,000, 19 percent for the net income from $20,000 to $35,000, 24 percent for the net income of $35,000 and over.

We also suggest that the surtax on net income be changed from 6 percent on the first $25,000 to 6 percent on the first $35,000, 8 percent from $35,000 to $50,000, and 14 percent on net income over $50,000, with the total of the two taxes being 21 percent on net income from 0 to $5,000, 23 percent on net income from $5,000 to $20,000, 25 percent on net income from $20,000 to $35,000, 32 percent on net income from $35,000 to $50,000, 38 percent on net income of $50,000 and over.

This suggested schedule would not penalize anyone and would certainly place firms in the $25,000 to $50,000 bracket on a much fairer position than they now hold.

We solicit your study and consideration of this phase of the tax question, and sincerely hope that something can be done to correct this particular situation.

Sincerely,

A. W. KIMBALL,
Director, Washington Office.

J. Edgar Hoover

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. WOODRUFF. Mr. Speaker, I have known J. Edgar Hoover, the very capable Director of the Federal Bureau of Investigation, since 1924, when he assumed the responsibilities of that position. His record has been an amazingly successful one. Prior to Mr. Hoover's appointment, there had been frequent changes in the directorship. These changes were made presumably either because of politics or dissatisfaction with the way those responsibilities had been discharged by the directors. It is a most significant fact that there has been no change during the past 23 years. During this time the Department has been greatly enlarged and the efficiency thereof has been above criticism. As a matter of fact, the FBI has acquired a standing among the law-enforcement agencies of the world such as no other has equaled. The people of the United States are fortunate indeed to have had the services of this fine public official. There have been times when elements of our society have undertaken to bring about Mr. Hoover's replacement, but, notwithstanding these efforts, he has retained the confidence and the support of each administration since his appointment.

Mr. Speaker, recently I read an article in the New York Post written by Mr. Victor Riesel. Evidently this very able writer thinks as highly of Mr. Hoover as I and he sets forth certain things and activities concerning the FBI which should be interesting to everyone with any regard for efficient administration and law enforcement.

Mr. Speaker, I include as part of these remarks the article referred to:

[From the New York Post of May 13, 1947]

INSIDE LABOR

(By Victor Riesel)

I'll always be grateful to those high school and college athletes who cracked my nose and hospitalized me by ripping my sides with their muddy cleats on the football field. This sandlotting took up so many hours I couldn't find the time to become an intellectual.

Because I got to know so little and didn't have time to develop my mind, I found when I took to the typewriter to earn my daily bread that I'd neglected to lease an ivory tower and had to go out and look at things before I could write about them.

So while I traveled I kept up with the latest in crusades by reading my more intellectual colleagues, especially those professional liberals who never went anyplace but who knew just what was right for the world, the working class, and humanity.

There are lots of ways to earn a living, and the ivory tower specialists can work their corner any way they see fit. But I'm exceedingly wearied by the professional liberal who sees as Fascist all who disagree with his thesis that our country, right or wrong, is wrong.

I'm weary, for example, of those who now are trying to smear the FBI as a secret political police because the Bureau will check the loyalty of all Federal workers. I wonder if it has ever occurred to that professional "our country can't be right" crowd to climb down from the stars and learn what the FBI is, before they try to smear it as an antilabor, anti-liberal-thought policy agency.

Why don't they go and look? They'd find, for example, that the $35,000,000 which the Government spends on the FBI nets it about $68,500,000 a year in fines, savings, and recoveries.

There were 169 convictions for white slavery in 1946 on the basis of FBI evidence. Since 1941, there have been 41 convictions of seditionists and last year three Axis spies were jailed, while recoveries of funds came to $3,650,000 from this crowd.

And if these men who crusade in the name of the working stiffs, whether said stiffs like it or not, aren't interested in the seditionists, their great hearts should glow over the fact that the FBI made 15 election fraud investigations this year and sent 45 persons to jail for tampering with the democratic process. And what about the 145 convictions for antitrust violations which resulted in $405,700 fines and recoveries of $31,248,000?

As for this dreadful secret police's suppression of labor, last year it participated in the conviction of nine union men who violated the War Labor Disputes Act and were sentenced to a total of 6 months and fined all of $2,340.

I wish those professional liberals would lease their ivory towers to the apartment-hungry crowds and go and see for themselves. And it would make better copy, too.

Commission on Christian Social Relations

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include certain statements and resolutions:

DIOCESE OF NEW YORK,
New York, May 16, 1947.

The Honorable JACOB K. JAVITS,
The House Office Building,
Washington. D. C.

DEAR SIR: I hereby certify that the enclosed statements and resolutions, entitled 1. "Displaced Persons and United States Immigration Policy"; 2. "The Taft-Ellender-Wagner Federal Housing bill;" 3. "Social Security for Lay Employees of the Church" were presented to the annual convention of the diocese of New York, held in the synod house of the Cathedral Chuch of St. John the Divine, New York City on Tuesday, May 13, 1947. Each of these, separately, was adopted by a unanimous vote of the convention.

Respectfully yours,

Rev. R. A. D. BEATY,
Secretary of Convention.

COMMISSION ON
CHRISTIAN SOCIAL RELATIONS,
DIOCESE OF NEW YORK.

STATEMENTS AND RESOLUTIONS PRESENTED TO DIOCESAN CONVENTION, MAY 13, 1947

1. Displaced persons and United States immigration policy.
2. The Taft-Ellender-Wagner Federal housing bill.
3. Social security for lay employees of the church.

Rev. HAROLD F. HOHLY,
Chairman.
Rev. LELAND B. HENRY,
Executive Director.

DISPLACED PERSONS AND UNITED STATES IMMIGRATION POLICY

Two years after the war there are at least 850,000 persons in detention camps in Europe who do not wish to return to their native lands for fear of oppression for religious, racial or political reasons. They represent all religions—80 percent Christians of various denominations, 20 percent Jews. The United States could easily absorb some of these people, especially since during the years 1940–1946 only 15 percent of our total world quota (of immigrants) was used. A fair share of displaced persons (estimated by experts) would be 400,000—less than half of the number that were not admitted during the war years.

No displaced person entering the United States could become a public charge as every individual corporation or agency sponsoring a displaced person must furnish an affidavit to that effect. They would be housed by friends, relatives and organizations responsible. They are workers: agricultural, housemaids, skilled workers, business and professional.

RESOLUTION

Believing in the Fatherhood of God and the Brotherhood of Man: Be it therefore

Resolved, That the Diocese of New York, in convention assembled, approve the plan to admit up to 400,000 displaced persons by reopening unused immigration quotas back to 1940 and allowing quotas to be transferable, this to be done over a period of 4 years, through the regular channels of the United States Government, and further be it

Resolved, That copies of this resolution be sent to the President of the United States, the chairmen of the appropriate committees of the Senate and of the House of Representatives, to the Senators from the State of New York and to the Representatives whose districts lie wholly or in part within the boundaries of the diocese.

THE TAFT-ELLENDER-WAGNER FEDERAL HOUSING BILL

THE NEED

The National Housing Agency estimates the present housing shortage at not less than 4,300,000 family units, not including any construction for the replacement of an additional 7,000,000 substandard dwellings, many of which are definitely unfit for human occupancy.

THE HUMAN COST

The housing shortage is the most serious single social problem facing the American people today. Several million families are living in inadequate quarters doubled-up with in-laws or friends, in quonset huts, in Army barracks, and in trailer camps. The social, moral and spiritual results are reflected in broken homes, juvenile delinquency, ill-health, and increasing social tensions. The feeling of disillusionment and frustration on the part of millions of veterans who return from military service to find the country and social order they fought to defend unable to supply them with the ordinary decencies of life constitutes an increasingly serious problem.

The welfare of the family has always been a concern of the Christian church. The welfare of the family requires a home. Therefore, the housing shortage is a legitimate interest of the church.

PRESENT CONSTRUCTION

In New York City (where the current shortage is 150,000 family units, not including the replacement of any substandard dwellings) during 1946 8,926 units were demolished and 4,578 new dwellings completed. Against a need of 150,000 units we have a net loss of 4,348 units. During the first 3 months of 1947 home building by private industry in New York City is 53 percent below the same period of 1946. So far as private construction is concerned, we are actually losing ground.

A FOUR-POINT PLAN

Due to the cost of construction, housing authorities are generally agreed that the provision of new housing requires a fourfold approach.

1. The needs of the lowest income group, able to pay not more than $30 per month, can be met only by public housing, with both tax exemption and subsidy. (For example, East River houses.)

2. The needs of the group able to pay from $35 to $50 per month can be met by public housing with tax exemption but without subsidy. (No local example.)

3. The needs of the group able to pay from $55 to $80 per month can be met by various forms of institutional investment, and by private, limited-dividend housing. This requires no subsidy, but does require temporary, limited tax exemption. (For example, Stuyvesant Town and Knickerbocker Village.)

4. The needs of the group able to pay over $80 per month can be met by unaided private industry.

TAFT-ELLENDER-WAGNER BILL

A comprehensive approach to the entire problem, with special emphasis upon the needs of the lower middle-income group, is provided by legislation now pending in Congress. The Taft-Ellender-Wagner bill (S. 866), and its companion bill in the House (H. R. 2523) have been introduced with bipartisan support after extended hearings in the Senate.

This bill has the support of the Federal Council of Churches, the National Catholic Welfare Council, the National Council of Jewish Women, the American Federation of Labor, the Congress of Industrial Organizations, the United States Conference of Mayors, the Veterans of Foreign Wars, the American Veterans' Committee, the Citizens Housing Council and literally hundreds of civic groups. The bill has been drawn to cover every aspect of the housing problem with a well-planned, long-range approach. In the opinion of qualified experts in the field it is the most comprehensive housing bill ever presented.

The Commission on Christian Social Relations therefore offers the following resolution:

Whereas the church in common with all social-minded individuals and groups, is keenly aware of the gravity of the present housing shortage, with its tragic affects upon family stability, juvenile delinquency, health, and the social, moral, and spiritual welfare of hundreds of thousands of our fellow citizens: Be it therefore

Resolved, That the Diocese of New York, in convention assembled, urge the enactment by the Congress of the United States of the Taft-Ellender-Wagner Federal Housing bill (S. 866, H. R. 2523); and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the chairmen of the appropriate committees of the Senate and of the House of Representatives, to the Senators from the State of New York and to the Representatives whose districts lie wholly or in part within the boundaries of the diocese.

SOCIAL SECURITY FOR LAY EMPLOYEES OF THE CHURCH

A RESOLUTION

Whereas lay employees of religious organizations are not included among those covered under the provision of the Federal laws providing for Federal old-age and survivors insurance benefits; and

Whereas the persons not so covered by reason of such employment are deprived of substantial rights and benefits, which are enjoyed by the vast majority of their fellow-citizens; and

Whereas the public interest and welfare require that such benefits should be made available to persons not now covered under the Federal law so as to bring a measure of security to them in their old age, and also to their dependent survivors; and

Whereas it is in the interest of the church to have at least a portion of the responsibility for the old age of her lay employees covered by the benefits made available under the Federal law: Be it therefore

Resolved, That the diocese of New York, in convention assembled, hereby memorializes the Congress of the United States to enact legislation to bring within the coverage of the Federal laws providing for Federal old-age and survivors insurance benefits, lay employees of religious organizations; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, to the President of the Senate, to the Speaker of the House of Representatives, to the Senators from the State of New York, and to the Representatives whose districts lie wholly or in part within the boundaries of the diocese.

Amendment to Wool Bill, S. 814

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. HOPE. Mr. Speaker, under permission given me to extend my remarks in the RECORD, I include herewith an amendment to the wool bill, S. 814, which will be offered when that measure comes before the House for consideration.

The amendment will be offered as a substitute for section 4 which is a committee amendment inserted by the House Committee on Agriculture. The new amendment makes wool one of the commodities to which section 22 of the Agricultural Adjustment Act is applicable. It provides further that as to wool "no limitation shall be imposed on the total quantities of wool or products thereof which may be entered or withdrawn from warehouse for consumption." The new matter added to section 22 is that which is in italic:

(a) Whenever the President has reason to believe that any one or more articles *are being, or are practically certain to be, imported into the United States under such conditions and in sufficient quantities as*

to render or tend to render ineffective or materially interfere with any program or operation undertaken, or to reduce substantially the amount of any product processed in the United States from any commodity subject to and with respect to which any program is in operation, under this title or the Soil Conservation and Domestic Allotment Act, as amended, or section 32, Public Law No. 320, Seventy-fourth Congress, approved August 24, 1935, as amended, *or the Wool Act of 1947*, he shall cause an immediate investigation to be made by the United States Tariff Commission, which shall give precedence to investigations under this section to determine such facts. Such investigations shall be made after due notice and opportunity for hearing to interested parties and shall be conducted subject to such regulations as the President shall specify.

(b) If, on the basis of such investigation and report to him of findings and recommendations made in connection therewith, the President finds the existence of such facts, he shall by proclamation impose such fees on, or such limitations on the total quantities of, any article or articles which may be entered, or withdrawn from warehouse, for consumption as he finds and declares shown by such investigation to be necessary to prescribe in order that the entry of such article or articles will not render or tend to render ineffective or materially interfere with any program or operation undertaken, or will not reduce substantially the amount of any product processed in the United States from any commodity subject to and with respect to which any program is in operation, under this title or the Soil Conservation and Domestic Allotment Act, as amended, or section 32, Public Law No. 320, Seventy-fourth Congress, approved August 24, 1935, as amended, *or the Wool Act of 1947:* Provided, that no limitation shall be imposed on the total quantity of any article which may be imported from any country which reduces such permissible total quantity to less than 50 percent of the average annual quantity of such article which was imported from such country during the period from January 1, 1929, to December 31, 1933, both dates inclusive: *And provided further*, That no limitation shall be imposed on the total quantities of wool or products thereof which may be entered or withdrawn from warehouse for consumption.

Low-Cost Peace

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. JOHNSON of Texas. Mr. Speaker, there is no doubt that this Nation needs progressive and enlightened leadership from both management and labor. There are signs that a new generation is arising in American business which is aware of its responsibilities and which has the imagination not merely to talk about the need for enlightened leadership, but to provide it.

One of these leaders is Charles Luckman, president of Lever Bros. Mr. Luckman has recently delivered a series of remarkable speeches, in each one of which he has advocated a program designed really to make democracy work. In a speech which he made at the University of Illinois last Thursday, Mr. Luckman advocated a round-table program for labor and management to be financed by a voluntary round-table fund of a million dollars. He has offered on behalf of his company to contribute $100,000 of this. It is Mr. Luckman's belief, as he has said in several of his speeches, that both labor and management must realize that their battles are not a private war; that they influence the entire people of the United States—and even of the world; and he proposes that the ranking junior leaders of both labor and management should engage in a joint educational program in which they consider not merely their own private problems but the problems of the entire Nation. I commend his speech to the consideration of the Members of the House:

LOW-COST PEACE

I am not here to be sentimental about our university's past. It is my privilege to join other voices here in doing honor to the man who will lead it into the future.

If someone should compile a set of ideal qualifications for the president of a great State university, these would surely include a distinguished teaching record, outstanding experience as an administrator, service in high public office, wide knowledge of the world through travel and observation, and an international reputation. There is no man in American education today in whom these qualifications are more ideally combined than in Dr. George Dinsmore Stoddard.

Last year he remarked to an alumni group: "The University of Illinois is not only a great university now, but it can become the greatest of all State universities."

On his own distinguished record as a scientist and a teacher, we understand Dr. Stoddard's prophecy to mean this: The greatness of the University of Illinois will be measured by the greatness of its service to the people of this State, this Nation, and this world.

It has already rendered a great service to thousands of young men and women. The 4 years I spent here as a student of architecture endowed me with a basic formula for studying, analyzing, and thinking problems through to their logical, though not necessarily obvious, conclusions. Those who participated in my education passed on to me a way of life, not merely a means of livelihood.

In the years which have ensued, I have been blessed with much—a large part of which resulted from my having been the beneficiary of the education afforded by this University. It is, therefore, only natural that I have a deep and abiding sense of obligation to do my utmost to help make it possible for millions of other young men to be given the same opportunity.

Once again, this is more than a mere conventional acknowledgment. The scope of this self-imposed obligation is both staggering and frightening. The future of the world is at stake in the race between education and catastrophe. In 1914, catastrophe won. Again in 1939 catastrophe won. These two lost races cost the world 120,000,000 casualties and $3,337,000,000,000.

Have we not already paid a disastrous price to give living significance to one of the United Nations preambles which states:

"Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be established."

We cannot act upon this self-evident proposition, unless we are willing to forego a few of our luxuries to pay for the training and cultivation of our national intellect. For too many years we have measured the wealth of nations by their natural resources, not reckoning that the greatest resource possessed by any country is the capacity of its people to be educated. In the development of our education, we Americans now spend no more than $3,000,000,000 annually, which represents only 1½ percent of our national income.

This simply is not enough in a world threatened by imperial communism. It is not enough when the Soviet Union spends 8 percent of its income, or $7,500,000,000 a year, to make big Marxists out of little ones. If we truly want our children to believe in the Bill of Rights, in the freedom and dignity of the individual, and in the political ideals of Jefferson and Lincoln, then we will have to spend, and spend, and spend.

In this troubled era, any nation is insane to worry about appropriations big enough for parity of physical armaments, while failing to make appropriations which will assure a parity of intellectual armaments.

This is particularly true of a nation which has grown soft with good living, and which has counted the training of its young as less important than liquor for its gullet, or paints and perfumes for the adornment of its women.

If our country can afford to spend $20,000,000,000 a year on recreation, tobacco, alcohol, soap, and beauty preparations, it can afford to ante up an additional $3,000,000,000 for the knowledge and understanding so vital to the perpetuation of our democratic way of life. It is written in Ecclesiastes that "wisdom is better than weapons of war"—a thought echoed 2,000 years later by Edmund Burke when he so wisely said: "Education is the cheap defense of nations."

If we can't afford this cheapest of defenses, then we should cut down on the consumption of our comforts and luxuries. As a manufacturer, I say to you that I would rather sell 15 percent less of these comforts, which include my own products, if this must be the price for providing the youth of our country with a passport to a good education.

Democracy is postulated upon the existence of an intelligent electorate. It cannot flourish half educated and half illiterate. "It is by education," said Aristotle, that "I learn to do by choice what other men do by the constraint of fear." How well are we progressing in the endeavor to make education common to all, to the end that we may do by choice what other men do by constraint of fear? Rather poorly. It is a shocking fact that today over 3,000,000 American children of school age are not in school. On top of that tragic fact, we must also remember that there is an additional 2,000,000 children who are in schools where they are receiving an inadequate, substandard education. Thus, one child out of every six school-age youngsters is being disenfranchised by our apathy and selfishness. This condition is of vital significance to the colleges of our Nation because the future of higher education is inextricably tied to the quantity and quality of the cross-road schools.

These schools have given us a present college enrollment of 2,100,000 students, with an additional half million young men and women knocking at the doors—only to be turned away.

I hasten to point out that among these half-million educationally displaced persons, there are over 350,000 GI's. They have already sacrificed 5 years of their lives. Shall we now deny them the opportunity to benefit from the kind of life which they fought and bled to protect?

How dare we Americans gamble $5,000,000,000 a year on horse races while veterans of our armed forces are unable to gain admission to college because of lack of facilities? Or do we expect to ride the wave of the future on the back of our favorite gelding at 2-to-1 odds?

Why are we making educationally displaced persons out of 5,500,000 American youngsters?

Is it not about time for us to make another historic declaration of war—this time on ignorance?

The most common answer to these questions seems to be that our physical facilities for education are inadequate to bear a heavier load.

An inventory of our plant facilities for education reveals that we now have about 209,000 primary schools, 29,000 secondary schools and 1,750 colleges serving approximately 30,000,000 young people between elementary and college ages. We also know that room is needed for approximately 4,000,000 more. In other words, our present plant capacity is capable of serving only 30 students out of 34 applicants.

So, I think we can agree that the immediate problem is to find s me kind of housing for our educational machinery—and to get its wheels, however creaky, in motion so that millions of students shall not lose irretrievable time while we are repairing the consequences of our own neglect.

I think a production executive would try to accomplish this objective by recognizing at the outset that he was dealing with a crisis, and that he could not overcome it by using niminy-piminy methods. He would further recognize, as he did during the war, that plant equipment is one problem, and the necessary personnel to operate it, quite another. He would, therefore, tackle these problems singly. Turning first to the problem of physical plant, he would ask himself: "How much equipment have I to work with, and how much of the time is it now being used?"

In analyzing the facts, he would discover that the Nation's primary and secondary school equipment is generally operated only 9½ months, or 42 weeks a year. He would then say to himself: "By operating that equipment 52 weeks a year, instead of 42, I could process 20 to 25 percent more students and thereby solve my problem. What then is there to prevent the year-round use of this equipment?" Nothing. We can eliminate the century-old habit of long summer vacations by admitting their probable value to the younger children, but by admitting also that for the older children they could be shortened and staggered throughout the year.

This idea of year-round education is literally a revolutionary one, although, in this context, the word carries a historical rather than a radical connotation. New England in the early eighteenth century contributed some of the greatest personalities our country has ever known. Under the discipline of an all-year-round school system, they created our birthright of freedom and democracy. As a temporary measure, to solve a temporary crisis, we could do worse than emulate our forebears. By sacrificing playtime, we can secure an equality of learning time for the children who will further our American civilization in the years to come.

Before turning away from the ancient and well-encrusted tradition of a long summer hiatus, a word should be said about those badly overworked teachers who may be troubled by the prospect of any further reduction in their vacation time. A solution to this problem has been suggested by that learned educator, Dr. Alvin Johnson, who says:

"The biggest reason for overworked teachers is paper work, which consumes almost a third of their time and, in the main, is of no earthly use. What we need is a thorough overhauling of educational techniques to simplify teaching methods. This would permit teachers to devote less time to bookkeeping and more time to teaching."

This same type of urgent thinking must also be applied to college plant equipment problems. Here the situation is a much more complicated one because it involves not only classroom and study accommodations but housing and recreational space as well. With respect to classrooms, libraries, and study halls, I believe the emergency accommodation of surplus students could be handled by a combination of two different adjustments:

First, by operating our college plants 6 days a week, 52 weeks a year.

Second, by scheduling classes on a three-shift basis during the 15 hours each day between 8 a. m. and 11 p. m.

Under this three-shift plan students would carry their normal schedules of 15 lecture hours per week during either a morning, afternoon, or evening shift, with appropriate staggered vacations spread out over a 12 months' period. We ran our industrial plants in round-the-clock operations for 5 years to win the war on fascism. We certainly should be able to run our educational plants halfway round the clock to win the war on ignorance.

So, let's do a little simple arithmetic. Our college plants are presently operating 5½ days a week, 43 weeks a year, 9 hours a day, 50 hours a week—a total of 2,150 hours per year. The three-shift plan would utilize plant facilities 4,680 hours a year, an increase of 117.9 percent in the usage of our present plant facilities.

With respect to housing and recreational facilities, I believe that a little of our wartime imagination, team work, and resourcefulness could be of great help during this period of crisis. None of us will ever forget that during the war the standard training mission for the Seabees was to construct—in 30 hours—a city for 1,000 men.

So let's call in our armed forces. If living facilities constitute the first beachhead in the battle of education, let them build student cities for peace as they built cities of occupation for war—complete with barracks, Quonset huts, kitchens, dining halls, medical and hospital facilities, and recreational equipment. This may seem a gigantic undertaking, but the armed forces have had enough practice to be just about perfect. Let us simply apply the bold methods which won the war on fascism to the strategic planning of our war on ignorance.

As a permanent, long-term solution, I am convinced that with an intelligent 3-year program of school building and repair, which would involve only 80 percent of the money we intend to spend on roads in the immediate future, we could ultimately return to a less drastic program. But, in the meantime our temporary solution would insure the cost of the present emergency being borne by the whole community, and not by 5,500,000 helpless youngsters.

Their neglect would be a stain on our national honor. Their ignorance would be a mighty obstacle in the path of our future progress. We dare not persist in being blind to our obligations and to their rights.

The second phase of the educational problem turns on the twofold question of getting enough teachers, with proper qualifications, to staff our national educational plant. This emphasis on proper qualifications cannot be too great.

The facts are that we have a predictable immediate need for a minimum of 1,100,000 teachers. We will have approximately 675,000 to meet that requirement. We are, thus, clearly headed for a disastrous teacher-power shortage of not less than 425,000 within the next 3 years.

Bad economics and bad human relations are the primary reasons why our communities are threatened with this disaster. At this moment, we, the employers of these teachers, are guilty of an economic exploitation which, by comparison, makes the industrial sweatshops of 30 years ago look like a Sunday-school picnic. On top of economic exploitation of the most pernicious variety, we have heaped personal indignities upon these men and women with a sickening degree of narrow-minded self-righteousness.

Now, these are very serious charges, and the supporting facts should be carefully examined. To start with, let's ask ourselves what are the requirements we impose upon individuals before we are willing to entrust them with the care and training of our children.

Dr. Ralph McDonald has analyzed this question. He concludes that the teachers of our young must be strong and vigorous, keen of intellect, balanced in outlook, superior in personality traits, deep-rooted in their spiritual foundations. They must have a passionate devotion to human freedom and be anchored to an abiding faith in the improvability of man. To such an outstanding personality must be added education and training in the heritage of the human race, in the knowledge of the world today, in a loving understanding of human growth and development, in the precepts of democracy, in the lore of the school, and in the skills of teaching.

Ladies and gentlemen, that is quite a job description. But, I think it is an accurate portrayal of the kind of people most of us expect our children's teachers to be. It is not the job description that is amazing. What is amazing is the fact that 200,000 of our teachers earn less than $25 a week. What is even more amazing is our apparent belief that this kind of talent and years of training can be procured for the average salary earned by all teachers in America, namely, $37.02 a week. We are so naive that we actually expect to command the services of this type of intellect at a salary which is lower than our starting wage for the youngsters who are just beginning to work in the factories of Lever Bros. Co.

No educational system in the world could be expected to survive in the face of such absurd economic thinking.

If we want capable teachers for tomorrow's citizen we cannot afford to hire any teacher for less than $3,000 a year. Plainly the people of our country are in basic agreement. Look to the Gallup poll of March 1947, which clearly indicates that a substantial majority of the American public believes that teachers' salaries are too low. More importantly, they are willing to pay higher taxes in order to raise salaries.

Now this readiness on the part of the little guys who are America, to respond to the needs of our educational system, plainly leaves the next move up to American business. We would be patently false to deny our responsibility, for there are 261,000 of us businessmen who today serve on school boards throughout the Nation. We therefore constitute 76 percent of the total membership of the Nation's school boards. Recognizing our self-imposed duty, there are two things we can do to remedy the bad economic thinking which now paralyzes our educational system.

First of all, we can see to it that industrial real-estate property assessments are not held down, but on the contrary are held up, because the revenue from these assessments is the foundation of the local school support in our industrial areas. I make this suggestion with a full awareness of the fact that Lever Bros Co. owns very substantial quantities of real estate throughout the United States. But I have no other alternative, for when we depress assessments, we depress our children—and I submit this is malodorous business, selfish parenthood, and a frightfully short-sighted brand of citizenship.

The second step we can take—and this applies not only to businessmen but to every voter within reach of these thoughts—is to make our voices heard in the Halls of Congress that our legislators may know we approve of Federal aid to education. We know that educational opportunity cannot be equally distributed without Federal assistance.

But let us also remember that money is not the only root of the problem. In addition to a reasonable starting salary, we must provide for a progressive and modern personnel

system for teachers which will place particular emphasis upon tenure of position and a fair opportunity for promotion based on demonstrated ability and length of service.

It is now generally recognized in all fields that social recognition and status have a great deal to do with job satisfaction. In spite of this, as one authority on school boards has pointed out, there are sections of this country where some folks have such a bad case of critical smugitis that the teachers are forced into dark corners if they want to live like modern people. They can't dance, smoke, have dates, use cosmetics, ride horses (except side saddle), attend social affairs, correct little Johnny or Mary, or act like human beings without being subjected to criticism and the potent likelihood of losing their jobs.

What is so badly needed today is an intelligent set of professional standards for teachers, suitable for Nation-wide distribution and endorsement, which will give them a full measure of the sense of personal freedom and dignity which we expect them, in turn, to impart to our children.

Surely, a nation does not progress by diminishing the respect so properly due those who mold its thinking.

That our thinking needs molding by higher education is evidenced by the fact that today our country is rocked with debate over proposed legislative corrections of the labor problem.

I do not minimize the importance of a sound legislative framework for the control of excesses on both sides. I believe in laws. But I also believe that labor-management peace will be created—not by trying to legislate a point of view—but my more understanding among men. This mutual understanding is being retarded by egomaniacs on both sides who conceal their ignorance by hurling abuse at one another, until the very air we breathe becomes poisonous with never-ending taunts, such as reactionary and radical. We need to do a gigantic job of air-conditioning in labor relations. We need to sweep from our minds the cobwebs of ignorance. For we cannot get mutual understanding without mutual knowledge. We cannot get mutual knowledge without mutual education.

The need for mutual understanding has been dimly sensed by business, which now annually appropriates millions upon millions of dollars for that form of persuasion in a top hat, sometimes called public relations. Yet, strangely enough, it has not occurred to any of us to use education on a large scale to help correct our No. 1 public-relations headache—the labor-management problem.

Before too long, those of us today who are the leaders of management and of labor will be turning the reins over to the young people who are now the junior executives in business, and the local and district representatives of organized labor. We in business could make no greater contribution to the long-term solution of this vexing labor-management problem than by effectuating a plan to broaden, through education, the concepts of those who must strive for the mutual understanding of labor and management.

It has taken us 20 years to get labor and management to sit down together at the bargaining table. So far, that table has been a square one. It has a side for management and it has a side for labor. We need to eliminate the sides from our national bargaining table. We must substitute in its place a round table, around which the unity and togetherness of all elements in our economy can be allowed to function properly for the benefit of all the people. Consider, then, how American business could justify a real claim to constructive leadership by creating an annual "round table fund" of $1,000,000.

The purpose of the round table fund would be the joint education of tomorrow's leaders of labor and management. Let labor nominate 500 of its promising young leaders; let management nominate 500 of its promising young leaders. Let these 1,000 young men and women spend 1 year in college together, studying the most enlightened methods for making our economy produce a higher standard of living for all.

Every American business would consider it an honor, as well as an opportunity, to have one of its men or women selected to be part of such a far-reaching undertaking; and consequently, would unhesitatingly furlough the selected students with full pay for the year. The fund would enable the colleges to provide the ablest teachers and the best research facilities and would also defray each student's tuition and special expenses.

In 10 years this plan would produce 10,000 thoroughly trained young labor and management leaders equipped with a keen knowledge and true understanding of each other's problems.

Think of the immeasurable value of having representatives of labor and management studying together, eating together, and living together. The result would be that, for the first time in American history, labor and management would be working together toward the same objective—a higher standard of living for our people. Since this procedure would involve every phase of our complicated industrial economy, the curriculum would necessarily cover a wide variety of subjects; for example, Methods of Increasing Productivity and Wages; Interrelationship of Wages, Prices, and Profits; Problems of the Guaranteed Wage; Basic Principles of our National Labor Legislation; Protection of the Rights of the Public; the Correlation of Government, Labor, and Management; and, the Standard of Living. And finally, I might suggest a "quickie" course on how to eliminate name-calling as a prerequisite to labor negotiations.

The final nomination of all students, both labor and management, would be made by the Round Table Commission, composed of the presidents of the American Council on Education, the United States Chamber of Commerce, the National Association of Manufacturers, the American Federation of Labor, the Congress of Industrial Organizations, and other major labor groups. The round-table commission would have the additional responsibility of authorizing the training courses and of selecting recognized institutions headed by farsighted academic authorities.

Since this is a program which deeply affects the commerce of our Nation, it would be highly appropriate for the Secretary of Commerce, Mr. W. Averell Harriman, to be asked to assume, for the first formative year, the chairmanship of the round-table commission. Thereafter the chairmanship would rotate by election among the members of the commission. The chairman of the commission could proceed with the assurance that Lever Bros. would consider itself privileged to contribute $100,000 for the implementation of this round-table program for unity through education.

In another age and at another time, it might appear to be a seven-league step from vast national and world problems to this inaugural ceremony which brings us together. But not in this inventive age. Jet propulsion has narrowed with frightening speed the distances between the nations of the world. We are only hours apart from peoples about whom we have relatively little knowledge or understanding—and who do not understand us. Therefore, education can no longer be regarded as a mere vehicle for national enlightenment. The future of mankind demands that we recognize its full potentiality as an instrument for international peace.

History, in its usual harsh way, has given us only these two alternatives: Either to wage another mighty war, or to make a mighty effort to educate the peoples of the world as to the truth about each other—knowing that only through world-wide knowledge can we achieve world-wide understanding, the first prerequisite to world peace and freedom.

Let us use the key of education to unlock the doors of our ignorance to flood our darkness with the light of truth. In the words of St. John, the beloved Disciple: "Ye shall know the truth, and the truth shall make you free."

Fred Barthold Norman

MEMORIAL ADDRESS
OF
HON. HAL HOLMES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. FRED BARTHOLD NORMAN, late a Representative from the State of Washington

Mr. HOLMES. Mr. Speaker, in the death of FRED NORMAN, the State of Washington and the Third Congressional District, in particular, lost an able, industrious, and conscientious public servant. His coming to Congress represented the fruition of a lifetime ambition, and I like to think that his wish when the call came would have been to pass on while performing in the public service, as he was. In life he was a tireless worker who had fitted himself through his studies to know parliamentary procedure and to acquire by diligent efforts the qualifications necessary to make him a good Representative for the people of the district who elected him to office.

Mr. NORMAN'S story aptly confirms the American concept, as expressed by Henry Ward Beecher: "The real democratic American idea is, not that every man shall be on a level with every other, but that everyone shall have liberty, without hindrance, to be what God made him."

Mr. NORMAN was a poor boy, but he was endowed with an indomitable spirit. He hitched his wagon to the star of faithful public service. He worked as a farmer, logger, mill hand, and shipbuilder, but never lost sight of his objective. During these days he prepared himself and worked toward his great ambition—that of becoming a Member of Congress. On the way he campaigned for and was elected a city councilman, then a State representative, then a State senator, and finally climaxed a successful career by election to the United States House of Representatives.

He earned the reputation as a hard-working, industrious Member, who was familiar with conditions throughout the district he represented, keeping constantly in mind the needs and welfare of all the people in his district and personally attending to many requests. The Third Congressional District of the State of Washington, the State, and the Nation have lost a tried and loyal friend, interested in the welfare of his country, his State, and his constituents. The goal he attained rests on a high plane that not only demonstrates what one may accomplish in this great land of opportunities, but also sets a worthy example for oncoming generations. We miss him, but take pride in his attainments.

William J. Gallagher

MEMORIAL ADDRESS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM J. GALLAGHER, late a Representative from the State of Minnesota

Mr. SABATH. Mr. Speaker, it affords me great pleasure to honor one of the most useful, interesting, and worthy characters with whom I have served in more than 40 years as a Member of this honorable body—the late WILLIAM J. GALLAGHER. I like to think of our deceased friend as he described himself, namely, a workingman.

We all well remember the fidelity with which he served here, his perfect regularity in attendance, the attention he gave to all matters before the House, despite imperfection of health, and his excellent voting record.

His frequent criticism on the floor of the House of false, publicity-seeking fears of communism, and his pitiless exposition of those who selfishly opposed the aspirations of labor will long endear him to those who believe in giving fair and adequate opportunity for the creation and maintenance of peaceful international relations and a realization of the merited longings of toilers for a more equitable share of life's goods.

Our friend did not rend this Hall with ear-splitting, gustatory, desk-pounding oratory, and try to hide sophistry with gusts of meaningless words. He had no penchant for artificiality and superficiality. He knew little about the wiles of logic and Demosthenesan oratory, because practically all of his life he was a simple workingman dreaming of the sun that would dry the mud. He had no occasion to master any of the artifices and refinements of rhetorical effort. He did not need them in his work, inasmuch as his whole life and soul had but one objective, namely, making this world a more comfortable place for simple men and women of his kind; and he depended upon accurate knowledge and inspiration as a means of intelligible communication.

Looking into the crystalline depths of his beautiful soul, methinks I behold it in all its greatness. One of his cardinal virtues was simple earnestness. Methinks I can see the honest indignation with which that soul would be stirred by the very shadow of a sham or pretense.

He had an abiding hatred of dishonesty, be its form what it may.

He could but ill disguise his loathing of him with the two face, or of him of the fawning ways, or of the cowardly character devoid of the courage of his convictions. I read therein the well nigh perfect manhood, scorning all pettiness and subterfuge, and strong and fearless in right-doing.

As we memoralize this useful and beneficient life, let us remember its lessons and admonitions. First, it proves to all that America is a place where one of only native ability and good character may by intelligent and persistent effort break birth's invidious bar and rise to reward and renown.

Secondly, it shows inspiringly that loyal and disinterested service of even a workingman for the public weal still has an abiding place in the affections of the American people.

Thirdly, this peace-loving life admonishes us that without assiduous, intelligent, right-minded endeavor we may not attain enduring success for the national good, but with it and without high scholastic training few things are without range of accomplishment in our blessed land.

William J. Gallagher

MEMORIAL ADDRESS

OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM J. GALLAGHER, late a Representative from the State of Minnesota

Mr. MACKINNON. Mr. Speaker, on this occasion, which is our memorial day for Members of Congress who have passed to their final reward, I would like to add a few remarks about my predecessor from the Third Congressional District of Minnesota, who passed to his final reward on August 13, 1946, after he had been renominated by his party without any personal campaign on his part.

WILLIAM J. GALLAGHER was plain "BILL" GALLAGHER to everyone who knew him. In the hearts and minds of many in Minnesota and elsewhere he is symbolic of that opportunity which is peculiarly American and which is nowhere more available than in our democratic form of government.

His rise in the political world was meteoric. His election and subsequent career in public life captured the imagination of millions of our people because of his deep understanding of mankind and his unique ability to express the root sentiment of the honest, hard working, everyday American.

After winning his party's nomination for Congress in the 1944 primary from Charles Munn, former Speaker of the Minnesota House of Representatives and also a former member of the Minnesota Railroad and Warehouse Commission, he went on to win the seat in a closely contested election. Subsequently, he selected Charles Munn, his former opponent, to serve as his congressional secretary. The two formed a fine cooperative team in Washington. I recount this incident because this magnanimity was typical of "BILL" GALLAGHER. There was no malice in his heart His heart encompassed all mankind, friend and foe alike. He was a fine American. His passing is deeply mourned.

Address by the Chief Justice at Presentation of International Humanitarian Award to James F. Byrnes

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21 (legislative day of Monday, April 21), 1947

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the distinguished Chief Justice of the United States on the occasion of the presentation to our former distinguished Secretary of State, James F. Byrnes, of the Variety Clubs International's humanitarian award in recognition of Mr. Byrnes' faithful services toward the establishment of world peace. I also ask that a newspaper article relating to the same matter be printed in the RECORD.

There being no objection, the address and newspaper article were ordered to be printed in the RECORD, as follows:

Mr. President of the Variety Clubs International, ladies and gentlemen, I am pleased to participate in the bestowal of the annual humanitarian award of the Variety Clubs International.

On Thanksgiving Day 1928, a broken-hearted mother left a month's old babe in a Pittsburgh theater. Pinned to the thin, worn garment of the infant, there was a badly scribbled note stating that she could not afford to keep the child as she had six others; that she had heard of the goodness of heart of show people; and "with a prayer to God that you will take care of her," she signed "A heart-broken mother."

The 11 members of the first Variety Club, formed the year before in Pittsburgh, cared for little Catherine. And the distracted mother's abandonment of her baby gave birth to the generous, charitable activities of the Variety Clubs International, now grown to 28 clubs, which have touched and helped hundreds of thousands of youngsters in 19 years of humanitarian service. Last year, more than 100,000 children were blessed and bettered in the expenditure of more than a million dollars in humanitarian service by Variety Clubs International.

In 1937, they initiated the annual humanitarian award honoring some man or woman who, by sacrifices and deeds, had helped to make this world a better world. The annual recipient of this honor is selected by a committee of some 70 newspaper and magazine editors and publishers, radio commentators, and playwrights, in a secret ballot to determine the most outstanding humanitarian of the year, and award to him or her a special citation, an honorarium, and a silver plaque as a permanent recording of humanitarian service.

Thus far, this humanitarian award has gone to Father Flanagan, the founder of Boys Town; the late Martha Berry, founder of the Berry Schools in Georgia; the late Dr. George Washington Carver, eminent scientist of Tuskegee Institute in Alabama; Sister Elizabeth Kenney of Australia, founder of the Kenney System for the treatment of infantile paralysis; the Honorable Cordell Hull, former Secretary of State; Dr. and Sir Alexander Fleming of London, England, the discoverer of penicillin; and for 1945 the award was given to Gen. Evangeline Booth, directing head of the Salvation Army.

It is interesting to note that in two successive years the recipients of the humanitarian awards have also been awarded the Nobel prize and the Pulitzer prize—the Honorable Cordell Hull and Sir Alexander Fleming.

Now to the performance of a most pleasant task—the announcement and presentation of the humanitarian award for the year 1946. It goes to Hon. James Francis Byrnes, former Secretary of State of the United States of America.

Mr. Byrnes knew the seamy side of life. Yet he has risen to the heights. He has occupied many official positions. As a young man he was a court reporter, and then became State solicitor, Representative in Congress, United States Senator, Associate Justice of the Supreme Court of the United States, Economic Stabilization Director, War Mobilization and Reconversion Director, and Secretary of State. Versatile, with great skill and facility, rare ability, and great devotion to any role he played—he possesses a great quality, never disguised or concealed, and always revealing the man, Jimmy Byrnes. That quality is his friendliness—his liking for common folks.

A moment ago I mentioned that he had served his country as Economic Stabilization Director and War Mobilization and Reconversion Director, positions reminiscent of the state of war. He performed herculean service. Then he stepped upon the world stage as an advocate of and worker for peace. The very first day he became Secretary of State he stated: "There can be no doubt that the peoples of this war-ravaged earth want to live in a free and peaceful world. But the supreme task of statesmanship the world over is to help them understand that they can have peace and freedom only if they tolerate and respect the rights of others to opinions, feelings, and ways of life which they do not and cannot share." That was the task to which he dedicated himself.

For 2 years, as Secretary of State, he worked selflessly, 7 days and 7 nights a week, to build peace, a peace which would make this world safe for all of us; a world in which all people, with their varied beliefs, kinships, and customs may live and let live. He has made people in all parts of the world realize the supreme importance of that task as they have never done before. He has made all of us realize that peace cannot be achieved by wishful thinking or by imposing our will on others, or by letting others impose their will upon us. He has taught us the wisdom of firmness and patience in the pursuit of peace and the well-being of common folks.

It is a personal pleasure for one who has worked with Jimmy Byrnes for a long, long time to present him the Variety Clubs award of 1946 in recognition of his faithful services toward the establishment of world peace. The inscription on the plaque depicts the donors' feeling toward this distinguished American—"Blessed are the peacemakers, for they shall be called the children of God."

TOO MUCH WAR TALK, TOO LITTLE OF PEACE, BYRNES DECLARES

James F. Byrnes, former Secretary of State, said last night "there is too much talk about war and too little talk about peace" in both the United States and Russia.

"If war should come," he declared, "it will not be because the people want it, but because of the incapacity of those who control the governments of the world.

"I do not believe there exists such bankruptcy of statesmanship," he said in encouragement. "I deny that conflict is inevitable. I believe we can make the peace and we can keep the peace."

Byrnes' speech, released last night, was recorded here Wednesday on sound film for a showing in Hollywood to delegates of the Variety Clubs, which had bestowed on him the humanitarian award for 1946. It was the first major foreign policy speech since he left the State Department.

"We have made clear to the Soviet Union that it cannot dictate the terms of peace," said Byrnes. "We must also realize that the United States cannot dictate the terms of peace. There can be such dictation only to a defeated enemy state or a defenseless state."

He called upon Allied Nations to negotiate with each other on terms of equality and the people of the United States to not demand perfectionism in our peacemaking.

"In this imperfect world there is no perfect peace," declared Byrnes.

Byrnes resigned as Secretary of State on January 7 because of ill health and has returned to law work here.

He accepted the Clubs' citation and a silver plaque but turned over its accompanying $1,000 honorarium to the Washington Variety Club. He stipulated that the money be given through the club to the Washington City-Wide Ladies of Charity Milk Fund.

The award cited Byrnes in recognition of his faithful efforts toward the establishment of world-wide peace.

It was officially presented by Chief Justice Fred Vinson, who declared of the recipient: "He has taught us the wisdom of firmness and patience in the pursuit of peace and the well-being of common folks."

Selection of the winner of the annual award is made by secret ballot of a committee of 70 leading newspaper and magazine editors and publishers, radio commentators, and playwrights.

The Republican Party Today

EXTENSION OF REMARKS

OF

HON. J. HOWARD McGRATH

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, I send to the desk a copy of an address delivered by my distinguished colleague, the senior Senator from Rhode Island [Mr. GREEN], on Monday, May 19, 1947, over radio station WPRO, in Providence, R. I. I ask that it be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, in American politics, under our system of free speech, there is no legal penalty for insulting the intelligence of the American people. Any politician who thinks he sees some advantage in doing so is free to try it at any time. But this tactic usually fails. It boomerangs because no man can reflect in his speech a low opinion of his fellow countrymen without at the same time exposing himself.

Here in Rhode Island, we recently listened to a political spokesman taking it upon himself to insult the intelligence of the whole American electorate. I hardly need add that I refer to an address given by the chairman of the Republican National Committee, Mr. Reece. What he said would not be worthy of comment if it merely represented his own views. What he said was important because, as chairman of its national committee he was speaking for the Republican Party and his address revealed the line of argument which the Republican Party will use in its attempt to win the Presidential election of 1948.

That line of argument is essentially, first, that the Republican victory in the election last November was not conclusive; second, that the Democratic Party in the next election will have the support of the working people of this Nation and; third, that because of this fact the Democratic Party is dangerous, communistic, Moscow-dominated, and a threat to our American way of life in the future—as Mr. Reece puts it—"for the next hundred years."

I agree with the Republicans when they predict the Democratic Party will have the support of labor. It will have the support not only of organized and unorganized labor but also of America's small-salaried office helpers, America's small farmers, America's small businessmen—of America's "little people," her wage earners, everywhere. And there are very good reasons—reasons to be found in the record of performance of the Democratic Party, and also of the Republican Party—why that support will be given the Democrats.

But when a political spokesman attempts to sell this Nation the idea that the support of labor means communism, that politician not only casts a slur on the patriotism and loyalty of the wage earners of our country; he delivers a slap in the face of our entire body politic.

I have no idea how the Republican Party justifies its charges. I have not heard the Republican chairman reconcile his wild-eyed warnings against Moscow influence with the Truman doctrine of halting Communist aggression throughout the world. The leaders of the Republican Party themselves support that doctrine. And I submit that the Republican chairman endangers bipartisan support of American foreign policy by his unscrupulous efforts to arouse and keep alive in this country the lie of collaboration by one of our two great political parties with Soviet Communists.

I have not heard how the Republican chairman reconciles his charge of communism against the Democratic administration, with that administration's proposal to free our Government of every last vestige of Communist influence and its program to free our economy of the chaos on which communism lives and thrives.

Last Thursday morning I was amused to read in a Washington paper the news under a Providence date line that Chairman Reece had attacked President Truman for "a thoroughgoing mobilization of radical votes on his behalf." By a coincidence this Associated Press dispatch was immediately followed by a United Press dispatch under a Minneapolis date line that Henry Wallace had "denounced President Truman's loyalty test for governmental employees as a $25,000,000 witch hunt." Chairman Reece and Mr. Wallace seem to be fellow travelers along the anti-Truman route though not very congenial ones.

Chairman Reece divides the Democratic Party into three groups. The obvious intention is to prove that there is no unity of purpose in the party and, therefore, that it cannot be depended upon to accomplish anything worth while. He must have been supplied this curious idea right here in Rhode Island, because one of the leading Republican candidates in the campaign last fall divided the Democratic Party into three groups in the same way and drew a similar inference quite plainly. As a matter of fact, while there are divisions in the Democratic Party as to various matters especially of local interest, they are bound together by the common belief in certain fundamental principles. The most fundamental of all, and

one which distinguishes the Democratic Party from the Republican Party, which is similarly divided into groups, is that the Democratic Party founded by Thomas Jefferson continues to seek primarily the welfare and prosperity of all the people as distinguished from certain classes. The Republican Party on the contrary is united in the common belief that the Government should favor certain special classes, set apart either by wealth, or social position, or big business, from the masses of the common people. It believes in giving special privileges to those privileged classes, and tries to persuade their fellow citizens, the underprivileged especially, that whatever prosperity accrues to their betters will somehow seep down and be shared by their inferiors, the common people. Although most Republicans see public problems from this point of view, yet there are some who, far from being reactionary, are what one of them called himself the other evening in New York, "a Jeffersonian Republican."

It does not seem to me that Mr. Reece was quite frank in his speeches and interviews here in Rhode Island. He neglected to tell his Rhode Island audience whether the Republican National Committee would solicit funds from non-Rhode Islanders to be used in the 1948 campaign in Rhode Island as it did in 1946. He further neglected to tell his Rhode Island audience who it was that solicited this money for the 1946 campaign from the Du Pont family, the Pew family, and other non-Rhode Islanders in an unsuccessful effort to elect Republican candidates in this State last fall.

He also neglected to state, when he praised the antilabor bill, that the man who succeeded him as Representative from the First Congressional District of Tennessee, Representative DAYTON E. PHILLIPS, voted against the drastic Hartley labor bill when it was passed by the House of Representatives and had previously voted for a motion to recommit the same bill. Maybe Mr. Reece did not want these industrialists of Rhode Island, who are so active in the Republican cause, to know that the man who on his recommendation had succeeded him in Congress did not follow the Republican leadership in the House in passing this un-American Hartley antilabor bill.

The Republican program is open sabotage of American democracy. Sitting in the Senate I have seen a Republican-dominated Congress move toward that goal.

All of us have seen it force upon the country a dangerous inflation of prices. That inflation has swelled corporation profits and threatened the standard of living of millions of American families.

We have seen this Congress, under Republican domination, plan to break rent control as it broke price control. This means a further retreat from the living standard of the American workman and war veteran and their families.

We have seen this Republican Congress cripple every agency of Government which functions to protect the underprivileged and those who have little to live on, from exploitation by those who have much.

And while it has acted in favor of the big corporations we have seen the Republican Congress move to deprive American labor of its wage security and its right of collective bargaining. We have seen it enact measures to water down or nullify the Fair Labor Standards Act, the Anti-Injunction Act, the Wagner Act, and other hard-won rights in the long struggle of America's working people for economic protection and a decent living standard.

We have seen this Republican Congress cynically break faith with the people by refusing to return a budget report for the coming year's income and outgo. Before Congress can possibly know how much money to appropriate for our Government and by how much it can safely reduce our taxes, it must fix upon a budget figure. That is its duty by law and its moral obligation to the people.

The President has laid before it a budget of $37,500,000,000. One branch of this Republican Congress, the House of Representatives, recklessly voted to reduce that budget by $6,000,000,000. The other branch, the Senate, voted for a reduction of $4,500,000,000. Both figures were mere guesses and both Houses have refused to try to resolve their difference. Therefore, the people of the United States are, to this day, without an approved budget for the coming year. We do not know where we stand. Yet, in its headlong desire to create a windfall for the wealthy minority, the Republican Congress has proposed a tax reduction—heavily weighted in favor of the few with large fortunes—amounting to nearly $4,000,000,000. Until we know what our budget is, we have no way of knowing whether we can afford a tax reduction of four billions, or one of half that size or of any size. Yet, when a colleague of mine in the Senate stood up and pointed out the recklessness of this order of procedure, when he pleaded for sanity and asked of the Senate why some kind of budget report had not been made, there was no answer.

The people of America are reflecting on the price they must pay to live, or searching in vain for a roof over their heads, or wondering why no postwar program to meet other pressing needs has been enacted by Congress. They are restless as they experience only legislation giving more to those who need no more. The Republican Party, aware of the criticism based on these solid facts, has grown sensitive. Mr. Reece, in his address here, attempted a defense, but his apology was lame. It limped on five crutches which Mr. Reece enumerated as the achievements of the Republican majority in the nearly 6 months of its control. If you will examine these five enactments closely, you will find that each of them is negative—a process not of doing but undoing.

Until the Republican Party can and will adopt a positive program for America—something it has lacked for half a century—this will continue to be so. And the Nation—and its people—will continue to pay the price of do-nothing government so long as these men and their party remain in power. Today that cost comes high, but what we have paid to date in terms of social and economic set-backs is only the beginning.

The time to stop this corroding process is now. The date for beginning our fight for a Democratic victory at the next election is today. Day by day and hour by hour, it becomes a fight more worth the making—not for ourselves, not for our party, but for America.

What Labor Wants

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21 (legislative day of Monday, April 21), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD the very fine article entitled "What Labor Wants" written by a distinguished labor leader in my State, Mr. Dave Beck, for the American Legion magazine, at the invitation of the editors.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT LABOR WANTS

(By Dave Beck)

If you would believe the newspaper headlines of the past year, there is today no common ground on which labor and management can meet. If that is true it is enough to scare anybody, for then the public is doomed to be caught in the middle of a struggle which will end only when either labor or management has been utterly victorious over the other in a fight to control American industry.

I am going to say that this is absurd, for there is a common meeting ground. But first I want to point out that I am not dreaming up an argument. Many people in America, some of them frightened and others determined, are saying we must have a fight to the finish before we will have industrial peace. It is ironic, and may some day seem funny, that the biggest boosters of such a war between all Americans are (a) the Communists, who will settle for nothing less than the total domination of America by the worker, and (b) the extremists in industry, who want labor suppressed for once and for all. Strange bedfellows indeed—yet bedfellows they are in their desire to line you up in a war against the fellow next door. Probably neither of these groups would have much influence today if the other weren't present as a bogey man. But each is frightening new members into its ranks daily by pointing at the other, and if they have their way we may yet see an entirely unnecessary internal struggle between each man and his neighbor. We mustn't let that happen. It is possible for America to produce enough for all, and for American democracy to solve our differences.

As one of many labor union officials who claim a keen interest in the public welfare, I must speak out against the sentiment in some quarters that labor ought to be deprived of its right to strike. Many Americans share the view that the right to strike must be curtailed, but I wonder if they are not unduly alarmed by newspaper scareheads.

Industrial peace, like all much-wanted things, is easier to destroy than to create. It is always easier to talk about wrong ideas, wrong methods, and wrong policies than it is accurately to suggest right ideas, right methods, and right policies.

Labor and management today are feeling the pains of reconverting. During the war the members of American Federation of Labor unions observed their strike pledges and piled up a production record unequalled in world history. They deserve no special praise for this. Plainly it was their duty.

When the war ended, capital and labor, who, in spite of the Communists, are more inherently friendly than otherwise, became involved in a long series of disputes which have seriously disturbed the public. We of the labor unions are trying to readjust our people from war to peace. Industry is trying to do the same thing. Both are having difficulties. In my opinion these difficulties are about what should have been expected in the situation. However, labor and management have an equal stake in the solution of the difficulties and must work out their problems as co-custodians of American prosperity.

What strikes me forcibly is that so many people feel that out of punishing and vindictive legislation against labor will come a solution to the reconversion problems of

labor and management and an impetus to the welfare of the country. Nothing could be further from the truth. The strife of the past year has been, in the main, part of the postwar disjointedness of the entire country. Will not vindictive laws permanently wound labor for its part in a painful postwar adjustment to which no activities in the country were immune? Will not such laws help insure that the postwar difficulties between labor and management become a permanent breach? I think so. Certainly any other solution had better be tried first, and time must be allowed for judgment. In the entire Congress today one man votes the Communist Party line. Certainly labor, without whose votes many Congressmen could not hold office, has shown its faith in the Congress and will receive some faith in return.

I can hold no brief for the extremes some labor unions and labor leaders have been accused of following, nor deny the accusations levelled at the selfishness of certain employers and corporations in quickly proclaiming they were definitely through with collective bargaining.

Both labor and capital should be doing the kind of job together which won the war. But they are not. Each is every bit as guilty as the other in failing to work out a practical blueprint of progress, and the public cannot be blamed for wanting a quick solution.

The headlined strikes of the last year do not, as any sensible reader would know, represent the general picture of labor-management relations in this country—nor do they show that there is an insuperable breach between labor and management. Those were the hot cases, the sorest points of postwar difficulty. Not in the headlines are the men who work quietly for harmony in industry.

We have in America the finest leadership of capital and labor in the world. It is overwhelmingly against the socialization of industry and opposed to communism. Though some leaders in industry oppose any form of recognition for organized labor, a great many other men in influential business positions have grown practical. They have advanced with the times. They have learned that new techniques are necessary in this modern world.

The problems of readjustment are serious and I do not wish to minimize the difficulties to be overcome. Neither do I wish to magnify the difficulties. It is a hard, tough fight to bring about understanding of one another here in America, but it can be done in an American way, for that is the way we all wish to follow.

Industrial peace will not be brought about by politicians, or labor, or capital shouting at one another and seeking out ways to cripple or undermine one another. Nor by a blaze of propaganda in a large section of the press which, with the thought of muzzling labor by punitive legislation, falls far short of the insight it should be displaying at this time of crisis.

The vast majority of labor unions are aware that power brings responsibility and that we must measure up to that responsibility. Those unions are working quietly with management today for better things—and getting few headlines. Not long ago I spoke before members of the teamsters unions of 11 Western States and said: "I do not say, nor do I believe, that all our strikes will be, or can be, prevented. I merely say that to prevent strikes should be our goal, and that we should strive to reach this goal intelligently. There will be strikes from time to time, for there will be instances where nothing but strikes can bring labor and management together and clear the air so understanding can be reached.

"This is true because we, of labor, are human and prone to misjudgment, and so are the humans who comprise management, and who own capital."

I would hate, as would many other labor leaders who have voiced similar sentiments, to have to swallow those words, to go before the rank and file of our unions and report that all-out war had been declared against us, that we should stop seeking peace and start fighting.

But there are those who would punish the many good with the few bad, who seek to smash at all labor by class and discriminatory statutes, which would set back the fundamental cause of organized labor to a status of 20 and more years ago. Their excuse for this is that certain unions are acting in a high-handed and dictatorial manner endangering the very position of the United States.

Perhaps some unions have acted in the manner described. So have many unscrupulous industrialists, and during wartime. It is certainly foolhardy in the long run to draw a general conclusion of the use of a thing by its abuse.

We cannot bring about industrial peace by legislation. There are no sudden solutions to our economic problems. Vindictive laws will not increase production or efficiency, both of which are essential to capital, labor, and the public.

What, then, can possibly be done?

First of all capital, labor, and the public have to be educated to the understanding of industrial peace as an art, to be studied like counterpoint and practiced as scientifically as nuclear fission.

We must learn wherein lie the most serious threats to our economy, and wherein lies its strength. Vindictive labor laws in the guise of promoting industrial peace are a far more serious threat to our American system of free enterprise than all the Communists and crackpots combined—the growth of whose power depends on a widening breach between capital and labor. Whatever undermines the faith of the American worker in the honesty and fairness of his Congress and his Government cannot help but provide fertile ground for the growth of alien philosophies hostile to our way of life.

While labor must learn to use the power to strike judiciously, the right to strike must not be infringed. Industrialists with vision must realize that they owe a historical debt to the strike. Labor fought hard for equal rights in court and under the law. Long ago the sweatshop and the company-store peonage racket disappeared under the pressure of strikes, and when workers began to earn more money and more leisure, fighting and striking almost every inch of the way in many industries, a golden age opened up for industry, because labor became industry's best customer. The mass market that placed American industry at the top of the heap during the first 40 years of this century was a labor market, labor that had fought its way up from the poverty of the slag-heaps and suddenly began buying automobiles, radios, refrigerators rugs, vacuum cleaners, decent homes, and electric power.

Today any men who call in one breath for increased production and in the next for curtailment of the right to strike, want to have their cake and eat it too. The right to strike, on the part of labor, is all that assures industry that labor will be able to afford the products of industry.

No; the cure for industrial disturbance is not to be found in semislave laws intended to take away the hard-earned rights of working people and tie toilers to their jobs against their will.

It is to be found only in understanding between men of good will in industry and labor, and in public support for honest men.

Honest Americans today want industrial peace: they do not want strife and disorder. Honest men also know that such industrial peace cannot be established by law or by edict. Men, not laws, make peace—and war. Industrial peace must come through the process of equitable dealing by honorable men in both capital and labor.

If those who cry loudest for laws to curb labor were sincerely desirous of industrial peace, rather than selfish and unwarranted advantage, they would explore the tried and proven ways. They would tackle the problem by the use of the only successful formula: better, closer relationships, confidence, and mutual understanding between those who speak for labor and capital.

There is no doubt, nor do we deny, that labor has at times had leaders who proved to be without vision, or who were incompetent and arrogantly selfish, and even dishonest. Business and industry, even the honored professions, have had similar men. There have always been men, in every type of endeavor—even in the church—who have proved disloyal and unworthy of their trust. Responsible unions are as impatient of such individuals as is the public.

One group of Congressmen proposes publicity for labor's finances, as if labor had something to hide. The plain fact is that unions today furnish frequent financial statements to their members and often publish them in printed forms, for all who may be interested. Labor's financial statements are easy to understand; they are not like the complicated compilations of figures issued by corporations.

I am not afraid of publication of labor's finances. I believe, however, that if labor should be required to publish its financial matters employers should be required to do likewise. That is only being fair and honest about it. Whatever information may be required of unions should also be required of employers. I am not averse to making public all the incomes of both labor and capital, their employees and administrators.

I would go further than mere financial statements. If industry will agree, I would be willing to have both sides submit all of the facts about earnings, wages, expenses of all kinds, as well as profits, upon entering into collective bargaining conferences. Let us also require the corporations to furnish sworn statements of their capital structures, showing actual, honest investment. I would agree that if either the union or the employer failed or refused to submit all financial facts, then a Government regulatory agency should step in, examine the books and records, and furnish the data—and make it public.

So, in the end, we come right back to the fundamental principle that peace in industry, like peace between nations, is based on good will, understanding, and mutual respect. Peace can be maintained in industry only if labor and capital, each respecting the rights of the other, are willing to cooperate to find peaceful means for the settlement of differences.

Labor has its responsibilities. It must not retard but encourage the introduction of labor-saving machinery and processes. Labor must not interfere with the mechanization of industry and must encourage greater production and resultant lower consumer costs.

In the end labor will not progress through the public operation of industry because labor can only progress under free enterprise and competitive business, by means of collective bargaining.

Let me give you a specific instance of how industrial peace can be maintained.

In Oakland, Calif., a 3-day general strike had tied up the city. The teamsters refused to participate, because of their belief that a general strike actually is revolution, and in a short time the strike was dissipated. Similarly, in Los Angeles, we refused to participate in general-strike plans. The strike did not come off.

Again, in Los Angeles, we refused to cooperate in a food-store tie-up because the union primarily involved had not exhausted all of

the democratic processes established by the A. F. of L. for the mutual protection of the international unions and the contracting employers.

This demonstrates that there is weak leadership at times in labor. But it also shows there is responsible and experienced leadership.

This type of responsible leadership should be sought out and encouraged by capital. Since unions are here today as a vital stratum of our economy, management should help build a high type of union leadership and discipline which will help our Nation in the long run.

In that way, gradually capital will be dealing only with those who have experience and a sense of fairness. Even then there will be disagreements. That is America. That is democracy. That is our way of working things out.

It comes down to this: Labor unions are here to stay. Capital can have a share in building responsible labor leaders and rank-and-files. This can never be done by legislation which hits at all labor unions.

To do this, capital must have the guts and the vision, in its own set-up, to cooperate rather than destroy.

Both capital and labor must recognize that John Public has a vital interest in both organizations.

Capital and labor must cease placing the public in the middle. The way to do this is plainly the conference table. And leave the professional labor haters out as advisors to the employers. This will cut down to a minimum the possibilities of a strike. This will increase the possibilities of arbitration and conciliation.

When all is said and done you will find that the heart of American industry is not unlike the heart of the American Legion. The Legion relies for its strength, its integrity, and its sureness that it is right, in what it calls "the grass roots." On the top are the executives who fight the big battles and make the speeches, receive the insults and hew to the line. But down in the communities are the posts, whose members, working with the everyday problems of community life as it is actually lived, are in truth the life and the directing force of the American Legion. They and their neighbors are America. They direct the flow of events and they are the strength and the balance of the Legion.

And so it is with labor and management. Down at the grass roots, far removed from the mighty sphere of politicians testing each wind, are the men—laborers and managers—who work together every day of their lives; who, by the millions, conduct themselves to the same ultimate end, the good of their communities and of their way of life. They will solve their differences to the best good of all—if allowed to do so.

The broad, common ground on which labor and management can meet is there; it is our mutual interest in the welfare of America. Let us tighten, not sever, the bonds that hold us together.

The West in Revolt

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "The West in Revolt," published in the News and Observer, of Raleigh, N. C., on May 10, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WEST IN REVOLT

"Sixteen years for the winning of the West—and 16 weeks to lose it," groaned one western Republican as the Republican Congress slashed legislation to develop western resources. (Roscoe Fleming in the Washington Post.)

In the early nineties, when agriculture was nearly prostrate because Republican policies had enriched protected industry at the expense of the tillers of the soil, the farmers of Kansas and Nebraska and most other agricultural States either joined the Populist Party or compelled one of the old parties to promise relief.

In 1896 they supported Bryan in the belief that his and their faith that the free coinage of silver at 16 to 1, reduction of big tariff favors at their expense, and the destruction of monopoly would end farm prostration. They did not win the election, but did compel some changes, and were fed up with promises that did not materialize. And later the majority returned to the Republican Party in the hope it would keep some of its promises.

What happened? The good things all went to exploiters and eastern industries, and in 1929–33 agriculture was again prostrated. Republican subservience to big business had impoverished agriculture. Farmers were getting prices for their products less than the cost of cultivation, and farmers were being evicted from their farms. A rich country was prostrate. In their extremity the farmers voted almost en masse for Roosevelt, and New Deal legislation restored agriculture to a prosperous era. And then, like Jeshurun of the Bible, listening to the siren voice of Republican spellbinders they waxed fat and kicked and in the election of 1946 western farmers joined reactionaries and elected a Republican Congress. It was mainly the farm voters who made possible the election of Republican Senators and a number of Representatives in California, Washington, Montana, Utah, Idaho, and Nevada. They and other agricultural States also provided most of the Republican gains in Congress in 1938 and 1942.

If the farmers had not bit the hand that fed them the Republicans could not have controlled the present Congress. Its record has been shaped by eastern big business. Mr. Fleming truly says that there is a deep roar of protest from the 17 States west of the Missouri. They feel "like a national stepchild, a hewer of wood and drawer of water in the national household."

As proof that farmers are the forgotten men of this Congress, the contemptuous remark of Chairman TABER, of New York, that farm criticism is "only the squeal of a stuck pig," Mr. Fleming says "most westerners believe that eastern industrial-financial-political domination prefers to keep the West as a raw-materials supplier and as a market for eastern manufactured goods." And the same attitude is held as to the agricultural South. These interests wish to cut off anything that would lure industries away from the Northeast to the South, as they have done in every way for 50 years by freight-rate discrimination, tariff favors to the East, and other special privileges.

Mr. Fleming names the western resources seriously injured by the cuts in the bills affecting mining, water power, agriculture, and needed raw materials. These cuts produced such reaction as to cause western Republicans "to feel that a western Democratic upsurge will be difficult to head off in 1948."

Historically, and as true now as formerly, the Democratic Party from Jefferson to Roosevelt has been the party under whose policies agriculture has prospered. In 1912, and as in 1896, 1932, 1936, and 1940, the western Republican farmers walked out of the Republican Party to support Theodore Roosevelt, William Jennings Bryan, and Franklin D. Roosevelt. And then, when better days came, enough western farmers voted to return the eastern-dominated Republican Party to power and reaped depression, distress, and disaster.

We are told the burnt child dreads the fire. If that is true of children, older grown, the western farmers will join the southern farmers and the workers of the East in administering a sweeping defeat to the Republicans in 1948. To be sure, the Democratic Party is not perfect, but it is the only hope to prevent the West, the South, and the workers in industry from being the serving maids of the rich eastern reactionaries who control the Republican Party and who will name one of their own as candidate for President on the Republican ticket in 1948.

Soil Conservation

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. TRIMBLE. Mr. Speaker, it is my understanding that the subcommittee on agriculture will submit its appropriation bill next Monday. I do not know, of course, what is contained in that bill, but I do hope that the budget for soil conservation, rural electrification, and the other vital agricultural features of our economy are not cut.

Under leave to extend my remarks in the Appendix of the RECORD, I make, as part of my remarks, the annual report of the Washington County soil conservation district of Fayetteville, Ark. The board of supervisors of that district are Mr. Walter D. Ramey, chairman, Winslow, Ark.; M. G. Lewis, secretary, Farmington, Ark.; Mr. C. D. Griscon, Lincoln, Ark.; and Mr. Roy E. Spears, of Summers, Ark.

I think this is a wonderful report and shows something of the fine character of work which this agency is doing. These men are to be commended for the work which they have done.

The report follows:

WASHINGTON COUNTY DISTRICT SUPERVISORS ANNUAL REPORT, 1946

We supervisors have been able to have 10 meetings during the calendar year of 1946 with a quorum of board members present. There were two meetings where a quorum of supervisors was not present. At the board meetings with less than a quorum in attendance only that business which can be undertaken by individual members is cleared.

There were two supervisors who attended the Eureka Springs meeting on October 23 and 24. Reports of such meetings were made to other board members at the first opportunity and we are happy to report at other places these profitable meetings. Three board members attended the meeting at Russellville, Ark., from July 30 to August 1, inclusive. Only one member was able to attend the meeting of supervisors at Little Rock followed by the Friends of the Land meeting. This was considered a very interesting, profitable, and worth-while meeting for the supervisors. One supervisor was able to visit the Gaines Creek soil-conservation

district at McAlester, Okla., on December 20. This also was considered a very profitable meeting as the study of establishing Bermuda grass by seeding was reviewed on many farms. The supervisors hope that a few test plots may be established during the coming year in our district. We realize that we are in a much colder area but at the same time have lands much more suitable than the land in the Gaines Creek district of Oklahoma.

The fourth annual soil-conservation day at Lake Wedington project was sponsored jointly by the Benton County and Washington County districts on July 24 at which time tours and demonstrations and conservation talks were given. There were 550 people in attendance at this conservation day meeting. These annual soil-conservation days cost the respective districts some money but we believe we are getting enthusiasm, interest, and information over to a large group of cooperators, conservation leaders, and other supervisors as well as business interests that is bearing fruit. This year a tour of pasture development and forestry work was made with demonstrations in the elimination of brush from our lands for better and proper land use. The methods used were both mechanical and chemical. Mechanical saws, heavy-duty mowers pulled by tractors, Ammate, and the 2-4-D chemical were demonstrated. We appreciate the fact that these chemicals are not yet satisfactory or practical from a farmer's viewpoint but we are interesting farmers to keep on the alert and have some knowledge of the possibility of chemicals in the elimination of unsatisfactory vegetation from our lands.

We supervisors are aware to some extent of the tremendous responsibility, the advantages and the opportunities which we have in our position. We also realize that soil erosion in our respective districts did not all happen overnight or in a very short time and that it will take constant effort, the advice and the counsel of all individual farmers and businesses which we can encourage to give us assistance to hasten the consciousness of the severe erosion problem on all our farms. Our health, happiness, and future welfare depend on the curtailment of the ravages of erosion much more than any other agricultural problem that we know of today. All firms, businesses, and farmers realize, and must realize, that the cost of production and the products for sale hinge on the percent of profit they can make by producing the articles as cheaply as possible. If we could but get more and more agriculture-minded people to acknowledge that conservation farming is responsible for high yields and quality of products more than any other single benefit, we might hasten the application of conservation practices on the farms of the district.

The supervisors with the assistance of technical agencies held a conservation leaders training day on February 28, 1946, at which time all conservation leaders and many other individuals were invited by the supervisors to this training day where conservation talks were made, conservation pictures were shown, and at noon the conservation leaders were guests of the supervisors at lunch. We are hoping that we may continue holding these conservation-training days bringing information and enthusiasm to all conservation leaders and to many other individuals who will continue in the battle against erosion. We believe these meetings are of value.

TECHNICAL ASSISTANCE TO THE DISTRICT

During the past year 267 more farms were placed under the district program with 26,084 acres passing under the governing board of supervisors for approval. This brings to date (December 31, 1946) a total of 872 farms covering 91,972 acres which are applying conservation practices to their farms according to the district program.

There is a problem which is receiving consideration from the supervisors, conservation leaders and the technical personnel assisting and cooperating with the district. This problem is the change of land ownership either from sale of the farm or by death of the owner. During the past year 87 farms containing 7,695 acres were canceled through sale of the farm or death of the owner. Up to the present date, December 31, 1946, there have been 200 farms covering 17,907 acres which have been canceled. This means that 32.58 percent of the farms that were planned during the year were canceled by the above methods and 29.5 percent of the acreage was canceled during the year. Over the period of the operation of the district 18.65 percent of the farms have been canceled from sale or death and 16.29 percent of the acreage.

The severe drought during the summer and fall months of the past year was hurtful in getting some practices applied on the land and beneficial in getting others. As an illustration, the drought accentuated the needs for pasture water and during the past year we were able to apply 75 ponds measuring up to district specifications on the farms under agreement. This brings to a total 114 ponds meeting district specifications which have been built on the 872 farms now under plan with the district.

CONTOUR PLANTING

We planned during this period under proper land use 11,635 acres for contour operations. This brings to date a total of 29,792 acres. There were established during the past year 4,408 acres of contour cultivation which brings a total of 11,573 acres to date. Contour lines and terrace lines had to be run on these individual farms with careful explanation to the cooperators of the best methods of contour plowing and farming of their land and parallel farming with their terraces.

One of the largest land uses in the district is pasture development due to the steepness, erosion or lack of drainage. During the past year 13,154 acres were planned for pasture which brings to date a total of 39,541 acres to receive systematic pasture development. During the past year we were able to secure 8,800 acres of pasture development which consists in many instances of brushing of the land, preparation of the land, fertilizing of the land, and seeding or sodding of the land. This brings to a total 15,551 acres established to date.

We refer you to exhibit A to further study the statistical records and reports of the standing of the district.

REVIEW OF 1946 WORK

(By M. G. Lewis, secretary-treasurer, board of supervisors)

A review of the work of the Washington County soil-conservation district and its efforts to promote the soil conservation program during the year of 1946 brings to mind many interesting features as well as a number of questions.

Three members of the board of supervisors attended the short course for conservation district supervisors held at Russellville, Ark., on July 30, 31, and August 1, 1946. We came back very enthusiastically with much good information to be given out to our community leaders, but the question "how" arises. In October, northwest Arkansas districts held a meeting at Eureka Springs. Two of our board members attended. Again we received a shot of enthusiasm.

A trip to McAlester, Okla., was made on December 20 to study some Bermuda grass seeding methods and results. Only one member of the board of supervisors was able to go on this tour.

On each of these trips we gathered valuable information that should be given to every farmer in the district. The question "how" comes up again. Everything is fine as far as we have gone but we have to stop too soon. A board member cannot afford to lose his time to attend these meetings and then furnish his car and time to visit the farmers in order to give him this valuable information—information that he should have and we want him to have. I believe that if there could be some provision made whereby the board members could receive expenses for a maximum of 2 days per month in order to visit farmers and community leaders where perplexing problems arise, a great many of our problems could be solved.

It is my opinion that more trips like the one to Oklahoma would be very stimulating. Being the board member who made that trip, I have been asked to make a report. We left Fayetteville at 6 a. m. Each man carried his lunch. We drove all day and got home at 9:30 p. m. From 10 a. m. until 4 p. m. we were in the field or en route from one field to another for review of what was going on under the district program. The Gaines Creek district was stressing the sowing of Bermuda grass seed and has done a wonderful job. If there is a section in Oklahoma that needs to be seeded to Bermuda, that is it. All day I was thinking and wishing I could ask one question, "Where are your green cover crops?" Of all the thousands of acres we saw, I do not remember seeing as much cover crop as one would see on most any 40 acres of cultivated land in Washington district. So we learned much about seeding Bermuda; they need to know about our winter cover crops.

Every county, every community, every farm has different problems that must be met or overcome in different ways. I believe that we have the right kind of a set-up and the most efficient one for getting this great job done. We hear rumors of merger with other set-ups to economize. Now is a poor time to talk economy when our very existence is at stake. If floods are stopped, water must be held where it falls; if we keep our land, we must hold the soil where it is and not let it choke our rivers and fill our flood-control reservoirs while our farms become more nonproductive each year.

Conservation is doing a wonderful work in Washington County. Hundreds of farmers will verify this, but the problem is so big that the farmer alone cannot get the job done as fast as it should be done. The average farm in the Washington district has been in cultivation probably 100 years. The present owners cannot overcome all the mistakes and negligence of the farmer owners in just a few years. He must make a living and meet his obligations as well. He needs some help in the way of heavy machinery. The district does not have sufficient money to buy the necessary equipment, and I do not believe that is the best way if the money were available. If the county could get the machinery, maintain it, and do the farmers' terracing, waterways, gully control work, drainage, etc., when the machinery was not in use on the roads, and charge a fair price, the work could be carried on satisfactorily. Sorry, but the county judge does not have the equipment at present.

February 26, 1947, is set for our regular meeting of the supervisors with the community conservation leaders. This day should be given exclusively to the conservation leaders, and encouragement should be given them to present their problems and make any suggestions which would be profitable in getting more conservation practices applied on the land.

SOME NEEDS OF THE DISTRICT

(By C. D. Griscom, supervisor)

Most of the farmers in our district seem to be much interested in soil-conservation work. However, we need to do more educational work all over the county. Even when we think a farmer knows about the need for conservation practices to hold and improve our soil it is sometimes good to talk more about it with him. It helps to impress the need on him, and if we tell him of the accomplishments of others along these lines it gives him inspiration to go ahead with the job he is doing on his farm.

Our greatest need in this district now is for labor and heavy machinery. It would certainly be a wonderful help if the Government could get some heavy machinery and let farmers use it for building terraces and waterways. The ordinary farmer cannot do this kind of work with the equipment he has, and he cannot afford to buy heavy equipment with the little money that he makes. The labor problem is a great one, too. It is scarce, and it is high. Some few large landowners and operators, like some of those down near Lincoln, can hire labor the year round and then have it available all the time. But most farmers cannot afford to do that and cannot find the extra labor to hire just when he needs it.

It seems to me that there is more application on the land in the last 6 months than ever before. Yet there is a lot more to do. Some have not done as much as they ought to do on farming on the contour to hold the water and keep the land from washing. Our pastures need a lot more brushing and seeding. Terraces need to be constructed, but terraces need to be properly constructed or they can do more harm than good. Years ago, before the beginning of the soil-conservation district, I had some terraces constructed which did not empty right and nearly ruined my place.

DRAINAGE ON B. F. STRAIN'S FARM

Mr. B. F. Strain of the Strain community estimates that the yields on his farm have doubled as a result of carrying out his conservation plan with the Washington County soil-conservation district. A soil conservation service technician assisted Mr. Strain in developing his conservation plans which included adequate drainage, farming on the contour, the use of legumes adapted to his particular type of soil and the application of phosphate and lime.

On 13 acres of drained land Mr. Strain estimated a production of 400 bushels of corn which he says is twice what he would have expected before draining the land. The drainage system was laid out by the Soil Conservation Service technicians assisting the Washington County soil conservation district. The system was built by Vernon Strain, Mr. B. F. Strain's son, with horses, plow, and V-type drag.

The main drainage channel or waterway was constructed along the north side of the field. The length of the channel is approximately 1,500 feet. The channel is 35 feet wide and 2½ feet deep at the lower end. Three lateral channels across the field have already been constructed and one more, to be built later, will complete the drainage system. The entire field of 55 acres is benefited by the drainage system.

In addition to draining the land, each lateral channel across the field acts as a terrace in interrupting the water from washing across the field and also as a guide in cultivating on the contour. All of the channels are V-type and can be crossed easily with farm machinery. Each channel is seeded to rye grass and lespedeza to prevent scouring.

Drainage is only a part of the conservation work being carried out on this farm. Twelve acres have been seeded to rye grass and lespedeza for pasture. Four acres have been seeded to red top and 4 acres to Alsike clover. Two hundred pounds of phosphate per acre was applied on the entire farm last year. All tillage operations are on the contour.

Mr. Strain has farmed on this farm for the past 50 years and says that the crops are planted on the farm 1 month earlier than ever before due to drainage, and his yields have practically doubled. He expects to increase his yields still more by using legumes and phosphate.

G. F. JOHNSON'S ALFALFA LAND PAYS OFF

Three and one-half acres of first-year alfalfa on Mr. G. F. Johnson's farm in the Walnut Corner community produced 12 loads of good hay. The first cutting produced seven loads of oats and alfalfa mixed, the second cutting produced three loads, and the third cutting produced two loads, easily curing out 2½ tons per acre.

This land was prepared by first applying 2 tons of crushed limestone and 200 pounds of superphosphate per acre. Alfalfa and oats were seeded together in the fall of 1945. The seed, the preparation of the land, the fertilizer, and limestone cost approximately $25 per acre.

Mr. Johnson plans on cultivating this field with a spring-tooth harrow in the spring after the first cutting is made. Just before this cultivation 200 pounds of superphosphate will be applied per acre.

Mr. Johnson has recently purchased the adjoining farm, consisting of 180 acres, which now makes him 300 acres under the district program. He is developing 113 acres of open land to pasture, 97 acres of woodland, and 88 acres to cropland. Contour cultivation, cover crops, and fertilization were recently established on the cultivated acres. Approximately 20 acres of cultivated land have had terraces laid out, and work is being done on them at present. A large stock and fish pond was completed last year in his pasture development. His conservation program was worked out in cooperation with the technicians assisting and cooperating with the Washington County soil conservation district.

Mr. Johnson seems very proud of the progress of the program which is being applied on his farm.

CLAUDE BLEW'S ALFALFA PAYS OFF

"In actual value my field of alfalfa was worth $90 per acre this past year," Claude Blew, conservation leader of the White Rock community, reported at a meeting recently. "This 15 acres of alfalfa meadow was planted in the fall of 1942. I planted 30 pounds of seed per acre following soybean stubble as instructed by the technicians assisting and cooperating with the Washington County soil-conservation district. I have applied 200 pounds of phosphate each year on my alfalfa and in addition last year I added 100 truck loads of egg shells from the local egg drying and processing plant in Fayetteville. I made three successful cuttings this year averaging 1 ton per acre, leaving ample growth for transposition of plant food from the tops to the roots for the following year, as instructed by the technicians assisting the district."

Mr. Blew has been conservation minded many years and had two vegetated waterways that he had built long before his farm was placed under the Washington County soil conservation district program.

"I hope soon" Mr. Blew, continued, "to have my conservation plan completed on my farm."

Mr. Blew's farm consists of 72 acres with 27 acres in cultivation which he has completed. His terraces empty into these fine vegetated waterways which he had already established when the farm was planned. He has a 5-acre forest which he is protecting from fire and grazing and from which he secures his fuel and fence posts. Three acres are in farmstead where he has truck crops planted on the contour. Thirty-seven acres are in pasture development. He is a conservation leader and is doing a grand job on his farm and in his community.

Cost of conservation group leader's day	21.67
Other expenses, stamps, stationery, etc	36.40
Total	4,240.37
Balance carried forward	921.86

The 1947 Position of Agriculture

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. HARNESS of Indiana. Mr. Speaker, one of my constituents, Mr. Oscar B. Smith, of Frankfort, Ind., has expressed his views concerning agriculture in an article entitled "The 1947 Position of Agriculture," which he has asked me to bring to the attention of the Members of Congress by inserting it in the CONGRESSIONAL RECORD.

In compliance with Mr. Smith's request I respectfully ask leave to insert this article in the Appendix of the RECORD. Mr. Smith's article follows:

[From the Farmers Guild News]

THE 1947 POSITION OF AGRICULTURE

(By Oscar B. Smith)

An accurate appraisal of United States agricultural needs for 1947 requires first that its present position be determined. There is considerable jumping at the conclusion that it is in the same relative position following World War I. There are many factual premises that lead to this conclusion such as high prices for farm land, fluctuations in the futures markets, sound banks, a high level of employment, and an expansion of production in both agriculture and industry.

Now, as then, the farm problem is not one of production, it is that of price; and from all these viewpoints the agricultural position is indeed similar to that following World War I. However, there are many other factors to be considered before we can say there is any similarity between present day economic conditions and those of 1919, or that there is any similarity between forces that govern prices in Europe and here. Conditions are decidedly different today; not in mere details of similarity but in the shift of fundamentals.

A NEW POLICEMAN

An instance of the shifting of fundamentals can be noted in the fact that for centuries England was "mistress of the seas and policeman of the world." Since 1898 this fundamental has been undergoing a gradual shift, and I will give you three guesses to name the cop now.

A direct effect of this is seen in our peacetime military and naval budgets as the burden is shifted from the British to the American taxpayer. Note also the increase of military minds in administrative capacities.

Another significant change noted is that highly organized industrial labor has brought about high wage rates. This has effectually subsidized the foreign worker by putting their production costs far below our own, and promoted a factory building boom in South America, thereby forcing our industries to locate in lower-cost rural areas.

BRITISH FINANCIAL CHANGES

Another change affecting our agriculture is the international financial structure. After 1918 the pound sterling of England was a fairly stable unit. In 1931 England departed from the gold standard and through a lowered price for the pound sterling there was created an international price war that brought a collapse in our economic and financial system. From 1931 to 1934 an ounce of gold would buy 1.35 times as much in London and 1.55 times as much in British colonies and Argentina as it would in the United States.

With much of the world's currencies tied to the pound sterling our dollar became too costly and we lost one world market after another. We experienced the so-called flight of the dollar or the assault of Europe on our banking system. In the last 4 months of 1931 we experienced a net loss of about $552,000,000 in gold and an additional net loss of about $556,000,000 in gold in the first 6 months of 1932. American industry and agriculture became paralyzed.

BLOCKED STERLING INFLUENCE

Today many countries possess billions in pound sterling which England cannot possibly redeem at the present artificial level of $4.03. England is aware of this and there is no evidence that she wants to redeem at that level. At every monetary conference England has refused to stabilize the pound sterling.

The United States State Department argues that England under the American loan agreed that all blocked sterling would be freely converted to any currency so holders might spend it anywhere. Under England's new agreement with Argentina, conditions are imposed on Argentina that all released block sterling must be spent only in the British sterling area or trade empire, reciprocal trade agreements with other countries notwithstanding. Recent press reports relate that huge amounts of Argentine gold are leaving New York by airplane. Calling Peron a Fascist does not help matters one bit. As always money talks. Thus the parroting of an "ever expanding farm market abroad" and a "free access to the raw materials of the world" becomes just plain idle talk.

INFLATION IN ENGLAND

All this adds up to the fact that nationalistic self-interests, self-sufficiency, and self-preservation are uppermost in the thoughts of European and Asiatic statesmen. The manipulation of the pound sterling means that inflation is coming to England unless Uncle Sam wants to pour in more "margin" money.

We being the richest creditor Nation are not supposed to engage in a currency war. Instead the cry is for us to lower our tariffs and allow the debtor nations to flood our markets with their goods so that other nations can get enough dollars to buy food and supplies.

With this international financial situation confronting us our national position approximates that of 1931. It is the international financial structure that determines the economic outlook, and not wishful thinking on the home front.

THE FAKE AGRICULTURAL PARITY

In the period following 1918 our farmers had the semblance of a free market governed somewhat by supply and demand. In 1947 the agricultural market is burdened with the unholy yoke of a fake and bogus parity pricing system. This was originally intended to place the farmer in the same position he held from 1909–14, and in that respect it has been a howling success. From it you can take your choice whether his position is as of 1909 or whether it is 1934 when the parity concept got under way.

Parity as such is supposed to give farmers purchasing power from the sale of a specified commodity that will buy the same quantity of goods as it would during some specified base period which in this instance is 1904–14. Why that period is wholly dishonest is perhaps most clearly shown by a bulletin, Current Surveys of Business, published by the Department of Commerce in June 1939.

THE GREAT DISPARITY

On page 8 of that bulletin it is shown that the per capita contribution to national income in 1909 was $294. The next column is farms, $156. In other words, in 1909 there was $294 available for the entire population if it had been equally distributed, but farmers only received $156, or 53 percent as much as other people. This ratio follows through the entire base period and is called parity. It certainly does not place the farmer on a par with the rest of the country. It is not an honest parity much less being a true parity.

The United States Department of Agriculture gives figures even worse than these and shows that farmers only received about 28 percent as much as other people. Can parity on that basis ever bring relief to agriculture? Can parity on that basis ever create national prosperity where the farm purchasing power is only 53 percent or where it is only 28 percent of everyody else?

PARITY PERCENTAGES

It does not take much stretch of the imagination to see where the farmer is placed if certain laws limit his income to 55 percent of parity, or 85 percent of parity, or 90 percent of parity, or 110 percent of parity. It takes no stretch of the imagination to see that a parity income leaves the farmer worse off than a parity price.

The parity concept as now applied is either a colossal blunder or a deliberate fraud. No other business would permit itself to be saddled with such a pricing system.

REVISION IS NECESSARY

To save agriculture from the throes of another depression, either the present parity formula must be scrapped or else it must be revised whereby it will place agriculture on an absolute par with the rest of the Nation. If our statesmen, economists, educators, and major farm spokesmen prefer parity because it has been so long advocated and accepted that it would be more expedient to continue our agricultural economy on a parity basis, then let them define its formula to stand for what the farmers expect of it.

Let it embody the principles which would place agriculture on a true par with industrial and business concerns which show a profit from their operations. Let the parity formula reflect our year-to-year national average cost of producing a farm crop plus a reasonable profit. Unless and until the parity formula reflects farming costs plus a profit above operations, agriculture is not on a par with industry and commerce. By any other definition the parity concept is unsound and un-American.

THE CORRECT PROCEDURE

A simpler and more honest procedure would be to admit that parity as it is now constituted is a failure and replace it with the enactment of the cost-of-production bill, H. R. 794, now before Congress. By placing agriculture on a business basis under this proposal, there would be no quibbling over terms or what should be in our definitions.

Having done that, then let us accord it the same experimental patience we have given parity for, lo, these many years. One thing is certain; it could not be more unworkable than the present parity concept.

A NATURAL QUESTION

A natural question arises that if our Nation's farmers have never received their cost of production, how does it happen that they are still in business? Why have they not been forced out of business?

That is best illustrated by using the case of the two brothers who possessed about the same amount of ability and intelligence plus $25,000. One became a manufacturer and the other a farmer. The manufacturer grossed an annual volume of $200,000 and the farmer one of $4,000, which is about the average experience from such an investment. In addition, each had an annual loss of 10 percent on their volume. The manufacturer would sustain an operating loss for the year of $20,000 and the farmer one of $400. About 1 year would be required to drive the manufacturer from business, while the farmer might struggle along for 20 or 30 years, or as long as he had sufficient capital left to operate to some extent.

He could stay in business by gradually depleting his capital, by neglecting certain items of family recreation, comfort, and progress, by denial of a higher education to his children, and repairing his implements from the junk yard. All this because some group wants cheap food, while the great agricultural customer of industry is thrown overboard for a spectral foreign trade of uncertain permanency.

AVERAGE AGRICULTURE

Bear in mind that I am speaking of the Nation's average agriculture and not isolated instances where some farmers have benefited by an inheritance or have been aided by engaging in other activities.

What are the chances today for newly married farm couples to make a success of farming by starting from scratch? Carrying it further, how many of the more prosperous farmers could completely re-stock and re-tool their farms overnight?

IMPLEMENTING A PROGRAM

Anyone would probably say that they would be in favor of true parity prices or would be in favor of cost of production prices for farm products but the test of our sincerity and the proof of our courage is whether or not we are in favor of implementing such a program whereby the farmers would receive such prices in the cash markets. We might favor a true parity formula or we might favor a cost of production formula, but it takes more than a formula to make it effective.

To implement such a program requires an agricultural tariff to support those prices. Industry has such a tariff; agriculture has not. A tariff does not and never has made a price; it merely supports it. In our agricultural markets there is no such thing as an American price for American tariffs to support. Witness wheat in 1932 which sold for 30 cents a bushel when we had a 42-cent-per-bushel tariff merely against the importation of foreign wheat. That 30-cent price on wheat was due to a Government protected marketing system that originated in 1865 as an outgrowth of the War Between the States, and known then as the LaSalle Street game of "puts" and "calls."

FUTURES TRADING

Today in essentials, the system still operates as then but under the name of futures trading. The 30-cent wheat price of 1932 came from the futures market ticker tape, and will return again unless futures gambling is stopped. The pitiful part of it is that all other American farm commodities respond in sympathy with it.

The futures market is not concerned with the American tariff, American wage scales, or anything else that is American. It is un-American and anti-American. It does not pretend to quote American prices. It cares nothing for American farm production costs, and faced with world-wide famine it cares nothing for laws of supply and demand. It is only gambling under the forms of trade. Not even the cooperative selling by farmers has been able to overcome the obstacle of futures though encouraged by the policy of law.

ABOLISH FUTURES

The futures markets must be abolished. They cause much of the instability in agriculture. Futures markets are an evil for the following reasons:

1. The futures contract is not a warehouse receipt for a commodity but only a lottery ticket with no assets back of it.

2. Those who buy a futures contract deal only in price differences.

3. A futures contract does not permit the naming of grades.

4. A buyer of a futures contract, when delivery is made, has nothing to say about the kind or grade he shall receive.

5. The determination of kind or grade to be delivered under a futures contract is at the option of the seller, usually resulting in the delivery of dog-tail cotton or skin-grade wheat.

6. Deliveries of wheat under a futures contract are negligible—not more than one-third of 1 percent of the total volume of futures trading.

7. Those who buy specified grades of a commodity for spot delivery or for delivery-to-arrive do so in the cash markets and not in the futures markets.

8. The volume of futures trading always exceeds by many times the production of a commodity.

9. The selling of futures contracts is merely betting that the commodity price will go lower and has come to be regarded as an actual sale of a commodity and has the same effects on the cash markets as large-scale dumping.

10. From false propaganda, educators, economists, farmers, legislators, etc., have been duped into thinking that the farm price problem is insoluble except for the Government to give subsidies to farmers.

The foregoing facts have never been refuted or challenged by the most ardent defenders of futures trading, therefore how can the practice of gambling under the forms of trade be considered as an economically productive occupation.

The summation of my arguments may be stated simply: Remove from agriculture the fraudulent parity pricing system replacing it with an adequately implemented cost-plus program; take away the racketeering from its markets that exists in futures trading thereby placing farmers in the modern age of 1947 and there will be prosperity in these United States that is commensurate with our ideal of freedom.

The House and Senate Labor Bills

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an analysis of the House and Senate labor bills, by Donald R. Richberg, published in the May 15, 1947, issue of the Washington Daily News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE HOUSE AND SENATE LABOR BILLS

(By Donald R. Richberg)

(EDITOR'S NOTE.—Mr. Richberg has devoted a lifetime of study to labor-management problems. He was author of the Railway Labor Act and section 7A of the NRA Act—two trail-blazing measures in establishing labor's rights. As an attorney he has represented labor unions in more important litigation perhaps than any other American lawyer. He has made this analysis of the pending House and Senate labor bills at the request of the Scripps-Howard newspapers. The views Mr. Richberg expresses are his own. In some respects our views differ. We publish Mr. Richberg's analysis in the belief that it will contribute to public understanding of the issues.)

The House and Senate labor bills are children of the same parents. They are surprisingly alike in fundamental purpose and structure. They differ in a great many details which may seem to be more important than they actually are.

Both bills are needlessly complex and confusing because of a prevailing desire among legislators of both parties in both Houses to avoid saying exactly what they wanted to say and doing exactly what they wanted to do. This political tactic does not fool the opponents, but it always bewilders the friends of reform.

SIMILARITIES

It may clear away some fog if, first, we summarize the substantial changes in the existing law which are made in both bills:

1. Both bills amend the Wagner Act and (1) establish a new board in place of the present National Labor Relations Board; (2) prohibit unfair practices by labor as well as by management; (3) require labor as well as management to bargain collectively; (4) outlaw the closed shop but permit a union shop agreement; (5) exclude supervisors from

privileges and protections granted to employees; (6) reestablish the right of free speech for employers; and (7) authorize either employees or employer to have a labor representation issue decided by the board.

(NOTE.—Other Wagner Act amendments, where the bills are similar in object but different in method, must be described separately.)

2. Both bills establish a conciliation (mediation) service independent of the Department of Labor. This service has no compulsory power, but its aid may be offered or may be invoked by a disputant, and, in serious disputes, its efforts cannot be ignored.

(NOTE.—Impartial observers all agree that a genuine, reliable conciliation service cannot be maintained in the Labor Department, which is made by the law creating it a partisan of labor. The Senate bill gives the Government conciliators more effective influence than does the House bill, by definitely requiring disputants to listen to them before starting a fight.)

3. Both bills endeavor to prevent strikes which imperil public health and safety; but both avoid the use of compulsory arbitration. Both bills authorize the Attorney General to enjoin such strikes, not permanently but long enough to permit (1) conciliators to try to bring about a settlement, and (2) (in the House bill) an advisory board to recommend a settlement; and (in both bills) a secret ballot of employees to decide whether to accept a proposed settlement or to strike.

(NOTE.—Both bills try by complicated processes to create public pressures that will induce a voluntary agreement, and to avoid creating any prospect of compulsory arbitration, which might impair or discourage collective bargaining. There is no provision in either bill to insure continuous service even of public utilities, in case public pressures fail to bring a voluntary settlement. Evidently the Congress is not yet convinced that labor should also accept the obligations of public service which have been imposed for decades on the owners and managers of public utilities.)

4. Both bills make unlawful some of the monopolistic practices of labor unions, including particularly secondary boycotts and jurisdictional strikes.

(NOTE.—The House bill goes further in removing the exemption of labor unions from prosecution for conspiracies clearly in restraint of trade.)

5. Both bills require financial and other reports from labor unions to their members, and to the Secretary of Labor, primarily for the protection and information of the members.

(NOTE.—The House bill also defines coercion of members, discrimination against them, and other union abuses as unfair labor practices, which are made unlawful.)

6. Both bills authorize suits by and against labor unions, but provide that any money judgment shall be enforced only against the union and its assets and not against its members.

(NOTE.—It is difficult to justify the opposition of labor to suits for violation of contract. Of what value is collective bargaining if the resulting contract cannot be enforced?)

7. Both bills provide new methods of enforcing legal obligations imposed on labor unions, (1) by orders of the reorganized Labor Relations Board, and (2) by injunctions which, because of amendment of the Norris-LaGuardia Act, the Government will be able to obtain and enforce against both employers and labor unions.

(NOTE.—There may be a reasonable objection to injunction suits by private employers in view of former abuses of judicial power. But the Government should be able to enforce a law by all judicial powers available under the Constitution.)

8. Both bills prohibit payments by employers into welfare funds controlled solely by the union.

(NOTE.—This is essentially to end a growing labor practice that is usually an indefensible racket.)

DIFFERENCES

Now let us review some of the principal differences between the House and Senate bills:

1. The House bill prohibits political contributions by unions, and makes strikes of Government employees unlawful.

(NOTE.—Both desirable provisions.)

2. The Senate bill would establish a joint congressional committee to study and report on the entire field of labor-management relations by February 15, 1948.

(NOTE.—A dilatory, wasteful procedure promising no useful product.)

3. In amending the Wagner Act—

(a) House bill creates (in place of the present NLRB) a Labor-Management Relations Board of three members as a judicial body to hear and decide complaints of unfair labor practices, and an administrator as an independent official to prosecute such complaints.

(aa) Senate bill creates a new National Labor Relations Board of seven members.

(NOTE.—The House bill wisely separates the prosecutor from the judge in an effort to transform the board from a partisan aid to labor unions into an impartial guardian of public interests.)

(b) House bill defines "collective bargaining" so as to require that in any labor dispute the parties must exchange proposals and confer at length and, if unable to agree, make public statements of their positions, and engage in no strike or lock-out until after, in a secret ballot, a majority of the employees have voted to reject the employer's last offer and to strike.

(bb) Senate bill defines "collective bargaining" broadly, but goes beyond the House bill indefinitely requiring employers and unions to exhaust peaceful methods by negotiating and utilizing mediation before changing contractual relations or striking.

(NOTE.—If a conference committee of both Houses would give due consideration to the long-accepted language and established procedures of the Railway Labor Act, it could redraft these confusing and complicated requirements of the two bills into one clear, harmonious and enforceable obligation to make a reasonable effort to preserve the peace before starting an industrial war.)

(c) House bill outlaws industry-wide bargaining by prohibiting one labor union from representing the employees of competing employers unless they are less than 100 in number and working in plants less than 50 miles apart.

(cc) Senate bill makes no such provision.

(NOTE.—This important difference is discussed hereafter.)

(d) House bill makes "feather-bedding" an unfair labor practice—that is, compelling an employer to employ needless help, or to pay for useless work, or to restrict production in various ways.

(dd) Senate bill makes no such provision.

(e) House bill defines as unlawful—

(1) Strikes conducted with violence, intimidation, obstruction, and mass picketing;

(2) Picketing where there is no labor dispute with the employer;

(3) Sympathy strikes, jurisdictional strikes, monopolistic strikes, illegal boycotts, sit-down strikes, and similar interferences;

(4) Strikes to enforce "feather-bedding";

(5) Strikes to compel recognition of an uncertified representative, or to remedy practices for which a legal remedy is provided, or to compel an employer to violate a legal requirement.

All these strikes make offenders subject to suits and damages regardless of Norris-LaGuardia Act.

(ee) Senate bill has no comparable provisions except as to secondary boycotts and jurisdictional strikes.

There are many other differences in the House and Senate bills which are written into amendments of the Wagner Act, some of which intense partisans regard as very important. But the foregoing summaries present the major issues on which public opinion may be clearly defined and made effective in the drafting of the final bill in conference. There is one of these major issues on which it is particularly important to focus public attention—that is: Should industry-wide bargaining be prohibited?

There is no doubt that industry-wide bargaining is a powerful instrument of monopoly and a perennial menace to that continuous and increased production upon which our national prosperity and strength depend. On the other hand, industry-wide bargaining has many friends in management as well as labor. There are far-reaching relationships, long established, that would be disorganized by any attempt to reestablish local variations and actual competition in wage payments and working conditions within every industry.

Theoretically, industry-wide labor unions, and industry-wide employer associations, which are permitted to make monopolistic agreements will eventually destroy a free economy. And when they disagree, they are likely to force Government intervention that will be equally destructive of a competitive system.

Practically, the American people, including many strong industrialists, do not yet appreciate the fact that labor monopolies and labor-management monopolies move us toward socialism even more rapidly than the business monopolies which the Marxians count on to drive us into a state control of industry. Therefore, a flat prohibition of industry-wide bargaining may be unwise at this time.

If, however, the House and Senate bills can be welded together in a simplified measure which will obtain and merit strong nonpartisan support, the people of the United States will have made real progress toward preserving the productive strength of a free economy and the power of a democratic Government to protect the general welfare. In this effort it is necessary to make sure that, regardless of vociferous minorities, there is an active and dominant public opinion that will support the passage and enforcement of a law that will seriousy affect the lives of millions of our people.

Food Prices

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD an editorial from the Boston Post entitled "Why Food Stays High," which gives some telling reasons for the high cost of living insofar as food is concerned.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY FOOD STAYS HIGH

The price of lard has finally dropped below the OPA ceiling price fixed last year before the OPA was terminated. This, it is true, is only one item, although an important one, and the people generally are dissatisfied because the predictions made by many opponents of OPA that in a natural, uncontrolled market, prices would soon fall to a more normal level have not been fulfilled.

Prices, instead of going down, have gone up until the average food price level is about the highest ever recorded. Even though it may be fairly explained that the OPA ceiling prices were merely theoretical, and that, as everybody knew, actual prices last year were away above OPA ceilings, the people compare present actual prices with last year's OPA ceilings and complain there has been a big advance.

Why, it may be asked, have prices failed to fall when the crops last year were so bountiful? President Truman recently, when challenging business to lower prices if the country was to be saved from going into an industrial slump, declared that the Government policy of supporting food prices was not responsible for the present high prices, because, he said, the "support levels" were far below the actual prices and therefore were not effective at the present time in keeping prices high.

But this is only technically true. Mr. Truman apparently loses sight of the fact that all food prices are interrelated, and that if you cause scarcity in one kind of food you increase the demand for another kind, and that this increases the price. It may be recalled that a few months ago the newspapers printed pictures showing mountains of potatoes bought by the Government last year to keep up the price, and these mountain-high piles of potatoes were allowed to rot. The Government would not permit the poor people to buy these "surplus" potatoes even though the retail price was 65 cents a peck.

Now our Government is sending some 400,000 tons of grain to Germany each month to keep the Germans from starving. Potatoes have always formed a large part of the German diet. Out of 1,550 calories now being allotted to them by our military government, ordinarily more than 200 calories would be in potatoes. If then some of the 20,000,000 bushels of potatoes which were destroyed last year to keep the price high had been shipped to Germany we should now need to send less precious grain. But, after that horrible mistake, has the Government dropped its foolish potato policy? No.

Instead, they are buying the new crop down in Florida this year and pouring kerosene on the potatoes so that they may not be fit for food.

One of the largest chain grocery store companies in the country has issued a statement about food prices. It shows that this company during the last 5 years averaged only 1 cent profit on each dollar of sales, and that if all its profits were donated to the public it would mean only 4 cents a day for the average family. The big packing companies that produce the great bulk of the country's meat supplies operate on a profit of only a little over 2 cents on the dollar, so that it is obvious that the food processors and the retailers are not gouging the people.

The two main factors in keeping prices high are, first, the enormous amounts of food going out all over the world for relief purposes, and second, the Government policy of enormous subsidies for farmers and destroying good food to arbitrarily keep prices high. The relief program must be continued, rather than let other peoples starve, but it would seem we might follow a saner policy than destroying food to keep prices high when they are already at the highest level in our history.

Juvenile Delinquency: Its Cause and Cure

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 21 (legislative day of Monday, April 21), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask permission to insert in the Appendix of the RECORD, and I commend to the attention of the Members of the Senate, a speech on Juvenile Delinquency: Its Cause and Cure, by Herbert Garrett, Jr., of Woodruff, S. C., which recently won first prize in the South Carolina speech contest of the Knights of Pythias. I think these remarks by one of the outstanding high-school students of my State and of the Nation are especially worth the consideration of us older citizens who are so vitally concerned with this problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

JUVENILE DELINQUENCY: ITS CAUSE AND CURE

(By Herbert Garrett, Jr.)

In these postwar years, when America is trying to lead the world in the writing of a just and lasting peace, we are eager to increase our influence as a world power. However, we must not lose sight of the fact that we must strengthen the home base if we would enlarge our powers abroad. With an eye to the future, we must give special attention to our young people. We have all heard the old adage that boys will be boys, but may I remind you that boys will be men, and our young people of today must prepare to take their places of responsibility in the not too far distant future.

In recent years we've heard a great deal about juvenile delinquency. People have moaned about its increase, but, as Will Rogers said about the weather, it's something nobody does anything about. Now, there are some people who belittle this situation on the grounds that there has always been a certain amount of juvenile crime; usually there is a cause for everything a person does.

What causes an innocent child to become a juvenile delinquent? John Edgar Hoover, of the Federal Bureau of Investigation, says: "Crime flourishes where a child is not given the opportunity to live a normal, wholesome existence. It will be found where the ties of home are not strong; where the family unity has been weakened by divorce, the desertion of a parent, or the ignorance, indifference, or inaptitude of the father or mother. Failing to receive affection, guidance, and discipline at home, a child will inevitably seek happiness elsewhere. Left all alone, inexperienced youth has a good chance of going wrong."

With the weakening of the home, the child drifts and begins to spend more of his time outside of the home; seeking companionship and recreation, he soon finds himself going with a group of drifters, who are left to plan their own recreation. With this new freedom and the youngster's love for thrills and excitement, he is led to join the activities of a group of young people who are directed by the boy who has proved himself to be the most apt leader. When little things which at first proved thrilling become dull, the boys look for new excitement. The line between horse play and petty crime disappears, and the boy becomes a juvenile delinquent. Soon his school becomes uninteresting; the privilege of a good education is of no interest to him. Gradually he begins hanging around public places where he becomes acquainted with the bad literature, obscene pictures, and the seemingly pleasant effects of alcohol. Idle hands and bad companions are bound to lead him eventually to his first crime. Thus in three easy slips the good boy who followed the crowds and played hooky has become a criminal.

How are we to combat this increase in juvenile delinquency? First and foremost something must be done to improve the home life and family conditions. A home should be a happy place where each member can return after a day's activity, and find peace and comfort. The housing shortage must be met so as to give each family a home, a suitable apartment, or some place where they can live unhampered by relatives or friends.

The war is over: mothers who do not have to work any more can take their children off the streets and make a home for them. To give them food and clothes is not enough; they should guide them, plan recreation for them, and teach them to choose their friends wisely.

Even though parents have the main responsibility, there are many who are not going to live up to it. In that case the community must step in and plan a well-supervised program of recreation.

To have a gym, a public playground, and a youth canteen is not enough. We must have trained leaders in our schools, churches, and recreation programs who will accept the responsibility of guiding our boys and girls.

We as young people have seen so little of life that we have a tendency to rush out and meet the future with open arms. This does not mean that we are naturally bad; instead it merely means that we are enthusiastic about those things nearest to us. This eagerness in accepting those things close by makes it very important for us to have a good environment, and leaders who will understand our mistakes, and guide us in the correction of them.

The school is an important factor in every young person's life. Children coming from dull surroundings should get information and inspiration that would help them to improve the environment out of which they have come.

I feel that too often our schools have a tendency to make the under-privileged children feel out of place. This tends to make the child want to play hooky. The school should be the bright spot of the day for the child who comes from the wrong side of the tracks. It should lend glamour and color to a dull existence. It should make learning and experience as thrilling as a street fight in the slums. The end of each school day should find the youngsters impatient for tomorrow when they can come again to school and find sympathetic understanding while they learn to live together.

In other words, our schools must be institutions that meet the needs of the boys and girls. Such a system will lend to keep the pupils in school where they will be safe from the influences that would pull them down. To assist the school in its work of saving the boys and girls from delinquency and crime, we in South Carolina need a stricter attendance law, which will not allow even occasional hooky, for such days tend to create interests that lead away from school.

As I see it, juvenile delinquency is caused by neglect—neglect first in the home by parents who allow other things to seem more important than the rearing of their children. Those neglected in the home become problems in schools, in the churches, and public-recreation places. We allow ourselves to forget the importance of every individual, so we are glad to be rid of him when he drops out of school and quits attending the places of supervised recreation. When left with other boys of his own type he gets into small

difficulties. These are excused by the law and he continues to grow worse until finally he commits a crime for which he is arrested and sent to jail. There he is associated with hardened criminals who influence him still further, in the wrong direction. We need more schools like Father Flanagan's Boys' Town where first offenders can be corrected, not jails where those who have made their first mistake can be kept under lock and key.

Yes, delinquent young people are the result of neglect by the home, by the schools, by the churches, and by other social agencies. If this be true then the cure is simple: since the young people of today will make up the America of tomorrow we must become more concerned about these problem children, who will be the criminals of our generation.

If you would make America powerful in international affairs in the years that lie out ahead, you must understand and guide the youth of today. Make our homes happy places where we are loved and understood; make our schools places where we are inspired to live up to the ideals of our glorious history.

Give us supervised recreation for idle hours which will consume our extra energy and teach us to respect the rights of others, give us institutions where we can be corrected when we make our first mistakes, and give us the knowledge of Almighty God who created us in His own image and our generation finding new strength at home will lead the way in helping the world to find a lasting peace.

Pennsylvania Leads the Nation in Building a Postwar Naval Reserve

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. VAN ZANDT. Mr. Speaker, throughout the Nation, from May 18 to May 25, the Navy Department is observing Operation Naval Reserve Week and has launched a program designed to recruit over a million naval reserves. This operation is under the command of Rear Adm. John E. Gingrich, Director of Naval Reserve, Navy Department, Washington, D. C.

The mission of organizing the postwar Reserve began last spring, and already there are over 700,000 members of the Volunteer Reserve, 60 percent of whom are enlisted men. In the Organized Reserves about 100,000 members are training one night every week at their armories. More than 7,000 of this number have had their annual 2 weeks' cruise at sea or training period ashore.

The 800,000 members of the Naval Reserve represent an enthusiastic group, ready to perform its mission for the defense of our country, whenever or wherever needed.

Pennsylvania leads the Nation in making its contribution to this ever-growing Naval Reserve. Units are functioning in 16 separate cities in the Keystone State, and, as of May 1, 1947, the majority of the units have exceeded their assigned personnel strength. The following table discloses the progress being made by Pennsylvania in furthering the building of our postwar Naval Reserve.

The U. S. Naval Reserve in May 1947
PENNSYLVANIA

City	Personnel	
	Assigned	Enrolled by May 1
Allentown	420	491
Altoona	420	455

Wilkes-Barre	630	656
York	210	304

It Must Have a Soul

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. SHORT. Mr. Speaker, under leave to extend my remarks I include an editorial from the Evening Gazette, of Worcester, Mass., Monday, May 12, 1947. This is a most appropriate tribute to Edgar Monsanto Queeny and the splendid men and women associated with him.

IT MUST HAVE A SOUL

Just how "soulless" the Monsanto Chemical Co. is—all corporations being presumed to be soulless—must be left to those who are psychic in such matters. We can only point to some of the things it did when on April 16 sudden death and destruction struck Texas City, where one of its great plants was destroyed and many of its workers killed and injured.

Aside from the routine organization acts for opening communications and establishing relief centers, the corporation did certain other things. Executives, who might have been excused for spending a lot of time going over the destruction of the company's property and making plans for salvage, spent days visiting hospitals and relief centers, sympathizing with and encouraging victims and discovering what the company could do to help their personal distress.

The morning after the fire the company began at once paying $1,000 to the family of each deceased employee. It paid out group insurance benefits 48 hours after the blast. It set aside $500,000 and announced that the company would pay all hospital bills of injured employees. It began at once to pay all salaried employees at full rates and employees who worked on time basis at the normal earning rate until April 27, at which time those who were able and were not employed in restoration were given additional wage payments.

It guaranteed full wages to all employees who were injured, during disability. It paid for all wire communications with employees' relatives; made emergency repairs to houses, and moved all widows and families who wished to leave Texas City. When grief and hopelessness of the future hung over the people of Texas City like a cloud the company announced that it would rebuild the Monsanto plant as soon as possible.

There were many other things, including a four-page printed report to the stockholders, stated in frank and human terms so that the human responsibilities of the company would be made clear, and what actions were being taken to meet them.

There is much that cannot be recorded. The fellowship that made all this possible, and the response of human hearts; these are memories that have been etched into lives forever. Those who hold them will not want to hear much about soulless corporations. They know they are made up of people.

Buying on Credit

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial appearing in the Washington Post of May 21, 1947, on consumer credit.

The House Banking and Currency Committee will shortly begin hearings on our credit policies concerning Regulations T, U, V, and W of the Federal Reserve System.

BUYING ON CREDIT

At the end of March the outstanding volume of consumer credit—i. e., installment credit, service credit, single-payment loans, and charge accounts—reached a record total of $10,000,000,000. That is an increase of 44 percent for the year and double the amount of consumer credit outstanding in mid-1944. Despite this great expansion, however, the Department of Commerce points out that the volume of consumer credit is still far below what might be expected on the basis of prewar relationships to income.

There are a good many reasons for the rapid growth of installment loans and charge accounts during the past year. Relaxation of the Federal Reserve Board's consumer credit regulations has had some effect in encouraging expansion. Another important reason for the recent rise in consumer credit is the increasing supplies of durable goods, such as automobiles and household equipment, that are usually bought on time. Finally, the public is running out of surplus cash acquired during the war years when prices were controlled and there were fewer goods for civilians to buy.

The last-named cause of the upturn in the volume of consumer credit is currently attracting a good deal of notice. Some observers are inclined to view the trend with alarm as indicative of a buying slump ahead, with a subsequent decline in business activity. At any rate, there is considerable evidence to support the view that the country is returning to a prewar pattern of consumer buying, with credit rather than savings being used to bolster up buying demands. The sharp rise in living costs since the end of price control has made inroads on current incomes and earnings, thereby reducing the savings capacity of the people. For instance, in 1940 the average family saved about 10 percent of its net income. In the last war year, 1945, nearly 24 percent of family income was saved. Since then the rate of savings has declined until it is estimated to be back at the prewar 10-percent-average level. Furthermore, the lower income groups have been especially hard hit by the rise in prices, with the result that their capacity to save—never great—

has doubtless been seriously impaired, and in some cases destroyed.

Thus while the volume of consumer credit is still limited in relation to the total net income of the buying public, danger signals are being hoisted. For the rise in consumer credits, coupled with evidence of increasing consumer resistance to high prices, indicates that we cannot rely upon hoarded or current savings to support a business boom at the inflated price levels now prevailing.

The rise in consumer credits also emphasizes the need for caution in extending loans for purchases of nonproductive consumer goods, and underlines the desirability of legislation that would provide for permanent consumer credit control by the Federal Reserve system. At present such controls rest on an Executive order of 1941. It is reported that the Federal Reserve Board is preparing to recommend the immediate dropping of all remaining controls if Congress adjourns without enacting permanent legislation to extend its regulatory powers in the consumer credit field.

It is to be hoped that the board's repeated request for congressional action will be heeded. For control over consumer credits can help to check unsound expansion of this type of lending and can be used either to restrain consumer spending in boom periods by tightening restrictions or to stimulate buying in periods of depression by a relaxation of restrictions. As stated in the Federal Reserve Bulletin some time ago, consumer credit regulation, "along with more fundamental measures for promoting economic stability, continues to be a form of governmental action that serves an important public purpose."

World Trade Week

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Secretary of Commerce W. Averell Harriman on World Trade Week:

Secretary of Commerce W. Averell Harriman today issued the following statement on the observance of World Trade Week beginning May 19, 1947:

"The observance of World Trade Week this year is particularly appropriate. Annually since 1935 this observance has been of notable importance in emphasizing to Americans the relationship between expanding world trade and the economic well-being of this country and of all nations. The need for general understanding of this relationship is now more important than ever.

"The devastations of war and the dislocations caused by war have disrupted the lives of people in vast areas of the world. Some countries for a time will continue to need help from others. Millions of people are still living in hunger. They need relief before further steps in economic reconstruction can be taken.

"During the reconstruction period, to a considerable degree, it will be through loans and credits that foreign countries can make purchases in our markets of needed capital equipment and other products. But in the long run, people abroad must sell goods in the United States if they are going to be able to pay for what they buy. An expansion of multilateral trade among all countries is indispensable to their long run recovery.

"America, as the leading economic nation in the world today, has a vital stake in two-way world trade. Exports will provide more jobs and prosperity for us. During the war we tremendously expanded our industrial and agricultural production, and we now need permanent and expanding world markets for the product of our factories and farms. We are the one great Nation which can give a good life to all of its people, and at the same time help others to help themselves.

"On the other side of the ledger, we will also benefit from increased imports. With a high level of employment and prosperity in this country, we will require increasing quantities of raw materials from abroad to sustain our production. Without injury to our own industrial welfare, we can import products which will add to the standard of living of our people. Larger imports will make dollar credits available to our customers abroad who want to buy our products and will enable us to develop a better balanced system of trade relations with the rest of the world.

"We all have a personal stake in expanding world commerce not only in terms of prosperity, but also in terms of peace. Economic and political considerations are inextricably interwined in the modern world. It has become crystal-clear that there can be no political stability without a reasonable degree of economic stability. The hopes we share with all mankind for peace cannot prosper in a hungry, impoverished, discontented world. Our fullfledged participation in world reconstruction and expanded trade will be of great assistance in organizing a stable peace.

"We are the standard bearer for those nations which believe in freedom and individual dignity. The people of all free countries look to us for example and leadership in finding a way out of their profound material and spiritual difficulties. In our own interest as well as theirs we must maintain a high level of prosperity and a healthy democracy here, and we must do all in our power to revive trade and help others to help themselves.

"To date we can be proud of the role we have assumed in international efforts to reduce the obstructions and barriers to trade among nations. Delegates from 18 nations are now meeting in Geneva to negotiate tariff reductions and to discuss the proposal for an International Trade Organization for the purpose of increasing trade and ending discriminations. American leadership in this work has become a symbol to the rest of the world of our acceptance of responsibilities commensurate with our strength and position.

"Others have watched with encouragement the development of our international political policies and our strong support of the United Nations. They know that our participation in postwar international settlements is essential in the development of a just peace and in the protection of the interests of all.

"They are encouraged by the fact that our international political policies have the support of the people of this country on a bipartisan basis. But there remains concern that we may not pursue a consistent policy of support to the expansion of world trade. They remember all too well what happened in this respect after the First World War and during the depression of the thirties.

"It is of the greatest importance that we do not dash the hopes of our friends in other countries by actions that will appear to be a withdrawal from leadership. We must come to the fullest recognition that we as a nation are the first among the family of nations, and whatever we do will inevitably have world-wide ramifications.

"World Trade Week calls the attention of all of us to our responsibilities and opportunities in world commerce. It should be an event of personal meaning to all Americans."

No Tariff Reduction for Glassware

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 9, 1947

Mr. WEICHEL. Mr. Speaker, I want to include the following statement that I have made before the Committee on Ways and Means covering the manufacture of handmade glassware in my district being jeopardized by lowering the tariffs on cheaply made foreign glassware:

Mr. Chairman, the so-called reciprocal trade agreements have been a continual cut in the tariff without regard to American industry and the effect on American workmen. The lowering of tariffs is forcing the American workers to compete with the low-wage products of Europe and eventually lowering the standard of living for the American workman. Much of this has been done on the plea that we must assist the foreign countries to restore their economy. I question this especially with reference to the glassware industry. Evidently it is doing very well in Europe and I include herewith for the committee photostatic copies of the Czechoslovak Glass Review, volume I, discussing the Prague Sample Fair of September 1946, and the Czechoslovak Comment, which calls attention to the fact that the glass industry in Czechoslovakia is flooded with orders, before, during, and after the official dates of the fair, customers from the rich overseas countries were in search of luxury goods and the more expensive lines, particularly cut and table glass, and that big business was concluded with the United States. In addition, I include a copy of a communication addressed to the State Department by the glassware industry. I am sure an examination of this matter will disclose that there should be no further reduction in the glassware industry under the so-called reciprocal trade agreements.

"CZECHOSLOVAK COMMENT

"(By Zdeněk Bárta, export director of the National Corporation of Czechoslovak Glassworks)

"Reply to an article which appeared in the American Glass Review of June 22, 1946, entitled 'Lack of Skilled Craftsmen Real Reason for Czech Glassware Industry Falling Below Expectations.'

"It was a great surprise to us to read information about the Czechoslovak glass industry in the above-mentioned article which did not actually conform to the facts.

"Details were given which were completely wrong, as for instance: 'It was estimated when the war ended, that production of Czechoslovakian glassware would soon reach prewar levels, particularly by this time. The estimate, however, has been revised sharply downward, and this has been done on the basis of official reports from American representatives there.

" 'Now, indications show that the production of glassware in that country for this year will amount to about 10 or 20 percent.'

"There was also a statement to the effect that there was little prospect for any genuine improvement unless a change occurred in Czechoslovakia.

"In answer to this we need only to point out that the total export of Czechoslovak glass between January 1 and September 30, 1946, amounted to Kčs 830,504,000—. Of this figure, Kčs 327,396,000— went to the United States of America, i. e., the export of Czechoslovak glassware reached its full prewar level. As glass exports are on the increase and a steady rise can be noted every

month, it is perfectly obvious that the export of glassware from Czechoslovakia will be much bigger this year than in any prewar year. It is, therefore, entirely wrong to state that Czechoslovak production of glassware will amount only to about 10 or 20 percent of its prewar level, and it seems, therefore, probable that the article in the American Glass Review was written by a person who had been absolutely misinformed.

"This is not all, however. Reading a little further, we learn, under the heading 'Craftsmen leaving country' that 'About 300,000 German families, with generations of glassworking behind them, constituted the backbone of the Czechoslovak glass industry. The industry was able to produce merchandise of a quality that could withstand competition in the markets of the world, both in price and quality, because of these German craftsmen. Now, as the Germans return to their homeland en masse, this asset to the Czech glassware industry has been severely curtailed.'

"From such a paragraph any uninformed person would immediately imagine that tens of thousands of skilled craftsmen left the Czechoslovak glass industry and that the departure of these workers undermined the whole Czechoslovak glass industry. The article goes on to point out that this is really the case, and that it will take years before new skilled workers are trained. The author of the article states expressly:

"'Until something definite is done, the production of glassware in Czechoslovakia will continue in a small way only, and it is felt that its quality will generally be substandard.'

"We consider it necessary to correct these false impressions. It is true that a certain number of German skilled men has left the Czechoslovak glassworks and the Czechoslovak Jablonec industry, but hardly more than 8,000 people are involved—a number which, compared to the total figure of workers in the trade, is small. Besides this, the figure of 8,000 also included unskilled workers. Approximately the same number of German workers will be left in the Czechoslovak glass industry, and these are for the most part highly qualified personnel. Although some German labor has been lost, it will hardly cause any serious change in the glass industry, either in total capacity or in output, and it should be noted that a training glassworks has been brought into existence. Here young people are being systematically trained mainly for manufacturing hand-made glassware, but for machine-made glassware also, so that in the near future the decrease of workers will be completely made good.

"Nor is it a negligible fact that thousands of our foreign clients have had the possibility to convince themselves in the last months that not only is our glassware of high quality and exactly the same artistic value as in prewar days, but also that deliveries are being carried out precisely and in rotation, even although we have permanently to struggle with a serious lack of the railway wagons needed for carrying the necessary raw materials and finished goods, and permanently to combat the fact that so far the direct transport of goods via Hamburg—our natural port—is impossible, and we are forced to use the very expensive and far-away connections via Antwerp, Rotterdam, and Amsterdam, facts which make our goods extraordinarily dear and hold up deliveries. There are also a whole number of technical obstacles which can only be removed gradually. That this is happening can be seen from the constantly increasing export figures.

"We feel that the whole of this article which appeared in the American Glass Review was probably inspired by some of the buying agents of large American firms who came to Czechoslovakia to conclude business in order to get ahead of their competitors, by discouraging them from going to Czechoslovakia.

"In the meantime we have been able to welcome a great many of our old business friends from the United States of America and Canada in our country, and they were able to see for themselves that our works are working at full pitch, that the quality of Czechoslovak glass is as high as ever, and that we are able to fulfill all demands in this respect. It is only natural, however, that many glassworks have completely exhausted their stocks of finished goods, while demands are flowing in at such a rate that it is not possible to have them all executed at one time. Unfortunately it really is not possible to execute all our orders as quickly as our customers would desire because the majority of our glassworks have orders sufficient for many months ahead. Nevertheless orders are executed comparatively swiftly. It is a fact too that there are only very few complaints and that our monthly export is much greater than in prewar days and is constantly increasing.

"We hope that this survey will correct the erroneous information given in the American Glass Review.

"It only remains to add that we are always willing to give our customers every information concerning the purchase of Czechoslovak glassware and to put them in touch with the glassworks which are manufacturing the lines desired. We are also always ready to give precise information about production possibilities, forwarding, etc., and will be very glad if our old business friends will, as they have done before, approach us with full confidence. We shall certainly not fail them."

"Mississippi: The Land of Opportunity"

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. WILLIAMS. Mr. Speaker, we Mississippians have long been aware of the fact that our State is the land of opportunity, and during the past 10 years Mississippi has developed her resources further than any other State in the Union, in spite of the handicaps which she had to overcome through ridicule and vilification by hostile newspapers and selfish leaders in other parts of the country, as well as the present unfair discriminatory freight rates which have hog-tied her industry.

It is indeed refreshing, as well as unusual, to hear from someone in a high position of responsibility the truth about Mississippi and her opportunities. I was indeed pleased the other day to find an article about Honorable Robert R. Young, millionaire railroad man and industrialist, which was printed in the June 1947 issue of the magazine Pageant, which article quotes Mr. Young as follows:

I mention Mississippi because of the tremendous development going on there as a result of the high productivity of the land. They are just discovering this productivity because the Delta has just ceased being a one-crop country. I am informed that the land is more fertile than the Nile Valley, and that Jackson, Miss., is expected to grow from 95,000 to 250,000 in the next 10 years. The same thing happened, of course in Houston. It is happening in Florida today for different reasons.

I think there are opportunities on the West Coast but it has attracted so many people for climatic reasons that the competition there is pretty keen. The crowd hasn't heard about Mississippi yet.

As a Mississippian, I wish to thank this learned gentleman for his kind expressions of faith in Mississippi: America's land of opportunity.

Italian Treaty Danger

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. ROONEY. Mr. Speaker, on yesterday I questioned the justice and advisability of ratification of the Italian peace treaty and pointed out that this indefensible proposal was signed by former Secretary of State Byrnes solely in order to appease the Soviet Union. We must take immediate steps to prevent the spread of communism in Italy, not to assist it. The following newspaper article by William Philip Simms which appears in today's Washington Daily News points out how Russia would be the big beneficiary from the proposed Italian treaty:

ITALIAN TREATY DANGER
(By William Philip Simms)

Information from Italy all seems to point to the conclusion that as soon as allied troops pull out the Communists will take over—or at least try with an excellent chance of succeeding.

This is widely regarded as one good reason for delaying ratification of the Italian peace treaty. That document stipulates the earliest possible withdrawal of occupation forces, in any case not later than 90 days after the treaty comes into force.

The treaty will leave Italy practically unarmed. But her Communists are known to be comparatively well equipped with arms, including tanks and machine guns, and to have ample funds. They can get more of everything, including plans, from Marshal Tito, Moscow's puppet in Yugoslavia. Compact, fanatically minded, iron-disciplined, it is said the Italian Communists could put at least three fighters in the field to the Government's one. By means of the general strike, they could paralyze the country.

Russia would be the big beneficiary from the Italian treaty. She and her satellites would collect most of the indemnities which, in the end, American taxpayers would have to put up in the form of aid to the prostrate people. The so-called Free City of Trieste would be almost surrounded by Yugoslavia. If Italy turned Red, Trieste's freedom would not last long; our aid to Greece and Turkey would be like water down a rathole; the Adriatic would be a Soviet lake and the Mediterranean would be cut in two. The whole of the Middle East would be isolated.

Here in Washington the treaty has been voted out of committee and is before the Senate for ratification. Leaders have expressed themselves against delay. Russia, though, has used every means to delay general ratification of peace with Austria despite her pledges to the contrary. Also, she is

blocking the economic merger of the Saar with France. All of the Big Four, save Russia, favor immediate merger to facilitate French recovery by the use of the Saar's coal in her industries.

There is little or no opposition to ratification in the Senate. There is, elsewhere, however, a growing feeling that it would be shortsighted to rush ratification to the almost certain disadvantage of the United States.

Well-founded reports are that the Italian people feel the United States has "let them down." To this, some Senate Members reply impatiently: "So what? They fought us, didn't they?" But the Italians can make a good case for themselves.

Again and again President Roosevelt and Prime Minister Churchill promised that they would make things easier for the Italians if they would throw their dictators out. On June 4, 1944, the President broadcast a message on the fall of Rome. He recalled that many nations had contributed to the victory and, he added: "The Italians, too, forswearing a partnership in the Axis which they never desired, have sent their troops to join us in our battles against the German trespassers on their soil."

Again, in the following October, in a Columbus Day address he said: "To the people of Italy we have pledged our help and we will keep the faith." On the same program Attorney General Biddle reinforced the President's promise. Said he: "It is the settled determination of the President to bring the provisions of the Atlantic Charter to bear upon Italy's problems."

United States Liberates Japs From Feudal Bondage

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include herewith an article from the Cleveland Plain Dealer by Ralph J. Donaldson:

In all the history of the wars between nations, there is no precedent for the treatment which the defeated Japanese are being accorded by the victorious Americans.

Instead of exterminating or enslaving them, in retaliation for the sneak attack at Pearl Harbor and the cost in blood and treasure that it took to defeat them, we have given them the blessing of freedom.

Today there is no doubt about it—the Japanese are a liberated people. Their cities are in ruins, a large percentage of their industrial plants have been smashed and burned out, they are cold and hungry, and there is a scarcity of all the things that make for comfortable living, but they are free, for the first time in their lives.

FREED FROM MILITARISTS

They have been freed from the domination of the police and the militarists; they have been freed from the superstitious belief in the divinity of the Emperor; they have been freed from the vainglorious belief in their racial superiority (it was thoroughly knocked out of them); and they have been shown the way toward political and economic freedom.

We have given them a democratic constitution which makes the Emperor a figurehead and renounces war as an instrument of national policy and prohibits the establishment of armed forces.

We have instituted a program of land reform which releases the tenant farmers from virtual slavery; we are proposing to abolish the fishing concessions which kept whole villages in bondage; we have instituted economic reforms abolishing the system under which a few ruling families, the Zaibatsu, were able to control Japanese finance and industry; we are ministering to the health of the Japanese people and directing their education along democratic lines; we have tried to give them a free press, although this effort so far has not been entirely successful; and we have encouraged the organization of labor unions and have given them the right to strike, provided such activities do not interfere with occupation policies.

Her army has been completely disarmed and demobilized. Her air forces have been totally destroyed. In the entire empire there is not even a single Japanese commercial plane left. For 3 months after the occupation a few Japanese cargo and passenger planes were allowed to remain operational to assist the occupation authorities. But no Japanese pilot has been in the air since December 1, 1945.

JAPANESE AIRCRAFT SCRAPPED

When the occupation forces arrived there were 11,500 Japanese aircraft of all classifications in the islands. They caused the American authorities some apprehension. Most of them were capable of one suicide mission.

The problem was how to disable them all at once, so as to prevent a few hot-headed pilots from making a final suicide attack. This was done by the simple expedient of ordering the Japs to line up their planes on their airfields, remove the propellers and lay them on the ground in front of each plane. American fighter planes flew over the airfields and were prepared to shoot up any Jap plane which still had a propeller on it. But the order had been obeyed and there was no shooting.

Overnight the propellers rusted and the Japanese Air Force became permanently inoperational. Then the bulldozers went to work and today there is nothing left of the Japanese air forces but huge mountains of scrap.

A similar job is under way with respect to what was left of the Japanese navy at the end of the war. Five hundred midget submarines were scrapped. One hundred and six conventional submarines have been towed out to sea and sunk. The warship scrapping program is 40-percent complete.

The eventual disposition of the Japanese destroyer and escort fleet has not yet been determined by the Allied Powers, but these ships eventually will be scrapped or distributed among other nations as part of the reparations program.

The Japanese war industries which were not destroyed in the B–29 bombing raids are being systematically dismantled and removed. Under the direction of the occupation authorities, stores of munitions are being blown up.

SELF-SUPPORT IS GOAL

Through these and other measures we are attempting to rehabilitate Japanese economy so that Japan at the earliest possible moment will become self-sufficient on a peacetime basis and will no longer require financial aid from the United States to alleviate hunger and privation.

All this is being done under policies laid down by the United States and its allies, as stated in a document prepared by SWNCC—the State, War, and Navy Departments Coordinating Committee.

The ultimate objectives as stated in this document were (a) to insure that Japan will not again become a menace to the United States or to the peace and security of the world, and (b) to bring about the eventual establishment of a peaceful and democratic government which will respect the rights of other states and will support the objectives of the United States as reflected in the ideals and principles of the charter of the United Nations.

PROGRAM IS OUTLINED

These objectives were to be obtained, the document stated, (1) by limiting Japanese sovereignty, (2) by a complete disarmament and demilitarization of Japan, (3) by encouraging the Japanese people to "develop a desire for individual liberties and respect for fundamental human rights, particularly the freedoms of religion, assembly, speech, and the press," and (4) by affording the Japanese people an opportunity to develop for themselves an economy which will permit the peacetime requirements of the population to be met.

The first objective of the occupation already has been attained. Never again can Japan become a military threat to the United States or to peace of the world except through American indifference or approval.

One of the most interesting operations is being conducted in the British commonwealth forces occupation zone where tons of poison-gas bombs and shells were discovered. These are being loaded in the holds of old ships by Japanese laborers and towed out to sea. Then the ships are sunk.

Other supplies accumulated by the Japanese war lords have been seized and disposed of by the occupation authorities. Thus, medical supplies were distributed to Japanese civilian hospitals and doctors through the Japanese home ministry.

RELIEF SUPPLIES DISTRIBUTED

Three million tons of food, 1,500,000 tons of coal, 85,000,000 articles of clothing and 7,000,000 blankets were distributed to the civilian population in the form of relief supplies.

Today you see thousands of Japanese men wearing army uniforms or parts of uniforms. Some of them may be former soldiers who are wearing their old uniforms because they have no other clothing. But others may have been civilians who received this clothing under the relief program.

We could have seized all the food, clothing, fuel, and medical supplies and sent them to the United States if we had wanted to. That is standard practice in the Russian occupied areas. But it would not have been to our interest to have done so because eventually we would have had to replace them with other supplies to aid the Japanese civilian economy, in accordance with our program of helping the Japanese to become self-sufficient as soon as possible.

Thus it is obvious that under present conditions Japan could never fight another war without our permission or connivance, because she has nothing left with which to fight.

The Limits and Uses of Our Relief Funds

EXTENSION OF REMARKS
OF
HON. JESSE P. WOLCOTT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from the New York Times of May 20, 1947:

IN THE NATION—THE LIMITS AND USES OF OUR RELIEF FUNDS

(By Arthur Krock)

WASHINGTON, May 19.—The searching debate in Congress on the bill to appropriate grants-in-aid to Greece and Turkey, despite

the attempt of the administration to limit it with a mandatory "dead line" of March 31, has already proved its value. Various official steps are being taken to determine the approximate costs of the Truman doctrine, of which the Greek-Turkish bill was the first expression, and our national capacity to meet them. And Congress is giving attention to suggestions how the use of our future funds for rehabilitation and relief can be more effectively supervised.

These moves, though belated, are new. For months that mounted up to years B. M. Baruch demanded that a national "balance sheet" of our assets and proposed liabilities be drawn up before the Government set out on any postwar plan of grants and loans, such as is envisaged in the Truman doctrine. In the same period Joseph P. Kennedy and Senator HARRY F. BYRD made similar proposals. But no evidence appeared that Congress or the executive department were giving these any consideration until the Under Secretary of State, Dean Acheson, made his recent speech in the Mississippi Delta.

In this speech the administration offered its first authoritative approach to a definite calculation of the probable annual costs of the Truman doctrine, by that time reshaped into an economic, nonemergency, civilian prescription to rebuild the shattered democratic systems of peoples who wanted to retain them. In the course of the debate in Congress the original stress given in the President's message of March 12 to the ideological and military bases of the doctrine had been swept away.

Also, many persons apparently had concluded with Mr. Kennedy that "global communism cannot be defeated with just dollars," but only by their effective use, and with his proviso that in any event the economy of the United States must be kept sound and strong. Implicit in this conclusion was the fact that our national economy cannot be kept sound and strong, and exported dollars cannot be used effectively, if this government does not relate the amount to its resources.

A REVISED PROSPECTUS

Mr. Kennedy got very few recruits for his other counsel—that Europe be permitted to try out communism if it desired, because only then could be demonstrated the inability of communism to make good its claims of superiority to capitalism. But he offered that advice on the text of the President's Message of March 12, which was a very different prospectus from that given in the speech by Mr. Acheson.

Since the latter is now generally accepted as the intended, long-range program, it was inevitable that any government in its right mind would accept the balance-sheet proposal, and that the legislative branch of that government would show deepening interest in methods to supervise the use of the dollars available for such purposes. Several plans have been offered. But one which is attracting considerable attention from the Republican leaders is the work of former Representative Charles S. Dewey, who has been an Assistant Secretary of the Treasury and financial adviser to the prewar Government of Poland.

In a memorandum Mr. Dewey pointed out that the National Advisory Council, which coordinates the foreign loan policy of the Export-Import Bank and other Government agencies, and in developing plans for the sale in this market of obligations of the International Bank for Reconstruction and Development, has no such powers over advances to foreign countries through grants-in-aid by Congress. But he said, since testimony in connection with the Greek-Turkish aid measure "reveals that it is accepted policy to provide American supervision" for these appropriations, there should be an extension of this coordination.

THE DEWEY PLAN

"The personnel of such a supervisory group [he wrote] should be individuals who in the past have had actual experience in supervision and management of economic foreign loans and in the construction and development of foreign public utilities. Subsequent grants-in-aid for reconstruction and development of any countries should include * * * a supervisory council * * * appointed by the President with the advice and consent of the Senate to carry out the policy of nonpartisanship in international affairs."

In choosing the members of this Council—with a Cabinet member as chairman—special emphasis should be given, Mr. Dewey urged, to seven listed brands of experience, including familiarity with foreign agriculture, transportation, central banking, and national budgeting. Quarterly reports to the President, Congress, and the National Advisory Council should be made from the field. All costs should be charged against the grant-in-aid or credit which is being supervised. But, above all, he advised:

"It is desirable to coordinate plans of the grants-in-aid * * * with similar plans being considered by the International Bank, in order that the taxpayers of the United States may be relieved as soon as possible and that the grant-in-aid countries can in due course seek future assistance through International Bank loans."

Senator VANDENBERG has hinted that no more foreign relief requests will be passed at this session of Congress. It is even more certain that orderly supervision of their use, alined with the present NAC system, as Mr. Dewey has suggested, will be linked with them when they are approved.

Paul Robeson

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Westwood Hills Press of May 15, 1947:

HONEST CHOICE

Paul Robeson announced after completing two singing engagements at Albany a few days ago that he could afford to leave the concert stage for 2 years to go on speaking tours to advocate the political ideas in which he believes.

His speaking engagements will be handled by the Progressive Citizens of America. He has said he will supplement his talks with songs: probably not operatic selections or folk songs, but the marching and fighting songs of Soviet Russia and the Spanish resistance movement.

Robeson had been booked to give a concert in an Albany school auditorium at a fee of $2,000, of which $300 had been paid in advance. Then the mayor and school board, having heard of his pro-Soviet interpolations between songs in other cities forbade his use of the school auditorium. A court order permitted the concert to proceed, minus the propaganda. A second concert was arranged by Negro organizations in Albany, with nothing barred.

The decision to take a vacation from concert work and make speeches under the banner of the PCA is an honest one. Music lovers have been paying their money to hear a great baritone sing, not to have their ears troubled by aspersions on the Truman doctrine and the general foreign policy of the United States, and by indirect praise of Soviet aims.

Those who pay to hear Robeson make what he will call anti-Fascist speeches will get what they want to hear. Those who usually string along with Uncle Sam can stay away, unless they think it might be interesting to hear what he has to say for communism.

It will undoubtedly be interesting. Not even Henry Wallace is so great a zealot in opposing the efforts of the Government of the United States to maintain its ideas of democracy around the world.

Horace C. Carlisle

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. BRYSON. Mr. Speaker, as is known to most of the Members of both Houses of Congress, Mr. Horace C. Carlisle, an employee in the office of the Architect of the Capitol, has been for more than 20 years, a frequent verse contributor to the columns of the CONGRESSIONAL RECORD.

Mr. Carlisle's contributions to the RECORD, because of the many encouraging reports that have been constantly coming from all parts of the country, are very gratifying to him, as well as to the large number of both Senators and Representatives who have been pleased to favor him by requesting unanimous consent to have his poems printed in the RECORD, a number of which have been read on the floors of both Houses of Congress.

These poems which have appeared in the CONGRESSIONAL RECORD, now numbering 150, altogether, if printed in a separate volume, would make a unique addition to Mr. Carlisle's group of 15 other manuscripts, now practically ready for the press.

Deeply appreciative of the helpful interest manifested by many of the Members who have in this way acquainted the country with his poetic creations, Mr. Carlisle has addressed a brief communication to the Members of both the House and the Senate, which at his request, I ask to insert at this point, as a part of my remarks:

To the Congress of the Country:

I wish to express my sincere gratitude to the Members of both Houses of Congress for the privilege afforded me of having printed in the CONGRESSIONAL RECORD many of my poetic creations, which seem to have met with more or less appreciation throughout the country.

Since by unanimous consent these poems, 150 in all, have appeared in the RECORD, it might appeal to the Congress to have them printed collectively as a public document, and make them available to the American people as a historic, poetic picture of an awful, yet glorious, time through which the Nation for the past quarter of a century has been feverishly struggling that freedom might not perish from the earth.

Both Republicans and Democrats from the four great sections of our common country, many of them, have been very gracious in their words of commendation, as is recorded at the beginning of each of these poems which the RECORD has carried from time to time on its widely read pages.

It is with pleasure inexpressible that I propose to present herewith this collection of poems for the purpose mentioned, as a token of my appreciation for the opportunity afforded me to serve my day and generation and those that are to follow, in such a way as this.

HORACE C. CARLISLE.

Hearst Annual Oratorical Contest

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. POULSON. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I should like to bring to the attention of this body and to the Nation as a whole, the excellent training and inspiration afforded American youth through the medium of the Hearst annual oratorical contest.

Each year the life of some famous American historical leader is selected for the subject of these orations and shortly thereafter, students in high schools, junior colleges, and colleges all over the country begin weeks of study, composition, and training. Contests are then held in the schools, in various districts, regionally and nationally until finally, through the process of elimination, winners are declared on each school level.

This national winner is provided a free trip to the scene of his subject's former activities and thus is given an even closer insight into this man's inspirational life.

I find these contests highly commendable for the originality they inspire, for the spirit of competition they engender and for the training in the neglected art of public speaking they provide. It is my conviction that all of these traits need to be cultivated today as never before.

The national collegiate champion this year was Mr. Edmund F. Penney, a 20-year-old freshman at the University of Southern California. As a fine example of the value of these contests, I submit herewith the winning oration of Mr. Penney on the life of Patrick Henry:

PATRICK HENRY WINNING ORATION—EDMUND PENNEY OF UNIVERSITY OF SOUTHERN CALIFORNIA GIVES INSPIRING PICTURE OF FAMOUS PATRIOT

(Here is the winning oration of Edmund Penney, of the University of Southern California, second from his school and third from Los Angeles, to take the national championship in the Hearst newspapers oratorical awards, in the 4 years of competition. The speech, produced by a splendid young American, who was coached by the famous Allan Nicholls, of the University of Southern California speech department, brings a vivid picture of Patrick Henry, statesman and patriot, to the hearers and readers of this modern age.)

PATRICK HENRY

"Fire! Fire!"

The awesome cry fills the night and echoes from end to end of a small Virginia village. Gowns and nightcaps appear at windows. Men rush into the street. All can see a red glow burning upon the horizon. The home of a young merchant is in flames. The men form a bucket brigade and start passing pails of water. But it is too late for bucket brigades. The fire has gained too much headway. There is no stopping it now. So the villagers stand about, helplessly, watching the red flames.

"Look at that blaze!" one man cries, "they shouldn't have allowed it to get out of control."

"It's too bad," another remarks, "he loses all he has in business and now his house burns down."

Somewhat apart from the others stands a young man. An immense futility overcomes him as he watches the flames destroy the last vestiges of his earthly wealth. He mumbles to himself, "If only I had discovered it sooner, before it got out of control, I could have stopped it; I know I could have."

The villagers have returned to their houses; but the young man still stands, gazing into the embers. Reflectively he reviews his early endeavors. Farmer. Merchant. These too went up in smoke. "That's the trouble," he cries, "these failures are like this fire. As a farmer I've let the land lie waste and become hard and unfertile. As a merchant, instead of stopping to work out my financial problems, I've plunged more deeply into debt. I've let my troubles gain too much headway and, like this fire, they too were soon out of control. Next time I shall stop the flames before they gain headway. I've failed as a farmer and as a merchant, but I shall not fail again."

Immersed in thought, he walks away from the scene of the fire. So he does not notice a new and more menacing red glow just beginning to burn upon the horizon. For across the Atlantic, the British Parliament is beginning to debate taxation without representation.

The next day after the fire the young man—Patrick Henry—turns to the study of law. The Parsons case has scarcely established his reputation as a lawyer when the Stamp Act is passed and circulated among the Colonies. Beneath the clever, involved wordings of this act Patrick Henry discerns that it is the beginning of a plan of foreign oppression against his people. He realizes that this plan is much like a simple fire—it has only just begun. It must be stopped now. So Patrick Henry opposes this Stamp Act. Opposes its tyrannical decrees with all the hatred of a freeman who has fought and struggled bitterly for his personal liberty, individualism, and independence. He passes seven resolutions in the House of Burgesses against this act. Passes them through the persuasive force of a brave, challenging speech. "Caesar his Brutus, Charles the First his Cromwell, George the Third treason. Make the most of it." Aroused by these fighting words the House of Burgesses reassembles and elects Patrick Henry and six others as the delegation to the First Continental Congress in Philadelphia.

At the Congress, Patrick Henry demands immediate defense of the Colonies. Others seek to delay matters and charge him with furthering only the cause of Virginia. Patrick Henry replies to his antagonists with the brilliant sentence "I am not a Virginian, I am an American."

Returning to his home town he does not long remain idle, for the red glow is becoming brighter. He organizes the Virginia Convention and, disgusted with the Nation's complacency toward the growing menace of conflagration, he rises in his seat at the convention and with stirring eloquence calls the colonists to arms, knowing full well that if his cause fails he has signed his own death warrant. "The battle is not for the strong alone. It is for the vigilant, the active, the brave * * * life so dear * * * peace so sweet * * * to be purchased by chains and slavery * * * liberty or death."

This speech reechoes through the Colonies. It becomes the battle cry for freedom. Under the spell of these burning words the Government now authorizes the training and arming of companies of artillery, cavalry and infantry, and the Nation rises to revolt against foreign tyranny and oppression.

Today we realize what Patrick Henry and those early Americans did. But are we aware of the conflagration of world terror that is spreading in our own day? The time to act is now, before the fire gains too much headway. We must have the courage to fight these elements of foreign tyranny. Like Patrick Henry, we must be ready to stop the fire of impending disaster. In this world of the atom and cosmic crises we, too, may have to rise to action. For once again, far across the Atlantic, an ominous, red glow burns upon the horizon.

Unrestricted Lobbying

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. POULSON. Mr. Speaker, I would like to invite the attention of the Congress to three United States Navy public relations ventures which have me a little confused as to their intent and somewhat puzzled as to their purposes.

The first of these is an article in the May 3, 1947, issue of the Saturday Evening Post entitled "Let's Not Civilize These Happy People." This article is authored by a rear admiral on active duty with the Navy on the island of Guam as an aide for civil administration to the naval governor of Guam. This admiral writes about the Micronesian peoples of the Pacific Islands with an air of authority and supreme finality.

In his article he attacks private citizens and Government officials as missionaries of modernism, bureaucrats, sentimentalists, and busybody-do-gooders. It is his thesis that only the Navy is capable of governing these island peoples—administration of their affairs by any other agency of the Government would ruin their culture, wreck their economy, and cause them to fall into a state of utter degeneracy and depravity. Although it is quite true that the article to which I refer carries a routine disclaimer in fine print by which the opinions in the article are said to be those of the admiral himself and not those of the naval service, I would be interested in knowing the full purpose of the article.

The second and somewhat related matter also has me puzzled to its intent.

I see by the papers that the Secretary of the Navy has released to the press a report on the governments of Guam and American Samoa which was submitted to him by a so-called special civilian committee. This committee was appointed by the Secretary on January 8, 1947, to study the naval administration of Guam and American Samoa and to prepare a report embodying recommendations thereon. It was transported to the far Pacific and back in Naval Air Transport planes; naval civilian and service personnel gave many days of work to the committee, and naval quarters and messing

facilities were made available to its members. I do not know what salaries and travel allowances the committee members received, but no doubt these also were paid by the Navy from appropriated funds—from the taxpayers' money.

The Secretary's committee assembled in Washington on February 15 and then went on out into the Pacific and by way of San Francisco and Honolulu. On March 16 they returned to Honolulu where they lingered a few days before returning to the United States to prepare their report. They thereafter returned to Washington, submitted their report, and presumably have now returned to their normal pursuits.

I, for one, would like to have someone tell me why it is necessary for the Secretary of the Navy to hire a so-called Special Civilian Committee to study the governments being administered by naval personnel on active duty in Guam and American Samoa. Can it be that the Secretary is so distrustful of the naval officers who run insular affairs for him that he cannot believe their reports and must appoint civilian committees to investigate for him? No, that committee was not created and sent out to investigate and report on the delinquencies of naval personnel. It was a publicity move. It was another attempt to allay public criticism of naval administration of the affairs of Guam and American Samoa. It was a move to develop public opinion in favor of continued naval administration of the affairs of the civilian populations of Guam and American Samoa. Was it not a planned and studied attempt to arouse public opinion and bring it to bear on the Congress on the question of civil government for Guam and American Samoa?

It has been charged in the press that the Secretary's civilian committee was a "whitewash" committee designed to cover up an uncomplimentary situation in Guam and Samoa. It has also been said that it was a face-saving committee on whose findings the Secretary might gracefully navigate to certain reasonable reforms while still retaining control essentially intact in naval hands. It has also been said that it was a mere publicity scheme by which the Secretary hoped to counteract the unfavorable publicity and criticism which he has been receiving for many months on the matter of naval government of civilian populations in time of peace. I have also heard it said that the committee was just another delaying device by which the Secretary hoped to delay action for the present in order that the whole thing might be cooled off and delayed until the Congress adjourns.

Be that as it may, the report was promptly released to the press. Why? Why is the Secretary of the Navy trying to develop public interest in matters bearing on the form of government of Guam and American Samoa?

There are several bills before this Congress at this very moment which have as their purpose the establishment of civil governments in Guam and American Samoa under the cognizance of a civil agency of the Government. Can it be that the Secretary of the Navy is desirous of arousing public opinion with respect to these bills? If that is the case, I fear he has lost sight of the fact that he is in the executive and not the legislative branch of the Government. It is his job to execute the laws of the United States and not to make them.

I submit that investigation of the charges of malpractice of the Navy in the islands was the function of Congress and that Congress even yet might properly ascertain for itself conditions existing there. Under what authority has the Secretary of the Navy assumed such functions?

There is still another and somewhat related matter which unlike the other two does not puzzle me in the slightest. For some months now the Navy has been taking groups of west coast businessmen on trips to Hawaii and return on naval vessels. While in Hawaii, recently, I learned from reputable sources that a group had been taken to Hawaii and returned to the mainland on the U. S. S. *Boxer*. En route and in Hawaii they had been royally entertained by the Navy. I know for a fact that more west coast businessmen and influential citizens were taken to Hawaii on the U. S. S. *Shangri La*. They, likewise, were heavily entertained en route and while in Hawaii.

Again, I ask why? Why are groups of influential citizens and businessmen taken on pleasure cruises on public vessels of the United States and wined and dined at Government expense? This time I know the answer. I have just received a letter from one of the men who were on such a trip. I should like to quote from this letter which I received from the Los Angeles manager of one of the Nation's large industrial firms:

> As a guest of the Secretary of the Navy, it was my privilege and pleasure to make the cruise on the U. S. S. *Shangri La* from San Diego to Pearl Harbor. As a civilian I now have a much better knowledge of our Navy—our first line of defense—and of its need for manpower and funds to maintain a strong Navy as long as the world is in such a turmoil and until world peace is assured. I can commend our Nation on the very fine calibre of men making up the officers and crew who man our Navy ships.
>
> As my Representative in Congress, I wish to make a strong appeal to you for adequate appropriations so that we may maintain a strong peacetime force. Despite the need for economy, I sincerely trust we will not again curtail our Navy as we did before World Wars I and II. Preparedness is our best assurance for maintaining the peace for which we have so dearly paid.

Why are these men being taken on such trips if not to lobby Congress in favor of naval appropriations? To me, this is as pretty a picture of high-powered lobbying with the taxpayers' own money as you will ever see.

There are three good examples of the manner in which public moneys and official positions are being used by public officials to put pressure on the Congress of the United States. I, for one, would like to see the Congress—this Congress—put an end to such practices.

Since we are requiring all other lobbyists to make detailed reports to Congress, why should we not ask for reports from some of the heads of our governmental agencies such as the Navy and others?

Now I should like to give you my answer to the letter which I have already quoted:

> My Dear Mr. ———: In reply to your letter of May 7 concerning adequate appropriations to maintain a strong Army and Navy, I should like to tell you that I, too, am in favor of this but it should be realized that unless we scrutinize the budgets of the various departments, they will, regardless of their fine intent, become careless and even reckless in their expenditures. Both the Army and the Navy are guilty in this respect.
>
> I am in favor of a strong preparatory program, but I maintain that some measure of economy must be practiced. I am sure, however, that whatever cuts may be made in the Navy budget will not be of a nature to hinder this program.
>
> As a businessman you know that it is good management to be checked carefully, and you know also that economy can be effected when necessary.
>
> I appreciate your interest, but on every side we hear and see propaganda put out by the Administration against all economies and find also that businessmen who seek a reduction in both taxes and expenses will ask that we do not cut their special friends. If you are aware of the opposition of this type which we must face I am sure that you would understand why we must be brutally frank about this problem.
>
> Very truly yours,
>
> Norris Poulson.

Relief Assistance to People of Countries Devastated by War

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. MILLER of Maryland. Mr. Speaker, at a time when we are appropriating hundreds of millions of dollars of the American taxpayers' money to feed the hungry and starving people of other lands, we must think about preserving our own economy. For our own welfare and that of the world, we must see that we do not kill the goose that lays the golden eggs.

We cannot avoid our humanitarian responsibilities, but another vital need is that the food produced by our farmers should find its way to the consumer and that crops should be saved, processed, and distributed to the hungry. The scandalous loss and waste of money and nourishment that occurred when thousands of tons of potatoes were allowed to rot or are being destroyed, is a type of tragedy that must be avoided if we are to continue to feed a large part of the world's population. At present there are danger warnings in our own economy. The large surpluses on hand in some branches of the canned and frozen food industries is such an indication.

Based on the returns of the Department of Commerce as of March 1 of this year, there were in storage 203,554,000 cases of canned goods, 67,571,000 cases more than a year ago. The percentage of last year's pack remaining unsold is very high, in some items 100 percent or more.

In a standard item such as corn, the amount of the 1946 pack unsold as of March 1 was 52 percent. In addition to the surplus of canned corn, there is a frozen food stock equivalent to 1,783,000 cases of canned goods that adds to the surplus. Unsold canned beets amounted to 76 percent of the 1946 pack; leafy greens 89 percent and spinach 43 percent. Snap beans were bogged down with 53 percent of last year's pack unsold and the equivalent of 1,088,750 cases in frozen food stocks; peas were 50 percent unsold with the equivalent of 4,714,200 frozen cases, in addition. And so it goes.

With this situation confronting us, the Government is purchasing for shipment abroad foods which are in extremely short supply, such as grains, flour, fats and dry beans. This tends to hold domestic food costs at a high level while the administration calls for lower prices. I hope these new funds we are appropriating for relief can be so spent that they will help us at home as well as abroad.

Unless the canned and processed foods are moved to clear the warehouses and markets for the disposal of this year's crop, a disastrous chain of events will follow. The farmers have planted and will produce a large crop of perishable vegetables and fruits. If the canners and processors dare not operate on a large scale because of huge unsold stocks, much of these crops will be wasted while large sections of the world go hungry. The farmers will suffer as a matter of course.

The character of foods shipped abroad for relief purposes should be selected from the American point of view as to what is expedient to send and not entirely on the grounds of what is desired by the beneficiaries or what at first blush may seem cheaper commodities.

Canned foods are compact, easily distributed, and do not necessarily have to be cooked. In countries where fuel is as scarce or scarcer than food, this last factor is of real importance.

It is necessary for all branches of the Government to keep in mind the overall importance of promoting domestic economy, if we are to succeed abroad. We must put our own house in order, if we are to continue to feed a large part of the world. Let us therefore ship abroad foods that will ease rather than tighten our domestic markets and production.

Senate Labor Bill Preferable

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 20, 1947

Mr. VURSELL. Mr. Speaker, many of the Members of the House who some weeks ago voted for the Hartley bill, H. R. 3020, did so because they believed it was the wish of the people generally as well as a great many of the rank and file of labor that this Congress should pass legislation that would bring about a greater degree of industrial peace, redefine and clarify the rights of labor, the rights of business, and the rights of the general public. They felt that certain abuses had grown up in the labor movement and that certain labor leaders were exerting too great power over the economy of the country and the rank and file of labor as well. They supported this legislation, feeling certain some of the provisions of the bill would be modified by amendments in the Senate.

I stated on the floor of the House that I felt the bill went too far in its provisions in its restrictions in regard to pensions, health, and welfare funds which have been practiced for many years between employees and employers.

I also stated that I thought the bill went too far in attempting to outlaw industry-wide bargaining. I still believe that in certain instances industry-wide bargaining is absolutely necessary, particularly in the coal-mining industry.

The Senate has wisely stricken out the provision against industry-wide bargaining, and the provision barring the establishing and the administration of welfare funds. These and other changes make the bill more acceptable.

It is my firm belief that the conferees of the House should agree to the position taken with reference to these two matters by the Senate.

There are other provisions of the two bills which are not of such great importance where compromises can be made. It is important that out of the provisions of these two bills there is reported back, to the House and Senate, a bill which is fair to labor, fair to business, and which will protect so far as is possible the general public welfare and the economy of the Nation. With such a bill enacted into law, many disputes between capital and labor can be prevented, and the country can go forward with a greater degree of industrial peace than we have known in the past numbers of years; and with greater production, which is so necessary to the people of our Nation and to the world. All of us want labor steadily employed at high wage levels under good working conditions. The proper kind of legislation fair to all will help labor as much or more than any other group of our citizens.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. BATTLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony by me before the House Subcommittee on Education in favor of Federal aid to education:

There are several important points which I would like to emphasize as we consider Federal Aid to Education without Federal control. My bill, H. R. 1870, is a companion bill of the Senate bill 472 which was introduced by Senaters TAFT, HILL, and others. It is very similar to Congressman MCCOWEN'S bill which is being considered at the present time. These bills are based on the need of our people in the United States for assistance in education. It represents an urgent minimum of help to needy States which is necessary to resurrect our public school systems throughout the Nation. H. R. 1870 would cost the Federal Government $250,000,000 per year and no one is capable of estimating the returns on this investment which seem unlimited. The poorest schools in the poorest districts of the poorest States may yield the richest leadership for world peace.

1. THE PUBLIC SCHOOL CRISIS IN THE UNITED STATES

(a) The spotlight has been necessarily focused in recent years on war and industrial activities. During an international crisis it is understandable how intolerable conditions which exist in the public school systems of the United States could be overlooked and neglected. However, the time has come now when we can no longer afford to neglect any portion of our young people in the Nation, all of whom should be equipped to cope more successfully than we have with national and international problems.

There is hardly a paper or magazine these days which does not point out in some way the neglect of our schools, of our teachers, and the neglect of many of our people in their educational opportunities. In the past few years we have driven professional talent out of school work in wholesale quantities and have discouraged promising young men and women to the extent that only one-third as many people want to make this their life profession today as compared with the early 20's. I am told that about 25,000 teachers in America were paid less than $600 a year in 1945–46. The average teacher's salary over the entire country in 1944 was $1,755. Janitors and charwomen received more consideration. Is there any wonder our teachers are going to more lucrative fields of endeavor? Yet could there be anything more important for all of us than to give mental sustenance and guidance to the youth of our land—the hope of tomorrow? During the period of 1941 to December 1946, the salaries of all other working people were raised 79 percent while the teachers' salaries were raised 31 percent. During this same period, the cost of living went up 55.5 percent and teachers throughout the Nation were already living on substandard salaries. There is not a State in the Union which does not have substandard schools within its boundaries. I understand there are still districts in the rich State of Ohio where teachers are paid $100 per month and often do not receive even this amount on time. We must realize there is a crisis in our public schools of the United States when we see that perhaps 20 to 25 States would come under the provisions of my bill which establishes the need for assistance at only the very, very low standard of $40 annually per child. In harder times perhaps 40 States would fall below this low standard.

It is reported that Great Britain spends twice as much and Russia five times as much of their respective national incomes for education as does the United States, the richest Nation in the world. Can our children of democratic America compete successfully in world affairs with fewer educational opportunities than their neighbors?

(b) A critical point has been reached in the teaching profession. In some cases our educators have felt it necessary to strike to get a livable wage. Are we not to blame for forcing the people of such a basic and noble profession to put their services on a commercial basis in order to force the public to give them enough money on which to live? I contend that we must not force an atmosphere of industrial strife upon the profession which is largely responsible for training and educating our future generation.

2. IS THIS A NATIONAL PROBLEM OR A LOCAL PROBLEM?

(a) We all realize that there is a national as well as a State responsibility of citizenship. It is to our selfish interest to make it possible for young people to meet these requirements so they can be an asset instead of a liability to the Nation.

It was not necessary for me to be engaged in World War II very long to realize that education is a national problem. I could soon see that our success would depend to a large degree upon the knowledge of our civilian army and the quick conversion of their knowledge and skills into a war machine. Is it a national problem when 350,000 young men who registered for the draft could not sign their own names? There is no doubt that at such a time of international crisis we pay a penalty for ignorance. During the past war we rejected almost as many people for educational reasons as we had combat troops in the Pacific. Some 20 divisions with about 15,000 men in each division were rejected, and I have been told that General MacArthur had 22 divisions of combat troops at his disposal in the Pacific. Is it a national problem when this country in 1940 had 10,000,000 illiterates who could not read or write as well as a fourth-grade child? If there was ever a time when education and understanding among the peoples of the world were needed, they are doubly needed in this atomic age to prevent an incalculable catastrophe to civilization.

(b) Do we not all realize that this is a national problem when we consider the great mobility of our people in these United States? As everyone knows, there is an enormous shift in population from our farms to our towns, and from our rural regions to urban regions. I have one State in mind whose greatest export crop is its people—including many students and teachers. This State has exported about 10,000 persons every year for the last 20 years. This will give you an indication of the extreme mobility of our population.

(c) In the past some have objected to similar bills on the grounds that our richer States would receive less in return for their tax dollar than the poorer States. Actually at the present time the richer States without realizing it are getting the better end of the bargain. Most of the population which is shifting to the richer regions are in their productive years, have completed at least high-school educations, and usually have additional occupational training. Consequently it is easy to see that while these richer sections now pay nothing for the education of these people, they gain the benefit of their work and services. Also, many of these richer States make a profit from the natural resources of the poorer States through absentee ownership. Should not the children of both States benefit from the wealth created by the use of capital from one State and resources from another State? In my own district we have a greater share of the State's wealth than most of the other districts and pay taxes in proportion. However, we realize that it would be a very short-sighted policy to build up a few superschools in our district and leave other school systems in the State impoverished. Many States throughout the Nation now operate on the principle of sharing the tax wealth to produce equality in educational opportunities in public schools throughout the State. The same reasoning should hold true for the country as a whole.

(d) If modern transportation and communication have made this one world, then we in the United States live in each other's back yard. We are interdependent in everything we do. One section of the country cannot lag behind another section without dragging the whole country down. This is true in the field of industry and trade and it is even more true in the field of education. The transmission and exchange of ideas and cultural achievements is the greatest source of wealth of this or any other nation. I firmly believe that the relatively small investment which is involved in this bill will yield the greatest dividends ever known to the United States of America. As great reservoirs of mental ingenuity are developed in our poorer States, they will begin to carry their own financial load and will eventually contribute a surplus to the Nation's wealth. I know of no one who has studied this situation who is doubtful about the returns of this investment.

(e) Federal aid to education is not an innovation in American history. We have benefited from more than 150 Federal aid bills during the past 160 years. During the period between 1785 and 1945 there were 31 major educational enactments. One of the latest is the GI bill of rights which was made a part of the law of the land in 1944. In looking back over this Nation's history, one cannot place a value on our land-grant colleges, our vocational education program, the GI bill of rights, or the other enactments mentioned above. Even the material value is too great to be measured. Actually, H. R. 1870 fits into this great traditional pattern of education in the United States.

3. FEDERAL AID AND STATES' RIGHTS

(a) This bill has very zealously guarded the rights of our individual States. Although we have a general over-all pattern of education, still each State has grown up with its own traditions and has a peculiar contribution to make to the culture and security of the Nation. This bill states specically that the Federal Government shall not "seek to control in any manner, or prescribe requirements with respect to, or authorize any department, agency, officer, or employee of the United States to direct, supervise, or control in any manner, or prescribe any requirements with respect to, the administration, the personnel, the curriculum, the instruction, the methods of instruction, or the materials of instruction, nor shall any provision of this act be interpreted or construed to imply or require any change in any State constitution prerequisite to any State sharing the benefits of this act."

(b) This bill is so worded as to encourage the initiative of individual States and provides for an element of comparison and competition with other States in educational achievements. There are three paramount factors involved in the distribution of the funds which will go to the individual States. First is the number of children between the ages of 5 and 17, second is the effort that each State makes, and third is the ability of the individual State to provide for educational opportunities. The normal effort of any given State is judged to be 2.2 percent of its total income for educational purposes. Incidentally, the average effort for the States at the present time is 1.1 percent of total income for educational purposes, so you see the individual States are stimulated to make a greater effort on their own. According to the provisions of this bill, if any State falls below 2.2 percent then the amount of money coming from the Federal Government is reduced proportionally. Consequently, the penalty for dropping below the normal effort is designed to encourage State initiative. This is as it should be in my opinion. It was interesting to note an article in the Washington Post recently by Walter Lippmann in which he was pointing out that the poorer States that have the lowest educational standards are in the highest bracket of effort—that is, the highest proportion of their tax dollar goes for educational purposes.

(c) I believe that we can dispel our fears about the Federal Government usurping State powers in this field of activity when we study our vocational-training program for adults which receives Federal aid. I have never heard a complaint about the Federal Government misusing its powers gained from the appropriations of money to be used for vocational training in individual States. If this bill did not have what I consider adequate safeguards for State control over the spending of this money and the administration of its own educational program I would be against the entire bill. However, I am not worried about this bill on this score in the least. I believe our States' rights are adequately protected. Also, I have faith in the professional integrity of our educators and faith in each of our States to do a good job.

4. H. R. 1870 AS A DEFICIENCY BILL

In summary, let me say that in my opinion this bill, H. R. 1870, should be classed as a deficiency bill. To me it seems like it is something we have been owing to the people of the United States for a long time and have not paid them. To me it seems like a bipartisan responsibility to alleviate the intolerable conditions in the field of education which exist today. The fact that 14 such bills have been introduced in the House of Representatives and 5 such bills with multiple sponsors have been introduced in the Senate indicates the magnitude of this problem. It is so important, there is so much at stake, and the yield promises to be so great that I sincerely believe it behooves us to act favorably upon this or a similar Federal aid-to-education bill. Our national security in time of war, our economic prosperity, our capacity to lead the world to peace—these draw no State lines.

Navaho Indian Problems

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks I should like to include in the RECORD a portion of a letter sent to me from Mr. Philip Johnston, of 2335 Norwalk Avenue, Los Angeles, Calif. Mr. Johnston is most interested in the problems of the Navahos which are after all the problems of the Federal Government. I do not believe that if we give careful consideration to the story as it is presented in this letter alone, we can fail to agree that some prompt and definite action should not be taken by the Members of this Congress. I quote herewith from this letter:

Washington's record of treaty observance with foreign governments has been exemplary, but you may be surprised and shocked to learn that Washington has blandly disregarded the most vital part of a treaty concluded with the Navaho Nation in 1868. Article VI of this covenant promises that the Government will provide one school and a teacher for every 30 Navaho children between the ages of 6 and 16 years. After a lapse of nearly eight decades, the facilities set up for this purpose accommodate only 5,500 of the 20,000 children of school age.

Results of our Government's failure to fulfill this promise have been tragic, and today the Navahos find themselves in a desperate situation. The tribe numbers 55,000 and is increasing at the rate of 1,000 each year. Four-fifths of these people are illiterate and utterly incapable of securing employment at decent wages. The reservation is for the most part a barren wasteland, restricted by nature to stock raising and very little agriculture. The Government undertook a com-

pulsory stock-reduction program without making any provision for substitute vocations. Most Navahos are sick, hungry, and miserably housed. In 1940 the average per capita income was $80.89, as compared with a national average of $861 for that year. Even including the value of home-grown products, food consumed was only about $1 per week per capita, which comprised less than 1,200 calories. The Navaho Reservation has become "America's black spot"—and the blame for this condition rests squarely upon the shoulders of Washington. The time has come for a show-down. We intend to find out, definitely, if a treaty entered into by the United States is worth the paper it is written upon.

I am speaking for a large group of Navaho marines who were trained under my direction for secret communication in their native tongue—a service that materially shortened our war against Japan, saved thousands of American lives, and billions of American dollars. Many of those Navaho marines made the supreme sacrifice on the battlefield to uphold the principles of international morality and impartial justice. The survivors have returned home to find conditions on the reservation even worse than they were when they entered the service, and they know that the sole blame rests with the United States Government. At the same time, they see our Government pointing a finger of scorn at other nations who violate treaties. Is it not entirely logical for them to reach a bitter conclusion that Uncle Sam is a plain, unvarnished hypocrite?

Prompt and decisive action by Congress on the Navaho problem is imperative. There must be no further economy at the expense of covenants entered into by Washington. Preliminary estimates show that an expenditure of more than $50,000,000 will be required to establish the school facilities promised by the treaty of 1868. Disaster to this outstanding nation of first Americans must be averted by a comprehensive program of development for their reservation. To be sure it will be costly—but America has always been lavish with her gifts to the "needy" in every quarter of the globe. However, in this case, we are not appealing for generosity. We are insisting, Mr. POULSON, that the United States Government live up to its treaty obligations.

World Trade Week—Statement of Secretary of State Marshall

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Honorable George C. Marshall, Secretary of State, on the occasion of the observance of World Trade Week, May 18–24, 1947:

The keynote of World Trade Week in 1947 is World Trade Unites Nations; a theme particularly appropriate for a time when the need for unity among peoples is more vital than ever before in history. National leaders are urgently seeking unity in all the fields of international relations—political, security, and economic. Economic conflict and trade wars invariably set the stage for political disunity.

Representatives of 18 trading nations are meeting now in Geneva in a concerted effort to achieve unity through expansion of world trade and the resulting increases in production, employment, and improvement of living standards in all countries.

Although the United States Government has taken a leading part in bringing about this meeting, a successful conclusion can only be realized through the cooperation of all participating nations. At Geneva these countries are seeking to lower excessive trade barriers and are engaged in drafting a charter for an International Trade Organization, to insure international cooperation in commerce. Agreement on this charter will mark a great step toward economic stability and the common security.

Farm Income Must Be Kept High

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. VURSELL. Mr. Speaker, as a Member of Congress from a Midwestern State, I often wonder, during the few moments of relaxation which a Congressman has, where do we go from here?

The war is over, but the promised postwar peace for which many of our young men gave their lives is still in the distant future. The recent demand of the President for financial and even military aid to Greece, the prospective demand of other nations for similar aid, and other factors, such as our own national debt of $260,000,000,000, indicate that there are many problems ahead.

I am not one of those who feel that all is lost. I have an abundant faith in our American system of government and our potential resources from which to repay the national debt while at the same time having a period of prosperity and full employment.

The United States has 6 percent of the population of the world but our efficiency and natural resources make it possible for us to produce and consume 25 percent of the world's production of physical goods. This, in terms of production and price, represents roughly 47 percent of the world's dollar business. Last year our Nation had a national income of $165,000,000,000, enough to balance the budget and maintain the highest standard of living in terms of goods ever enjoyed by any people. To obtain this huge production we spent less than 5 percent of our national income for imports of products to supplement our own natural resources. With such abundance it would appear that there is no need to fear the future if we operate the United States in a businesslike manner.

To me that means a program along economic lines, and fiscal policies which will make it possible for our annual production of goods and services to create a national income large enough for prosperity and a solvent national budget. It is up to us Members of Congress to initiate such a program. Surely it does not make sense to those whom we represent or to the citizens of other nations for the United States to have a depression. With the resources to produce 95 percent of everything we need within our own Nation ours is a problem of business management.

We all remember the depression of the thirties and many of us remember the depression in 1920–21. A repetition of those depressions must be avoided at all costs.

We also remember the days of the so-called New Deal or the lend-spend program with all its fallacies and ideologies, many of which are not yet extinct.

Mr. Speaker, in my opinion we are still in a state of confusion and should take the time out to get our bearings in order that we may return to the basic principles upon which our Nation was founded.

Benjamin Franklin, one of those immortals who guided this Nation in its early history, once said approximately that a nation can become wealthy in one of three ways:

First. By war or by taking away the wealth that other nations possess.

Second. By trade, which to make a profit requires cheating.

Third. By the development of agriculture or the planting of seeds which create new wealth as if by a miracle.

With the United States having the finest form of government in the world and resources which have given us the highest standard of living known to man we should avoid the first method.

In my opinion, our present course, that of trying to expand our trade with other nations, is one fraught with many pitfalls and danger of financial losses. I agree with Franklin in regard to becoming a wealthy nation through trade. I, for one, do not wish to have the United States to become rich by exploiting other nations. Trade is essentially the exchange of goods, and if we give and receive equal value there is no profit. We can, of course, trade for things which we need, but in doing so we should not expect to take in exchange the goods produced by slave labor or by international investors bent on exploiting other nations.

Our course should be to expand and develop our agricultural resources, the greatest of any nation in the world, thus bringing about an ever-recurring cycle of new wealth with each new crop. That was the foundation upon which the United States grew and prospered. If we carry through on our present attempts to expand our foreign trade we must take in exchange farm products from a world that is hungry.

Mr. Speaker, 85 percent of the economy of the rest of the world is based on production of farm products. Expansion of foreign trade, therefore, must take place at the expense of our own agricultural industry. In displacing our own agriculture we will destroy the very source of wealth which we need to remain a prosperous nation. To do so will mean financial ruin and economic chaos for the United States.

My reasons for this conclusion are definite and factual. In 1941, testimony was presented before a committee of Congress, in which it was pointed out that in the United States we have $7 of national income for each $1 of gross farm income; and that if we didn't have the initial dollar of farm income we

would not have the $7 of national income. To me the reading of this testimony was revolutionary in its approach to our economic problems. Since that time the Raw Materials National Council of Sioux City, Iowa, has continuously reiterated the ratio of approximately 1 to 7. Others have taken it up and Tom Linder, Secretary of Agriculture from the great State of Georgia, has used it in his market bulletin. To my knowledge the relationship has never been refuted. I have attended several meetings at which Carl H. Wilken, economic analyst for the Sioux City organization, has presented a detailed analysis of the formula. It not only sounds logical but seems to be supported by the facts. I have personally checked the records of the United States and find that this seven-times turn of our farm income has been in existence for the 25-year period 1921–46. During this period we have had prosperity, depression, and war. And, in spite of all special legislation for labor, agriculture, and the lend-spend program, the ratio of $1 of gross farm income and $7 of national income has continued without interruption.

Mr. Speaker, there are those who ask the question, Does the farm income come first? To me that question is academic. The growing of crops and livestock must precede the operation of approximately 70 percent of our economy engaged in the production, processing, and distribution of the annual products of our soil. Suppose we were to discontinue agriculture in the United States. Our Nation would soon be a land of hunger and want.

A few days ago, I received a copy of a statement presented to the House Committee on Agriculture by Mr. Wilken. In his statement he offered, in conjunction with Dr. John Lee Coulter, to appear before any committee of Congress with detailed data as to the importance of agriculture in our economy. Dr. John Lee Coulter is considered one of the leading factual economists in the United States and has a record of which any man might be proud. In my opinion, these two men have carried on the most complete study of our economy that has ever been made. I feel that the people of the United States need their help and as Members of Congress I feel that we should avail ourselves of the information which they can give us. To me the ratio of $1 of gross farm income and $7 of national income will clear away our economic confusion and open up a new era of prosperity for ourselves and the rest of the world.

Mr. Speaker, with this positive ratio in existence proper prices for our agricultural production become a must measure. A prosperous agriculture will mean a prosperous United States as a foundation for the reorganization of the economy of the rest of the world. It ought to be self-evident that we cannot bring about permanent recovery for the world by giving our goods away or making loans which will never be repaid. We must help the rest of the world to help itself. With 85 percent of the rest of the world dependent on agriculture the first step must be proper agricultural prices so that they may earn the income to expand their production. This will require many years, but with a steady and constant income from agriculture a war-torn world can rebuild a new era upon the wreckage of war and exploitation. The ratio of our own agricultural income to national income can be used as the yardstick to measure the economy of every nation. Instead of economic confusion we can rebuild the world with arithmetic as a guide and economics will become a science instead of conflicting theories based on greed and wishful thinking.

With 80 percent of our labor force engaged in other work than agriculture they think in terms of cheap food. The seven-times turn of gross farm income proves to me that there is no such thing as cheap food. As farm prices decline because of the seven-times turn of the farm dollar all incomes decrease in ratio, and the cost of living when measured in terms of per capita incomes does not decrease with lower farm prices. For example, I have the record of food expenditures for 3 years on the basis of percentage of national income. In 1929 the American people spent $19,000,000,000 for food, or 22.8 percent of our national income of $83,300,000,000. In 1932, the low point of farm prices during the depression, we spent $12,100,000,000 for food, or 30.3 percent of the national income of $39,900,000,000. In 1945 we spent $31,800,000,000 for food, or 19.7 percent of the national income of $161,000,000,000. All of these figures are from the United States Department of Commerce.

To me they prove the accuracy of the seven-times turn of the farm dollar and the precedence of farm income for national prosperity. As farm prices go up we create the national income with which to buy the food and the additional income for durable goods and services. With low farm prices we approach an existence standard of living. This fact is clearly proved throughout the world. With agricultural prices in the Far East and China creating an income of less than 20 cents per day there can be nothing else than hunger and starvation.

Mr. Speaker, the trade turn of the farm dollar clearly proves the fallacy of our foreign economic policy. The State Department is making every effort to reduce our tariffs, which will in turn reduce our farm prices to world levels. The result will eventually be another depression because of a reduced farm income. Our loss in national income will be in a sevenfold ratio to the reduction in our farm price level as a result of the competition of an existence standard of living in other nations. Then we will become fertile soil for the ideologies of communism. It might be well for the Members of Congress to realize that the Communists believe that free trade is the road to communism. For the information of the Members of Congress I would like to point out that Karl Marx in a speech at Brussels in the nineteenth century favored free trade. Not, however, to promote world peace. Marx favored free trade because he felt that the destructive results of such a policy would hasten the day of the economic revolution. The bankruptcy and poverty in the rest of the world would indicate that Marx was right.

At the present time we are concerned about the spread of communism. The best weapon against this ideology is the economic leadership which will bring about prosperity. Prosperity will destroy communism and in my opinion it is the only means other than force of arms to combat the disease.

The growth of the United States has put us in a position of world leadership. It should be our goal to teach the benefits of our system of free enterprise to the rest of the world. To achieve this goal our foreign economic policy should be one in which we maintain our price level and with it as a yardstick reorganize world economy on a price level equal to our own. Then the rest of the world can have the prosperity which we have indirectly promised them in the Atlantic Charter.

Mr. Speaker, the seven-times turn of the farm dollar proves to me that we have a foreign economic policy which is just the opposite of what it ought to be.

Therefore let me say again, I think it is time that we get at the facts in order that we may chart a steady course based on arithmetic rather than theory.

Instead of our present program of reducing our farm prices to world levels, let us send out a message that will ring around the world. A message which will open up the full resources of production and at a price that will permit the higher standard of living that we talk about and must bring into being.

Instead of fears of surplus and continuous predictions of lower prices from our Department of Agriculture, let us tell the world that the way to prosperity is work and production priced at a level which will permit consumption. Then and not until then will we have started on the road to prosperity as an example for the world to follow.

MEMORANDUM

A FEW PERTINENT FACTS

Ninety-five percent of our national income is spent within the United States. Five percent is spent for imports to supplement our domestic production.

Eighty-five percent of the economy of the rest of the world is agriculture.

To expand our foreign trade above the natural level of need we must either give away our exports or we must accept farm products in payment.

The propaganda that the trade agreements will increase our exports of farm products is an insult to our intelligence.

But, in our economy each $1.00 farm income creates $7.00 of national income.

Reduction of tariffs on farm products will mean lower farm prices, a lower national income and a reduction in our standard of living.

Karl Marx favored "free trade" because he believed it would create the economic chaos which would hasten the day of the economic revolution.

CARL H. WILKEN.

WASHINGTON, D. C., *April 11, 1947.*

Hon. CHARLES W. VURSELL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: I am very much concerned about the seemingly organized drive by the administration and industry to reduce price levels and especially the price of raw materials.

All the research work of the Raw Materials National Council of Sioux City, Iowa, over a period of 10 years points clearly to the im-

portance of raw material income. The record of the United States for 25 years proves that farm income is the governing factor in our economy in a ratio of 1–7. In other words, that each $1 of gross farm income will generate $7 of national income.

We find also that the combined farm and mineral income or the income from new wealth production constitutes the profit of our annual economic cycle.

In other words, this drive to reduce raw-material prices means a reduction in our national income and a reduction in our annual profit on all capital investment.

As you know, we have a national debt of $260,000,000,000. If this debt is to be serviced and repaid it must be from the production of new wealth from our natural resources. At the present time the Federal budget requires approximately 20 percent of each dollar of national income.

If our national income is reduced to $100,000,000,000 we will have to pay 33 percent of each dollar of national income to meet the Federal budget. Such a condition is unthinkable and we would find ourselves in a state of financial chaos.

In some way or other the Members of Congress from our raw-material producing States must organize to prevent a repetition of the 1920 cry "we must come back to normalcy" which brought on the drop in farm prices and the closing of many of our banks in the Midwest and other raw-material producing States. The Members of Congress from the Midwest, South, and West must join together to stop this move before another depression is upon us.

Farm prices and the price of other raw-material products must remain high if we are to have the national income to meet our national debt and maintain our standard of living. Not until our national debt has been materially reduced should we think in terms of lower prices.

I feel that the attitude of those who wish lower prices is the result of the economic fallacy that living costs are too high. This is not the case. Higher farm prices ratio into increased per capita income and on the basis of our buying power today, we have a lower percentage of our national income going for food than in either 1929 or 1932. The actual figures are as follows:

1929: 22.8 percent of the national income was spent for food.

1932: 20.3 percent of the national income was spent for food.

1945: 19.7 percent of the national income was spent for food.

Lower raw-material prices will mean a lower national income and a surplus from underconsumption, a depression and the collapse of our system of free enterprise.

As a Member of Congress you can point out the danger to those whom you represent and also to those who are responsible for the demand for lower prices, the road to a depression.

Yours,

CARL H. WILKEN,
Economic Analyst, Raw Materials National Council, Sioux City, Iowa.

Will the Conferees Nullify Labor Legislation?

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. BREHM. Mr. Speaker, during the days and weeks in which I was using my best efforts to help write labor-management relations legislation, I did not concern myself with attempting to write legislation which President Truman would sign or one for which certain Members of the other body would vote, in order to override a veto. Mr. Speaker, I was interested in three basic objectives.

First, I was interested in the workers themselves—in seeing that they were dignified and given some individuality and in helping to protect them from exploitation by certain unscrupulous labor leaders as well as to protect them from being used as chattels by certain unscrupulous industrialists.

Secondly, I was interested in protecting an innocent public of 125,000,000 Americans, who belong to no trade-unions but who have been punished and caused to suffer many times because of pig-headedness of both labor leaders and industrialists; and

Thirdly, Mr. Speaker, I was interested in seeing that both labor and management were given equal rights and opportunities under the law in defining unfair labor practices.

Mr. Speaker, I was and still am positive in my own mind that if we give to the individual worker the right, without fear of coercion or intimidation, to express himself freely and openly without fear of losing his job or being discriminated against in some other way, as well as permit him to hear both sides of the question, that the rank-and-file workers themselves will correct many of the evils which undoubtedly now exist between labor and management. In an effort to do just that for the working men and women we wrote into the House bill 18 provisions which we termed "a bill of rights for the workingman." To me, Mr. Speaker, this provision is the heart of the bill and primarily the provision which caused me to support the House bill.

Now, Mr. Speaker, if we retain those rights for the individual worker, the second objective which I had in mind, namely, of protecting an innocent public, will automatically be achieved or accomplished. So far as my third objective was concerned, namely, between labor leaders and industrialists, if they are given equal rights to sit down and bargain collectively across a table, I have no fear that either one of them will be pushed around very much. I am confident that both of them are quite capable of taking care of themselves.

Now, Mr. Speaker, I realize that a person cannot believe everything which he reads in the papers, but in Sunday's paper, Monday's paper, and yesterday's paper I noted wherein certain of the House conferees on the pending labor legislation have stated that they were willing to concede the bill of rights, which is contained in the House bill. Mr. Speaker, I based my entire argument for supporting this bill on that bill of rights. I mailed out 71,000 speeches stating the 18 basic fundamental rights which were accorded to the rank-and-file workers. I received back two postal cards and one letter disagreeing with my position. In other words, Mr. Speaker, I am confident that the people of America do not give very much of a hoot for any national or international labor leader and are almost equally indifferent toward certain overlord industrialists. I am also convinced that they, like myself, are interested in the underdog. Those folks who many times are called out on strike, receive decreased pay checks, are forced and compelled to walk picket lines, contrary to their own best judgment, but who because of the fear of being penalized or punished by their leaders go along meekly and calmly.

Mr. Speaker, each of us owes a responsibility to the folks back home—to the folks of America whom we are honestly and conscientiously trying to serve, at least we have taken an oath to serve them to the best of our ability. We are not being true to those folks or true to our oath or obligations if in writing any legislation we bring in the argument as to whether or not it will be acceptable to the President of the United States or to some Member of the other body, or to some labor leader or to some industrialist. The question which we must ask ourselves is, Will this legislation protect the American public and those who are responsible for production in order that the public may not be punished, or their safety and interest jeopardized I, for one, am perfectly willing to assume my full responsibility and to vote for a bill which in my humble opinion will accomplish these things which are most certainly needed, and the testimony which our Labor Committee received proved is needed, than I would to vote for a gesture of a bill just for fear the President might veto it or one or two Members of the other body, who seem to take delight in running off the reservation, would not support. That is their responsibility and not mine, Mr. Speaker.

Now, Mr. Speaker, if we are not going to protect the workers from paying exorbitant initiation fees, as much as $1,500 in some instances, as well as exorbitant union dues; if we are going to permit mass picketing and violence; if we are not going to protect the individual worker and his family from intimidation, coercion, yes, and even from assault; if we are not going to give the worker the right to go to and from his work without being molested in that journey; in other words, Mr. Speaker, if we are still going to permit the worker to be exploited by certain of his leaders and used as a chattel by certain industrialists, just what have we done in this bill except to appease certain leaders and certain industrialists. Mr. Speaker, I, for one, am opposed to any program of appeasement for anyone; either a thing is right or it is wrong and I, for one, have always taken a stand one way or the other and have avoided appeasement. I trust that I may always continue to do so.

Mr. Speaker, we give the power of injunction to the Federal courts wherein we state that if and when conditions arise which seem to jeopardize or interfere with the public, health, safety, and interest, that the President may do so-and-so. Now, Mr. Speaker, the President of the United States has that power

already given to him in the Constitution, if and when any condition arises which seems to jeopardize the welfare of the Nation, to step in and take appropriate action. He does not need any power of injunction from this Congress to do those things which on their face quite evidently are not for the best interest of the Nation. Mr. Speaker, I am convinced, as previously stated, that if the same rights of free speech are accorded to management as is accorded to labor leaders; namely that they can appear before their workers and state their side of the question, just as labor leaders state their side, and that the workers are then free by secret ballot to vote without fear of reprisal from either management or labor, that we will get along mighty well in this country.

Mr. Speaker, we are not going to accomplish the objective or the purpose which we had in mind by attempting to pass legislation which will punish certain labor leaders. We have seen that tried in the past—we saw it in Pittsburgh, where the leader was arrested and put in jail. Did that solve anything? It did not; it simply caused thousands of workers to walk off the job and to stay off the job in protest because their leader had been arrested. I am convinced that thousands of those who walked off the job did so involuntarily simply because they feared the consequences if they spoke up or continued to work.

Now, Mr. Speaker, if certain articles which I have seen in the paper are true, it would appear that certain members of the conferees are attempting to arrive at a solution or produce a bill which will please the President of the United States, which will please two or three wild mustangs in the other body, which will not be too repulsive to labor leaders, and which will pacify certain industrialists. Well, Mr. Speaker, if that is to be the objective of the conferees they are not going to accomplish anything worth while, so far as settling labor-management differences are concerned. Even if the President would sign it, and even though certain labor leaders and industrialists were apparently appeased, nothing would be settled and the arguments would go on as before, with the public holding the bag.

Mr. Speaker, I do not want to say positively that I will not support the report of the conferees if the bill of rights for the working men and women is stricken from the bill, but I do say in all sincerity that it will be mighty hard for me to support it if this provision is stricken. It would certainly put me in a most embarrassing position to base everything upon the fact that something had been done for the workers which, if granted, would, in my opinion, protect the public, and then to have that provision stricken from the bill and still expect me to go along with it.

Now, Mr. Speaker, if we are not pleasing either labor leaders or management; if we are not granting constitutional rights to the workers; and if a long-suffering public is not being granted relief under this proposed legislation, then just for whom are we attempting to legislate?

Mr. Speaker, it may be that the papers are not correct in their quotes; at least I do not intend to definitely commit myself until I have read the report and analyzed the bill which comes from the conferees. However, again I say that if the bill of rights is stricken from the House bill it will be mighty hard for me to support the conference report unless it does more to help settle labor-management relations problems than I believe will be accomplished if this provision is stricken from the House bill by the conferees.

Since the Fulton Speech

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1947

Mr. SPRINGER. Mr. Speaker, there are many problems confronting the American people, today; the same will be true on tomorrow. It appears that many of the utterances of the past, when compared with the more recent statements, cause much speculation, and, in some respects, much confusion. A very interesting article appeared in the Washington Post, of recent date, by Walter Lippmann, relating to some of these statements which may be of immediate interest to many, which I am extending as a part of my remarks herein.

Therefore, Mr. Speaker, I extend my own remarks in the Appendix of the RECORD and include the article to which reference is made, as follows:

TODAY AND TOMORROW

(By Walter Lippmann)

SINCE THE FULTON SPEECH

Nearly a year ago, at the end of June, the Prime Minister of South Africa, Field Marshal Smuts, delivered an address at the Pilgrim's dinner in London. Little attention was paid to it at the time, but a short news report to the New York Times said that he had pictured "the world of tomorrow as divided into two great power groups, with the British group between them," and that he had said that it was the task of the British Empire to interpret "the one to the other, thus preventing war."

The significance of that statement was not appreciated either by the State Department or by the American public, though a statement of that sort would not have been made idly by an Empire statesman at a Pilgrim's dinner.

Prime Minister Smuts was speaking only a few months after Mr. Churchill's speech at Fulton and shortly after Secretary Byrnes had been converted to the thesis of the Fulton speech and had begun to act on the idea of an Anglo-American front throughout the world against the Soviet Union. The policy of the Smuts speech was so radically different from that of the Fulton speech that few Americans at the time were willing to believe that it was more than a vagrant expression of a personal opinion.

Most of those who professed to speak with knowledge and authority about British affairs have kept on insisting that only a few back benchers of the left and some "crypto-Communists" and fellow travelers take the view Smuts stated—that the interest of Britain is not to aline itself with the United States against the Soviet Union but to take an independent line.

So they felt sure that the so-called Truman doctrine, which descends directly from the Fulton speech, would be received with enthusiasm in Great Britain. It should have been if the fashionable and official estimate of Britain was correct. But in fact the Truman doctrine has had a generally unfavorable reception in Britain, as it has almost everywhere else in Europe, though for reason of expediency rather than of conviction, the expression of the unfavorable opinion has been restrained, and indirect, except, of course, on the far left.

Now, however, events are beginning to show that the Smuts speech of last June, rather than the Fulton speech and the Truman doctrine, indicate the direction in which British policy is evolving. There has been the royal visit to South Africa, where Smuts is Prime Minister. There is the recession of Britain from Greece, Turkey, Egypt, and Palestine. There is the economic agreement with Poland, and the British negotiations with the Soviet Union. There is Mr. Churchill's speech last week wherein, as he advocated a united Europe, he spoke of "we Europeans," and asked the dominions and the United States to give their blessing to Britain's new role, which is "to play her full part as a member of the European family."

These are portents which we shall ignore, or explain away, only if we are determined not to know what is going on in the world. The royal family did not go to South Africa in order to escape the cold weather in England but to mark and to promote the change in the Empire and the revolution in imperial strategy. In South Africa, which is an immensely rich and undeveloped land, Britain may find the means of becoming, despite the liquidation of the Indian and Near Eastern Empires, an independent great power in the world. The British people have been great too long to accept passively the role which was assigned to them in the Fulton speech, and is implicit in the Truman doctrine, that of the little brother in a fraternal association with us.

As they withdraw from the old imperial positions, they are looking for new ones. They are withdrawing from Asia into Africa as regards their overseas empire. They are moving forward into Europe as regards the British Isles. They are drawing closer to France. They are not allowing the iron curtain to shut them, as we have allowed it to shut us, out of Poland. They will not abandon, and they will probably strengthen and renew, their alliance with the Soviet Union.

None of this means, I need hardly say, that they are divorcing themselves from the United States. But it does mean that they are not accepting the ideological pattern and the political consequences, which Mr. Churchill laid down at Fulton and President Truman adopted a year later. I think it is fair to suppose that they regard the Truman doctrine as a wrong way to do a right thing, and in its reckless overtones an aberration, due to inexperience, which this country, as it reflects upon it, will replace by a much more constructive policy based on the actualities of the world.

I have no doubt myself that this is what is going to happen, as we reexamine and reassess our position, the general commitments which have been made for us so rhetorically, and the enormous responsibilities and burdens which we shall soon have to meet.

President Should Also Be Concerned Over Problem of Surplus Potatoes

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 7, 1947

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following editorial from the Monday, May 19, edition of the Mobile (Ala.) Register:

PRESIDENT SHOULD ALSO BE CONCERNED OVER PROBLEM OF SURPLUS POTATOES

President Truman says he is deeply concerned over the recent rise in farm land prices.

At his request Secretary of Agriculture Anderson has called a conference for June 9 which the President hopes will bring "a specific program of methods of discouraging further inflation in farm real-estate prices and unwise expansion of farm debts."

Department of Agriculture figures show an increase of 92 percent in farm land prices over the 1935–39 level, of which 12 percent occurred during the past year.

President Truman's concern may be quite justified. A wild boom and terrific crash in farm land prices could leave many American farmers in distress, an experience which came to many after the First World War.

However, if the President is concerned about farm land prices, he should also be concerned about another farm problem—the potato surplus. The dumping and destroying of a large quantity of potatoes—an estimated 50 tons—in Baldwin County the past week underscores the potato surplus problem.

Secretary of Agriculture Anderson spoke at a dinner in up-State New York last week. Among other things he said: "In recent weeks, we have seen some fairly stiff attacks by press and radio upon farm prices and upon governmental price-support policies. We are now supporting the prices of only three commodities: potatoes, eggs, and dried skim milk. Surely those three commodities do not add a great deal to the cost of livin. * * * It is only because we have price support in the background that farmers dare produce the tremendous volume of food and fiber they are now turning out."

At all events, surplus potatoes produced under a price-support program are being dumped at a time when food is acutely needed in various foreign countries and when this country is apparently getting ready to spend $350,000,000 more in foreign relief, apart from the $400,000,000 for assistance to Greece and Turkey.

We wonder if this state of affairs adds up to much businesslike sense in the mind of the average taxpayer.

Representative PAUL W. SHAFER, Republican, Michigan, is pushing a resolution for a study of the potato-surplus problem.

He said the other day "the Department of Agriculture still is following a 'plow-'em under' policy on potatoes," that the potato surplus this year is 100,000,000 bushels, "a large part of which went to waste."

Mr. Shafer spoke also of the cost of potato price-support: "This year we are spending $80,000,000 on potato-support prices because of a 100,000,000 bushel potato surplus. Now, $80,000,000 may seem like chicken feed in these days of billions for loans, grants, and gifts to other nations, but it is still a very imposing sum to most Americans and if we could cut out this expense without hurting the potato farmer we would be doing the Nation a great service."

Finally he asked this question: "Why talk about price reduction when we waste 100,000,000 bushels of potatoes, pay out $80,000,000 in subsidies, ship out 500,000,000 bushels of grain, causing our own flour and bread prices to go up?"

Since Mr. SHAFER did not do it, we invite the Truman administration to answer this question in the timely campaign it is conducting for lower prices.

I Am an American

EXTENSION OF REMARKS

OF

HON. J. LINDSAY ALMOND, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. ALMOND. Mr. Speaker, the welfare of our country demands that the American people be ever mindful of the obligations and responsibilities of citizenship.

A relentless conflict of ideologies, seeking to gain mastery over the minds of men, rages in the arena of world thought and action. It has never been more true than now that eternal vigilance is the price of liberty.

The spirit and purpose of I Am an American Day should not be permitted to subside with the conclusion of a formal celebration. The force, power, efficacy, and virtue of democracy as a dynamic living force at work, at home and abroad, must be America's answer to every antithetical concept or philosophy which seeks to overthrow our system and supplant our way of life.

Our obligations and responsibilities as Americans, the fundamental principles upon which they rest and through which our system must endure, were graphically analyzed and eloquently proclaimed in a sound, forceful, and able address delivered by our distinguished colleague, the Honorable TOM PICKETT, of Texas, May 18, 1947, at Roanoke, Va., on the occasion of the celebration of I Am an American Day.

Under leave to extend my remarks in the RECORD, I include Mr. PICKETT'S address I Am an American:

The phrase "I Am an American" has a connotation of its own and a meaning distinct to every individual who gives voice to it. Nevertheless, when we speak those words and realize the meaning of the phrase there comes to every individual a feeling that within their concept are certain fundamental principles and inalienable rights that we possess, as citizens of these United States, separate and apart from those of any other nation.

It would not be news to you for me to relate the details of the spontaneous origin of I Am an American Day set aside as the outgrowth of scattered celebrations in various parts of the Nation, beginning as long ago as the year 1915. It is of no moment in the full meaning of the phrase that it was first observed by the Immigration and Naturalization Service in 1939; or that on May 3, 1940, the third Sunday in May of each year was set aside officially by resolution of the Congress and Presidential proclamation as I Am an American Day. It would serve no purpose to review fully in these brief moments the constitutional guaranties of citizenship, with all of the implied rights and privileges, both to the native-born and to those who possess such citizenship by naturalization. Notwithstanding, articles I and II, together with the fourteenth amendment, in their respective sections and clauses, express the intent and purpose of the framers of the Constitution and those responsible for the amendments in that regard. Similarly, it is of no great consequence that the first Naturalization Act was passed March 26, 1790. Numerous other acts were passed shortly thereafter, and they have been amended from time to time.

It does become worthy of note to reflect upon the benefits bestowed on the citizenship of this Nation, native born or naturalized, by reason of the extension of that privilege to every individual. But in the consideration of those rights and privileges, we must not forget that every right has its corresponding duty and every privilege has its concomitant responsibility.

A small group of men, John Adams, Benjamin Franklin, Roger Sherman, Robert R. Livingston, and the incomparable Thomas Jefferson, to whom is ascribed the authorship of the document, in whose hands was entrusted the task of drafting and phrasing the Declaration of Independence, had that principle in mind throughout the disposition of their labors. That fact becomes self-evident from the reading of the document itself. The second sentence reads, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." When read in connection with the last sentence, "And for the support of this declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes and our sacred honor," we discover a direct recognition of that principle. It is an acknowledgment that the inalienable rights of life, liberty, and the pursuit of happiness carry with them the duty on the part of all individuals to maintain those rights with our lives, our fortunes and our sacred honor.

The Constitution, composed of the original seven articles, bespeaks that same principle commencing with the preamble: "We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America." The first 10 amendments to that constitution, known as the Bill of Rights, specify by their delegation of and their restriction on the powers therein referred to the principle which we are discussing. Each succeeding amendment, becoming a part of our Constitution from time to time by its ratification in the prescribed manner, continues to enunciate the principle, both directly and indirectly.

An effort to discuss in full the rights enumerated and reciprocal duties attendant, the privileges bestowed and corresponding responsibilities implied by the whole document would be an herculean task, requiring more of your time than discretion dictates should be taken. Perhaps a less monumental undertaking more in keeping with your preference will serve the purpose of imparting to you some of the meaning to me of the phrase "I Am an American."

With what are we endowed by the guaranties of life, liberty, and the pursuit of happiness? And what are our own obligations

in respect to our possession and maintenance of that endowment?

None is so naive to believe that our greatest bounty, life itself, is bestowed on us by other than the great Giver from above, or that its perpetuity is a creation of man. We do, however, in these United States hold most dear life's safeguards provided within the scope and by the concept of our institutions. Constitutional and statutory guaranties make it certain that the privilege of living and living unconfined is preserved, save only that it may be denied as a result of proper proceedings upon a judgment legally found for commission of defined transgressions willfully committed against the society of which we are a part. No man may be so free in the exercise of his privileges of citizenship as to commit unrestricted violence on his neighbor. Having been apprehended, however, in violation of those principles so plainly engraved in the thoughts of honest citizens that they need no elucidation in the statutes of this country, though they are there for all to see, it may become obligatory in the course of extraction of justice to require that the transgressor's life or freedom be taken in forfeit. If such be the case, we know it was the result of a considered judgment by a jury of our peers and not because of the arbitrary whim of a reigning despot. It is incumbent upon us to defend our right to live. It is equally imperative that we be as ardent defenders of that same right of our neighbor.

We do not guarantee the perpetuation of life, because that is a matter for the hand of God only, but He helps him who helps himself. In the course of our national evolution, from the earliest days of the Republic until the present, we now stand astride the world with the most potent of all institutions for scientific research and development. Those who have toiled in them have searched again and again through almost insurmountable difficulties to find the answers for a successful combating of the diseases which have wreaked their havoc on mankind since before the dawn of history. As a result of the God-given talents and tireless efforts of those who have enjoyed the privileges of citizenship in this country, among them a number not native born, there has arisen many an aid to the extension of life's span beyond the normal scope in other spheres. Today citizenship on this soil carries with it insurance of the longest life expectancy in the world. It, therefore, becomes our obligation to nurture, foster, and assist in every way possible by our own contributions the preservation and extension of that privilege to humanity.

What liberties do we possess and what obligations do we own for their continued maintenance? We are entitled to the free prosecution of any religious belief dictated by the individual conscience. Whether we be Protestant or Catholic, Jew or gentile, sectarian or nonsectarian, no man may proscribe our religious belief and avid practice of our belief. One of the basic tenets of a good American is the partnership of God and man. No citizen can be a good American who fails to pay homage to God for the bounties He has bestowed on this Nation individually and collectively. That is as true as that no citizen can be a good American who abjures the principles of the Constitution. Devotion to the laws of God and the laws of the United States is both separate and inseparable; devotion to the two is concomitant to being a good American. You and I, who may follow our religious conscience at will, must respect the same privilege for our fellow man and accord him the same freedom we choose to demand for ourselves without an effort to suppress that of another.

Again, we exercise the privileges of free speech and are allowed an unrestricted press, save only for treasonable utterances, slanders and libels. We may differ with an executive, with a legislator, or a judicial officer in the performance of his duty. We may criticize him for a failure of performance. We may find fault with our neighbor and be assured that it is one of the privileges we enjoy as American citizens. In turn, we have the duty to preserve for our fellow men the same prerogatives we accept for ourselves.

We are a democracy within a republic. Titles of nobility are prohibited under our system. That is true whether the title be one of hereditary origin or one conferred by our Government. We recognize neither prince nor kingdom, overlord nor serf. Our ancestry is of no consequence. It is what we are that matters. No significance is attached to whence we come; it matters only whither we go. We as citizens can seek the highest or the lowest office in the land and be successful in our efforts, if it is the will of the constituency to whom we make our appeal. That right is prohibited none only in that article I of the Constitution provides, "No person except a natural-born citizen, or a citizen of the United States, at the time of the adoption of this Constitution, shall be eligible to the office of President." We may be Senator, a Congressman, a member of the United States Supreme Court, a governor, a clerk or a recorder, an enforcement officer or any one of a hundred other cogs in the wheel of governmental progress, if we are favored by the electorate. If we do not choose to seek the office, we have the right to aid in choosing him who may hold the office; if we comply with the regulations properly invoked, prescribing the privilege to vote. That is our great American system of selecting those who shall administer the affairs of state, both national and local. That right to serve in public office or aid in the selection of him who does serve, places on our shoulders the responsibility of selecting one who exercises the most careful and candid judgment in keeping with American ideals in order that we may preserve the institutions which have lived so long and prospered so well on this continent.

Within the limits of our own talents, energy, initiative, and ability, we may pursue with success a chosen profession or occupation. There is no more exemption from unremitting toil here than there is in any other country; no more surcease from the struggles and heartbreaking disappointments common to mankind on these shores than elsewhere. There is the assurance we can wage the battle. There is no guaranty that prosperity will ensue from our efforts, but there is the guaranty that we may make the effort. We must, therefore, maintain for those who will come after us the right to toil, earn, and accumulate without paying toll and tribute save of our own volition.

We may become educated or remain illiterate; we may travel even to the extent of becoming nomads or remain at home; we may work or we may idle; we may exercise our own will in many things; we may not prohibit to others those things we choose for ourselves, nor may we enforce upon others the responsibilities we are not willing to accept. These and many other things are our liberties which we are bound to preserve with integrity for the benefit of others who may seek to do likewise. To exercise our rights and shoulder our responsibilities is a duty upon every citizen. To do otherwise would be but to put in reverse one of the basic tenets of good government, that "the people should support the Government—not the Government support the people."

In the pursuit of happiness, which is founded upon the right to life and liberty, we are bound only by the restrictions that we shall not invade and transgress upon those who seek to do likewise or violate the general welfare. No man can enjoy life or liberty on these shores without some happiness ensuing; nor can he be happy without the right to life and liberty.

The ultimate of happiness may be achieved only if we have faith in America; faith in its institutions; faith in its future; faith in Americanism. In the course of human events, in the course of internal and international relationships, it has been necessary too many times for the sons of this Nation to take up arms to preserve the privileges of citizenship in a free America. No words of mine can adequately portray the glories of the accomplishments of those who have given so much in life and life's blood to that task. Just 2 years ago the armed might of our country brought to a successful conclusion the most costly and destructive of all wars. Those who went forth to do battle for preservation of the guaranties of citizenship which we, at times, accept so lightly, had faith. Many have not come back. We can be grateful that those who have returned did so with renewed faith in the full knowledge that the future of this Nation lies in the future; that there is no happiness if we dwell in the glories of the past, decry the decadence of the present, and express hopelessness of the future.

We cannot accept the benefits the young men and women have bestowed upon us by the victory they have won without assuming the responsibility for carrying on with them shoulder to shoulder the current struggle to resist other isms seeking the overthrow of the fundamental of all Americanism. We, the new citizens of this Nation, by our oath of allegiance, expressed during the naturalization proceedings or implied when we reached man's estate, have forsaken allegiance to all beliefs and institutions save those upon which this Nation was founded and prospered. There is no place in America for fascism, nazism, communism. There is no place in America for the hyphenated American; the German-American, Polish-American, French-American, Italian-American, Chinese-American. We can be Americans or non-Americans; we cannot divide our allegiance and be both for there is no middle ground. We are either Americans or we are not. There is a place only for Americanism. We owe the duty to maintain with our lives, our fortunes, and our sacred honor the future of America wherein this happiness may be found.

All those things have been constructed, maintained and will be preserved to our posterity if we sustain the spirit of liberty. That is the spirit which brought all our forefathers to these shores and now has brought you. This spirit of liberty is the spirit of Him who centuries ago attempted to teach mankind a lesson which it has never learned, but a lesson it has never quite forgotten; it is the spirit of America, which has never been and which may never be, which never will be except as the courage and conscience of American citizens create and preserve it; the spirit that lies concealed in some form in the hopes and aspirations of all; the spirit which, fostered and nurtured, continues to grow for the future. It is in that spirit I ask you again to repeat in silence to yourselves the pledge of allegiance, with full appreciation of its meaning to the man who can say with pride, "I am an American."

Unification of the Armed Services

EXTENSION OF REMARKS
OF
HON. GEORGE J. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following editorial from the Lowell (Mass.) Sun of May 15, 1947:

MERGER DISGUISED

One of the most important pieces of legislation to the people of this country at the present time is the proposed National Security Act of 1947. This is commonly known as the armed services merger bill. It is now being considered by the Armed Services Committee of the Senate and the Committee on Expenditures in the Executive Departments of the House.

The Truman administration is exerting every effort and trying every political trick to force this legislation out of the committees and enact it during this session of Congress. It is President Truman's bill. It is the most important bill he has yet sent to Congress, and in all likelihood the most important he will introduce during the remainder of his term of office.

On the whole, this merger bill is opposed by at least 90 percent of the professional Navy and Naval Reserve officers as well as a goodly percentage of the Army and Army Reserve officers. It is presented to Congress and the American people as a plan desired by both the Army and the Navy. Nothing could be further from the whole truth. It is mainly desired only by a few military men at the top who believe that they can achieve a few selfish ends and gain in power and personal prestige through some such organization as is demanded in this bill. Some want to control the whole military organization and through that control actually then control the country.

There is no question but what the policy of the Navy Department and the policy of the War Department is that of supporting this bill, and it is widely publicized that this bill represents an agreement between the War and Navy Departments, but let's look behind this agreement.

In the first place, if there ever was a "shotgun marriage," this is it. The President has used his power to force his Secretaries of Navy and War to resolve their respective differences and agree on some kind of a plan. They have been told to do this or else—

On January 16 they sent a letter to the President stating that they had made this agreement; however, about all they did then was agree to agree and had worked out a general outline of agreement. This National Security Act of 1947, the result of this agreement, certainly is not agreed to by the vast majority of the men in the Navy, plus a goodly number in the Army and Army Air Corps. Furthermore, and this is important, neither the Navy Department nor the War Department has made any effort whatsoever to find out how the professional officers as well as the Reserve officers feel about this matter; instead they have boldly announced this merger as the policy of the Navy and War Departments.

In fact this policy represents only two or three men at the top, while the thousands and thousands of men who have to shoulder the responsibility of making any defense plan operate efficiently and smoothly have had absolutely nothing to say regarding this proposed bill. This is clearly wrong and should not be tolerated, and the Congress should be the first to realize it is wrong and the Congress should act accordingly.

This merger bill calls for the creation of a Secretary of National Defense who has absolute power over all of the Military Establishment of the United States, as well as all industry and all manpower in time of war. If established, this Secretary of National Defense would have the power to be a military dictator of the Nation.

We have never experienced or tolerated in this country the granting of such power. The powers of this proposed Secretary of National Defense are tremendous and very far-reaching. And it is highly questionable whether the creation of such a powerful person in the military organization would give to the United States the best possible military policy. In time of war he would control the Nation.

Another questionable feature of this proposed legislation is the establishment of an independent Department of Air. In other words, this bill is said to be a merger bill but instead of merging, it actually is in a sense expanding the military forces from two departments to three departments. Again it is very debatable whether or not the establishment of an independent Department of Air is the best policy for the defense, and the offense of the country in time of war.

It is well known, and it has been well illustrated by the recent war that air power must be closely integrated in every way and in every detail with the operation of the Army and the Navy if it is to be most effective. To make air power independent so that it does not need to take orders except from its own commanders and can ignore requests of other service commanders seems to be a step in the wrong direction consistent with a well-integrated military policy.

It is well to consider this situation from the viewpoint of 10 years, 15 years, or 20 years in the future. You may be assured by this time there will be no such thing as piloted aircraft in warfare. The striking power of the strategic air force of the last war just ended was great bomber fleets. In the future war it appears that this striking power will be completely accomplished through the use of rockets, directed missiles, fly bombs of all types, homing projectiles, flight torpedoes, pilotless aircraft, and other forms of radio-directed weapons and electronics. In the short space of 10 years, it is quite possible there will be no need whatsoever for a separate Department of Air in the National Military Establishment.

All air weapons are weapons used not only to force destruction upon the enemy but to reduce resistance to the point that the ground and surface forces may take over the enemies' territory. As a result it is most necessary that these air weapons be under the complete control of the Army and Navy, however they choose to use them.

No service should be limited in the use of any weapon. Neither the Navy nor the Army should be restricted in any way in the employment of weapons used by the other service. Neither should be restricted in any way to the area of operations of the other service. Both should give the utmost assistance possible to the other service in the successful performance of their assignments just as they did in the last war where we even found the Navy assisting in the crossing of the Rhine.

Veterans of Foreign Wars Approve Continuation of State Department's Informational and Cultural Program

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, I am pleased to insert in the RECORD a copy of a letter from National Commander in Chief Louis E. Starr, of the Veterans of Foreign Wars of the United States, to the Honorable KARL E. MUNDT, chairman of the subcommittee of the Foreign Affairs Committee, expressing the approval of his organization of H. R. 3342 to continue the State Department's cultural and informational program.

The VFW endorsement of this program, along with that previously expressed by the American Legion puts these two great veterans' organizations on record in behalf of this vital and necessary project. It is my hope that the House will consider the wishes of these two outstanding organizations and accord its approval to H. R. 3342 so that the Voice of America will not be silenced but will continue to give to the world the true picture of our country, our institutions, and our ideals.

MAY 20, 1947.

Hon. KARL E. MUNDT,
Chairman, Subcommittee of House Committee on Foreign Affairs,
House Office Building,
Washington, D. C.

Re H. R. 3342.

MY DEAR MR. MUNDT: This is to express the interest and approval of the Veterans of Foreign Wars of the United States with respect to a bill introduced by you and identified as H. R. 3342.

The Veterans of Foreign Wars strongly approved and supported the organization and charter of the United Nations and it was my privilege to represent our organization as consultant to the American delegation in San Francisco, Calif. In my opinion adherence to the purposes of the United Nations and its charter requires a participating nation to establish and maintain a cultural relations program. Therefore, it would seem to be not only good judgment but an obligation for the Congress of the United States to establish a valid basis for the development and continuation of a cultural relations program which includes explanatory broadcasts by this Government concerning its ideals and way of life.

It was my privilege and pleasure to issue a statement in support of President Truman's proposal for aid to Greece and Turkey, which proposal has been approved by the Congress and is sometimes referred to as the Truman plan. In my opinion, if the so-called Truman plan is worthy and deserving of the support of the Congress and the American people then, by the same token, there should be established and maintained a program of cultural relations with the necessary authority and appropriations to broadcast explanations of how and why we do certain things in the United States.

I am hopeful that your committee will favorably report H. R. 3342 and that it will eventually be approved by the Congress and signed by the President.

Respectfully yours,

LOUIS E. STARR,
Commander in Chief.

Copy to Hon. MIKE MANSFIELD, Member of Congress.

Why Not Another Bond Drive—This One for Peace?

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. SADOWSKI. Mr. Speaker, several days ago a very interesting article appeared in the Washington News written by Mrs. Eleanor Roosevelt. I have

read and reread it a dozen times, and each time I am more impressed with the suggestion—$250,000,000,000 to win the war; why not ten billions to win the peace? There is a small minority in the United States that can only think in terms of war, but I know that the overwhelming mass of American people are praying and thinking in terms of peace. Some of our people are thinking only in terms of rebuilding Germany and looking forward to reaping millions of dollars worth of profit out of the investments that they shall make in German industry. Of course, they will be able to hire labor at slave wages; likewise they will not be subject to the heavy income taxes in the United States. It is a grand and golden opportunity to make millions of dollars in profits for a short while. Europe is so devastated and the market is unlimited, but in 10 or 15 years from now there will come another German leader who will rally his people to kick out the American exploiters. By that time Germany will be powerful and even stronger than she was before World War II. She will have the advantage of all the advanced American methods of production.

Yes; then will come another Hitler, Kaiser, Bismarck, or Frederick the Great. Another German leader will arise to expel the British and American investors, and take over the new and powerful rebuilt Germany. Then will come World War III.

Where will we look for allies? Who will be with us? Can we expect the support of the nations who were the victims of Nazi aggression? We must give those nations who were our allies an opportunity to rebuild their economy now. They should not be made to depend upon German industry again. They will never understand why the United States had forsaken them for Germany.

I am very much disturbed and fearful over our present policy. It seems to me that the only result of this policy will be a flock of American "Made in Germany" millionaires, and the pay-off will be the enmity of Europe, and another German war in 20 years from now.

The article follows:

(By Eleanor Roosevelt)

NEW YORK, Thursday.—In my mail yesterday I found a letter which the writer told me he was sending to several people in the Government, and I can't help thinking that it makes sense, so I publish it here:

"This is John Q. Public talking—talking about the price of peace.

"Like millions of other Johns, I bought Defense bonds because I didn't want to see war come to us.

"And then like millions of other Johns, I bought war bonds because I wanted to end the war as quickly as possible.

"Those billions of dollars helped doctor a sick world, but the ravages of that illness are still with us. The distress, the suffering, the famine, the fear of millions of Johns and their families in Europe and elsewhere is almost beyond the comprehension of the Johns of the still fabulously rich United States.

"Since distress, suffering, famine, fear is the mixture that creates the Hitlers of history, obviously the ravages of World War II are the festering grounds for World War III, or the great holocaust. Obviously, too, the pattern will be repeated and we will have defense bonds and war bonds.

"Why wait? Why wait for defense bonds and war bond drives for World War III? Why wait and blow our bond money into the faces of our brothers in other parts of the world? Why not have a peace bond drive now and blow our bond money into the mouths, the hands, the living hearts of the people in distress?

"Are the glories of war so great that we would more willingly buy bonds to win a war than buy bonds to buy a peace? They say it will take $10,000,000,000 to straighten out the economics and straighten up the backs of the distressed nations of the world. That's only the price of a few days of World War III.

"Let's have a peace bond drive now and raise that $10,000,000,000. Let the 'arsenal of democracy' demonstrate its love for peace as well as its strength for war. Peace bond drive now—or war bond drives later. Is there a John Q. Public anywhere who would hesitate in his choice?"

The suggestion made by Henry Wallace in Paris that a loan to the U. S. S. R. might be made through the International Bank under given conditions does not seem to me such a foolish idea, for certainly the U. S. S. R. is a much devastated country and must need a loan as much as any other country.

However, I can't help feeling that we really ought to make a loan, not of money but of men as well. Our best and brightest young executives in every field should be picked by their superiors who know their ability. They should be made responsible for producing results through a comprehensive loan which would really begin to rehabilitate the world.

It is a tremendous dream, but I think the time calls for more imagination and for dreaming on a vaster scale than we have ever had before. It's men with energy and ability backed by the resources which they know this country has, who can swing a gigantic economic program such as we face today in the world as a whole.

Nine Hundred Thousand Elks Fight Un-American Activities

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report by Algird Kazemekas, exalted ruler, Naugatuck, Conn., Lodge, No. 967, BPOE:

NINE HUNDRED THOUSAND ELKS FIGHT UN-AMERICAN ACTIVITIES ON SEVENTY-NINTH ANNIVERSARY; GREAT PATRIOTIC ORDER DECLARES WAR ON SUBVERSIVE GROUPS

In every part of the United States, from Hawaii to Georgia, the Benevolent and Protective Order of Elks, celebrating its seventy-ninth anniversary this month, is fighting against communism, the Ku Klux Klan, and all other groups of malcontents who are bent on destroying our form of government. The campaign is making considerable progress, according to a statement from Grand Exalted Ruler Charles E. Broughton attending an Elk conference in St. Louis and received this week by Algird Kazemekas, exalted ruler of Elk Lodge, No. 967, in Naugatuck.

"We have here the greatest and happiest country in the world, with the highest standard of living ever known," said Mr. Broughton, Wisconsin newspaperman. "It is up to all of us to protect what we have so painstakingly built and the 900,000 members of this great patriotic body are doing just that in a vigorous campaign reaching into every corner of the country.

"We have already caused the revocation of the charter of the Ku Klux Klan in Wisconsin and Georgia and we are working toward similar action in all other States where this un-American organization has raised its head. The Indiana Legislature has unanimously gone on record favoring the outlawing of any organization like the Klan based on hatred and prejudice.

"One of the spots where the Communists are most aggressively trying to seize control is Hawaii, perhaps because that is our great bastion nearest to Russia, the home of communism, which kills the spirit and enslaves the individual. In Honolulu, the Elks lodge, 1,900 strong, has gone into a relentless battle to save our American institutions, appropriating $10,000 from its treasury and enlisting the active support of every civic, religious, fraternal group and club in the islands. Elsewhere other Elk lodges are fighting the subversive elements just as grimly and vigorously."

From every platform where Mr. Broughton has spoken in his swings around the country he has spread the warning of America's danger and the gospel of patriotism as against a doctrine of hatred. "It is very pleasing to note the cordial reception I have received at the hands of the press in all parts of the country in this campaign to bring government closer to the people and to maintain the freedoms for which so many have given their lives," he stated.

"Created on February 16, 1868, by 15 New York actors as a social and mutual assistance organization, the Order of Elks has become one of the greatest patriotic bodies in the history of our country, fast approaching the million mark in membership and maintaining lodges in 1,450 cities in every State and Territory in the Union.

"The history of the Elks is a stupendous story of good will and good acts. Without any religious, political, or commercial angles, the Elks have gone quietly about their work of enhancing the welfare of their fellow man in a manner which has saved countless lives and brought cheer and happiness to millions of unfortunate people. One of the smallest of the Elks' contributions to American welfare has been the raising among their own membership of $70,000,000 which they have given, without any strings attached, to people in need of help.

"During World War II their work was priceless in maintaining 155 fraternal centers near military camps where they entertained, fed, and housed millions of service people, in addition to their work of enlisting 97,000 Navy Seabees, 36,000 Army engineers, and thousands of nurses and air cadets. The order is now cooperating with the United States Army in a national campaign to encourage enlistments in our new land forces. As part of their peacetime program the Elks are taking care of sick and wounded war veterans in 300 hospitals and will continue to do so as long as there is a single veteran in a hospital.

"The work the Elks did during the war is one of the reasons the order has grown from 490,000 in 1941 to more than 900,000, including thousands of World War II veterans."

Buying on Credit

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 21, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I

wish to include an editorial, Buying on Credit, which appeared in the Washington Post, Washington, D. C., on May 21, 1947:

BUYING ON CREDIT

At the end of March the oustanding volume of consumer credit—i. e., installment credit, service credit, single payment loans, and charge accounts—reached a record total of $10,000,000,000. That is an increase of 44 percent for the year and double the amount of consumer credit outstanding in mid-1944. Despite this great expansion, however, the Department of Commerce points out that the volume of consumer credit is still far below what might be expected on the basis of prewar relationships to income.

There are a good many reasons for the rapid growth of installment loans and charge accounts during the past year. Relaxation of the Federal Reserve Board's consumer credit regulations has had some effect in encouraging expansion. Another important reason for the recent rise in consumer credit is the increasing supplies of durable goods, such as automobiles and household equipment, that are usually bought on time. Finally, the public is running out of surplus cash acquired during the war years when prices were controlled and there were fewer goods for civilians to buy.

The last named cause of the upturn in the volume of consumer credit is currently attracting a good deal of notice. Some observers are inclined to view the trend with alarm as indicative of a buying slump ahead, with a subsequent decline in business activity. At any rate, there is considerable evidence to support the view that the country is returning to a prewar pattern of consumer buying, with credit rather than savings being used to bolster up buying demands. The sharp rise in living costs since the end of price control has made inroads on current incomes and earnings, thereby reducing the savings capacity of the people. For instance, in 1940 the average family saved about 10 percent of its net income. In the last war year, 1945, nearly 24 percent of family income was saved. Since then the rate of savings has declined until it is estimated to be back at the prewar 10 percent average level. Furthermore, the lower income groups have been especially hard hit by the rise in prices, with the result that their capacity to save—never great—has doubtless been seriously impaired, and in some cases destroyed.

Thus while the volume of consumer credit is still limited in relation to the total net income of the buying public, danger signals are being hoisted. For the rise in consumer credits, coupled with evidence of increasing consumer resistance to high prices, indicates that we canont rely upon hoarded or current savings to support a business boom at the inflated price levels now prevailing.

The rise in consumer credits also emphasizes the need for caution in extending loans for purchases of nonproductive consumer goods, and underlines the desirability of legislation that would provide for permanent consumer-credit control by the Federal Reserve System. At present such controls rest on an Executive order of 1941. It is reported that the Federal Reserve Board is preparing to recommend the immediate dropping of all remaining controls if Congress adjourns without enacting permanent legislation to extend its regulatory powers in the consumer-credit field.

It is to be hoped that the Board's repeated request for congressional action will be heeded. For control over consumer credits can help to check unsound expansion of this type of lending and can be used either to restrain consumer spending in boom periods by tightening restrictions or to stimulate buying in periods of depression by a relaxation of restrictions. As stated in the Federal Reserve Bulletin some time ago, consumer-credit regulation, "along with more fundamental measures for promoting economic stability, continues to be a form of governmental action that serves an important public purpose."

Resolution Adopted by Board of Aldermen, Chelsea, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a resolution adopted by the Board of Aldermen, Chelsea, Mass., in which they endorse the movement of the Massachusetts Allied Veteran Housing Council for the immediate alleviation of the housing shortage:

Resolutions endorsing the movement of the Massachusetts Allied Veterans' Housing Council for the immediate alleviation of the housing shortage

Whereas the crisis of not having proper American homes, not only for the civilians but also for the veterans and their widows and children; and

Whereas there seems to be no need of the bottleneck caused by the nonmovement of necessary materials to construct homes for the people of the United States, except for the apparent jockeying of various political leaders; and

Whereas recently there was formed in our State the Massachusetts Allied Veterans' Housing Council, which is attempting to bring together the American Veterans' Committee, the American Veterans of World War II, the Disabled American Veterans, the Jewish War Veterans, the Marine Corps League, and the Veterans of Foreign Wars; and

Whereas the national office of the American Legion has declined to join the local council because of their national policy and not because they are opposed to the aims of the local council; and

Whereas the Massachusetts council is approaching the solution of the shortage of homes

First: By the passage of the Taft-Ellender-Wagner bill which would make probably ten million low-cost housing units at the rate of one million a year, and

Second: Construction of veteran housing projects by municipalities as authorized by the legislature.

Therefore the Board of Aldermen of the City of Chelsea, Mass., endorses the aims of the Massachusetts Allied Veterans' Housing Council.

Resolved, That a copy of this resolution be sent to the President of the United States, the President of the United States Senate, the Speaker of the National House of Representatives, His Excellency Governor Bradford, Senate President Nicholson, House Speaker Willis, Senators Lodge and Saltonstall, Congressman Lane, State Senator Melley, and our Representatives Kamens and Cronin, and the Massachusetts Allied Veterans' Housing Council.

JAMES A. HANLON.

We Must Tell Our Story

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. LANHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial in the Atlanta Constitution on Sunday, May 18, 1947, entitled "We Must Tell Our Story."

I concur heartily in what Mr. McGill has to say and believe that we should by all means maintain our program of information to let the world know the facts of life about our American way of life.

WE MUST TELL OUR STORY

(By Ralph McGill)

Last year one soap company in this country spent $30,000,000, mostly on the radio, to sell soap to the women of this country.

I offer no objection.

But, I do offer objection, not as a Democrat or Republican, but as an American, to the proposal that this country shall not be allowed to spend as much money on a program of information—not propaganda—which lets the people of the world who do not have access to our newspapers and domestic radio know the facts of life about this country.

I want them to know that we are not a nation of imperialists, militarists, gangsters, and boors, as the Russian propaganda service daily informs Europe and South America. I want them to know we are not a nation of Hollywood divorcees; that our daily fair is not race riots and strikes.

I want them to know those things when they occur, but I also want them to know we are a nation where dams are built, where wheat is grown, where children are fed milk; that we have artists, musicians, orchestras, writers, and good well-meaning people who want peace and have a way of life they believe is best productive of a good standard of living and peace.

Who is on my side?

Secretary of State Marshall, speaking out of his personal experience in China, Russia, and other parts of the world, says it is vital.

Secretary of Commerce Harriman, former Ambassador to the Soviet Union and the Court of St. James's, declares it necessary.

General Eisenhower, Admiral Nimitz, out of their own experience, view as imperative the need for better understanding abroad.

Present Ambassador to the Soviet Union, Bedell Smith, puts it first on his priority list.

It is ridiculous to assume these men would declare vital anything which was "leftist" or unnecessary.

It has been said it does not reach an audience.

Who says so?

Not a single person who knows.

The Russians say they are hearing it. Marshall Tito publicly and officially has commented on the fact his people were listening. Thousands of letters, commenting on the program, asking for further information about America, seeking information about missing relatives, have been received.

About 84 percent of almost half a million such letters asked to be put on the mailing list for schedules. In the first 4 months of this year almost 80,000 such letters have been received in 14 languages. Keep in mind it is difficult to write such letters from many countries.

WIRE SERVICES

It is argued our news associations can do it. That is preposterous.

They send a schedule of news. But editors who receive it select what will sell their papers. Tommy Manville's tenth marriage gets a play. So do lynchings in Georgia and the exposé of the latest Hollywood love nest.

In a trip around the world in 1945 I saw the children and adults of Turkey, China, India, Egypt, Australia, Iran, and of European countries flocking to see educational movies of our farms, steel mills, factories, and home life; flocking to see our books, magazines, and pictures. It is true, too, in South America.

I saw it again last year in Germany, Italy, and Greece.

A short while ago I had a letter from independent and incorruptible newsmen who were amazed to see in Peiping, Singapore, Rangoon, and Saigon how eagerly the people were devouring facts, not propaganda, about the United States. All over the world the hunger for American books and information is great. Shall they receive only books from Russia and other nations?

There has been so much of pettiness in opposition to this program of information.

Those who disliked OWE transferred their dislike to this service. It is not the same. OWE and OWIAA had about 11,000 personnel in the last year of the war, OIC has 3,000 and I submit the responsibilities are as great.

FAIR PLAY

I believe in fair play. Yet, some of the opponents of this service which Secretary of State George Marshall declares to be vital, attack its director, William Benton, because, of all things, he was a partner of Chester Bowles 12 long years ago. As far as I am concerned Chester Bowles is looking better every day as a prophet, but he has nothing to do with William Benton or the OIC.

They attack a selection of pictures from modern American art. I don't know how good it was and neither do the chief critics. The answer seems to be that in Czechoslovakia, where it currently is being shown, great crowds have seen it and a request has been made for an extension of its stay.

There is petty and unfair criticism of its programs.

The critics made this error. They forget the fact the programs are aimed, not at Americans who know about their country, but at peoples ir other lands who don't. The programs must be keyed to that fact.

That there have been errors and inefficient acts I am sure is true. The personnel is human.

During the war this country spoke with a loud voice.

In peace it is even more important that her real story be made known and she speaks loudly, but factually, so that in all the confusion and clamor of ideologies there may be one sure voice speaking out for the American ideal and way of life, letting the world know the light still burns in the torch of liberty and freedom for the individual man.

Price Increases

EXTENSION OF REMARKS

OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial, A Promise Unfulfilled, which appeared in the Winston-Salem Journal, Winston-Salem, N. C., on May 20, 1947:

A PROMISE UNFULFILLED

Republican leaders who fought so hard to abolish OPA, and finally succeeded, assured the people that prices would come down as a result of higher production, once all Government control of prices was discontinued.

The record proves, however, that this is another promise that the Republicans in Congress have failed to keep. Statistics show that on May 10, this year, the general level of wholesale prices was no less than 30.2 percent higher than on June 30, 1946, when the old OPA act was permitted to expire. By groups of commodities the wholesale price increases have been as follows during this period:

	Percent
Farm products	25.7
Foods	42.1
Hides and leather goods	34.7
Textile products	27.2
Fuel and lighting	18.9
Metals and metal goods	26.1
Building materials	37.1
Chemicals, allied goods	33.6
House furnishings	16.2
Miscellaneous	21.5

The big increases came last year in farm products, foods, and textiles, while this year the largest price increases have been in metals and metal goods and building materials.

It was promised that building construction would be stimulated if industry were given full and free play. So far in 1947, however, building has declined, and present predictions are that 1947 will see the accomplishment of only about two-thirds of the program set earlier for this year. Producers and the public alike have been deterred from going ahead by high prices, of labor as well as of materials.

According to F. W. Dodge Corp., construction contracts awarded in 37 States east of the Rocky Mountains in April dropped 18 percent below the volume reported for the corresponding month last year.

The Necessity of Soil Conservation

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. COOLEY. Mr. Speaker, a short while ago I had the pleasure of attending a banquet given by the adult farmers of one of the fine agricultural communities of my district. The banquet was attended by a large number of men and women who depend upon the arts of agriculture for their livelihood and who know at least a little something about the mysteries of the good earth.

At this banquet I had the privilege of hearing one of the best speeches I have ever had the pleasure of hearing on the necessity of soil conservation. The speech was delivered by a 14-year-old freshman from the Youngsville High School, Franklin County, N. C.—Wiley Mitchell, Jr. His delivery was magnificent. The young man spoke with all the poise and ease of an experienced orator. In fact, the speech was more impressive because it was delivered by a very manly young man who was still a youth of tender age. As he spoke to his adult audience, the thought came to me: "A little child shall lead them," for, in fact, a little child not only led but ably discussed one of the most important problems which at this time faces the people of our great Nation.

I commend to you, the Members of Congress, and to the country the able discussion by my young constituent, Wiley Mitchell, Jr., of the subject The Necessity of Soil Conservation:

It has been said that all mankind is within 8 inches of starvation. This means that only the top 8 inches of the soil is fertile enough to be productive. Is not this ample proof that if good health is our No. 1 need, then soil conservation is surely our No. 2 need. Two of the main objectives of the good-health program are a sufficient, well-balanced diet for every man, woman, and child in the United States, and the proper maintenance of a healthy body by periodical medical treatment. The same is true of our soil. To be productive it, too, must have not only a sufficient amount of plant food, but also the economical maintenance of a fertile, well-kept soil, by proper treatment and conservation.

In communities or sections where soil conservation is practiced, you will find progressive and prosperous farmers, whose families live comfortably in attractive, well-kept homes. This is made possible by profits derived from luxuriant crops growing upon fertile, well-kept soil. It is in such communities that you will find good schools and churches, a high community spirit, and a still higher standard of living. Why, you ask? Because these farmers have availed themselves of the vast store of knowledge on soil improvement furnished by their Federal, State, and county departments of agriculture. They have put this knowledge to work and have found that the more they do for the soil, the more it will do for them.

But despite all this wealth of knowledge to be had for the asking, there are still far too many sections where the soil is abused, misused, and robbed of its fertility. A reconnaissance erosion survey in North Carolina in 1934 showed that more than three-fourths of the land area of this State had lost about one-fourth of its original fertility. By practicing the known methods of conservation, this could have been prevented.

Conservation measures are of three types: Work on the land to protect it against erosion; improvement of the land by crop rotation, diversification, and other treatments; and use of the land in accordance with its needs and adaptabilities, as well as its physical capabilities.

There are two main types of soil erosion. In one the soil is washed away. This type is known as water erosion. An example of this form of erosion would be the Blue Ridge Mountains. Once these mountains stood 30,000 feet high; now they are less than one-third that height. The soil has been worn away, carried to the ocean by numerous streams and rivers. The same is done on all our soil; piedmont, mountainous, and even our coastal plains are affected. About 38,000,000 million acres of once-productive farm land in the South has been so badly eroded and wasted that it is now unfit for cultivation. If we are to live and prosper, if mankind is to exist, this must be stopped.

Sheet erosion, our second type, is caused by wind and water. This type may be illustrated by the dust storms of our Middle Western States. This illustration is not typical of most forms of sheet erosion, however. In most cases the soil is moved a little at a time. That is why it is not noticed until it is too late. Forest projects or some close-growing crop will not only serve to prevent erosion, but will also put the otherwise idle land into production.

The South contains 28 percent of the country's area. It is a region with an abundance of natural resources. It has a mild climate, suited to growing crops, and a large population. Yet the South is known as the poorest region in the United States. Why? Because we have failed to control two of our deadliest enemies, erosion and depletion. If we wish to raise our low rating in the Nation we must put to work every known method of reducing wastefulness.

Improvement of the soil is an important step in the conservation program. This may be done by crop rotation, diversification, and other treatments.

What is meant by crop rotation? This means that the crops follow each other in systematic succession from year to year rather than in irregular order. For example, a common rotation in many parts of the corn belt is corn, wheat, and clover, the crops following each other regularly in the order named. Each crop grows on a given field once in 3 years. Crop rotation has numerous advantages, one of which is that the different crops take different amounts of the various plant foods and organic matter from the soil. The change of crops prevents the using up entirely of any one element in the soil. Other advantages are that insects, plant diseases, and weeds are more easily controlled, equipment is used more efficiently, and man and animal labor is more evenly distributed, as well as more effectively used.

There are certain rules that must be followed in successful crop rotation, however. The first to consider is to use crops best suited to the soil, climate, and market conditions. And most important of all, crops that have an even distribution of labor throughout the different periods of the year. We must grow plants that will give to the soil rather than take away, and crops that have the highest yields for the least amount of labor.

Crop rotation and crop diversification are almost synonymous, as the latter means the growing of a variety of crops instead of only one or two, while the former means "to vary in succession." Diversification means, in other words, that instead of planting on the "one crop system," a farmer should have several more crops on which he can depend in case his money crop fails. These varied crops not only give the farmer a better chance of making a profit, but also aid in enriching the soil. Therefore, diversification is rotation. If a farmer is carrying out the principles of rotation, he will naturally have more than one crop planted on his farm. Then, he is more able to adjust his crops to meet consumer demand.

The relationship between land and people is inevitable. Poor land means poor people. The whole social and economic status of the South and of the Nation is influenced by this relationship. There are enough farmers in the South who have kept their farms in first-class shape to show the possibilities of all southern farmers, if they are willing to work. On farms where yields bring hardly enough to pay for the cost of production, what else can we expect but poverty, disease, and ruin? If we are to raise our southern standard of living, something must be done about these poor conditions.

Facts show that more than one-tenth of our southern cropland, or 12,500,000 acres, should be taken out of cultivation, because it is too steep and too erodible for cultivation on safe terms. This land could be made profitable by adopting a forest or permanent pasture project. Both are cheap means of accomplishing two main objectives of every farmer; preventing erosion and putting otherwise idle land into production. A good crop of timber may be grown in about 20 to 25 years, while a well-developed pasture can be used indefinitely.

There are 6,275,769 acres of land in the South that have soil-conserving treatments, but 16 times as much land remains untreated. In round figures, of the 100,000,000 acres of farm land in the South, only about 6,500,000 acres have soil treatment. This means approximately 95 percent of the farm land in the South is not being properly used, cultivated, or preserved. What does this do to our standard of living? What will this mean to future farmers?

Our natural resources are our second line of defense in our country. Our great efforts today to safeguard our hard-won liberty and to preserve the rights and privileges for which our country has fought call for large amounts of equipment and supplies. This means that there is a greater demand for our natural resources and most of all, food. During these critical times of readjustment and rehabilitation, when America feeds not only herself, but the countries of Europe and Asia as well, the draw on these supplies is tremendous.

America can meet the ever-growing demands upon her only if she to a man puts into practice all the wealth of knowledge available to her. We can get the most out of the Nation only by putting the best efforts and practices to work in it to try to realize the greatest gains. Can this be accomplished when 95 percent of our southern farm land is rapidly becoming a depleted delapidated waste? We must not only think of our present-day needs, but of future generations that will have to pay for our thoughtlessness. The future of the South and of the Nation is in the hands of the present-day farmer. To make this future bright he must wage a constant war upon his deadliest enemies—soil erosion and depletion. Let America, heretofore known as the world's most wasteful nation, set the example for all nations by becoming the world's most conservative nation. Thus only will America reap the fullest benefits from her land; and thus only can she hope to remain the world's foremost nation.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, May 22 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Seaway Bill," published in the News-Tribune of Duluth, Minn., for May 12, and an editorial entitled "St. Lawrence Plan Chances Improve," published in the Rochester Democrat and Chronicle for May 14, 1947.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Duluth (Minn.) News-Tribune of May 12, 1947]

THE SEAWAY BILL

Once again there is a St. Lawrence waterway bill before Congress. It means another battle in the long, long war to win this improvement for North America.

Several things about the newest measure seem likely to improve its chances of passage. The opposition is powerful, however, and we have learned from long experience that it is extremely skillful.

To begin with, the measure is introduced by Senator VANDENBERG, whose growth in statesmanlike stature and prestige has been conceded by observers in both parties. Associated with him are Senator FERGUSON, the other Senator from Michigan, and the Senators from Minnesota, Wisconsin, and North Dakota—States with a long-time interest in the waterway. Another Republican, Senator WILSON, of Iowa, also represents the section which thinks of the waterway as a means of improving its transportation facilities.

The New England Republicans, Senators AIKEN, of Vermont, and TOBEY, of New Hampshire, represent a section of the country which is vitally interested in the hydroelectric power the waterway would produce. That interest has been greatly stimulated by the activities of John L. Lewis. Thoughtful New Englanders would like to be sure that their industries were less dependent upon coal for their power.

With them are four Democrats, Senators THOMAS, of Utah; JOHNSTON, of South Carolina; BARKLEY, of Kentucky; and TAYLOR, of Idaho. They prove again that this is a bipartisan measure of interest to the country as a whole, as well as to the sections which can see direct benefits for themselves and to those which, mistakenly, we think, fear that the waterway would injure them.

Representative DONDERO, of Michigan, chairman of the Public Works Committee, has introduced the same measure in the House.

The measure provides for tolls which would be used to pay the cost of the improvement.

Several other factors should improve the bill's chances of passage. It is plainfully apparent that we have not yet entered an era of unthreatened peace. The waterway would do much to increase our military effectiveness. Without it we deliberately weaken ourselves.

Then, too, we find ourselves in an era when the world's hopes are pinned on a revival of international trade. Anything that makes it easier for us to trade with other nations will strengthen their commerce and bolster their living standards, and make it easier for the world to advance along the paths of peace.

It is extremely important that this measure succeed at this session of Congress. It deserves all the support any American can give it.

[From the Rochester (N. Y.) Democrat and Chronicle of May 14, 1947]

ST. LAWRENCE PLAN CHANCES IMPROVE

(By James B. Hutchinson)

WASHINGTON.—Once again the seemingly perennial St. Lawrence seaway and power project is up for congressional consideration.

Practicability of the St. Lawrence seaway has been discussed in Washington for the past 50 years.

Every President, from the late Woodrow Wilson to Harry S. Truman, has recommended favorable congressional action to build the project. So have governors of many Eastern and Western States.

Both Republican and Democratic Parties, at various times, have included a pro-St. Lawrence plank in their national campaign platforms.

Every Senator and Congressman who has held office for more than one term has become familiar with the arguments for and against the seaway.

Without rehashing all the parliamentary details, Congress on several past occasions has debated measures to authorize the St. Lawrence project. But the legislation never has been passed in final form.

Newly introduced St. Lawrence resolutions in House and Senate this year appear to have a far better chance of favorable action than ever before.

Reason is that something new has been added to the St. Lawrence picture:

1. For the first time, the seaway and proposed hydroelectric power station near

Massena, N. Y., are emerging as vital necessities to national defense. Secretary of State George C. Marshall and the Army-Navy Combined Chiefs of Staff assert the seaway and St. Lawrence power will be needed to provide adequate industrial and transportation facilities in any future war.

2. The seaway is needed for shipment of iron ores from the vast new Central Labrador deposits to the Midwest's heavy industries and steel plants, to fill the gap caused by near-exhaustion of Minnesota's Mesabi iron-ore range. The military command fears that without the seaway, the new Laborador ores naturally will go to industries along the Atlantic coast.

3. For the first time, new seaway legislation provides for self-liquidation of the project by a maximum toll charge of $1.25 a ton on shipping. St. Lawrence proponents say this meets with the new economy program of Congress, as it avoids outright payment for the project by the Federal Government. They also assert it defeats opposition arguments that a federally financed seaway would be "subsidized" competition for the railroads.

The plan is to remove remaining obstructions to deep water navigation so the Great Lakes will be open to oceangoing ships, through the St. Lawrence River. In addition, dams would connect Barnhart Island, near Massena, N. Y., to the American and Canadian mainlands. These would develop 13,000,000,000 kilowatt-hours of hydroelectric power—virtually equal to output of the Tennessee Valley Authority and produce at a lower rate than any plant in the United States, with possible exception of Niagara.

Of the over-all seaway project, Canada already has built the Welland Canal, connecting Lakes Ontario and Erie.

The United States has built MacArthur lock at Sault Ste. Marie, connecting Lakes Superior and Huron. This country also has done considerable dredging in channels connecting the Lakes, and the channels now are 25 feet deep. Proposed work would make these channels connecting Lakes Superior, Michigan, Huron, and Erie 27 feet deep.

The High Cost of Living

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, May 22 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, recently there came to my attention an editorial which appeared in Columbia, the national magazine of the Knights of Columbus. I shall ask unanimous consent to have the editorial printed in the RECORD, because it is one which all of us should read. It begins by saying:

The people on our street have some ideas about the way things are going.

Later in the editorial it is stated that—

They—

The people on our street—

are convinced that someone is trimming them too close around the ears and they do not like it. They were told, not so very long ago, that the devil was Government controls as administered by the late OPA. Then the story was that the inept OPA was driving goods into the black market. But now there is no OPA and Joe Doakes wants to know why he should have to pay black-market prices for over-the-counter merchandise. He would also like to know when that good old "free competition" is going to start making his week's pay last a whole week. It's only a detail, of course, but it bothers him.

Mr. President, I ask that the editorial in its entirety be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

The people on our street have some ideas about the way things are going. They are by no means chronic "whiners" but they are unhappy about the prices they have to pay for food and clothing and everything else, about the extreme difficulty of getting and keeping decent living quarters, about the feeling of tension, cantankerousness and uncertainty in the air they breathe. They are confused because they are getting so many different explanations of these matters that they are unable to tell which, if any, is the right one.

They ask you to consider, for example, the innocent citizen who remembers away back when the automobile manufacturers printed the f. o. b. price of their vehicles in their national advertising. He gets a notion that he would like to buy himself a modest little wagon—nothing de luxe, you understand—just a simple boiler of the least costly make and model, so that he can take the wife and children out for a spin Sunday after mass to let them get the 3-room-and-bath kinks out of their frames. Assuming that the miracle happens and he actually gets a car, he also gets a collection of "extras," which are by no means optional, and he pays roughly twice as much as he did before the war.

We leave this discontented brother to cool himself with little squirts of water from that windshield gadget that seems to be the principal postwar contribution of a great industry to its eager customers. He is less to be pitied than the breadwinner who goes out to buy the family shoes and shirts and bacon and eggs and beans and such. After all, you can live without a hydrochloromatic clutch but you do have to eat and, in these latitudes, wear clothes. What the aforesaid breadwinner is asking is why he has to pay $68 and some change for a suit that looks suspiciously like the prewar $40 job; why the price of eggs goes up at the same time that eggs become more plentiful in the market.

The wonderment of the people on our street about these things is rapidly turning into resentment. During the war, they were told to put the blame on the shortages of many consumer items that naturally and unavoidably occurred and they took the explanation, for the most part, with good grace. They do not believe that, at this date, shortages are the cause of the high prices. They are convinced that someone is trimming them too close around the ears and they do not like it. They were told, not so very long ago, that the devil was government controls as administered by the late OPA. Then the story was that the inept OPA was driving goods into the black market. But now there is no OPA and Joe Doakes wants to know why he should have to pay black-market prices for over-the-counter merchandise. He would also like to know when that good old free competition is going to start making his week's pay last a whole week. It's only a detail, of course, but it bothers him.

Some poorly informed captains of industry and commerce, the neighbors say, must be under the impression that during the war all their customers somehow became rich, that their mattresses are still lumpy with fat rolls of hundred-dollar bills, and that the present price scale is just what they need to sustain a healthy pride in their hoard of war bonds. The only trouble with this idea is that it's not so. We'll grant that some citizens did themselves well—and did so legitimately—during the war. But there aren't enough of them to wear all the two-dollar shirts that are being offered at three-ninety-five, and the sooner this is understood the better it will be for all concerned.

When the neighbors get together nowadays, these are the topics of their conversation. They are in a mood to really pour it on, if they could with certainty identify the villain. That's the catch—everybody has an alibi. The corner storekeeper claims he has to pay high prices for his stock; the jobber says the same about the wholesaler; the wholesaler blames the manufacturer; the manufacturer blames the producer of the raw materials and, of course, labor. The producer of raw materials blames—you guessed it—labor.

It seems that labor is getting all the money (although our street gets little mail from Palm Beach), and if labor would stop being annoying and demanding everything would be hunky-dory. In spite of the persuasively written statements in newspaper advertising space, which are a feature of all sizable present-day differences between labor and management, we doubt that this is quite the full story. And the fact that some labor leaders have made serious mistakes or have even committed crimes, doesn't add up in our book to a valid reason for throwing a workingman's claims and aspirations out of court.

Organized labor at present is getting a bad press. In itself, this is no novelty; but there is a danger in the situation that is new—the danger that if the propaganda has its apparently intended effect on Congress the country will almost certainly suffer serious harm. Stripped of the pious protestations of concern for free enterprise and the right of every man to be his own Alger-book hero, etc., the objective of the drive is to bat the unions' ears off—to "cut them down to size," as the saying goes. We would have no sympathy with such a project at any time, and this is the most inopportune moment in recent history for anyone to be engaged in it.

This time of growing crisis, when the future of freedom and the "good life" in the world depends so directly upon a strong and united American people, is emphatically not the time for a knock-down-and-drag-out battle between capital and labor. Such a brawl would bring joy only to the Communists here and to their bosses in the Kremlin. There would be no winner but Dictator Stalin, who, you may be sure, would lose little time in the event of an American domestic smash-up in taking over the rest of Europe.

As an essential preliminary to a reasonable settlement of honest differences, we recommend to labor leaders abandonment of the truculence that too often leads them to conclude their remarks with the phrase "or else." And to the negotiators on the other side of the table we recommend discard of the high eyebrow and the "how dare you, my good man" attitude. Neither side should expect to gain any public sympathy by the exchange of epithetic statements dreamed up by some publicity man who fancies himself as a smart phrase maker. In fact, it has become smart not to be smart, and the great, tired, word-weary public that sits uncomfortably in the middle of these jams reserves wreaths of laurel for the man who will speak the truth.

That's what the people on our street are interested in—a reasonably decent portion of straight talk and square treatment. They are not violently interested, at the moment, in what Gromyko said to Austin, because they have enough common sense to know that Gromyko is singing for his supper and has all the importance of Charlie McCarthy as an international figure. They are, however, fed up with and resentful of the modern propaganda which is designed, as J. J. Gilbert, of the NCWC News Service says, "to make one uncertain about the principles, or uncertain about acting on those principles once they are clearly seen."

It may be, of course, that we do not meet the right people, but these are the gripes we hear. We think they are well-founded gripes, but they are not sour. They can be cured by the exercise, in the proper places, of some restraint, generosity, and good will—especially good will. What the country needs, even more than a good 5-cent cigar, is a dash of the wartime spirit of unitedness in a common cause. If what we have was worth the lives of the many thousands of young soldiers and sailors who died in the war, we ought to be able to keep it without bitter wrangling, name calling, and plain selfishness. That's what the people on our street think.

Progressive Farming

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. COOLEY. Mr. Speaker, all through the years men and women have studied the arts of progressive farming, but today even the youth of America realizes, as never before, that "the farmer is the backbone of the world."

A few weeks ago I had the pleasure of hearing an able discussion of the subject Progressive Farming by a high-school student in one of the fine high schools in a progressive farming community in my district. Calvin Ayscue, Franklin County, N. C., spoke with earnestness and zeal in addressing a banquet attended by a large number of farm men and women in the community in which he was born. He spoke with great poise and persuasion, and he impressed his audience with his great sincerity and with the fact that he was proud to be a part of the agriculture of his community and of his country.

Because of the importance of the subject he so ably discussed, and especially because of his effective and forceful presentation, I commend to you this able discussion of the subject Progressive Farming:

Since the beginning of time the farmer has been an important figure in the development of all nations. His importance to the progress and well-being of the human race is exemplified through his efforts to feed, clothe, and shelter the peoples of the earth, and to produce the raw materials for our major industries. Yes; it is a true statement—true, indeed, when we say, "The farmer is the backbone of the world."

When we accept this great truth, we cannot avoid its reality. We, as clear-minded American citizens, cannot deny the foregone conclusion that any progress made by farmers or any improvements brought forth in the realm of agriculture are nothing more than milestones along the highway of human progress or the uplifting of the society of the known world.

There are many stones to be turned in order to clear the way for the American farmer to reach his own. To use the modern expression, "There are many bottlenecks to break before the farmer can be elevated to the level which he rightly deserves and which his Creator intended for him to have."

The first handicap or bottleneck lies within the hands of the farmers themselves. That is for each farmer to realize; that there is a great deal of scientific information available for him that should be put into practice. This help comes in many ways, such as our newspapers, farm magazines, United States Department of Agriculture bulletins, experiment-station releases, farm agents, agriculture teachers, etc.

The second trouble is that there are too many people on the streets who seem to think that the farmers are the underprivileged class and that they don't even deserve fair prices for farm commodities. The American public should be made to realize the importance of the farmer and should give him his rightful place in our society.

The third bottleneck has to do with that all-important matter of marketing. It is high time for the producer of raw materials to follow his produce from the soil to its ultimate consumer. If this was done, we could plainly see that too many groups of profiteers are getting too much cream from the fruits of the farmer's toil. The answer to this is cooperative marketing associations plus improved methods of processing on the farm.

The fourth and final handicap deals with mechanized farming. This field has just begun to open in the fullest sense. The modern farmer cannot afford to be content with old, inefficient, laborious methods of production. Times, so to speak, are changing and changing fast. The farmer must reduce man labor to a minimum and increase the use of efficient machines to the maximum.

When these problems are removed from the planters' pathway, it will be like the time of old when Moses led his people to the mountainside where they could behold the promised land. The land of opportunity, freedom, and happiness. You may say that Moses was not permitted to enter. True, indeed, but the younger generation did enter. So it is with us. We can lead the way to this new era in agriculture, and the younger farmers can enter into the fruits thereof.

As I look into the valley of the promised land; the valley which holds the future of farming, I can plainly see beautiful highways leading from farm to market. On either side of this highway I can see lovely country homes. The types that are decorated with the mysteries of nature—white barns, green pastures, fat cattle, plant life, and fertile fields. The inhabitants of this land are second to none financially, socially, or morally.

I don't propose the illusion of hope that another George Washington might appear on the horizon to lead us. Nor do I propose a vast sit-down strike in the field of agriculture until a permanent farm policy is thrust upon us by our National Government. Not a few, endowed with the qualities of Washington, can solve our problems, but rather all of us, cooperating and dedicating ourselves to the principles set forth by our first and greatest of farmers.

Perhaps the idea I wish to leave with you is best expressed in the creed of the Future Farmers of America:

"I believe in leadership from ourselves and respect from others. I believe in our ability to work efficiently and think clearly with such knowledge and skill as I can secure."

This same thought, so well exemplified by Washington, thus making him first in agriculture, should serve as a guidepost in the solution of our problems today.

And so, when we stop to regard the founder of our occupation in America, we must realize that we have a heritage of which we can be proud. When we are obsessed in the plans of politicians, or envy the ease of our city friends, or get discouraged by the hard work and discomforts of farm life, let us ask ourselves, "What would painstaking, methodical, hard-working George Washington do under these circumstances?" The answer would be, "Carry on, strive for improvement, and farm intelligently."

Changes are necessary in any progressive movement, but changes alone are not sufficient in progressive farming. The modern progressive farmer must be on the alert at all times, after proper adjustments in his program have been made. He must possess a keen sense of values in selecting crop varieties, breeding stock, and implements of production. He should also understand the economic forces which will determine the price structure in both buying and selling. In order to be progressive in any endeavor, one must possess ideas and ideals above and beyond the average. The farmer is no exception. He should know what fertile soil is—how to make it fertile—and should appreciate the fruits thereof.

Yes, the modern progressive farmer is one who rejoices in seeing nothing short of the best, one who gets a real satisfaction out of living because his heart and soul are set on producing the best through his own effort.

There Will Be a Third Sugar Stamp

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. ENGEL of Michigan. Mr. Speaker, changing details of the sugar situation are a matter of great importance in my district. My district is one of the leading fruit-producing areas, and it happens that sugar is the single biggest factor, in its availability for processing and home canning, in the successful marketing of that fruit.

Because of the lack of sufficient sugar for home canning last year thousands of bushels of top-quality fruit were dumped or left on trees in the peach and apple orchards of my district. Without sugar there simply was no market for this fruit. The dollar loss to the growers was terrific.

The situation this year should, of course, be greatly improved. It is probable that rationing may be eliminated by fall, which is precisely what we all want. In any event rationing of sugar must end on October 31, the date on which the present Sugar Control Act expires, insofar as its rationing provisions are concerned.

Assuming the worst, that rationing continues to October 31, it should be repeated that our people have been promised not less than 35 pounds per ration book in the period from January 1 to October 31. They were told that in addition to the first stamp for 5 pounds three other 10-pound stamps would be issued, one on April 1, one on July 1, and the last probably on October 1. The April 1 stamp came along on schedule, and the July 1 stamp, according to a Sugar Rationing Administration announcement of May 13, will become valid 30 days early, on June 1 instead of July 1. To quote the actual announcement, it was phrased this way:

A second 10-pound stamp for consumers (No. 12) will be validated June 1 instead of July 1, but must still last until October 31.

Those final words, "but must still last until October 31," proved puzzling, to say the least, since they carried the implication that the October 1 stamp might

not be issued. A Member of the other body earlier this week took the announcement at face value, as he was entitled to do, and urged immediate decontrol of sugar, claiming a breach of faith on the part of the Sugar Rationing Administration.

I am as anxious as any, and more anxious than most, to see complete decontrol just as soon as it can be assured that there will be an adequate supply at a fair price for the little user as well as the big one. I hope these supplies now being built up will be sufficient to bring decontrol in July or August.

But however that works out, I am sure we want no talk of reneging on any of the sugar commitments made to date. The present schedule should not be upset excepting by better arrangements. In short, I want to hear no talk about doing away with the October 1 stamp, unless it be replaced by another of earlier date or by discontinuing rationing entirely.

When I saw the debate on this question as it came up in the Senate Tuesday, May 20, I got in touch with the Sugar Rationing Administration and asked for an authentic statement in regard to its May 13 release saying the June 1 stamp would have to "last until October 31."

I was informed the wording of the May 13 statement was "unfortunate." I was told officially there would be a third 10-pound stamp on or before October 1, unless decontrol intervened. The Department said the wording of its May 13 statement merely meant to imply that the No. 12 stamp, good on June 1, would expire on October 31; that there was no change whatever in plans to issue a third 10-pound stamp on or before October 1. Unofficially, if we do not have complete decontrol before then, I believe it is safe to say the third stamp is likely to come about September 1.

As far as home-canning operations are concerned, September 1 will be a better date than October 1. If we cannot have decontrol by then, I hope it will at least be possible to hold to the September 1 date for the third stamp. I hope too our sugar ration authorities will keep uppermost in mind Secretary of Agriculture Anderson's promise that any further increases in supply, during the short period remaining for rationing, will go first to home users.

Interior Waterways

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Thursday, May 22 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Interior Waterways," published in the May 10, 1947, issue of the Evansville Courier. The editorial is in reference to the proposed connecting link between the Ohio and Mississippi Rivers and New York Harbor, and improvements along the Allegheny River.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTERIOR WATERWAYS

With the big wars apparently over for a while, at least, it is natural for the constructive forces of the Nation to turn again toward the rich interior of the Nation and bring it to more fruitful use along many lines. One of the most obvious and long-planned projects is the joining of the Ohio and Mississippi Rivers with New York Harbor for productive use on a big scale, and improvements along the Allegheny River. According to Yates Catlin, executive secretary of the Upper Allegheny Improvement:

"Our association supports a cause which is also your cause. We seek to tie in the New York Barge Canal and the New York Harbor with the vast Mississippi waterway system, by completing the Allegheny River waterway and by rebuilding the old Genesee Canal in western New York State."

The long-needed St. Lawrence seaway is being discussed again. Perhaps this time it can be built.

Forgotten Men

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. LATHAM. Mr. Speaker, I wish to speak briefly today on behalf of a group of "forgotten men." They are the veterans who, during World War II, suffered atrocities of confinement in enemy prison camps as prisoners of war, and as such, were entitled, by military regulation upon their return to United States control, to automatic promotions in rank or rating and commensurate increases in pay but who, through no fault of their own, were discharged from service without receiving these benefits.

In many instances, this error occurred because of the loss of service records. In other cases, men were separated from their original companies because of hospitalization, and failed to receive proper recommendation for promotion. Many commanding officers failed to receive information as to regulations governing the promotion of repatriated personnel. Also, men otherwise qualified for discharge upon their repatriation were sent immediately to separation centers prior to the time their service records were received so that their discharges would not be delayed.

I am, therefore, introducing a bill providing that those in this category who were returned to an area under United States control from a status of prisoner of war, internee, missing in action, or evading capture in enemy-held territory, may apply for the promotion in rank or rating which is legally theirs, with pay retroactive to the time that such promotion should have been effective. I submit to you that this is the least we can do for our men who suffered the hardships of enemy concentration camps.

It is nothing more than simple justice.

Under leave to extend my remarks in the RECORD, I include the following copy of the bill:

A bill to provide that persons separated from the armed forces of the United States before receiving promotions to which they were entitled upon their return from prisoner of war or similar status shall be held and considered to have been granted such promotions and the pay and allowances connected therewith

Be it enacted, etc., That (a) any person who (1) while serving as an officer or enlisted man in the armed forces of the United States during World War II, was entitled, under existing regulations, to promotion upon his return to an area under United States control from a status of prisoner of war, internee, missing in action, or evading capture in enemy-held territory, and (2) did not receive such promotion prior to his separation from the armed forces or his release from active duty therein, shall be held and considered to have been granted such promotion on the earliest day on which, under existing regulations and the facts surrounding his particular return, he could have received such promotion.

(b) Any person held and considered to have been promoted pursuant to subsection (a) shall be paid in a lump sum such additional pay and allowances as he would have received had he in fact been promoted on the day specified in such subsection.

The National Federation of Small Business Supports H. R. 1671

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the results of a poll taken by the National Federation of Small Business on H. R. 1671. This bill, sponsored by myself, would compel sellers to disclose to any customer their complete line of discounts at any time upon request from such customer.

The Robinson-Patman Act was intended to strengthen the antitrust laws at a point of vital importance to small business. Discriminatory discounts have caused the death of legions of independent businessmen. The Robinson-Patman Act made such discounts thoroughly illegal and greatly strengthened the law on this point. H. R. 1671 proposes to further strengthen this law. Under the existing situation the Government has encountered great difficulty in discovering discriminatory discounts. It has had to rely largely on tips from customers who thought, or had reason to believe, that discriminatory discounts were being given to their competitors. H. R. 1671 would make it possible for any customer, at any time, to demand of a seller that he reveal to him his complete line of discounts to any and all customers. I think such a provision is vitally necessary to strengthen and im-

prove the effective operation of the Robinson-Patman Act, and I note with real pleasure the endorsement given it by the membership of the National Federation of Small Business.

The poll of the national federation shows that 77 percent favored the passage of H. R. 1671, 21 percent were opposed, and only 2 percent did not vote.

The National Federation of Small Business has thousands of members scattered over the Nation. It is reported to have the largest individual membership of any business organization in the United States, and I am gratified by the support which they have given H. R. 1671.

Veterans' Efforts for a National Housing Program

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I gave on housing Sunday, May 11, 1947, over Station WORC, Worcester, Mass.:

Ladies and gentlemen, I am glad to come up here this afternoon in response to several veterans' organizations and speak to you on the housing problem. Also, I like to come back home, as often as I possibly can so that the people who cannot afford to go down to Washington can see me and present their problems personally. As Thomas Jefferson once said: "When a man assumes a public trust, he must consider himself public property." I was elected to Congress by all of you people and I intend to do the best I can for each and every one.

Today the current topic in Worcester, as you know, is the open forum on housing, sponsored by the Worcester Veterans Council, taking place at our Worcester Auditorium tomorrow evening, in which nearly 50 of our local veterans' organizations are taking part.

About a month ago I was interviewed over the radio in Washington on the housing situation, and while the problem, especially with respect to the availability of homes is concerned, has not changed, Federal legislation has advanced a little since then.

In my Washington interview I was asked to discuss the Taft-Ellender-Wagner bill, which, I believe, provides the most far-reaching provisions for aid in the solution of the general housing problem. At that time S. 866—the so-called Taft bill—was pending in committee, and just recently it was favorably reported out of committee, by the narrow margin of 7 to 6, despite a great deal of lobbying against it.

The most recent action in the House was on the Wolcott rent-control bill, which was passed on May 1 by a narrow margin. There isn't sufficient time here to outline the whole Wolcott bill, but to my mind it repeals in substances the Veterans' Emergency Housing Act; it eliminates all controls on building materials; cuts down the time privilege of veterans to buy or rent newly constructed homes; removes rent controls of newly constructed housing; removes eviction causes and throws such cases to local control. I am convinced that its adoption into law would bring about more confusion, discrimination, injustice, and unrest in the housing situation than we have today.

The debate on this bill in the House extended over 4 hours, which may seem long to you, but I feel more time could profitably have been given to its full discussion. Several amendments were offered to the bill, but most of them were voted down. In my opinion, without the remedial amendments, which were offered and defeated, the essential defects of its over-all provisions far outweigh the few advantages it contains, and, as the Wolcott bill was finally presented and passed, I voted against it.

Since I have been asked about the present status of the Taft-Ellender-Wagner bill, I can tell you that this bill is now out of committee and ready for presentation to the Senate for action. Senator TAFT has stated that it is No. 4 on the Senate schedule, being preceded by labor legislation, foreign relief, and tax reduction. Therefore, it probably will be quite some time before the Senate discusses it. However, Chairman WOLCOTT, of the House Banking Committee, has announced that there is virtually no chance that his committee will consider any long-range housing legislation this session, even though the Senate should pass the Taft-Ellender-Wagner measure. I personally feel that the housing emergency is the most critical problem that we face here in the United States today, and I believe it should be acted upon as an emergency as soon as possible.

To refer again to the essential rent-control features of current legislation, I might mention that there is a bill in the Senate similar to the Wolcott bill, introduced by Senator BUCK, of Delaware, which was approved by the Senate Banking Committee on March 31, and still awaits Senate floor action. It is not certain yet whether the Senate will take action on this measure or on the Wolcott bill.

A brief comparison of the important provisions of each of these bills would be interesting to you, I think. The Senate bill would set up advisory boards in each of the 600-odd rental areas of the country, with power to increase rents or remove controls locally. The House bill gives local governments absolute authority over controls. The Senate version which transfers rent control authority to the Housing Expediter, would permit the Expediter to overrule local boards.

Both bills eliminate most priority and allocation controls from housing. The Senate bill would continue rent controls until March 1, 1948—the House bill would continue controls over rents until December 31, 1947, and authorizes the President to extend them 3 months beyond that date. Under the House bill, landlords and tenants would be permitted to agree on 15-percent increases in rentals, provided the increases were continued in leases that do not expire before December 31, 1948.

With respect to the Taft-Ellender-Wagner bill, I believe that by its passage Congress would recognize and declare that there is still a grave housing shortage and that the general welfare and security of our Nation requires a production of residential construction and related community development to remedy this housing shortage. This bill is also designed to eliminate slum areas and to realize, as soon as feasible, the goal of a decent home and a suitable living environment for every American family.

It would help local communties with their housing problems by giving financial assistance to the cities and towns which can estimate their own needs for housing, and can demonstrate that these needs cannot be met entirely through reliance upon private enterprise and by local and State revenues.

It further provides that the National Housing Administrator shall engage in technical research and afford technical advice and guidance to communities for local housing studies, surveys, and planning. I regard this research provision as a very important part of the bill.

As I interpret the Taft-Ellender-Wagner bill, it would provide assistance to home owners, to those who want to build homes, and to the construction industry which will build them.

There has been much confusion about this housing problem. Morgan L. Fitch, president of the National Association of Real Estate Boards, has keynoted a drive to try and convince homeless America that the housing shortage isn't really so severe after all. He recently stated that the city housing shortage can be solved by building about one million and a half units. Yet, at the same time, Government surveys indicate that more than 3,000,000 families are living doubled up or in thoroughly inadequate quarters. Exhaustive studies by the National Housing Agency and congressional committees have shown the need of at least 12,600,000 new city homes in the next 10 years.

Six million of these units would replace substandard dwellings in which so many of our people now live and six and a half million units would be for newly formed families and families now doubled up. It becomes increasingly obvious that the real-estate interests do not choose to concern themselves with the 3,000,000 nonfarm homes that lack private baths and proper sanitary facilities * * * the 3,000,000 units that lack even running water, and the 3,000,000 units that need major repairs and modern plumbing.

The substandard dwellings constitute 38 percent of all the Nation's nonfarm housing. Regardless of their disrepair, these hovels are today being rented for high prices. With decent homes, reasonably priced, on the market, they would be a liability to their owners.

Can this account for the big campaign now under way to try and sell the Nation the story that the housing shortage is pretty much of a matter of imagination—and rent control?

The Government has assumed an obligation to the veteran and the rest of the people in this matter of housing. It is estimated that at the beginning of 1947 more than 2,500,000 families were in the market for homes and that 250,000 additional families will be looking for homes during the year 1947.

Here in the city of Worcester, at the beginning of 1947, there were about 20,000 veterans. Of these, 45 percent are married, and about 71 percent are gainfully employed. The average income of these veterans is $37 per week. Of the married veterans, 36 percent are either living in rented rooms or doubling up with their parents and relatives. I think that picture prevails in every other community in New England and the Nation.

A recent survey shows that two-thirds of the veterans are more interested in renting than buying—probably because prices today are far beyond their means. What they need most now is an opportunity to rent decent living quarters at reasonable rates of $30 to $40 a month. With the slow-down of private home building—I have been giving this matter considerable study lately—I hope that some plan may be worked out by which the Government, private capital, and the banks can cooperate together in financing the immediate construction of moderate rental units for veterans.

In conclusion I should like to say this—we cannot delude and blind ourselves any longer about this housing problem. There is one and its a serious national emergency. The building industry has not, so far, come out with a national program of their own to cope with it. It is worthy of mention that the housing issue was big enough in England to influence a significant change in the English Government, and I don't think we want such changes here, so we better do something about it. The fact is that American families want decent homes and they want them by the

millions. Decent people everywhere recognize the growing menace of child delinquency, increasing divorce, and broken homes attendant in good measure upon our disgraceful housing conditions.

I urge every church, labor, civic and welfare society to get behind the veterans' organization in its efforts to promote a national housing program, with provisions for public housing for the low-income group. The American Government, the American building industry, the American public and the American veteran by their combined work can lick this housing shortage—and you may be assured of my full cooperation in this fight for a decent home for every American family.

Our Soft-Fiber Industry Deserves Government Protection

EXTENSION OF REMARKS
OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. CLASON. Mr. Speaker, one of the largest units of the jute industry in the United States is located in the Second District of Massachusetts. It is the most important industry in the thriving town of Ludlow. Since this industry has been so closely interwoven with the lives of several generations of families in my district, they are greatly concerned over the action which may be taken in the near future by our Federal administration on the question of reduction in existing tariffs at the Geneva Conference of the International Trade Organization which is now in session.

Few Americans have any considerable knowledge of the jute industry in the United States and the important part which it played in the success of the Allies in the Second World War. When it no longer became possible for our people to secure imports either in the form of manila rope or as fibers from the Philippines, the jute industry came to the rescue of our Navy and merchant marine. They provided the ropes, both heavy and light, which were essential to the proper employment of our warships and our merchant vessels. For their splendid achievements during the war they have been highly praised by both the Army and the Navy.

It is now most important that this industry be kept alive in peacetime as a standby for the manufacture of ropes and other war items in case of future trouble. Because jute products are essential in many industries which contribute heavily to the success of American industry and provide employment for thousands of our citizens, it is of the utmost importance that no change be made in the tariffs on jute and jute products in the negotiation of trade agreements with other countries at this time.

A fine presentation of the importance of the soft-fiber industry to the people of the United States has been made by Mr. Joseph C. Mahoney, of Boston, Mass. He is chairman of the tariff committee of the Soft Fibre Manufacturers Institute and, in business life, is the treasurer of the Ludlow Manufacturing & Sales Co., the largest unit of this industry. I urge the Members of Congress to read his remarks as presented to the Committee for Reciprocity Information and as set forth herewith:

TESTIMONY OF MR. JOSEPH C. MAHONEY, OF BOSTON, BEFORE THE COMMITTEE FOR RECIPROCITY INFORMATION

My name is Joseph C. Mahoney, of Boston, Mass. The tariff committee, of the Soft Fibre Manufactures' Institute, of which I am chairman, has asked me to tell this committee briefly of the direct threat to the future of this industry and its employees from any reduction in existing tariffs, and to ask your help in our particular and probably unique situation.

Our industry is called the soft-fiber industry both because of the type of machinery we use and the products we manufacture. We make jute, flax and hemp yarns, twines, threads, also flax woven goods. Many of you are familiar with these products, such as the ball of jute or hemp twine, and the flax or hemp threads with which your shoes are sewn. Other of our products are essential but not too familiar to the consumer. For example, probably all of the carpets in this room are founded on jute carpet yarn; other yarns made by this industry are used in the manufacture of electric cables.

These products are spun from fibers of jute, flax, and hemp on specialized machinery called soft-fiber machinery. This machinery is different from that used for cotton or wool on the one hand, and different from the coarser hard-fiber machinery used to manufacture rope from Manila and other so-called hard fibers. I ask the committee to note this unique type of machinery which we use because it is important to one of the points I should like to make.

The soft-fiber industry has been established in the United States for over 100 years. It is a typical American industry. Its factories are located in Massachusetts, New York, New Jersey, Pennsylvania, Connecticut, Rhode Island, Ohio, Kentucky, Delaware, Maryland, and Oregon. Approximately 9,000 workers have developed the skills required, and are employed in this industry. They, and those who have invested their savings, believe that they have a right to more consideration than appears to have been given to them up to the present time in connection with the reciprocal trade agreement program.

This industry is not opposed to foreign trade, and, as a matter of fact, its existence depends on substantial importations from foreign countries—notably Belgium, the Netherlands, the United Kingdom, and India—of jute, flax, and hemp fibers.

On behalf of the Soft Fibre Manufacturers' Institute, I made a statement before the Committee for Reciprocity Information, which contained considerable detailed information in regard to the soft-fiber industry, and which I believe you will find useful. I, therefore, request your permission to file a copy of that statement with your committee.

In briefly outlining our particular situation to the committee, I believe it will be helpful to discuss jute, flax, and hemp separately. Let us look first at jute. Because the bulk of all the jute in the world is grown in India, that country has a monopoly position in the sale of raw jute. It has taken advantage of this monopoly by establishing export taxes on jute and jute goods. The interest of the Indian Government in the manufacture of jute goods in India can be highlighted by a recent event of immediate relation to the present problem. After the invitation to India to participate in the proposed International Trade Organization, and with the present trade treaty negotiations in prospect, the Indian Government on October 23, 1946, disproportionately increased these export taxes. It raised the export taxes on raw jute very greatly, but raised the export taxes on Indian-manufactured jute goods far less. The plain objective was to penalize the consumers of raw jute in other countries and give a subvention to manufacturers in India.

This interest is not theoretical. The greatest concentration of machinery for the production of jute goods is in Bengal, India. Any reduction in the tariffs on jute goods, as anyone in this industry knows, will mean the destruction of the American industry and the transfer of manufacture to India. Why this is so I will demonstrate in a moment. But, first, the committee should note that India, largely because of its heavy exports of certain types of jute goods, such as burlap, as well as of raw jute, has regularly exported more to the United States than it has imported from this country. India, therefore, does not and will not lack dollars to purchase substantially more United States goods than it has in the past. Reductions in tariffs on jute goods will not result in any direct increase in what India buys from the United States. Any reduction in such tariffs will, in the final analysis, benefit only India.

The key factor is the matter of wage rates. According to an official report published by the Government of India, which appeared late last year, and contains data through 1945, over 60 percent of all of the workers in Indian jute mills were receiving between $1.20 and $2.11 for a 54-hour week. The highest-paid group, comprising only about 5 percent of all the workers, received somewhat over $3 per week. To pick a key occupation, this same official Indian Government study shows that spinners received a maximum of 4.4 cents and a minimum of 2.5 cents per hour.[1]

It is estimated that at the present time the average hourly wage in Indian jute mills is less than 7 cents.

The soft-fiber industry in the United States is efficient and progressive, but it cannot hope to compete with any such wage rates and at the same time give its employees hourly wages justified by American standards of living. Wholly apart from overtime, social-security benefits, and the like, the average American wage rates, comparable to those in this Indian Government report, are over 92 cents per hour. It is therefore not surprising that during 1946 over $84,000,000 worth of jute goods were imported into the United States as compared with $12,000,000 of imported jute fiber.

The committee should also note that practically all United States duties on jute goods are at specific rates, such as 4 cents per pound on 14-pound jute yarn. These rates have remained unchanged since 1922. It is obvious to anyone who reviews the situation that a rate such as this, that was established in 1922 based on the comparative wage levels at that time, must be wholly inadequate today. The enormous increases which have occurred in United States wage rates since 1922, as compared with Indian rates which have increased only a few cents per hour, justify substantial increased protection to the American industry rather than decreases which are now proposed. This inadequate protection has already resulted in the elimination of considerable employment in this country through the loss to India of substantial production.

Let me give you just two examples. At one time all of the United States requirements for jute upholsterers' webbing were produced in this country. This jute webbing is now imported from India. Likewise, the production of jute bale covering for covering the

[1] Report on an Enquiry Into Conditions of Labour in the Jute Mill Industry in India. Labour Investigation Committee, Government of India. Government of India Press, Simla, 1946. Table VIII and appendix VII.

United States cotton crop is also rapidly being transferred to India.

Before leaving this point I should like to tell the committee that these tremendous cost advantages are not theoretical. One of the principal jute products now being manufactured in this country is yarn used in carpet manufacture. The company with which I am associated has filed figures with the Committee for Reciprocity Information, showing that this jute yarn can be landed in the United States and the duty paid for an amount which is less than the United States costs. The obvious result, of course, is that jute yarn for carpet manufacturing is being imported in substantial quantities even at present tariff rates.

In the production of flax and hemp products, the situation is similar.

Historically, these two fibers antedate jute, at least in Europe and America, and their cultivation and preparation by handicraft methods came to this country with the first settlers. Colonial homespun fabrics were made from American hemp and flax. The transfer of such manufacture to machinery came early to our industrial history, and since then our industry has regularly produced threads, twines, and the coarser varieties of woven fabrics. Full protection against low foreign wages has never been given, and as a result all of the finer sizes of yarns and fabrics are imported. Even in the range of sizes which the industry regards as its normal output, imports now represent a substantial part of the quantity consumed in this country.

Hemp and flax are high-grade fibers, and their proper preparation and manufacture call for substantial amounts of skilled and semiskilled labor. The upward course of wage rates in the United States has, therefore, diminished the effectiveness of the established tariff; but in spite of this, the industry's protection was reduced substantially in 1939 in the United Kingdom trade agreement, entered into under the provisions of the Reciprocal Trade Agreements Act.

The outbreak of war in Europe postponed for a time the full effects of the reduction in protection, and the industry was able to meet the substantial demand which the war developed for its products. As soon as the war finished, however, heavy importations of foreign flax and hemp yarns and threads were immediately resumed; and even some domestic spinners found it advantageous to use imported yarns in the making of certain products. This is scarcely surprising when it is remembered that these imported products are supplied principally by the United Kingdom and countries in continental Europe. Even in the United Kingdom, which is generally considered to have the highest wage level of any part of Europe, the wages paid to workers in the important occupations of the flax industry are about one-quarter of those paid in this country. Wages paid in the important continental flax and hemp-manufacturing centers are lower still.

The extent to which foreign competition has captured the United States market for flax and hemp finished goods may, to some extent, be appreciated from the fact that during 1946 $32,500,000 foreign value of flax and hemp finished goods were imported into the United States, whereas the total importations of the raw fiber amounted to only $3,200,000.

You have heard a great deal in regard to how necessary every industry is in time of war. It is, therefore, difficult to indicate to you the exceptional situation in regard to the necessity that there be in existence, in time of war, an American soft-fiber industry.

This country is dependent on foreign countries for its supply of cordage and rope fibers, such as manila from the Philippines, sisal from Africa, and jute from India. Both the Navy and the merchant marine are dependent upon cordage. Without rope, farming cannot continue. And as shown by the necessary Government action in allocating cordage, there are many industrial activities dependent upon cordage and rope or upon steel cables, most of which require a fiber center.

In time of war foreign sources of manila, sisal, and other hard fibers are largely cut off. It is then necessary to drastically expand the production of hemp in Wisconsin, Minnesota, Iowa, Illinois, Indiana, and Kentucky, as was done during the recent war. It is obvious that the expanded production of hemp can serve no useful purpose, unless there is in existence in this country an industry which can convert this fiber into cordage and rope. It is necessary, also, that there be an American industry with supplies of the foreign fibers available for conversion into products, at least until such time as the American hemp can be grown and made available as a substitute.

Only the soft-fiber industry has the unique machinery to convert both the American hemp tow and line into rope and other essential products. Our experience in the last war shows how extremely necessary these inventories of fiber are for all the products manufactured by our industry, but particularly for rope, which in wartime has top priority. The procurement officers of the armed forces will unquestionably substantiate the statement that the importance of the American soft-fiber industry was second to none during the war.

The Reciprocal Trade Agreements Act has been described by many of its advocates as a means not only of expanding foreign trade but also of reducing unemployment in this country. There are provisions in the Reciprocal Trade Agreements Act for increasing as well as decreasing tariffs. Apparently, little or no attention has been given to the necessity of making increases in order to protect American industry that is subject to competition from extremely low wage rates of foreign competitors.

The soft-fiber-manufacturing industry is actually furnishing less employment today, and it is likely to furnish even less in the future unless serious attention is given to providing it with tariff protection which will tend to equalize the difference between domestic and foreign wage rates. If the State Department, at the Geneva Conference, should reduce tariffs on the products of this industry, it is my opinion that this will result in the eventual complete liquidation of the American soft-fiber industry. It is not my belief that Congress intended, when enacting the Reciprocal Trade Agreements Act in 1934, to bring about the liquidation of a long-established American industry with resulting unemployment to American workers, who have for many years been acquiring the skills required by this industry.

The high American standard of living was established during years of adequate tariff protection for American industry, and at least insofar as the soft-fiber industry is concerned, I am thoroughly convinced that a reversal of that policy will tend to bring about business recessions and unemployment. Congress will then most certainly be called upon by the American people to reestablish adequate tariffs. Our contention is that by now adopting a more realistic view than this trial and error method, subsequent unemployment can be avoided.

In this reference to unemployment I touch on a most important consideration, which far transcends the soft-fiber industry. It is agreed generally, I think, that world stability depends on the maintenance of this country upon an even keel, economically speaking. Indiscriminate tariff reductions will reduce the number of industries in the United States. Such a reduction in the number of industries, which form the base of our employment, will intensify unemployment in periods of recession. I am sure that you will agree that it is most desirable to spread employment over a large number of healthy industries, which should result in greater employment stability.

The presentation of these facts to the State Department has resulted regularly in reference to the so-called "escape clause." This escape clause is simply another trial-and-error method. It provides for a review after the damage has been done, and even then it does not guarantee relief, even though the need for it is fully demonstrated to the satisfaction of all concerned.

It is scarcely necessary to point out that once an established industry has been seriously damaged by unwise tariff changes, its capital impaired, its skilled workers dispersed, and its management discouraged, it cannot be quickly resuscitated by a Government inquiry, regardless of whether or not relief is then given. No post-mortem inquiry ever revived a corpse.

We are confident that our situation warrants the most careful congressional inquiry. It raises pointed questions as to how this trade agreement program is to operate and what its objectives and effects are to be. It raises directly the issue whether an American industry, which is old, established, and technically efficient, which basically produces a large volume of foreign trade and enjoys no special advantage over its foreign competitors, is to be destroyed solely because it pays its workers wages necessary under the American standard of living. It presents a situation where cause and effect are not a matter of theory, but where important products made for a long time in the United States have already been lost to India and where detailed comparative costs and presently increasing imports show beyond argument that any reduction in present tariffs will have an immediate and drastic effect. Finally, it raises the issue whether any respect is to be paid to the provisions of the act authorizing increases when necessary to protect an American industry from extremely low foreign wage rates.

We leave our case to you, confident that you will recommend not only that no existing rate on any domestically produced jute, flax, or hemp manufacturers be reduced, but that steps be taken immediately to reestablish tariffs which will permit this industry to continue to pay its employees American wage rates, maintain domestic manufacture of these essential products, and afford in a unique area an element of national security which the recent war demonstrated to be essential.

Oil and Blood

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. LEMKE. Mr. Speaker, we are traveling on a slippery road—a strange international highway—a highway strewn with human corpses. We have been traveling this road for some 30 years. We are permitting a few internationalists, one-worlders, to lead us into World War III. It was this same gang that got us into World Wars I and II.

In World War I we suffered 360,300 casualties, and spent some $44,000,000,000 in making the world safe for democracy. In World War II, the American people suffered 1,134,380 casualties, and spent and gave to other nations

$440,000,000,000. This for the "four freedoms" that we did not get. In addition, as a result of these two wars, hundreds of thousands and millions are suffering physical and mental agony today. Yet these same loud-mouthed, stay-at-home superpatriots did not then, nor do they today, offer to risk their lives, limbs, or health on foreign battlefields.

It is for the purpose of awakening the American conscience, before it is too late, that I take the liberty of inserting the following article from La Follette's Progressive, written by Carleton Beals, entitled "Oil and Blood." The article speaks for itself:

OIL AND BLOOD

(By Carleton Beals)

When I went to my general files to get my folders on oil, I discovered that the next folder was labeled "Peace." This was real irony. It is conceivable that oil, which, in spite of the new promise of an atomic age, is still the major source of energy and power for modern man, could become the handmaiden of peace and promote the welfare of the world. As it is, the attempt to monopolize the world's oil remains the greatest single cause of world disorder and war.

Near Eastern oil was part of the American booty in the First World War. The State Department was used to force England and France into line; American naval and military force was used blatantly to secure that oil. The fleet, even as today, was sent arrogantly into Turkish waters. American admirals and high Government officials served as agents for the oil companies, and the whole weight of American military power and the governmental machinery was used to back up the notorious Chester concession in Turkey and to get a share of the war booty for the American oil companies.

Thus the pattern was already set for World War II, but in this war the goal has been not to gain a share of the oil in the region, but to grab all remaining oil exclusively.

President Roosevelt had set as the ideal: the free access of all peoples, "victor or vanquished"—"access on equal terms to the trade and raw materials of the world which are needed for economic prosperity." This was magnificent hyprocisy.

Actually, in the Near East, Roosevelt, the Government, and private interests, were laying their plans, under the shadow of war and death, to grab the key raw material right under the noses of the Russians and everybody else.

Oil company agents, operating as naval officers, Army officers, Government technicians and procurement officials, as special cultural diplomats and so on, traveled freely about while other decent people on legitimate or necessary business could not even get passports.

Such was the setting for the struggle in Iran. There behind the flag, with the stench of Stalingrad in their nostrils, American oil agents tried to grab off all the oil in Iran, including the traditional Russian sphere. Previously the Soviets had renounced all imperialism and rights in this area. This was in the days when the Soviets still sought to protect the rights of small nations and subject peoples.

Their move was not meant, I presume, merely to vacate the region for the sake of bigger and better imperialism by others. With the behind-the-battle doublecross, the Soviets, quite lacking the finesse of the western democracies, used the only tactics they apparently know, rough-shod bullying, and sat tight, creating one of the first of the great, serious impasses between the hitherto loving allies. They got out of Iran only when all oil concessions were denied to everybody.

But the American grab was complete in Kuwait, Saudi Arabia, and Ethiopia. In Saudi Arabia several American companies had pooled their interests and slipped in to gain exclusive concessions in violation of the nobler spirit of "share the loot," which had featured the demands of our Navy and State Departments after World War I. We had progressed greatly between wars. Our motto had become not "part of the loot" but "all the loot." Obviously this was in direct opposition to Mr. Roosevelt's noble "equal access" idealism.

The risks of this policy were to be underwritten, and are being underwritten, by the United States Government and the money of the American taxpayer. The profits go to private companies.

While Mr. Roosevelt was emitting his noble platitudes, he greased the dictator of Saudi Arabia to the tune of $20,000,000 in lend-lease and an Import-Export loan of $10,000,000. Actually a lot of other costly aid went into the undertaking: the costs being disguised by the regular overheads of Army, Navy, State Department, OWI, OSS, and various other special wartime agencies. Out of what budget came Roosevelt's expansive personal gifts to Ibn-Saud, automobiles and so on, I do not know.

Mr. Roosevelt personally conceived the Petroleum Reserves Corporations to win oil around the world, without due regard for equal access or the rights or interests of subject peoples or other wartime allies.

The proposal in the case of Saudi Arabia was to build a United States Government pipe line at a cost of $165,000,000 or so to aid the private companies. Other lend-lease materials and loans to other Near Eastern countries were fitted into the jig-saw puzzle. The United States Government was to get a 25-percent reduction in the cost of oil up to a billion barrels over a 50-year period, and to have control of all sales from the Mediterranean and to foreign governments and nationals. Strategic storage depots were to be set up in Ethiopia, Egypt, and other places.

Behind-scenes diplomatic conferences were held in Egypt. Roosevelt met the various heads of state aboard an American battleship off the Egyptian coast.

Arrangements were made for the United States to send missions to carry out various undertakings, the construction of ports, the building of an oil city of 70,000 on the Persian Gulf, the building of airfields to police the pipe line across the barren wastes, and the sending of a military mission to Saudi Arabia. The pipe-line project as a Government enterprise fell through, but the military mission is now in Saudi Arabia, and airports are being constructed.

President Truman soon revealed that he intended to back up Near Eastern oil imperialism. Roosevelt's conference with Ibn-Saud occurred in February 1945. President Truman's Army Day address on April 6, 1946, told of the vast natural resources of the Near East and said that rivalry in that area might suddenly erupt into conflict.

His words foreshadowed the diplomatic, financial, and military support that was to be forthcoming for the oil interests and the aid to Greece and Turkey, which was suddenly demanded in the name of "an emergency," although the plans for this aid were being made long before it became an issue, the ground being carefully studied, the fleet being dispatched on flamboyant tours as after World War I.

The oil companies got the green light for a bigger corporate arrangement, which all told would include American companies of the Standard empire, with total assets of more than $4,000,000,000, and a gross turnover of nearly $2,000,000,000. It is worth while comparing this sum and the power in world affairs which it represents with the amount the world is willing to spend on making the United Nations a success.

Certainly the Near East oil venture has already cost the American taxpayer plenty and may cost incredible sums in the future. And during the war, the United States Government, thanks to oil company officials in control of Navy procurement as Government officials, had to pay nearly three times as much for its Near Eastern oil as did England.

Oil imperialism will lead us right into war and then help the enemy once that war has started. Near Eastern oil was one of the chief goals of German war strategy. It will be the goal of any other war, and an attempt to monopolize it, rather than to seek the proper world agreement, means that we are asking for war and are leading for it with our chins out.

Already this quest for monopoly has led us to flout the United Nations, just as oil, among other things, led us to follow a unilateral policy toward Argentina and to junk the inter-American system and the good-neighbor policy. It might be well for the American people to recall that the downfall of Japan and Italy began when those two powers flouted the League of Nations. It is somewhat shameful that in the preparations for World War III, it is now the United States that pursues the fatal policy of the Axis Powers in handling world affairs and in destroying the UN; and one may be sure that world opinion will gradually rise against us and perhaps overwhelm us.

Put the shoe on the other foot.

The oil fields of Mexico and the potential field of Peten, Guatemala, are about the same distance from New Orleans as the respective Near Eastern fields, British and American, are from the frontiers of the Soviet Union. Imagine the Soviets making enormous gifts and loans to Mexico and Guatemala, sending in swarms of technicians, training Mexican and Guatemalan armies, building new ports and cities, constructing airfields. Mr. Stalin journeys to the Gulf of Mexico and meets the various Presidents aboard a battleship. Periodically the Soviet Fleet maneuvers off the entrance of the Panama Canal. Then to buttress up this shaky nonsensical policy, he moves into Cuba and the Dominican Republic with hundreds of millions of dollars, technical experts, army personnel, army equipment.

The answer? We would go to war overnight. If the Soviets have not gone to war with us it is merely because they still feel themselves too weak and because Mr. Stalin by his brutal methods can keep the Soviet people in ignorance and prevent their fear and anger from bursting forth.

The Soviets have other preliminary weapons. Despite our millions and technicians, Soviet geographic proximity and influence make it possible for them to keep the neighboring areas churned up and in an explosive popular state. Very shortly, the costly American oil imperialism in the Near East is going to be confronted with new Arab unity, Arab economic nationalism, or maybe even a mass uprising of the Arab peoples. Will we go to war against the Arab people? That certainly would mean World War III.

The question is not whether United States oil imperialism in the Near East will be successful, but merely how much it is going to cost the American public for the sake of fabulous private profits, and how long it is going to last before the house of cards comes tumbling down in revolution, war, and disaster.

No one dislikes the Soviet system worse than I do. I have only one hope as a writer from any such system: The firing squad. I am appalled by its mass murders; its concentration camps, its brutal disregard for human rights and decencies. I detest its greedy ter-

ritorial expansion, its blundering old-style imperialism, its rule-or-ruin policies, its iron curtain, its lying propaganda.

Furthermore, I would say that the United States has just as much right to support brutal undemocratic governments in Greece and Turkey as the Soviet Union has in Yugoslavia and Poland. We have as much right to destroy human freedom and democracy in southern Korea as the Soviets have in northern Korea. We have just as much right to support the ferocious dictatorships of the Dominican Republic, Nicaragua, Honduras, and Paraguay as the Soviets have in Bulgaria and Rumania. We have just as much right to grab oil or the other resources of most of the world as the Soviets have.

The answer to this whole process, of course, is war, and it is silly to expect anything else.

The first League of Nations accomplished many fine things, but it was stricken with a moral sickness as a warped product of World War I. That moral sickness was not the failure of the United States to join it, which was a serious drawback, but chiefly the fact that it was a league of victors intent on using the organization as a cat's paw for holding on to the booty of war and the false and treacherous boundaries of war.

The United Nations is even sicker, for it does not even represent a league of victors. A UN police force is a patent absurdity. The UN is concerning itself with outmoded political and territorial disputes on a narrow basis of nineteenth-century nationalism. The salvation of the United Nations and the peace of the world can only come if the organization is able to face and handle the great economic empires, the real superstates of the modern world.

The Roosevelt dictum (which he himself flouted) of equal access to resources and trade, is the only possible answer to Soviet and United States imperialism and the power struggle heading toward war. Unless the United Nations can convert itself from a sterile debating society over petty frontier issues into a force for controlling the proper distribution of resources and for human welfare it will soon be a dead duck.

Shortly after World War I, in a piece for Scribner's magazine, I pointed out that the only possible way of avoiding World War II was to set about the rationalization and proper international control of the great strategic resources of the world and the elimination or control of international monopoly in these fields.

Unless the great international monopolies can be brought under some sort of world control, and be divorced from the present process of betrayal of backward peoples, and be made to serve the needs of the world and its peoples, then the United Nations will be merely a futile gesture to keep the peoples blindfolded till a new struggle breaks out. This economic effort is more important even than atomic energy control, in my judgment.

Unless we wish merely to fight blindly over Near Eastern oil like a dog over a bone, as we are now preparing to do with all we have, at the cost of a million American lives or so, we should begin setting up an international system for proper control and operation and distribution of Near Eastern oil.

When we were the "outs" in the region, we favored the British to come across with a share. We should not wait until we are forced one of these days to lose Near Eastern oil entirely or be forced to cede a share.

Such international control should take cognizance of the following principles:

1. Welfare of the workers in the industry.
2. The national and social welfare of the nations where the oil is produced.
3. Quotas on production to prevent price-fluctuations and improper exhaustion of any given field.
4. Equitable distribution of the oil to all countries of the world on the basis of present and potential needs.

Such controls in key troubled areas would do much to ease tensions and pave the way for economic and political peace. Such an arrangement for the Near East could be used to force international agreement on Rumanian oil and thus bring it back into the lifeblood flow of world trade. It would pave the way eventually for a world-over rationalization of the industry for the benefit of the peoples of the world.

The alternative is war and defeat for everybody.

Research and Development Spells National Security

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Nutt, director of aircraft engineering, manager, Toledo plant of the Packard Motor Car Co.:

Two world wars have come and gone, both within a generation. Each of them was the result of turmoil and envy starting in the European Theater and spreading cancerously the world over. The United States of America was drawn into these wars inevitably and now finds herself in the position of a world power saddled with too much responsibility for international affairs. Her geographic isolation from the European and far Pacific areas has been largely responsible for her position. The civilian population of this country has been through these two major wars without seeing combat, without knowing the terrible consequences of a war-torn countryside, without experiencing the ravages of an invading enemy. In fact, war has brought high wages and false prosperity although not an abundant life.

Perhaps the most significant factor in this last terrible war was the appreciation of the effect that aviation has had on the art of making war. During World War I the airplane was a feeble youngster raising its head in an almost futile attempt to obtain recognition. Airplane speeds little over 100 miles an hour were normal during those early years and only through the foresight and faith of the few aviation-minded military men in the services did military aviation survive and grow even though it was not an important factor in winning World War I. Those of us who went through the postwar period of World War I know the stagnation which took place in the aviation industry and the lack of technical progress because of the inevitable economy wave that follows a war. We hope history will not repeat itself in this respect.

Only 10 years ago Russia had fighter airplanes in production which were more modern and had higher top speed than any airplanes in production in this country at that time. This is not only a matter of record but also a matter of personal observation both in this country and in Russia. Fortunately aviation was still small, airplanes were small and small engines relatively were required. Therefore, it was possible to develop experimental airplanes and engines at a fraction of the present cost. The aviation industry struggled along through the years both in the military and commercial fields and at the outset of World War II we found ourselves with better equipment than after World War I, but still inferior equipment. A considerable spurt in activity in the industry came as a result of orders from European powers shortly before our entrance into the Second World War although our equipment was not outstanding at that time. The only fighter in production was the Curtiss P-40 airplane with a top speed around 350 miles per hour; and a prototype bombardment airplane, the Boeing Flying Fortress, was in the development stage. There were other experimental ships under design or construction, among which were the famed B-29 Super Fortress, the North American P-51 Mustang fighter, and the Lockheed P-38 twin-engined fighter. None of these new ships was in production in quantity.

It is significant that the military airplanes and engines which helped win this last war were developed in peacetime. It is true that improved models of basic types were developed during the war, but time was not available to develop new types such as the jet-projelled fighters and bombers. At the close of the war we began to see a few P-80 Shooting Star jet-propelled fighters but they did not get into combat or into production in quantity during the war. A new form of propulsion, the jet engine, was responsible for raising the speed of our fighter airplanes approximately 100 miles per hour almost overnight, although too late for use in the war. The Germans were using several new jet-propelled fighters in combat before the end of the war. Both the Germans and the English were years ahead of us on the development of jet engines and they are ahead of us by several years at this time. Both of the above-mentioned nations started the development of jet engines over 15 years ago while in this country no money was available for this development until after we were in the recent war. The aircraft engine companies who had been in business for years were too busy on war production and were not permitted to engage in jet engine development. As a result the war ended with one American jet engine in experimental airplanes and this engine was a "blown up" copy of an English engine.

The importance of the turbine type jet engine to the future of this country cannot be overemphasized. Aviation has shrunk this world to the point where oceans can be spanned easier than the English Channel a generation ago. No longer are we safe against invasion. The enemy actually touched our shores during this war. The next war will see destruction and havoc hit us without warning. There will be no time to convert our factories to wartime operation. We have had two wars which were expected to end all wars; and the third war may end all wars, but probably at the expense of ending all civilization. There are still those skeptics who do not believe the possibility of remote-controlled bombs. Nevertheless they are an actuality. Only 2 years ago in this country the idea of flight near and above the speed of sound, transonic and supersonic flight, was being ridiculed by many; and yet, concurrent with this kind of thinking, the Germans were launching V-2 flying bombs which had a speed of 3,500 miles per hour and of such colossal size and power that they required fuel pumps of 600 horsepower. Even today we have nothing to compare with this weapon which was developed under the handicap of dictatorial power where men feared to report the mistakes and blunders of their colleagues and their political dictators.

The atomic bomb is here and the jet-propelled aircraft, the jet-propelled guided missile, and rocket power are our only protection against this awful force. It is futile to hope that the Albert Einsteins can educate the world in the immediate future so that the threat of war no longer hangs over us. The world has progressed infinitesimally toward real civilization in the last 2,000 years and we can use no head-hiding-in-the-sand process to provide national security. We must face the fact that other nations will discover the detailed secrets of the atomic

bomb and we can no longer sit back complacently as a superior world power. Time and lethargy has a way of leveling off relative military power. We must consider seriously what other large powers would do if they had the atomic bomb. Our military forces have had a 90-percent reduction in combat strength since the end of the war. Under present peacetime policies these forces will never regain their strength, and only the impetus of war will restore them.

Very definite steps can be taken, however, to provide the potential energy needed to keep this country at least partially prepared for a national emergency. The first step is to provide sufficient funds for research and development in the aircraft industry. The $147,000,000 to which the War Department budget was cut from the $347,000,000 required to carry on an adequate program will not provide sufficient funds to even keep abreast of developments in the world. We are now several years behind England in the development of jet engines and we cannot catch up to say nothing of surpassing them unless funds are made available. Sufficient funds should also be made available as a second step for limited production of airplanes, engines, and equipment to keep personnel trained in the manufacture and the operation of aircraft and its component parts. Equipment on paper and no operating experience does not spell national security.

In the face of public resentment of too much spending by Government agencies, the request for more funds may appear unreasonable. However, funds should be provided for research and development at the expense of other less important projects. We have spent and are apparently planning the spending of millions if not billions of dollars for relief and loans all over the world. If history repeats itself these loans to a large degree will never be paid and the money will help many of the nations to divert their energy toward the building of their military strength while we continue to fall further and further behind in our research and development program in this country. Self-preservation is a great force but no force is effective without the necessary financial support.

Billions of dollars are being spent by Government agencies today and only a fraction of saving in the various agencies and bureaus would provide the $347,000,000 needed to carry on an adequate research and development program in this country.

Only the Congress can make available the necessary funds for research and development and also for sufficient production to maintain a strong and healthy aircraft industry prepared at all times to develop and provide airplanes, engines, and equipment for our national security.

Soviet Fallacy in Atom Control

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a timely editorial from the St. Louis (Mo.) Post-Dispatch, May 21, 1947, dealing with the Soviet double-talk of Andrei Gromyko in his radio address to the American people. It follows:

SOVIET FALLACY IN ATOM CONTROL

The fallacy in Russia's notions about the atomic bomb, as eloquently propounded by Andrei Gromyko in his radio address to the American people, is that while they are labeled "international control" they are actually national self-restraint.

Mr. Gromyko declares that control of the bomb can be achieved by prohibiting its use. The trouble is that prohibition is worthless without enforcement. The people of the United States found that out in such relatively minor—but absolutely unpleasant—ways as the eighteenth amendment. The whole world found it out, if not before, in World War II, which was prohibited by the Kellogg-Briand Pact and by other international commitments.

It is an unfortunate illustration which Mr. Gromyko chooses in an effort to prove his point—and understandably so, since there are no fortunate ones. He says poison gas was not used in World War II because the nations had outlawed it. That is piffle in the first degree, and Mr. Gromyko ought to be one of the first to know it. Poison gas was not used because neither side could figure out that it would gain any advantage by using it. If either side could have anticipated a decided advantage through the use of poison gas, it would have been used.

There can be no international control of atomic energy, without unlimited inspection and international monopoly of raw materials. Russia, in short, rejects international control in all but name, and proposes national self-restraint. It is not enough.

Old-Age and Survivors Insurance Benefit Payments

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. KEATING. Mr. Speaker, a number of inequities in the present social-security law have been brought to my attention and have been the subject of considerable study. None of them, I believe, are covered by any of the legislation now pending to amend this law.

I have, therefore, today introduced a bill to amend various subsections of section 202 of the act entitled "Old-Age and Survivors Insurance Benefit Payments." In order that the Members may be familiar with the effect of these amendments, I should like to review briefly their purpose.

Nearly all of the changes result from communications I have received or talks I have had with constituents who have pointed out these apparent inequities in the present law.

It is now necessary for one to have been employed in a covered occupation for the equivalent of 10 years to draw old-age insurance payments. Therefore, if a man becomes disabled from working before he has completed these 10 years, he loses what he has paid in by way of deductions from his pay envelope, without any benefit. Probably some minimum working time should be provided, but it seems to me that if a man has worked 5 years in covered employment and then becomes permanently disabled from performing any gainful occupation and, therefore, from completing the time for making his payments, he should not be deprived of the benefits afforded by the social-security law.

The first amendment in this bill takes care of such a situation and protects an individual who suffers such a permanent disability during the period of his employment, provided he has fulfilled the other requisites to secure insurance benefits. The bill provides that, for the purpose of reckoning his average monthly wage, required by the statute, it shall be assumed that he received, for the time he was prevented from working by his disability, the average wage of the last year when he did work.

The second situation dealt with by this amendment to the existing law is to cover a case where a man has worked at least 5 years but has left his covered employment for some other reason; for instance, as often happens, he may not be able to show permanent disability to perform any work, but he may be unable, physically, to continue with the strenuous work of the covered occupation. He may be able to sell newspapers or do comparatively light work in the corner grocery store, but he may not be able to do the heavy lifting involved in his covered occupation. In such a case, although he does not require the extent of protection afforded by way of waiver of payments to one who has become totally and permanently disabled, he should have the privilege, if he wishes, to continue his payments or, if he can raise the money, make a lump-sum payment which will assure him of the benefits of the social-security law which he would have derived if he had remained in the covered employment for a 10-year period. This bill would give him, under such circumstances, two options.

He could either pay the full amount which both his employer and he would have paid if he had continued in his regular employment and receive, thereby, the full benefits afforded by the social-security law at age 65, a very economical type of insurance, or he can pay simply the proportion which he would have paid as an employee for the balance of the 10-year period and receive the proportionate benefits. To illustrate the latter option, if he had worked 8 years and was then forced to leave his employment, he could pay in the amount which he would otherwise have paid during the remaining 2 years without the matching sum paid by the employer and become entitled, therefore, to 80 percent, plus half of 20 percent, or a total of 90 percent of the benefits otherwise derivable.

Such changes in the law require corresponding changes in the benefits for widows, children, or parents in the ensuing sections of the Social Security Law.

With regard to children, a special situation has been called to my attention by the specific case presented by one of my constituents. Under existing law, the only child who can benefit is an unmarried child under 18 who is dependent upon the insured individual. A widower who has worked hard all his life and is facing retirement in the near future, has a daughter in her twenties, who is totally blind and completely dependent upon him for support. He faces the prospect

of having made substantial payments which can never benefit any member of his family because his wife is not living and his daughter is over 18 years of age.

It seems to me only simple justice that a child whose unfortunate physical disability makes him or her dependent upon the parent for support should receive the same consideration as one whose dependency is based on an arbitrary age limit. This bill would correct such a situation by affording equivalent benefits to one under 18 and one over 18 who is totally dependent upon the insured individual by reason of physical or mental disability.

It is only natural that cases would arise in the administration of the social-security law which were not envisioned when it was enacted. As these become apparent they should be the subject of remedial treatment. Within the necessary limits of a sound economy, without which our system of free enterprise will collapse and, along with it, the benefits afforded by such a law will vanish, we should endeavor to make adequate and fair provision for those who have contributed and whose employers have likewise contributed, to ensure that in the evenings of their lives they will have the benefit of a modest income and will not be compelled to become objects of the charity of family, friends, or the State.

One of the important factors, I believe, in the development and maintenance of a well-rounded and sound domestic economy, is the removal from those who work and produce, of the ever present and stifling fear that when their productive days are over, they will become objects of charity. It is imperative in the perpetuation of a system of free opportunity, whose cause most of us stoutly and fervently espouse, that we solve directly and adequately this important problem. As one step in that direction, this measure has been introduced. I am told the cost of this extension of benefits would be extremely modest. I hope it may have an early hearing and favorable consideration by the Committee on Ways and Means and that it will commend itself to the membership of the House.

Japs Really Going for Democracy, Editors Say

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article that appeared in the Cleveland Plain Dealer by Mr. Ralph J. Donaldson:

JAPS REALLY GOING FOR DEMOCRACY, EDITORS SAY

(Article 5)

Are the Japs putting on an act? Are they pretending to like MacArthur and appearing to accept the occupation with good grace, but actually biding their time until they get another opportunity to stab us in the back?

This is the question most frequently asked of persons who have traveled in Japan. The best answer I can give is that all of the editors who recently visited Japan were convinced that a real revolution has taken place in the minds of the Japanese people, that the seeds of democracy have been planted in fertile soil and that they will grow and flourish, provided we stay there long enough to nurture and guide their development.

There are, of course, some Japanese who are bitterly resentful of the occupation and whose only regret is that they lost the war. These include the war criminals; the members of the 11 princely families who have been reduced to the status of commoners; the members of the Zaibatsu and other families who controlled Japan's finance and industry and have had 85 percent of their wealth confiscated through capital levy taxes; the wealthy landowners who have been required to sell all but 7.35 acres of their holdings to the tenant farmers; the officer class, which has been abolished; and those responsible for planning the war, who have been excluded from holding positions of trust by the purge.

FORMER MASTERS UNMASKED

These, however, are in the minority. The vast majority of the Japanese are resentful not against the Americans but against their former masters who deceived and browbeat them and who led them into the disaster of war.

Take the testimony of former Prime Minister Baron Shidehara, who told the group of visiting American newspapermen that the Japanese people are less oppressed today under the occupation than they would have been by their own rulers had Japan won the war.

Then there is the testimony of Lt. Ethel Weed, of the information and education section of SCAP, a former member of the Plain Dealer staff, who is said to have a wider acquaintance among the Japanese than any other member of the occupation force. She has traveled throughout Japan, addressing meetings of women and explaining to them their rights under the new constitution, telling them how to vote, and giving them a picture of emancipation about which they never before had even dreamed.

Lieutenant Weed tells of instances where women have started at 3 o'clock in the morning to trudge through 15 or 20 miles of snow to attend her meetings. They have sat all day in cold, drafty auditoriums to hear her talk, to ask questions, and to discuss among themselves the possibilities of the new freedom.

There are the tenant farmers, who formerly paid an average of 50 percent of their production to the landlords and who are now looking forward eagerly to purchasing their own land.

There are the labor unions, whose members have discovered they possess vast economic and political power, although they are not quite sure yet what to do with it. Then there are the political parties, 268 of which entered candidates for the Diet at the last election, with 30 parties represented among those who were elected.

These people are not willingly going back to the old way of life. A vision of something better lies before them. And, with free elections, they will choose members of the Diet who reflect their views and who will not permit any tendency toward a revival of militarism and feudalistic slavery.

SEE UNITED STATES AID NEEDED

At a conference our group had with the speaker of the Diet and representatives of the five largest parties, there was general agreement on the following propositions:

That the Japanese harbor no ill feeling against the United States;

That they recognize the need for American help and believe that the occupation policies have been wise;

That they would like Japan again to become an independent nation, but that they realize the attitude of Russia toward Japan will be a factor in determining the length of occupation;

That even after the occupation army is withdrawn it would be desirable to have a token force of Americans remain to insure the maintenance of order;

That Japan's only hope for the future lies in the full acceptance and practice of democracy;

That this goal cannot be achieved overnight; but that democracy will be firmly established when the boys and girls who are now being taught its principles in school grow to manhood and womanhood and provide the leadership of the future.

Admission of Jews Into Palestine

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Post of May 21, 1947:

THE BRITISH PROTEST

The British Government is reported to have protested to ours against the activities of certain groups that want Jews admitted to Palestine.

Lord Inverchapel, the British Ambassador, according to the New York Times, objected to the raising of funds for armed resistance to British forces. He also called attention to a recent advertisement by Ben Hecht as an example of encouragement to violence.

The Ambassador, however, did not ask for suppression of such activities. Instead, he questioned the right of the organizations, identified by the Times as the Bergson groups, to tax exemptions for their funds.

As a result, the whole situation in regard to these organizations is said to be under review.

The British Government's representation is not a protest but merely a querulous complaint. The suggestion that our tax officials crack down on these organizations is an attempt, by indirection, to reduce but not stop their activities by the use of force. It is on a par with British tactics in Palestine itself.

This newspaper always has opposed the use of force for political purposes. It has never condoned the blood and killing in Palestine. Nevertheless, anyone who has studied the history of injustice knows that men and women, if pressed far enough, will strike out, perhaps foolishly, against what they believe to be intolerable conditions.

In Palestine, the conditions that Jews who have taken to bloodshed consider intolerable are a compound of many factors. The British Government, in 1939, issued a white paper which cut immigration to a trickle and sharply restricted purchase of land by Jews on any terms. A League of Nations commission denounced this policy as a clear violation of the mandate to provide a Jewish national home in Palestine. At that time Hitler's slaughter of Jews in Europe was increasing in fury. Notwithstanding, the Jews provided 30,000 young men for the British Army during the war. They expected that Britain, relieved of the Nazi threat, would restore their rights after the war. Not only did the policy continue, but more than 14,000 Jews who did attempt to enter Palestine were forcibly deported to barbed-wire enclosures in Cyprus.

A year ago, the Anglo-American Inquiry Commission recommended a plan for admission of 100,000 immigrants to Palestine, abolition of the restrictive land laws, and reorganization of the government. The United States and British Governments disagreed over the political provisions.

During the months that passed, President Truman, Prime Minister Attlee, and others on both sides of the Atlantic talked about Palestine. The hopes of Jews rose with each statement and were dashed with each deportation. Even at the United Nations nothing was done to relieve the actual, day-to-day plight of these people and to change the conditions that made the pressure dangerous.

This latest act of the British Government is a glaring revelation of the fault of which that Government and our own are guilty. It illustrates a resort to police power, rather than an honest attempt to find a real solution, not a paper solution, good for a thousand years, but a solution to put an end to the intolerable conditions of today.

Such is the proposal that many people had hoped would be made before the United Nations—immediate admission of 100,000 Jews to Palestine, leaving the political settlement for a later and less violent time. Failing that, many hoped that the British Government, with support from our own, would at least begin the admission of much larger quotas while the UN Commission made its investigation looking toward a plan for a final settlement.

If the problem of Palestine were to be raised by the United States Government or by the British, the subject for discussion should have been something of that kind—not a sly use of tax laws to check committees, however mistaken they may be.

Care Must Be Exercised in Revising Court-Martial Systems of the Armed Forces

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. VAN ZANDT. Mr. Speaker, the following letter from Mr. Will Leach, of Scranton, Pa., which appeared in the New York Times contains some interesting facts to be remembered in revising the court-martial system, and I feel that every Member of Congress should read the timely observations in Mr. Leach's communication:

THE COURT-MARTIAL SYSTEM—ITS REVISION BY LAWYERS WITHOUT MILITARY EXPERIENCE IS OPPOSED

To the EDITOR OF THE NEW YORK TIMES:

Having spent the last 47 years as lawyer, judge, and enlisted man in the Army, I think that the lawyers who are trying to take the court-martial system away from the officers have no idea of what they are doing.

Lawyers who make such a revision should have been members of the armed forces and spent considerable time in the enlisted service. Then they would know that the military officer's job is to train men to get their murder implements speedily in place to kill the enemy before the enemy kills them. His men must be drilled to automatic obedience to orders. It is the only way to save their lives, because they cannot outrun a bullet.

It may be the officer's duty to send men to great danger to save the rest. There must be no suspicion that he shields favorites. Each man under his command should be kept at the same distance so that he has no preference for anyone.

This "caste" system of the "brass hats" seems un-American and contrary to our idea that every officer is a public servant with the duty of being pleasant to everyone he meets.

Woe to the military officer who gives his men the idea that he is trying to please them instead of trying to train them. His popularity will not last 3 weeks. Each morning 100 men will have 93 different ideas of what the officer should do to please them. At night 3 will be pleased and 90 sore because he did not follow their ideas. When he talks with 1 man 99 will think "that sucker has an advantage over me" and be sore.

I was an enlisted man in a detached command in World War I and was sent to several camps and was under several officers. I found that every officer who aimed to please was heartily disliked. The men complained that he had "suckers." Each man had a different complaint on some unfair thing that the officer had done.

The stern disciplinarian was hated at first. He announced to the men that it was their job to learn to soldier, and he meant to see that they did it. He rode his men so hard he was called "Old Iron Bottom." In 6 weeks' time "Old Iron Bottom" was rated "tough" and "square." He had no "suckers." He stood for no foolishness. He saw that the cook and everybody else was on their toes, and men got what was coming to them. The men were proud of him and their outfit. Instinctively, his men knew the officer was trying to do what was right.

The lawyer, trained to question and take every possible exception to the ruling of the judge, has no business revising the court-martial system unless he has considerable military experience.

A politician is a man who trades favors for votes. The Congressmen should not let the Russians sell them the idea that the Russians discarded. That idea was that the officers should be responsible to politicians in the ranks.

WILL LEACH.

SCRANTON, PA., *April 23, 1947.*

Universal Military Training

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein a resolution adopted by the fifth district of the Iowa Department of the American Legion urging favorable consideration of legislation for universal military training:

IOWA DEPARTMENT,
THE AMERICAN LEGION,
Oskaloosa, Iowa.

Be it resolved, That the Legionnaires of the old fighting fifth district hereby respectfully petition the two United States Senators and the eight United States Congressmen from Iowa to not only favorably support the universal military training legislation now pending, namely, S. 651 and H. R. 1988, but also to aggressively work for its immediate passage.

Dated at Ottumwa, Iowa, May 15, 1947.

ROY C. GILLETT,
Fifth District Commander,
American Legion, Department of Iowa.

Resolutions of the Thirty-seventh Annual Convention, National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM M. WHITTINGTON
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks, I include the following resolutions adopted by the thirty-seventh annual convention, National Rivers and Harbors Congress, May 2 and 3, 1947, Washington, D. C., to wit:

THE PRESIDENT'S MESSAGE

Last January the President, in his message to the Congress on the state of the Union, said:

"In our responsibility to promote the general welfare of the people we have always to consider the natural resources of our country. They are the foundation of our life. In the development of the great river systems of America there is a major opportunity of our generation to contribute to the increase of the national wealth. This program is already well along; it should be pushed with full vigor."

We believe that no better statement could be made in behalf of the interests of this Congress and believe that it is especially fitting for the Chief Executive, in these times, when international matters threaten to monopolize the attention of our statesmen, to stress the importance of this opportunity to do good in our own land. We, accordingly, urge that the Congress of the United States consider carefully the status of flood control, navigation, reclamation and allied works, give full recognition to their importance to the national economy, and promote their prosecution at a vigorous rate so as to avoid the waste of spasmodic construction programs that require alternate disruption and rebuilding of administrative and construction organizations.

PRODUCTIVE CHARACTER OF PUBLIC WORKS

We voice our earnest conviction that the great public works projects, not only of our Federal agencies, but of our State and local governments, are among the important wealth-producing resources of our country; that the protection of our fertile valleys and industrial centers from flood disasters adds untold wealth annually to the Nation's income from farm, mine, and factory; that the economical and efficient transportation provided by the Nation's network of inland waterways and its excellent coastal harbors makes possible the cheap distribution of our agricultural and industrial products, not only within our own boundaries, but throughout the world; that the reclamation projects of the West have created a vast agricultural empire where once were barren and arid lands; and that the incidental benefits in recreation, drainage, health, and power, not only have added to our national income and wealth, but have made this a better land in which to live. All these benefits, we submit, afford abundant confirmation of the productive character of public works for improving our natural water resources, for flood control, navigation, reclamation, power development and allied purposes.

APPROPRIATIONS

We commend to the careful and thorough deliberation of the Congress of the United

States the need for adequate appropriations for all phases of our national resources development program. We believe the recommendations of the Bureau of the Budget for public works appropriations are inadequate to meet the great need of the times. We appeal to the Congress of the United States not to be swayed by the hysterical and verbose cries of advocates of a false economy which would deprive great sections of our Nation of funds for protection from devastating floods; would deny the necessary moneys to keep open important arteries of commerce, and would fail to provide the funds which would keep the arid lands of our country from returning to dust and desolation. We submit that the public works projects of the Federal Government are the most important wealth-producing items in our economy and that to neglect or discard them not only robs our National Treasury of substantial revenues but materially reduces, for a great mass of our population, the high standard of living so vital to the maintenance of our national economy.

POWER POLICY

The primary objective of the National Rivers and Harbors Congress is to promote the sound and orderly development of our national water and land resources; and

Many projects for the development of such resources involve the production of incidental hydroelectric power necessary for the economic development of such projects; and

Tremendous confusion now exists relative to policies concerning the sales and disposition of excess power from multiple-purpose dams as evidenced by the several bills presently before the Congress proposing, among other things, to amend section 5 of the Flood Control Act of 1944.

It is obvious that the enactment of any of such amendments will fall far short of establishing a fully effective policy in the matter of the disposition of excess power.

It is the firm conviction of the National Rivers and Harbors Congress that the question is of such importance, magnitude, and complexity that it should be the subject of a thorough study made with the view of formulating a workable and sound national power policy.

We urge that wherever economically feasible, as recommended by the Corps of Engineers and the Bureau of Reclamation, that multiple-purpose-type dams be constructed and that the maximum hydroelectric possibilities be developed at such sites consistent with full operation of the dams for their primary purposes, that is, flood control, navigation, and irrigation.

VALLEY AUTHORITIES

The National Rivers and Harbors Congress reaffirms its long-standing opposition to the extension or creation of river valley authorities. Two Senate subcommittees only last year, after exhaustive hearings, found no justification for a Missouri Valley Authority. A new MVA bill recently was introduced in the Senate. We still see no justification for its passage.

SOIL CONSERVATION AND REFORESTATION

We believe that Federal planning, execution, operation, and maintenance of public improvements relating to the prevention of soil erosion and to reforestation, including such investigations and estimates of runoff and water-flow retardation in the various watersheds concerned as are considered to have useful or practical values, should continue under the jurisdiction of the Department of Agriculture.

RECLAMATION

The population of the 17 Western States continues to increase and the national food requirements continue to grow. The Secretary of Agriculture has recently proposed a policy calling for the utilization of all potential, available, productive acres to supply the domestic and foreign needs of agricultural produce.

The development of the arid and semiarid lands by irrigation in the 17 Western States is recognized as the most beneficial use of water and will materially aid in meeting agricultural production goals.

We therefore endorse the construction program of the Bureau of Reclamation and ask Congress to provide adequate funds to carry the Reclamation program forward in the most economic and beneficial manner.

IRRIGATION

We recommend that Federal planning, execution, operation, and maintenance of public improvements relating solely to the distribution of water for irrigation should continue under the jurisdiction of the Interior Department. We commend the energy and efficiency of the Bureau of Reclamation in the execution of its program. We believe that the present cooperation between the permanent agencies of the Government with respect to multiple-purpose projects affords the most economical and efficient executive management of such projects.

PLANNING FUNDS

The National Rivers and Harbors Congress requests the Congress of the United States to provide advanced planning funds for fiscal year 1948 for those rivers, harbors, and flood control projects which have been authorized by the Congress and are recommended by the United States engineers as eligible for advanced planning.

IMPROVEMENTS OF OUR WATER RESOURCES FOR NAVIGATION, FLOOD CONTROL, AND ALLIED PURPOSES

We reaffirm our conviction that all planning and execution of public improvements of our water resources for navigation, flood control, and allied purposes, including beach and shore protection, continue as in the past to be under the jurisdiction of the War Department as a function of the Corps of Engineers. We reaffirm our faith and confidence in the Corps of Engineers whose devotion to this Nation and loyalty to the Chief Executive have made possible the orderly and efficient development of the greatest waterway and flood control projects on earth. In their many years of experience, during peace and war, they have met many emergencies and have never failed to accomplish the greatest good for the greatest number of people in a manner most advantageous to the Government and to the people. Furthermore we believe that only through the plans developed by the Corps of Engineers can we obtain a consistent and coordinated improvement of our water resources.

Migrant Influx Worries Officials in Kern County

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 8, 1947

Mrs. DOUGLAS. Mr. Speaker, there are evidences of a renewed serious migrant problem in California.

There are practically no decent facilities for migrant workers today in California.

The enclosed clipping points out that once again counties and local communities are passing migrants along from one community to another. Reports from California indicate the possibility of this situation growing more acute. We should be thinking in terms of a renewed Federal-aid program such as took place during the days of the Federal Transient Service in 1933–35.

Local communities, and even States, should not be asked to bear the whole burden, a burden that is so palpably interstate in nature.

It seems safe to predict that this is a problem that within a year is going to demand concrete thought and action.

The clipping follows:

MIGRANT INFLUX WORRIES OFFICIALS IN KERN COUNTY

BAKERSFIELD (Kern County), May 3.—John Lott, farm placement manager, declared today Kern County faces the most serious migrant labor problem since before the war because of an unprecedented influx of farm workers from all parts of the country.

Lott said the county's current crops cannot provide work for all the newcomers and even at the harvest peak there will not be sufficient jobs.

He said about 3,500 persons are employed in the potato fields at the present time and about 9,500 will be needed later.

Lee Sumner, chief deputy sanitarian, declared approximately 1,400 migrant families have come here so far hoping to work in the 1947 harvest, and another 1,100 are expected.

POSES SERIOUS PROBLEM

The influx, Sumner asserted, poses a serious health problem because there is not enough proper housing to care for the migrants. As a result, he said, they are living in tents, shacks, and other crude shelters where there are no sanitary facilities and, in many cases, no water.

Three hundred such families have been ordered by Dr. William C. Buss, county health officer, to vacate their temporary quarters in the Edison district where one case of diphtheria and several cases of dysentery have been reported.

These families, numbering between 1,400 and 1,500 persons, have been advised, Sumner said, to "go north," in order to get ahead of the harvest in the northern counties.

Sumner blamed the situation here on two factors: The discontinuance of government-operated mobile camps, and the policy of most farmers in dealing with labor contractors who do not undertake to provide housing.

CAMPS DISCONTINUED

In the war years, Sumner pointed out, mobile camps took care of the workers as they moved from field to field with the change of crops.

"Now," Sumner continued, "there are no such camps. Coupled with that, most of the farmers who used to have to guarantee housing in order to get workers, now have their crops harvested on a contract basis.

"The contractors seldom provide living quarters, and the workers have to shift for themselves."

Sumner said efforts are being made through the Farm Bureau and other organizations to remedy the housing situation. He declared the Mexican consul is attempting to arrange living quarters for laborers from Mexico.

TULARE HAS PROBLEM

VISALIA (Tulare County), May 3.— Dr. C. S. Ambrose, Tulare County health officer, declared today he does not know whether any

of the 300 families to be evacuated from unsanitary camps in Kern County will come here, but asserted Tulare has a serious camp problem of its own.

Dr. Ambrose said four camps in the county have been abated within recent weeks because of inadequate sewage facilities and other unsanitary conditions.

"All that we ask," he said, "is that persons who live in camps conform with the ordinary standards of sanitation, but many of them allow filth to accumulate in such a way as to endanger not only their own health but that of others."

He declared the migration of families, mostly from the Middle West, is increasing and most of them are living in tents.

FRESNO COUNTY PREPARES

Dr. W. F. Stein, Fresno County health officer, today asserted the county health department insists on the maintenance of proper sanitation facilities for residents of the area.

"If these migratory workers come to Fresno County the department will require the maintenance of sanitary living accommodations wherever they settle," he declared.

"It is the duty of the health department to insist on sanitation to preclude the possibility of any district becoming a breeding place for communicable diseases and dysentery."

A survey made by the Agricultural Labor Bureau of the San Joaquin Valley last week indicated the supply of labor now in Fresno County is completely adequate for cotton chopping, the only agricultural operation in progress in the area.

Most farmers in the county use their year around help for irrigating and other duties which precede the opening of the harvest season.

"The Great Magician's Dead"

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by Charles McGlue, which appeared in the Lynn Telegram-News on Sunday, April 20, 1947:

"THE GREAT MAGICIAN'S DEAD

"We announce in our paper of today, we confess with no great regret, the death of that far-famed and ill-begotten monster the gerrymander. This 'delicate monster' has been pining ever since last November, when he terribly strained himself in attempting to swallow one of his parents. But regardless of the consequences of that wicked and injudicious attempt, he yesterday made another most desperate effort to swallow three of his nearest relations, and immediately expired in the most 'agonizing struggles'—a loud warning to all his relations in this and the neighboring States."

The above article appeared in the Salem Gazette on April 6, 1813, celebrating the great victory of the Federalists over the Republicans on April 5, in the disputed Essex County senatorial district, which was carried by the Federalists by a vote of 2,909 to 2,730, or a Federalist majority of 170 votes.

HISTORY ALWAYS REPEATS

So, "The Great Magician's Dead" was good for a big headline story 134 years ago in Ye Olde Salem in Ye Olde Essex County. That century-and-one-third-old story had to do with the demise of the so-called political dragon or monster, christened the "Gerrymander," but which could be readily and most appropriately named the "Gerry-monster."

Just think how many, many magicians have stopped doing fancy mystifying and devious tricks since 1812! Let's see, there was the sensational Harry Houdini, the great Thurston, Sir Oliver Lodge, Dr. Watson (Get-the-Needle) and his sidekick, Sir Conan Doyle, not to mention Mandrake the Great, and hundreds of other seers, soothsayers, spiritualistic mediums, voodoo doctors, medicine men, clairvoyants and fortune tellers, all of whom passed this way but once. All these great exponents of chicanery, trickery, sleight-of-hand, now-you-see-it-now-you-don't, and legerdemain, couldn't fool "Old Man Time," but "Old Man Gerrymander," "he just keeps rolling, he just keeps rolling along." And every 10 years "Old Gerrymander" does his stuff in Massachusetts and he never, never forgets to pay a visit and leave his business card and his trade-mark at his old birthplace, Ye Olde Essex County.

"BRIGADOON" A REPEATER?

A few weeks ago there appeared in Boston a play called Brigadoon, which was billed as a new musical, with book and lyrics by Alan Jay Lerner. The play critics panned it gently, or praised it ever so highly. After a brief Boston sojourn, Brigadoon hied itself to New York City, and there on Old Broadway, it became an overnight hit. The plot of the play has to do with a town in the Scottish Highlands, called Brigadoon, which disappears for 100 years at a time. Precisely at the end of every century, without fail, Brigadoon comes to life, and for one glorious day lives again in all its pristine glory, with a Scottish sword dance in MacConnachy Square, accompanied by weird Scottish bagpipes, and the finale, touched off by a wonderfully portrayed wedding ballet.

GEISSELMAN?—GERRYMANDER?

The New York success of Brigadoon naturally aroused considerable curiosity as to how author Alan Lerner could produce such an imaginative story out of nowhere. But, according to a good research worker with a good memory, Miss Beck, in a recent communication in the New York Times, writer and lyricist Lerner must have been studying up on his German recently. Miss Beck claims that there was a certain German playwright, by the name of Herr Geisselman (1806–62), who, a century ago, wrote a story whose plot is practically identical with that of Brigadoon except the locale has been relocated from Germany to Scotland.

So, it is possible that Brigadoon may be a repeater, too. And I may be an iconoclast in the bargain for bringing the comparison up. At any rate, whether it be Geisselman and his story, or Lerner and his Brigadoon, you may always rely on the adage, "That history always repeats itself."

INTRIGUING SUBJECT

However, the tale of the reappearance of the town of Brigadoon every 100 years intrigues me. It also intrigues me when I think of Governor Gerry and his hoary crew who return to life in Massachusetts every 10 years and proceed to scuttle our democratic processes of equitable and constitutional opportunity of representative districts, and to make the plot more binding they use the same technique, same dialogue, same stage settings, and the very same plot, as they did way back when the War of 1812 between England and the United States was raging.

With this difference. There isn't any fantasy about it. The ghostly group returns on its decennial rounds and demolishes our democratic structure and cracks wide open our Constitution, and the damage, dents, and destruction last for another decade. They then return to their political graveyard until 10 years later the old Constitution bell calls them together again. They take the oath of allegiance to Gerry and then these partisan wraiths, under the telepathic guidance of the great magician, who was supposed to die in 1812, again get out their scalpels, machetes, and broadaxes and again perform their mysterious, behind-the-scene rites. (Pronounced "rights" but does not mean it. Look up "rituals.")

These rites are legalistically known as redistricting, but in actual political practice they are better named gerrymandering. While the rites are being performed the GOP'ers generally "wake" (Irish connotation) the Democratic Party while its leaders slumber on their rights.

HISTORY OF GERRYMANDER

The Massachusetts State election on the first Monday of April 1811 resulted in a complete triumph of the Democratic or, as they styled themselves, the Republican Party. The Governor, Elbridge Gerry, was of that party, as well as a majority of both the senate and house of representatives. Hon. Samuel Dana, of Middlesex County, was chosen president of the senate, and Hon. Joseph Story, of Salem, was chosen speaker of the house. The winter session of legislature began Wednesday, January 8, 1812. Speaker Story, having been appointed a Justice of the United States Supreme Court, resigned his office as speaker on January 18, and Eleazer W. Ripley, of Waterville, Maine, was chosen in his place. You see the State of Maine was then a part of Massachusetts.

In 1811 both branches of legislature and the Governor were, with the exception of a single year, for the first time Republican, but their tenure of office was extremely precarious.

On January 22, 1812, an order passed the senate, and on January 23, 1812, an order passed the house appointing a committee to consider the subject of a new law to alter the districts now established ior the choice of counselors and senators and to determine what alterations may be necessary therein. The committee consisted of Messrs. Seth Sprague, Jonas Kendall, and Francis Carr, of the senate, and Benjamin W. Crowninshield, of Salem; Mathew Cobb, of Portland, Maine; Jonathan Smith, of West Springfield; and Eliakim Phelps, of Belchertown, of the house. Mr. Kendall, of the senate, and Mr. Phelps, of the house, were Federalists. The rest were Republicans.

The committee reported a bill which was considered by the senate on February 4, 1812. Various amendments were offered by the Federalists, but were all voted down.

BROOKED NO OPPOSITION

The Republican majority divided the counties of Essex and Worcester in a manner which showed that all considerations were disregarded, and that the only object was to form a Republican district from each of those Federal counties.

The outer Essex district was to choose three senators, and the inner Essex district was to form a Republican district from each of those Federal counties.

The outer Essex district was to choose three senators, and the inner Essex district was to choose two senators.

The bill passed that day without amendment by a vote of yeas 19, nays 18, and went to the house on February 5 and was passed on February 7, by a vote of yeas 278, nays 231.

On Thursday, February 20, 1812, in the house, a protest signed by 224 Members was read by William Sullivan and is entered in full with the names in an appendix to the journal. Eight pages of the house journal was necessary to print all the protestants. The Boston Weekly Messenger, Nathan Hale, publisher, published a map of Essex County showing the gerrymander on March 6, 1812, and said:

"The Gerry-mander did not disappoint the expectations of its fond parents."

"In 1812, the election of State senators took place under the Gerry-mander law and the result was that 29 Republicans and only 11 Federal senators were chosen. On the same day, the Federal candidate for Governor was chosen by a handsome majority; and what is more remarkable, such was the malignant influence of the animal of which we are giving the history, that it required fewer Republican votes to choose the 29 Republican senators than were actually given to the Federal candidates of whom only 11 were chosen."

The whole number of votes given for senators was 101,930, of which 51,766 were given to the Federal candidates and 50,164 for the Republican candidates, making a Federal majority of 1,602 votes. Yet the Republican minority, with the help of the gerrymander, outvoted the Federal majority, almost 3 to 1—29 Republicans to 11 Federalists.

NATHAN HALE VERSION

New England Historical and Genealogical Register, October 1873, page 421, stated:

"The map of the county of Essex, designating the boundary of the senatorial districts, was drawn by Nathan Hale, who with Henry Sedgwick were editors of the Weekly Messenger. It was printed in that paper March 6, 1812. The extraordinary division of the county of Essex, taking a single line of towns from the outside of the county and adding Chelsea from the county of Suffolk, in order to secure a Republican majority in the senate, was such a piece of political management as to produce a general outcry. The map was copied into some of the other newspapers, and at a dinner party at the house of Mr. Thorndike, an eminent merchant of that day in Boston, it was exhibited by Mr. Cogswell, afterwards librarian of the Astor Library. The form of the district was a subject of remark, and it was said that it resembled some horrible animal and only wanted wings to make a frightful political dragon. Mr. Tisdale took his pencil and sketched the wings, and there was a discussion about the name, some suggesting that of salamander. Mr. Alsop proposed that of gerrymander, which was adopted."

A DIFFERENT VERSION

Joseph T. Buckingham, in his Specimens of Newspaper Literature (1850), gives this account:

"In 1811, when Mr. Gerry was Governor of the Commonwealth, the legislature made a new division of the senatorial districts. Both branches had then a Republican majority. For the purpose of securing a Republican representative, an absurd and singular arrangement of towns in the county of Essex was made to compose a district. Russell took a map of the county and designated by a particular coloring the towns thus selected.

"He then hung the map on the wall of his editorial closet. One day Gilbert Stuart, the celebrated painter, looked at the map and said the towns which Russell had thus distinguished formed a picture resembling some monstrous animal. He took a pencil and with a few touches added what might be supposed to represent claws. 'There,' said Stuart, 'that will do for a salamander.' Russell, who was busy with his pen, looked up at the hideous figure and exclaimed, 'Salamander! Call it gerrymander.' The word became a proverb and for many years was in popular use among the Federalists as a term of reproach to the Republican legislature which had distinguished itself by this act of political turpitude."

Gilbert L. Streeter in his Account of Newspapers and Periodicals, published in Salem (1856), page 36, also attributed the drawing to Gilbert Stuart and the name to Major Russell.

MIGHT BE PROPA-GANDER

On April 2, 1812, the Independent Chronicle, an opposition newspaper, said: "The Federalists of Boston lately drew an accurate likeness of themselves and sent it out to their country brethren in the Gazette and Repository, hoping that it would inspire sentiments of respect and admiration. They misnamed it the Gerrymander; it should have been the Federal-Gander, for none but geese would ever have resorted to such a paltry and foolish expedient. The mathematicians who planned and the limners who executed the sublime specimen of Federal ingenuity drew their own portrait without intending it. They exposed at one view all their malignant, venomous, and lizardlike qualities."

WHO WAS THE FATHER?

Extract from communication on the Gerrymander in the Columbian Centinel, May 23, 1812, shows that Salem judge Story, of the United States Supreme Court, was at that time suspected by his political opponents of being the originator of the scheme. "It would be well, however, if we could so ascertain beyond a doubt the real father of this unnatural monster, that we might hold him up to everlasting scorn and contempt. He must and he shall be found out and exposed—and it shall be left to an impartial public to judge of this most wicked story."

GOVERNOR ELBRIDGE GERRY

Elbridge Gerry was Governor of Massachusetts from 1810 to 1812. He was born in Marblehead on July 17, 1744, and died in Washington, D. C., on November 23, 1814, at which time he was Vice President of the United States.

He graduated from Harvard College in 1762.

Governor Gerry had a very distinguished political career.

He was one of the original signers of the Declaration of Independence.

He was a member of the United States Constitutional Convention.

He served for several terms as a Member of Congress.

In April of 1812, Governor Gerry was defeated for reelection by the Honorable Caleb Strong, Federalist.

STRANGE OMISSIONS

In November of 1812, Governor Gerry was chosen as the Vice President of the United States, but strangely enough his own native State of Massachusetts, of which he had just completed a term as its Governor, did not see fit to give him the electoral vote of Massachusetts in that national election. However, the other States of the former American Colonies gave him sufficient electoral votes to insure his choice.

Another rather strange omission relative to the career of Gov. Elbridge Gerry appears in the Manual for the Use of the General Court, which is prepared annually under section 11 of chapter 5 of the General Laws of Massachusetts.

In this manual is the listing of the Governors and United States Senators who have served Massachusetts, together with the dates of their terms of office.

No mention is made in the Massachusetts State Manual of the fact that Governor Gerry was subsequently elected Vice President of the United States in 1812, although in the same manual reference is made to the fact that Calvin Coolidge was Vice President of the United States from 1921 to 1923, and that subsequently Calvin Coolidge was President of the United States from August 3, 1923, to March 4, 1929.

Then again the Massachusetts Manual makes mention of the fact that United States Senator Henry Wilson, of Massachusetts, was elected Vice President of the United States in 1872, while serving Massachusetts as United States Senator.

Maybe Governor Gerry is being punished for his part in the infamous gerrymander of 1812 which now bears his name, and which has become such a descriptive word in our national political dictionary.

It will be noticed in the 1812 picture that lines forming western boundaries of Andover, Middleton, and Lynnfield form the profile of a man's face. It is said to be that of Governor Gerry.

The New England History and Genealogical Society has copy of original gerrymander picture in flash color and profile shows eye, nose, and mouth. (Natural and Political History of the Gerrymander (1823).)

By the way, the reference in the opening paragraph of this article to the "delicate" monster who terribly strained himself trying to swallow one of his parents meant obviously that Governor Gerry was one of the parents and referred to Governor Gerry's defeat for Governor in November of 1812.

The reference to the monster's attempt to "swallow three of his nearest relations" meant the defeat of the gerrymanderers to carry their three senatorial candidates who at that time were to be elected in three's in the outer Essex senatorial district. Defeat took place on April 5, 1813.

Well, whether it be a gerrymander, a Federal-gander, or mere propa-gander, if you want to get a good constitutional look at the Essex County house districts as they should be redistricted, take a good "gander" at this column next Sunday. See you then.

CHARLES MCGLUE.

"Voice of America" Broadcasts

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of May 22, 1947:

VOICE OF WHAT?

"Conducted by a group of pro-Communist fellow travelers and muddleheads, they fill the ether with tons of material favorable to the Soviet Union and the Communists, or just plain twaddle."

The quotation is from a recent speech in the House by Representative FRED E. BUSBEY, Republican, of Illinois, about the Voice of America.

This alleged American voice is the State Department's radio set-up, under Assistant Secretary of State William Benton, for the broadcasting of United States promotion stuff to other countries, including Russia.

When the State Department asked recently for thirty-one-million-and-some-odd dollars to keep the voice prattling for another year, the House cut the request by exactly 100 percent.

Representative KARL E. MUNDT, Republican, of South Dakota, is now backing a bill to let the voice go on talking, but on a reduced budget and under a management from which the FBI would have carefully sifted out all Communists, fellow travelers, and other subversives.

When you consider that these broadcasts reach few if any people in gagged and earplugged Soviet Russia, the whole project seems pretty futile, even though Generals Eisenhower and Marshall and various other prominent persons think it is a fine thing.

If we must have the "voice," though, it certainly should be Edgar Bergened by Americans whose loyalty is unquestionable. That has not been happening under the Benton management to date.

Benton's three top assistants in charge of the "Voice of America" broadcasts have been Messrs. William T. Stone, Haldore E. Hanson, and Charles A. Thomson.

Stone is an ex-member of the editorial board of Amerasia magazine, which has printed large amounts of pro-Russian copy. Hanson was for long a soldier of fortune in China, where his best friends and confidants were Chinese Communists. He was shifted hurriedly to another State Department niche when the congressional heat was turned on the "voice." Thomson has had considerable to do with production of pro-Communist movies, and is on record with some loud praises of the Communists' activities in the Spanish civil war.

Many of Benton's lesser helpers were inherited from Archibald MacLeish's and Elmer Davis' old Office of War Information, which was notorious for its high percentage of Red and fellow traveler employees.

Benton says he was unfamiliar with most of the "voice" program contents. The answer to that is, we would say: Then what are the taxpayers paying Benton his $10,000 a year for? To sit around and look pretty?

We would suggest, urgently, that if Congress keeps the "Voice of America" alive at all, it at least insist on a personnel clean-up from top to bottom; and if it wants to start with Benton himself we don't expect to object.

Capitol Stuff

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John O'Donnell from the Washington Times-Herald of May 22, 1947:

CAPITOL STUFF

(By John O'Donnell)

If the distinguished Members of Congress have any doubt that the Roosevelt Reds in the State Department are doing some slick and snide lobbying to get their hands on the thirty-odd-million dollars they want for propaganda broadcasts, we commend their attention to the extremely interesting and "highly confidential" State Department memo we now print.

This memo is written by State Department's William Treadwell Stone, described in the CONGRESSIONAL RECORD (p. 5296) as "top-flight assistant to Assistant Secretary William Benton, Director of the Office of International Information and Cultural Affairs."

It is addressed to John Howe, whose letter to us of yesterday describes himself as "special assistant to Mr. Benton." In addition to Howe, the memo was addressed to Messrs. Luther Reid and Bill Bourne, both of whom, the State Department assures us, are at present on the Department's pay roll in Benton's cultural and information headquarters.

The memo is a highly interesting document because it illustrates (a) the cold-blooded manner in which the hangovers of the Roosevelt New Deal go in for dark trickery to double-cross Congress and the taxpayers and (b) the slippery fashion by which the fellow travelers and Roosevelt pinks have wormed their way into high posts.

In the memo the boys in the cultural headquarters are urged to save the Voice of America by trying to put pressure on Bernard Baruch and even band leader Benny Goodman. The memo being tossed off about the time that the Communist Daily Worker was announcing the mission to Moscow of the maestro of swing.

Also important is the tie-up in this handling of national affairs with the references to the wives of one-time Roosevelt financial wizards. The memo mentions a fund-raising organization "headed by Mrs. Wayne Coy and Mrs. Bell." Wayne Coy and Daniel Bell were all-powerful Roosevelt spokesmen in the Bureau of the Budget and potent officers in the palace guard of the Harry Hopkins era.

The record of the memo's author, William Treadwell Stone, as described by Representative FRED E. BUSBEY, Republican, of Illinois, to the House last week is this:

"Members of the editorial board of Amerasia from 1937 through November 1941. Chairman of this board was William Vanderbilt Field, now a regular columnist for the Daily Worker. Managing editor was Philip Jacob Jaffee, indicted and fined for possession of confidential documents, charged by Representative GEORGE A. DONDERO, Republican, of Michigan, with being in close touch with Earl Browder, recently head of the Communist Party, United States of America, and with Tung Pi Wu, Chinese Communist delegate to the San Francisco convention."

The memo follows:

"Confidential

"Memorandum for John Howe, Luther Reid, Bill Bourne:

"Re action and recommendations of New York 'alumni' committee.

"At a luncheon meeting April 29 called by Louis Cowan with Norman Cousins, Lim Linen, Harold Guinzburg, Mike Bessie, and Miss Singer present, the following recommendations were made:

"1. The committee will distribute copies of our clip sheet to key people throughout the country for use in the press, radio, etc.

"John Howe should send 150–200 copies to Miss Singer as secretary. We should also send 12–15 copies to the House committee hearings the moment they are available. The hearings will be used by the committee, columnists, editorial writers, etc.

"Harold Guinzburg or Mike Bessie will talk to Liebling about an article in the New Yorker. (Memoirs of Hecate County article by Henning in Chicago Tribune using Ehrenburg to show Voice of America ineffectual, art program, etc.)

"2. The committee agreed to contribute and receive funds up to $1,000 for the Washington organization headed by Mrs. Wayne Coy and Mrs. Bell. Funds for this purpose should be sent to Louis Cowan.

"3. The group favored a news story rather than an advertisement in the Washington Post to publicize the high caliber of people supporting the information program. The consensus that a paid ad would be less effective than a general news story. The ad would look like part of a costly organized lobbying campaign.

"4. It was suggested that Barney Baruch could be very helpful with top leaders in Congress. John Howe should follow up with Louis Cowan to determine the best approach to Baruch. Baruch has influence with VANDENBERG, TAFT, JOE MARTIN, and many other top leaders.

"5. It was suggested that General Marshall cable personally to the heads of the important missions abroad requesting them to report to him on the effect of killing OIC.

"6. The Greek broadcast should be publicized.

"7. Benny Goodman has offered to help in any way possible. He will be in New York next Tuesday. The group agreed that there is not much that Goodman can do in Washington, but that he should be urged to get support from top people in the show business. Thayer will see him when he arrives in New York.

"WILLIAM T. STONE.

"Copies to Howland Sergeant, Stew Brown."

The law of the land has a provision which might crack down on the enthusiastic and extra-curricular activities of the worthy hangers-on in the distinguished State Department. We quote section 201, title 18, Criminal Code:

"No part of the money appropriated by any act shall in the absence of express authorization by Congress be used directly or indirectly to pay for any personal service, advertisement, telegram, telephone, letter, printed or written matter, or other device intended or designed to influence in any manner a Member of Congress to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress, whether before or after the introduction of any bill or resolution proposing such legislation or appropriation—* * * penalty misdemeanor, fine not more than $500, or by imprisonment of not more than 1 year or both.

"JULY 11, 1919."

Harbor Facilities at Long Beach, Calif.

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. BRADLEY of California. Mr. Speaker, I invite attention to an article from the magazine Long Beach Business of May 1947, which sets forth the remarkable development of commercial facilities in the harbor of Long Beach, Calif. It is to be noted that the facilities offered there are as modern as any which are to be found in the ports of the world.

The article follows:

NEW TRANSIT SHED AND COAL LOADER

Visitors to Long Beach, including well-informed shipping men, are often amazed at what they see in our modern harbor. It may not be the largest on the Pacific coast but there can be no disputing the fact that in the excellence of its cargo-handling facilities it has no rival anywhere. Among the two that are the envy of other ports are the new transit shed now nearing completion on pier A and the bulk-loading equipment at berths 33 and 34.

The transit shed, which will be the scene of the Port-O-Trade national manufacturers' exposition June 13 to 22, is unique in that the roof is entirely supported from the walls and there is not a single column to interrupt the clearance throughout its entire length of 608 feet. The width of the steel and concrete building is 120 feet, affording more than 70,000 square feet of exhibit space for the trade show, being sponsored by the Long Beach Junior Chamber of Commerce.

When completed, the transit shed will be the most modern structure of its kind in the entire world. It is designed especially for handling cargoes by mechanical devices and accordingly the doors are unusually wide and high so that a tractor can carry a load direct from a freight car and stack it within the building. With two tracks between the shed and the ship and two more on the landward side there is ample room for freight cars.

The bulk cargo handler is the best facility of its kind on the Pacific coast, which gives Long Beach a big advantage in handling such shipments as coal, cement, gravel, potash, sand, and sulfur. Besides the actual machinery for loading the cargo there are tracks

for 150 freight cars adjacent to the pier so that there is no delay caused by a shortage of coal or other product to load. The rapidity with which coal may be taken aboard a ship was shown recently when 300,000 tons of Utah coal destined for Italy was loaded at the rate of 250 tons an hour, or a shipload every two and a half days, compared with a week or 2 weeks at other ports on the Pacific that have no such modern equipment.

The new shed and the loader will be open to visitors to the harbor during the celebration of World Trade Week, May 18 to 24.

Procedure for Disposition of Surplus Agricultural Lands Is Depriving Veterans of Farming Opportunities—Only 11 Percent of Acreage Disposed of by War Assets Administration Has Gone to Veterans—Legislation Required To Correct This Condition

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. HAYS. Mr. Speaker, Members of Congress are familiar with the fact that hundreds of thousands of veterans are seeking opportunities on the farm. Vocational training under the GI bill of rights is equipping these veterans for farm pursuits, but opportunities are greatly restricted by present policies with reference to farm credit and other facilities related to their chosen vocation. Congress has evidenced in many ways a sympathetic interest in farm youth, but additional steps need to be taken.

I find that the War Assets Administration had made available for disposition by the Farm Credit Administration 604,800 acres of agricultural land, and that approximately 243,300 acres have been disposed of by that agency. It is estimated that there will be a total of 3,000,000 acres to be disposed of under the Surplus Property Act of 1944. Of the land already disposed of under the terms of this act, only 11 percent has gone to the veterans. The veteran is in fifth position in determining priority. Others ahead of him are: Federal agencies, which have acquired 6 percent of the land; State and local agencies with 10 percent; former owners, 58 percent; and former tenants, 2 percent. I believe, Mr. Speaker, that Congress should take a look at the 16 percent that has been acquired by Federal and State agencies to determine if the uses to which this land is to be applied come within the purvue of the Surplus Property Act. I believe that it would be generally agreed that the priority of former owners should not be disturbed, but the retention of agricultural land in public ownership whether in the hands of Federal or State agencies is not in line with Federal policy generally and in some instances such acquisition should be discouraged. In an effort to benefit as many veterans as possible, particularly those with a farm background, I have introduced H. R. 2658 which is being considered by the Committee on Expenditures; and this measure, if enacted, will meet some of the criticisms to which I have alluded.

The Democratic Traditions of Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. GORDON. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an article published by an outstanding Scottish newspaper, the Edinburgh Evening News, on the occasion of Poland's Constitution Day in commemoration of this anniversary.

A few days ago this House devoted much of its time in commemoration of this great day for Poland. I know how very much our thoughtfulness was appreciated by the many hundred thousands of Poles dispersed all over the world who are still able to breathe free air after Poland's independence was destroyed by the Soviet occupants of that unhappy country.

The article follows:

THE DEMOCRATIC TRADITIONS OF POLAND
(By Zygmunt Nagorski)

Many people in this country have never learned about Poland at school. Many, too, thought Poland was a new country created after the last war by the Versailles Treaty.

Only a few are aware of the fact that Poland is one of the oldest countries in Europe, with a 10-centuries-old Christian tradition and an attachment to democratic principles firmly rooted in the minds of its people and statesmen. Their attachment to such principles explains why May 3 is Polish National Day.

It is not the anniversary of a battle; it does not commemorate any great national hero or any victory over an enemy. It is the birthday of the Polish Constitution which was passed in 1791 by the Polish Parliament, when two neighboring powers—Russia and Prussia—both ruled by autocratic governments, were in alliance against Poland.

Neither of these countries could allow a parliamentary system and the seeds of the French Revolution to grow in eastern Europe, which modern historians would describe as their "sphere of influence." And, unhappily for Poland, her progressive and democratic constitution was one of the main reasons why, a year later, Russian troops marched into Poland.

EQUAL RIGHTS TO ALL

But what was this constitution which made such fundamental changes in the inner system of Polish politics and in the essential structure of the Polish Commonwealth, as Poland was then called? The constitution gave equal rights to all men and women. It gave an equal start to newcomers to Poland and to those already living there. * * * "We declare absolute freedom for all those who are newcomers to the country and those who, having left the country, now wish to return. * * * Every man, from the moment when he steps on Polish soil, is absolutely free to apply his industry wherever and in whatever manner he may please."

Peasants, the class which at that time had, in many European countries, no protection whatsoever, were, by this constitution, brought under the protection of the law. * * * "The people on the land—from whose hands come the sources of the bounteous riches in the country, who form the major part of the population and thus build the greatest strength of the nation—for the sake of justice, humanity, and as our Christian duty, and for the sake of our own well-considered interests, we take under the protection of the law and the government."

BORN OUT OF THE PEOPLE

The religious intolerance which made people flee from their countries of origin was unknown in Poland, and the constitution says: "To all men of whatever denomination, peace in their faith and protection we owe; we guarantee to all religious denominations freedom in Polish lands in accordance with Polish laws." The Polish Parliament was to consist of the Chamber of Deputies and the Senate, thus applying the system already long established in the British Isles.

This constitution was the fruit of the work of the Polish King and his various Polish and foreign advisers. But the main structure of the constitution was born in the minds of the people, who pressed for reform, who wanted privileges till then confined to the gentry to be extended to others, particularly the middle classes and the peasants. The rights of man were, then, for the first time brought to light by this constitution, and this alarmed those who in neighboring countries were fighting against this very principle.

WILL BE FREE AGAIN

Soon afterward, Poland disappeared from the map of Europe, divided between Austria, Russia, and Prussia. She remained, kept in political, economic, and educational backwardness, in serfdom until 1918. Then, again, a short spell of freedom gave her a little time to recover. But out of the constitution of May 3 was born the solidarity among all classes of Poles—peasants, workers, townspeople, Polish Jews, and other minorities—who all felt their attachment to the Polish Nation.

They fought for independence for Poland from the first insurrection under Kosciuszko in 1794 until the last battle of Warsaw in August and September 1944. The same people, united, will build a new, free Poland when circumstances give them a chance.

The Polish National Day, celebrated in 1947 in exile by so many Poles, will be one more reminder to all friends of freedom and democracy that Polish democratic traditions are strong and alive. Given a chance for proper development and time for constructive work, they will undoubtedly produce a Poland truly free, genuinely democratic in the sense in which these terms are understood by western minds.

Conservation Measures

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include the following letter from the

Minnesota Game Protective League, opposing H. R. 2617 and H. R. 2472:

ST. PAUL, *May 14, 1947.*

The Honorable GEORGE MACKINNON,
House Office Building,
Washington, D. C.

HONORABLE SIR: I have been instructed by the president to address you and record with you the opposition of the league to the passage of bills H. R. 2617 and H. R. 2472.

H. R. 2617 is the bill which proposes to raise the cost of the migratory bird hunting stamp from $1 to $2. Our members would not object to paying the extra dollar if we thought the money would be used to good advantage for the benefit of migratory waterfowl, but, having in mind the manner in which the Fish and Wildlife Service have spent their money in our own State for useless refuges and the administration of those refuges, we feel the appropriations allowed them by Congress have been adequate except in one respect; their appropriations for law enforcement has probably been less than half of what it should be.

We might be in favor of the section of H. R. 2617 which proposes to open 25 percent of the already established refuges if this were a compulsory condition, but, in view of the past actions of the Fish and Wildlife Service, we believe they are offering this as a sugar coating to get the sportsmen to swallow the rest of the bill, and that they will be very reluctant to open any part of a refuge unless they are forced to.

We oppose H. R. 2472 because we see no necessity for the proposed addition of a corps of so-called expert technicians to advise regarding the handling of land and water in the interest of wildlife. At best, this corps would be simply duplicating the work already under way by nearly all State governments. This bill looks to us like just another proposal for the professional conservationists to supply their kind with a means of livelihood at the public's expense.

We trust that you will do all you can to defeat bills H. R. 2617 and H. R. 2472.

Yours very truly,

MINNESOTA GAME PROTECTIVE LEAGUE.
TOM WANN,
Second Vice President.

Msgr. John Dunphy

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include an article by Rev. Frederick D. Tyner, rector of St. Luke's Episcopal Church, Minneapolis, Minn., which appeared in the Minneapolis Sunday Tribune, May 18, 1947. This article describes some of the many admirable characteristics that have so endeared Monsignor Dunphy to the people in Minneapolis from all walks of life and of all faiths. Reverend Tyner and Monsignor Dunphy are two outstanding examples of the tremendous influence for good that members of the clergy can have upon the community through their interest in the sports. Reverend Tyner is a keen golf enthusiast and Monsignor Dunphy has for years been one of the active sponsors in Minnesota of all forms of all athletic endeavor. These men of the cloth have found that the principles of Christianity can be learned on the playing fields and that when they are learned there they are not soon forgotten. Monsignor Dunphy and Reverend Tyner are performing an outstanding service to mankind through their active interest in sports and athletics.

The article follows:

WHAT'S YOUR SCORE?

(By Frederick D. Tyner, rector of St. Luke's Episcopal Church)

The Right Reverend John Dunphy (he was elevated to the rank of monsignor on Easter Sunday last) hasn't boxed for many years. But he still is in the ring as a pastor, as an inspiration for young and old, and as an all-around citizen.

While in school, boxing was Father John's favorite sport. As he grew older, he discovered his boxing had taught him some of the fundamental principles of living with people, a factor every man has to learn to be even reasonably successful—how to give and take, a proper respect for your opponent or competitor, and the penalty for hitting below the belt. It also taught him a good temper is an asset if properly curbed and kept under control.

The pastor of the Ascension Church takes the keenest interest in his gymnasium, one of the finest in the Northwest. You will find him hovering around with a suggestion here and a correction there, and always with a word of encouragement for the anxious, or the timid. * * * Father Dunphy always is quick to spot any sign of unfairness and never stands on ceremony in pointing it out. His athletic club always has a fine corps of boxers in the big Golden Glove tournament, and he himself is a member of the advisory committee of that outstanding organization.

But boxing isn't the only sport in which Monsignor Dunphy is interested. He is a keen baseball fan and on the golf links still wields a wicked niblick.

Father Dunphy's philosophy of life is simple and to the point: Keep a sound mind in a sound body; be loyal to your church and your God; be loyal to your neighbor; be loyal to the highest ideals and to yourself, and life will have that glow that makes life worth living.

His motto might well be: "Be thou faithful unto death, and I will give thee the crown of life."

What's your score?

Motor Vehicle Service, Post Office Department

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. JONES of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to make a brief statement relative to a situation which I believe is eminently unfair to one group of Federal employees and which I have taken steps to correct through the introduction of H. R. 3331.

This bill will remedy an inequality in the act of July 6, 1945, Public Law 134, pertaining to certain employees of the motor vehicle service of the Post Office Department. I am glad to credit Mr. Paul M. Castiglioni, legislative representative of the National Federation of Post Office Motor Vehicle Employees, with first calling this discriminatory situation to my attention.

My bill will provide that all employees of the Motor Vehicle Service below the grades considered supervisory shall be accorded uniform treatment under law. Unless this bill is enacted, men employed in the Motor Vehicle Service of the Post Office Department in such classifications as mechanics in charge, special mechanics, and garagemen-drivers may devote a lifetime of service to the Government and yet be denied any opportunity to share in the rewards provided for faithful and meritorious service.

Certainly no one can take issue with the principle involved, for it cannot be deemed fair to reward one or two classifications of employees in a particular service for continuous faithful and meritorious service, and deny these rewards to others who work with them side by side. We cannot expect the employee discriminated against to display the proper amount of initiative desirable for efficient conduct of their duties.

This bill also recognizes the value and special qualifications of that group of the Motor Vehicle Service employees classified as dispatchers in that it will place them in the same category as special mechanics. At present the dispatchers are in a lower salary category with driver-mechanics and general mechanics, notwithstanding the fact their responsibilities are much greater and their promotion to the position of dispatcher came only after passing an additional appropriate higher civil-service examination.

I am confident that after considering the provisions of this bill and the present inequalities of the law the gentlemen of the Congress will share with me and with the National Federation of Post Office Motor Vehicle Employees the opinion that all employees of this group are entitled to the same general benefits.

McGregor Will Hold Conferences in District

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. McGREGOR. Mr. Speaker, it has always been my policy to keep in constant contact with the people of the Seventeenth Ohio District, whom I represent in Congress. I am anxious to learn what the folks back home are thinking about. In order to follow this policy I have attempted to make myself available to my constituents so they might discuss with me their views relative to national issues and also to give me the opportunity to be of service to them as their Congressman.

In accordance with my annual procedure—during the period of our official congressional recess—I plan to visit the six counties of the district. I have made arrangements to be at the courtroom of the county courthouses from 9 a. m. to

5 p. m. and have set forth the following schedule:

Monday and Tuesday, August 4 and 5, Ashland, Ashland County.

Wednesday and Thursday, August 6 and 7, Mansfield, Richland County.

Friday and Saturday, August 8 and 9, Mount Vernon, Knox County.

Monday and Tuesday, August 11 and 12, Delaware, Delaware County.

Wednesday and Thursday, August 13 and 14, Newark, Licking County.

Friday and Saturday, August 15 and 16, Coshocton, Coshocton County.

I have been most gratified with the results obtained in the past and the interest shown by the number of constituents who have availed themselves of our conference plan.

No appointments are necessary, and I look forward to meeting a greater number this year, as I am certain we all have problems of personal and national interest to discuss, which will be of mutual benefit. I urge my constituents to confer with me on the date most convenient to them so that I may have their views, which will aid me in representing them in Congress.

Excerpts From Address Delivered by Hon. Katharine St. George Before the Panhellenic Societies in Washington, D. C., on May 17, 1947

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an address delivered by me before the Panhellenic Societies in Washington, D. C., on May 17, 1947:

The time is long overdue to talk about the facts of national and international politics in these United States. And not because I expect any poor words of mine to have any lasting effect on these vast world trends that will doubtless go their way as they always have, but simply to clear the whole matter in my own mind and perhaps to clear it in the minds of that large minority with which I have always affiliated myself, I am putting these observations down, and in the brief time allotted me I shall try to express them to you.

Ever since our entry into World War I the most important question before the American people has been foreign affairs. It is the question about which they knew the least and also the question on which their leaders certainly knew the least.

There was only one way of changing the American policy based on the Monroe Doctrine, and that was to get the United States into a European war.

This was done; in both wars the same technique was used. The sentimentality of our people, which is very great, was played on by experts to the queen's taste.

Now within 2 years of the close of World War II a new enemy has been found, our quondam ally Soviet Russia. There was probably more perfect nonsense fed the American people to give them the idea of Russia as an ally in the cause of democracy than has ever been put over before. It is a tribute to the unparalleled ignorance of our people that that propaganda was completely successful. The picture of Russia as the crusading Galahad fighting to save the free nations of Europe is laughable if it were not tragic.

Russia in the first place never fought for anything but herself. Russia had nothing but men and would have been beaten to a standstill if she had not been equipped and bolstered by the colossal resources and technical knowledge of the United States. This fact was proved by the wretched performance of the Russian Army against the Finns in their first attempt to conquer that country, when they did not have any aid or comfort from the West.

Russia has never stood for freedom of any kind, and at least has had the honesty never to pretend to. She is an oriental despotism and the doctrine of spreading communism by the fire and sword is the age-old oriental doctrine. It was practiced by the Persians against the Greeks, by Genghis Khan who conquered and held more territory than any other man has ever conquered and held before, or since, and then by Mahomet's followers when they swept westward to spread their religion all over the world and to place the crescent in Europe, where they were finally stopped by Charles Martel on the field at Tours.

Now as a result of two World Wars within 50 years the British Empire has lost her world leadership and in spite of Mr. Churchill's proud boast that he would not preside over the liquidation of the British Empire, he has done exactly that.

As a result of these two wars and the collapse of the British Empire we find the United States assuming the role of empire and picking up the scepter that Britain has been forced to lay down. We find our country ceasing to be a republic and becoming an empire, and doing both with the consent and support of the majority.

So now we stand on the threshold of empire and how well equipped are we for this new venture? It must be admitted that we are poorly equipped for it. England trained her younger sons to be empire builders and sent them out when they were still young to distant lands where they spent their lives, but always kept their allegiance and their duty to England. Why was this? Because the English, like all Europeans, are patriots first, last, and always.

The modern American is not a patriot. If you look among your friends and acquaintances you will be surprised, if you analyze them dispassionately and fairly, how little real patriotism there really is in this country today. There is more in the Middle West than in any part of the country, but even there most people are a little ashamed of feeling or displaying patriotism. Some may take exception to this but, let them open their eyes to the raids on the Treasury by every little pressure group in the country. Everyone is looking for a Government handout.

There is a far cry from this modern America to the days when Patrick Henry said, "Give me liberty or give me death." No; that would sound very hysterical and theatrical today to those who consider the people a mob to be cajoled and bribed by bread and circuses.

Now if we are indeed to assume the purple robe of empire, it is to be devoutly hoped that we will acquit ourselves well.

Our people have little relish and absolutely no training for world leadership. We lack the basic patriotism that is a necessity in anyone who assumes authority over other nationalities outside his own country; only intense patriotism will make him keep up his morale and his morals away from home and surrounded by subservient and conquered peoples.

From the first-hand information coming from our occupied zones in central Europe, we have not shown much morale and very little morals since the cessation of hostilities. We have sent over a lot of troops who never saw any fighting and they have brought our country into great disrepute all over Europe.

An American told me that after seeing and hearing of the conduct of the American army of occupation in Europe she thought the best thing that could happen would be to withdraw them all and pay England to do the job.

An eminent Catholic priest said recently after returning from our occupied zone in Germany, that when he saw the type of officers that had been sent over after the war to police our area, he said, and I quote: "Under what stones could they have found such creatures?" All this augurs ill for our future, and instead of indulging in mutual admiration, it might be well to remove the beam from our own eye before going after the mote that is in our brother's.

The game of empire is a great game. It cannot be played by any but the patriot and the man of assurance and courage. As one who never wanted to see my country become an empire, but who realizes now that it is too late for her to be anything else, I want her to be one of the great empires, and if it is possible, one of the good.

Interior Department Cuts

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a letter, sent to the editor of the Washington Post by Hon. Mon C. Wallgren, Governor of the State of Washington, presenting the case of the West and the Northwest against the sharp and unnecessary reductions in the estimates of President Truman made by the Republican-controlled committees and the Republican-controlled House of Representatives, appearing in the issue of the Washington Post of May 22, 1947, under the heading, "Interior Department Cuts":

INTERIOR DEPARTMENT CUT

It is regrettable indeed to learn that the Post has supported drastic budget slashes voted for western power and reclamation projects. The Post editorial of April 25, entitled "Interior Department Cut," was cited with approval on the floor of Congress by congressional proponents of western stagnation.

People of the West wonder whether the House action was motivated by ignorance or by hostility on the part of eastern interests. Because I have always regarded the Post as an alert and aggressive newspaper with a high-caliber editorial page, I prefer to think that your newspaper is neither ignorant nor hostile but, rather, that it has been sold a bill of goods in a weak moment.

I say this because your editorial approval of the House committee action has a familiar ring. It contains the old, hackneyed arguments that were used for many years by the enemies of Grand Coulee and other western projects.

Your editorial said:

"Utopian plans for making the wilderness blossom by a forcing process are a dream of the future."

Fourteen years ago similar statements were made about the foolhardiness of building hydroelectric plants and storage dams in the wilderness, where only jackrabbits and sagebrush grew.

Had those wise Federal investments not been made a decade ago, would we have survived the delay in building the B–17 and the B–29? It was fortunate, indeed, that the "dream of the future" had become a reality in time to supply the power for vast wartime aluminum production—power crucial for victory—which private companies admittedly could not supply.

Your editorial writer regards the economic development of this region—scheduled during these last 14 years—as a "forcing process." Apparently he approves a forcing process by pinchpenny zealots to slow the march of western economy. He cites with approval the House committee opinion that "deferral of certain developmental construction projects to a more propitious time" can save many millions of dollars.

Rivers that run idly to the sea instead of supplying power for industry and water for veterans' farms represent millions of dollars saved only to those who profit by a declining economy and a smaller amount of national goods and services. This is a barren economic philosophy which simply fails to take account of the wealth-creating, self-liquidating character of these western projects.

Did your editorial writer give any thought to the land-hungry veterans anxiously waiting for Columbia Basin farms? Did he think of them when he said developmental work should await a more propitious time? These veterans, having applied in war the massed might of the greatest industrial nation in the world, will be surprised to hear that capital outlays for developing new farms now are beyond the taxable capacity of the people.

Thoughtful persons understand that systematic development of the West is not a hand-out saddling taxpayers with special burdens. They know it to be a profitable public investment in America's future. Those who want to stifle this development reject the principle that the Nation's resources shall be wisely and constructively employed for the benefit of all the people.

Secretary Krug, as a public servant intrusted with the supervision of the Nation's resources, has shown an understanding of the integral role that the West must play in a prosperous, expanding economy. The prejudiced criticism that swept into your editorial does no justice to the Secretary's stand. The editorial reflects the sentiments of House committee members who butchered the Interior appropriation requests and then tried to slip the knife into the Secretary's hand by charging him with failure to cooperate.

The Governors of 10 Western States have met with me to take common counsel and action against the threat to western welfare. If we succeed in dispelling ignorance and hostility regarding the West, the needs of the whole Nation will be more clearly understood and its welfare more surely advanced.

MON C. WALLGREN,
Governor of Washington.

OLYMPIA, WASH.

Address of Hon. Fred Bradley

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. HAND. Mr. Speaker, under unanimous consent, I am placing in the Appendix of the RECORD a speech made by my colleague the Honorable FRED BRADLEY, the distinguished chairman of the House Committee on Merchant Marine and Fisheries. This speech was made before the Propeller Club of the United States at the Waldorf-Astoria, New York, May 21, and is of great interest on a most important subject, the future of the American merchant marine.

I am informed that the speech will again be delivered tonight at the National Maritime dinner in Washington, under the auspices of the Propeller Club of the United States, port of Washington.

I commend it to the attention of the Congress and to the public generally. It follows:

I have been serving on the House Merchant Marine and Fisheries Committee for the past 8 years and this year I was fortunate to be honored with the chairmanship, succeeding one of the most loyal friends that the American Merchant Marine has ever had, the Honorable SCHUYLER OTIS BLAND, who had been chairman for the past 16 years. The judge has not been a well man this year and during the short time I have served as chairman and undergone the added responsibilities of that job, I can well appreciate why he has been under the doctor's care. I am glad to report to you, however, that he is well on the mend and will soon be back in our committee deliberations and on the floor.

This is National Maritime Week and I want to pay tribute to all those splendid young men, regardless of race, creed, or color, who were our wartime merchant marine and without whose heroic service we could not have won this last great war. All America, and indeed the entire peace-loving world, owes them an undying debt of gratitude.

I am asked tonight to tell you where I think our merchant marine is headed in the future. We have one of two roads to travel; one, a road of lack of unity, lack of teamwork and lack of efficiency. This road leads us to disaster and will pile the merchant marine on the rocks. The other road is one of unity and efficiency. If we do use our collective heads, join hands and all put our shoulders to the wheel—by that I mean Government, ship operators, and the men who man the vessels—we will indeed have the finest merchant marine in the world, and that we must have!

In developing that fine merchant marine, I would recommend an increased speed in turn-around. By that I mean we have to unload our ships faster; we have to load them faster and the stay in port must be drastically shortened. I would suggest that we even consider the matter of incentive pay. For instance, I believe that our tug men down here on the water front, and I believe that the pilots who bring these ships in, could help to turn them around a little bit faster if it were made worth while, and then I believe our longshoremen could do a much better job if there were some incentive.

Now I know that, perhaps, some of our friends among the longshoremen may object to such a program on the face of it because they fear a loss of income. What I want to do is to advocate a program that will increase their income by the very reason of their greater productivity. America has been built on production and that means all of us have to increase our production in the face of this extreme international competition with which we are faced. In other words, instead of spending a week loading and a week unloading one ship, why should not we put in much less time with mechanical aids in loading or unloading five ships in the same length of time and at the same time receive a higher wage scale for doing it?

If we are to meet this increased and terrific international competition—operating as they are with their own native crews at about 50 percent of our cost, or with Lascar crews at 30 percent of our wage scales and with their tremendously lower safety standards, their much lower numbers of crew members and low feeding costs—with these disadvantages we must remember this: That the only possible way we can defeat that competition and overcome these handicaps is by everyone turning to and ever improving the efficiency of our American merchant marine. The Government is attacking this problem in a constructive way through our maritime-training programs. We are training our unlicensed officers to become ever more efficient and are up-grading them, and at Kings Point, N. Y., we have the finest maritime academy in the world. When those boys graduated from Kings Point, they not only know the theory, but they have had a good start on learning the practical application of the theories they have learned, because they put 1 year of total actual service on at least four types of ships sailing the seven seas and acquire the requisites of their duties as ships officers.

I have known of many veteran officers out on the Great Lakes and, indeed, on the oceans who have come up, as we call it, the hard way; but I have yet to find one of them who has actually checked into the training at Kings Point who does not wish he had had that same training in his youth, because he feels down in his heart that he would be a better officer. Again in travel to foreign ports these well-trained officers will make fine emissaries of good will between this Nation and the rest of the world, to whom we have to look for return cargoes if we are to engage in successful competition with the maritime nations of the world.

In order to maintain an adequate, efficient, and profitable merchant marine it is necessary to secure cargoes. How shall we go about securing these cargoes? It seems to be no secret that this country is slowly devoiding itself of natural resources. The problem that now confronts all of us is whether or not we should continue the excessive use of our own limited resources or save something for an emergency—and by emergency I mean if we are attacked some years hence by foreign enemies. If we use all our resources, naturally, we will be in the same shoes that Germany, France, or England were in during the last war. They had to depend upon outside sources. If we save some of these resources for a rainy day—and I hope that rainy day never comes—we should import some of these resources from foreign lands. That will accomplish two things: One, protect our own resources and, two, give us return cargoes. Now in order to buy these imports, it should not be necessary to use the usual medium of exchange, namely, money, and thereby create an overbalance of credits which, of course, these prostrated countries cannot finance; instead, we should trade our commodities for our imports.

You know, we could have excess of foodstuffs—such as grains, meats, etc.—clothing, heavy-duty goods, locomotives, automobiles, bath tubs, and other commodities we can think of and thereby have cargoes going over. It is not necessary for me as a layman to tell you practical operators that a merchant marine will be only successful if you carry cargoes both ways; and in addition to that turn them around quickly in the ports, because you cannot make money with any steamship tied to the dock nor laying at anchor.

Since being in Congress, I have read many, many times statements from recognized economists that if we could export 10 percent of our commodities it would mean the difference between depressions and prosperity; and there are many who think that we should strive to do this.

Now in the carrying of these cargoes and operating the ships, we have another part of the operation that American companies

should participate in and by that I mean cargo insurance. It has long been the practice of foreign countries when purchasing goods in this country that they stipulate the goods be carried in their bottoms and their underwriters insure the cargoes. If we could work out a system whereby we could control some of the underwriting it would help business in the underwriting field and, of course, help millions of people interested in these insurance companies.

Therefore, you will see that not only is our committee interested in the building and placing the American ships in the proper hands for operation but we are also interested in assisting to keep these fine efficient plants in operation and in that we must interest ourselves in helping that goods be sold abroad, which will give work and income to the entire Nation.

Last but not least, I favor a ship subsidy to those few operators who are operating ships on routes that cannot be made to be profitable but still we must have them for the benefit of the merchant marine and the Nation.

With respect to our overseas passenger service, we must permit our merchant marine to engage in overseas air transport along the lines it is presently operating with surface carriers. Those of us who advocate this program seek no special favor for the shipping lines; we just ask they be given the same rights as anyone else who is an American citizen who participates in overseas transportation. They have the facilities, they have the know-how, and they have the finances to operate overseas airways parallel to their surface lines; and it is up to the Congress to force the Civil Aeronautics Board to grant them that privilege to stand on their own feet and be given licenses for convenience and necessity if, as and when they ask for them. I have so testified before the House Committee on Interstate and Foreign Commerce which has this very important matter before it today. Secondly, I would advocate, as a layman, that we not go in for too many superliners for the express purpose of carrying passengers. It seems to me that we will be more successful in the operation of ships, which will meet our rigid safety requirements, which will be fast, which will carry, perhaps, 200 passengers and carry some 10,000 tons of freight.

In conclusion, I repeat that if we are to maintain the American flag paramount on the high seas—and that is the responsibility of our committee—we have to have the utmost cooperation from all. We must have less individual selfishness on pulling at cross-purposes for their own selfish interests. We must have greater economy in our operation mechanically. We must have greater efficiency on the deck and in the engine room and on the dock; and we must have a cooperating spirit among the operators, the officers, and the seamen, and recognize the terrific international competition with which we are faced, which we must overcome to attain our goal.

Impoverished by Land Erosion

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. TEAGUE. Mr. Speaker, I do not believe any of us feel that our Nation can remain great if we allow our most valuable asset, our productive land, to become depleted by erosion. Mr. B. F. Vance, State Director of Production and Marketing Administration, United States Department of Agriculture, at College Station, Tex., recently announced the progress made on the 1947 agricultural conservation program in Texas. Fifteen million dollars has been obligated by our county committees for assistance to perform conservation measures so far this year. Texas originally received $19,788,000 for this program which means that about 77 percent of the program funds have been used during the first 4 months of this year.

It is conservatively estimated that another $20,000,000 will be required to meet the demands of farmers and ranchers to participate in the conservation program. I sincerely hope that those who desire to participate in conserving our greatest resource will not be denied the necessary assistance from the Federal Government.

Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the following careful study of land erosion by Glynn Mitchell Johnston, of Corsicana, Tex., which appeared in the Texas Professional Engineer magazine:

IMPOVERISHED BY LAND EROSION

(By Glynn Mitchell Johnston)

Out of a total Texas land area of approximately 169,000,000 acres, there were 33,000,000 acres in cultivation and fallow lands according to the census of 1940. It has been estimated that a total area of cultivatable lands of Texas is approximately 50,000,000 acres. This is about 30 percent of the total land area of the State and about 36 percent of the total area of 137,638,372 acres in farms. This area is made up of many different kinds of soils which vary in productive capacity and crop adaptations. While Texas does have a great variety of soils, some very fertile, the fact remains that consistent soil conservation practices must be maintained if our soils are going to be kept from impoverishment by erosion.

Several years ago a survey by the Soil Conservation Service of the United States Department of Agriculture revealed that nearly all the crop and pasture lands of Texas have suffered in some way from erosion and depletion. About 11,000,000 acres were classed as badly damaged, while more than 50,000 acres were classed as having lost approximately 25 percent of top soil due to erosion caused by wind and water. In the black land agricultural counties of central Texas, a study of the 1940 United States census will show a decrease in the population—a marked decrease in some places—in the period from 1920. This decrease is due in a measure to a wearing away of the soil. History proves that civilization perishes with the soil. Let us take a look into the past to see what has happened.

W. C. Lowdermilk, Assistant Chief, Soil Conservation Service, United States Department of Agriculture, Washington, D. C., made a survey of southern Europe, north Africa, and the Near East in 1938 and 1939, for the purpose of securing beneficial information for United States farmers and stockmen and the country as a whole in our national program to save our soils from soil erosion. Dr. Lowdermilk cites specific examples in Babylon, the ancient forests of the Cedars of Lebanon, and Palestine to prove that a general condition of neglect and of wasted lands, underused lands, and misused lands has caused a decline and virtual death of once proud civilization.

In Babylon, proud ancient empire, where 2,600 years ago lived 30,000,000 people enjoying the fruits of a great civilization, we now find a heap of salty desolation and less than 4,000,000 people in Iraq, including ancient Mesopotamia with its two rivers, Tigris and Euphrates, running full of water, with the same climate, same soils. In times past the chief problem was control of silt. Silted-up canals can be seen all through the area. One irrigation project, Kut Barrage, has diverted the waters of the Tigris over an area of more than 500,000 acres; but there are few farmers in this country, which has one of the greatest possibilities for supporting people of any portion of that part of the world. With modern irrigation structures and machinery to dig canals and keep them clean, Willcocks, the great British irrigation authority, says it will be possible to support a population of 50,000,000 in Iraq. This ancient civilization perished from the effects of soil erosion and the resultant silt.

Another area is that of the forests of the Cedars of Lebanon, where King Solomon got timber for the temple in Jerusalem, and which covered an area of about 2,000 square miles. Today we find only four small groves, the principal one being the Tripoli grove which has about 400 trees in it. At one time this grove was reduced to 44 trees because goats were allowed to range there. A stone wall was built to keep out the goats, seed from old trees began to grow up into a fine forest. This proves that the goats, not change if climate, were responsible for the disappearance of the forest, and also that it would be possible to restore this forest over most of the area it once covered, especially in those areas where the soil had not been completely washed away. This forest was despoiled by overpasturing and soil erosion.

Another area of particular interest is Palestine, which is today a sorry commentary on man's occupation and exploitation of a once fruitful country. Decadent native populations and political and social decay are the usual offspring of landscapes impoverished by erosion. Barren, rocky hills, gullies, goats, poverty, and low standards of living present a dreary picture brightened only by the work of the Jews in reclaiming lands. Dr. Lowdermilk reading from a Government report says, "The urge of Jewish people to build a national home in Palestine is an outstanding and fascinating phenomenon of our times. Agricultural colonization in Palestine is the most remarkable devotion to and reclamation of land that I have seen in any country in the New or Old World."

Such serious damage has been done to lands of Palestine that they can never be brought back to their original condition; but judging from what has already been done by the Jewish colonists, it is evident that with capital this land will be able to support a much larger population. This will be a costly venture, but it will pay in the redemption of the land and the redemption of the people, because after all we are concerned in the conservation of soils and waters because we are concerned with the conservation of human values and human people.

The question arises, What is the absorptive capacity of Palestine? This is based upon food production. Food is primary. It must be produced first by the land within the borders of the country, and then imported in exchange for manufactured articles. Dr. Lowdermilk says in Palestine about 1,800,000 in addition to the present population can be fed from within if his suggested project is carried out; however, if industry is increased and products are available from buying food from outsiders, Iraq for example, there is practically no upper limit. It will depend upon the genius and the extent of development of industry within Palestine.

Speaking as a conservationist who likes to see the resources of the earth put to their highest use in the interest of making them work, Dr. Lowdermilk suggests the possibility of an irrigation and power system in Palestine that is unique in the world, and which he calls the Jordan Valley Authority, which would include the drainage of the Jordan,

both Palestine and Trans-Jordan. The narrow valley of the Jordan River, with the Dead Sea 1,300 feet below sea level, is only a short distance from the Mediterranean Sea. A canal could be put in from the Mediterranean and the water dropped into the Dead Sea, thereby producing power. Water for irrigation would come from the fresh waters of the Jordan. It would be possible to develop power for all sorts of industries. The Dead Sea contains some of earth's richest minerals. As industries develop, food may be supplied from Iraq, if that country is developed. Palestine is strategically located at the crossroads of three continents; raw materials may be brought in; transportation by steamship, railroad, and airplane is possible. But, such a project requires manpower. There are not enough people in Palestine now to do it. Considering the 550,000 Jews already there, Dr. Lowdermilk thinks it not too much to say that an additional 5,000,000 people can be absorbed by the country.

The great Mayan civilization in Central America became decadent and disappeared because of impoverishment of its lands due to soil erosion.

Here in the United States we need an attachment to and love for our soil. We must have it if we are to save our country from destruction and the wastage it is undergoing now. "Land is not an economic commodity," says Dr. Lowdermilk, "it is a part of the Nation." It is "the film of life," says Russell Lord. From the Atlantic to the Pacific our soil is getting away from us. In a few years weather can remove soils that have been centuries in building. "Man through recklessness or ignorance removes natural curbs and lets erosion get out of hand." Stuart Chase says, "The skin of America has been laid open. * * * Geological erosion tends to be static, for soil builds as fast or a little faster than water carries it away. Man-made erosion is dynamic and cumulative and has no end save complete destruction unless it is controlled."

H. H. Bennett, Chief of the United States Soil Conservation Service, estimates rates of soil formation; for example, he says, "I would not be in the least surprised if it turned out that not less than 1,000 years at least are required to build an inch of good rich, Piedmont topsoil." This good soil has been ruined in 200 or 300 years and in some places as little as 20 or 40 years. We are told that at least 3,000,000,000 tons of solid soil materials are washed out of fields and pastures of the United States each year by water erosion alone. Bennett estimates that the United States has 610,000,000 acres of tilled or tillable soil. On the basis of this country's first erosion-reconnaissance survey started by the Soil Conservation Service in 1934, Mr. Bennett adds:

"Approximately 50,000,000 acres of once fertile land in this country have been essentially ruined for practical cultivation by erosion. Another 50,000,000 are in a condition almost as serious.

"About 100,000,000 acres still in cultivation have been seriously impoverished by loss of soil; and about 100,000,000 acres of cultivated land are being depleted of productive soil at an alarming rate."

Mr. Lord reminds us that 100,000,000 acres is as much land as there is in all of Illinois, Ohio, North Carolina, and Maryland together—enough to provide 1,250,000 families with 80-acre farms.

I am glad to be able to say that Texas farmers have not been, and are not going to be, the victims of complacency. After several years of intensive effort by farm leaders, there was enacted in 1939 the Texas State soil-conservation law. Under this law there have been set up in Texas 116 soil-conservation districts, including two-thirds of the State's area and four-fifths of its farms and ranches.

Because these districts do not have taxing powers, although otherwise they are true legal subdivisions of the State, their elected supervisors may extend to their landowners only such aid and assistance as are furnished gratis by the Federal and local governments, mainly the former.

Our Foreign-Aid Program

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun, Baltimore, Md., of May 22, 1947:

WE MUST KNOW THE DIMENSIONS OF OUR FOREIGN-AID PROGRAM

Secretary Marshall, in his press conference on Tuesday, stated that there will be no more appropriation requests, for the time being, comparable to the $400,000,000 program to aid Greece and Turkey and the $350,000,000 program of general foreign relief. But the important thing to note is the qualification for the time being. Mr. Marshall coupled his statement with the reminder that the State Department has already established a planning board (it was established before Secretary Marshall went to Moscow) that has for its task a full study of the role which American aid, whether by loans or by grants, may be called upon to play in our foreign policy.

Such a study is of the utmost importance. When President Truman anounced what has come to be called "the Truman doctrine," he stated it in such broad terms that its dimensions, in terms of American aid, could not even be charted. In his generalizations, he went far beyond the immediate subject, which was the case for providing assistance to Greece and Turkey only.

Obviously, the role played by American aid is going to be enormous. We have already loaned billions to Great Britain, and it is conceivable that more millions will have to follow them. We have made substantial loans to France and other countries. We carried the major load in the cost of UNRRA. We are following up UNRRA with our own foreign-relief program plus a large share of the cost of the IRO. We have earmarked $500,000,000 for China, to be used if and when China begins to put her house in order. The Greek-Turkish bill has been passed. Korea will require assistance. And these only touch the high spots of aid already granted or within view.

The reason for this outpouring is obvious. During the war the United States was a vast arsenal for the Allies. In terms of productive ability, the United States gained, rather than lost, during the war. The productive ability of much of the world, by contrast, has been shattered—by physical destruction and by economic and political dislocations. We are now, in a sense, playing the part of an arsenal of peace. We are compelled to pour forth assistance not for merely sentimental reasons but because there can be no real hope of a peaceful and stable world community until the unbalance between our immense productiveness and the rest of the world's needs stands corrected—until the shattered nations which look to us with mingled hope, envy, and skepticism can stand on their feet again. The role of arsenal of peace is as inescapable as the role of arsenal of war.

The fact remains that our capacity for aid is not limitless, but finite. When we speak of aid we tend to think of it as a matter of writing checks—of pouring out money. In fact, we pour out goods and services, not money. And there is a point beyond which this cannot be done without severe strain to the producing mechanism.

Hence the importance of the inquiry now undertaken by the State Department's planning board. We should now, insofar as it is possible to, know what will be required of us, so that these requirements may be equated with our capacity. It is not enough to be told that the demands on us are "tremendous." We need to know with a good deal more precision the scale of the demands and how they may be met.

Displaced Persons

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1947

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waukesha (Wis.) Daily Freeman, of May 19, 1947:

DAVIS SUPPORTS DISPLACED PERSONS MEASURE

We are pleased to learn from Washington that Congressman GLENN R. DAVIS, of Waukesha, is actively supporting and will vote for emergency legislation to admit 400,000 displaced persons of Europe to America in the next 4 years. During his campaign for Second District Congressman, DAVIS went on record in favor of the bill, introduced by Representative WILLIAM G. STRATTON, JR., Republican, from Illinois, and the support he received may be an indication of the esteem in which the measure is held in this area.

This emergency legislation does not request special privileges for the despairing, homeless, persecuted individuals. During the past 9 years more than twice 400,000 could have come to America except for the war. Their quotas disappeared in the smoke of battle. The bill merely asks for temporary legal machinery so that these men and women—and the children—without a country may find a home here. And they won't take urgent housing from anyone because they will live with relatives and those without relatives will be settled by welfare groups in rural areas where housing is available on farms for agricultural workers.

Who are these people? More than 75 percent of them are victims of one or another of European dictators, no matter under what cause or name the dictator flourished—Communist or Fascist. Eighty percent are of the Christian faith, a good many of them Polish and Baltic refugees. Another portion of them, by far the smallest number, is of the Jewish faith. Some of them are political exiles, and since fascism is nominally dead in Europe today, this means that some of them are exiles from countries now controlled by communism.

Our Statue of Liberty, standing majestically above the waters of New York City's upper bay, carries at its base a famous quatrain: "Send these, the homeless, tempest-tossed, to me!"

Congressman STRATTON's bill would at least abolish the hypocrisy of this invitation which, under our present laws, means so little since the "homeless, tempest-tossed" are at present barred from entry here.

The Texas City Disaster

EXTENSION OF REMARKS
OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following letter entitled "The Texas City Disaster" by Edgar Queeny:

THE TEXAS CITY DISASTER

To Monsanto Stockholders, Employees, and Friends:

As soon as we learned of the crushing misfortune that overtook Texas City, Mr. Rand and I, who were in the East, flew to the scene. Before landing, we circled the holocaust. You have heard it described in the press and over your radio. The reporters did not exaggerate. Exaggeration would have been impossible; our language is too inadequate.

The French liner *Grandcamp*, burdened with 2,500 tons of ammonium nitrate, was berthed at a quay immediately opposite our own. More ammonium nitrate, which has an explosive power about one-half as great as TNT, was on the dock at which she was loading. About half past 8 on the morning of April 16 fire was noticed on the *Grandcamp*. Soon after her crew abandoned her, and the nitrate exploded, subjecting portions of our plant to an impact we believe to be equivalent to 250 five-ton block-busters exploding simultaneously. Because the atomic bombs were exploded high above Hiroshima and Nagasaki, the blast beneath them we believe may have been less severe than that suffered by parts of our plant.

Our warehouse—a steel and brick structure—was flattened; not a splinter remained upright. The main power plant was similarly crushed. As the blast fanned out, walls of manufacturing buildings fell, windows of the plant office and laboratories shattered, roofs were ripped off, and pipe lines carrying inflammable liquids were torn apart. A huge wave, rushing in from the basin where the ship had rested, inundated the area while the explosion's heat ignited the benzol, propane, and ethyl benzene pouring out of the ruptured pipes and storage tanks. Savage and cruel fires, feeding on these inflammable liquids, scalded those who had survived the blast and were fleeing to safety; they cremated those who had fallen, and melted and twisted steel supports and girders.

Preventing effective rescue, these fires raged 2 days, sending up a mile-high Vesuvian wick which joined the titanic smoke columns arising from the near-by storage tanks of oil refineries, forming a pitchy umbra over the racked and grief-laden community.

Because our pay roll records were kept in the plant and were scattered by the blast, we are without an accurate list of those on duty at the time. We employed 658 persons in this plant. After most careful checking, we believe that 451 were on duty at the time. Of this number, 154 were either killed or are missing and believed dead; more than 200 required hospitalization; and 95 of the more seriously injured are still in hospitals. Some of them are not expected to survive. While there were many miraculous escapes from death, few escaped without the proverbial scratch. Almost all those not requiring hospitalization needed some medical aid.

In addition to our own casualties, 123 employees of outside contractors were engaged on construction in our plant. As most of them were working in areas of greatest exposure, their ratio of death and severe injury was greater than our own. Of the combined forces in our plant, the dead, missing, and believed dead total 227—more than one-third of the whole area's total.

While fate usually plays no favorites, our technical staff suffered the heaviest proportion of casualties. J. R. Mares, general manager of our Texas division, was fortunate; he did not reach the plant until a few minutes after the *Grandcamp* exploded. But glass was blown into the brain of H. K. Eckert, our plant manager. Although he remained for a few days in a critical condition, he is expected to recover. Charles Comstock, the division's technical director; B. F. Merriam, chief plant engineer; R. E. Boudinot, production manager; R. D. Southerland, safety engineer; and F. A. Ruecker, chief power plant engineer, and all his staff are dead. Robert Morris, assistant plant manager survived, although the plant jeep in which he was riding, seeking a tug to pull the *Grandcamp* into the bay, was hurled high in the air and overturned. He was saved by the giant wave which covered him. With punctured eardrums and painful bruises, he rescued many trapped office workers.

Of 17 young and promising chemists who were supervising production in different departments, 16 perished, leaving behind many young widows and families of tiny ones. To this list may be added other technical men who are still in critical condition.

Several other company officials came to Texas City to help, organize, and plan. Among the first arrivals were Dr. Emmet Kelly, our medical director, and some of his staff. A plane load of nurses and medical supplies was also flown in.

Friday Mr. Rand and I accompanied Dr. Kelly on his round of the hospitals. As we visited with our own stricken and saw the conditions of others, it was impossible for us to contain emotions. But we heard not one word of recrimination nor any attempt to fix blame. Each accepted his anguish stoically as the lot which fate had cast for him. We attempted to solace wives sitting beside husbands whose lives were in the balance. Their manner was brave but their eyes betrayed the torment of their souls.

A young girl—shattered and barely conscious—who had been in charge of pay-roll records, seemed to be worried only about the loss of her records. Another girl, bandage-swathed and disfigured forever by flying glass, touched us to the quick by saying softly, "Oh, I'm so sorry for Monsanto, losing so many fine men." Many evidences of unselfishness, heroism, pluck, and courage were unveiled to us.

By Friday morning, except for the benzol storage tanks which continued to burn, most fires in our plant had subsided. We visited the ruins. Fires still raged in both Humble and Republic Oil Co.'s nearby tanks, raising a huge Bikini-like pillar of pall 3,000 feet into an otherwise clear sky, where it was joined by the gray of our own benzol. There both plumed and stratified, forming a gloomy awning of darkness which drifted on southerly winds. Monsanto pilots flying to St. Louis that afternoon reported that these clouds stretched to Missouri's southern border.

The smoldering rubble in our plant still hissed as fireboats played streams upon it. Squads of Red Cross men were engaged in the dangerous work of removing bodies. Bulldozers had cleared pathways through the rubble, along which we passed stretcher after stretcher bearing the charred organic remains of employees. It was heartbreaking and gruesome; memories of it will haunt us forever.

Attempts to assuage the grief of the victims of such a disaster are ineffective, this being within the province of time alone. But Mr. Rand and I believed that our stockholders would approve alleviating the financial problems attending the changed circumstances of so many of our employees. Hence, we offered immediate payments of $1,000 in case of each death to each widow or nearest dependent. Almost all employees of over 3 months' Monsanto employment were covered by our group-insurance plan, and, as accidental death doubles the payment, the beneficiary of an insured hourly employee will receive $6,000 to $8,000 in insurance. Since insurance payments increase in ratio to salary, the widow of a man who earned $7,500, for instance, will receive $17,500. Our treasurer and a representative of the Metropolitan Life Insurance Co. began making payments 48 hours after the blast.

In addition, Texas law requires in such fatality cases the payment to the widow or beneficiary of $20 a week for 360 weeks—$7,200. Our legal liability in this respect is covered by Liberty Mutual Insurance Co., who will make the payments.

We requested all cases of special hardship to make known their needs to our Texas City personnel officer, who was granted authority to deal liberally with them.

We also announced that hospitalization costs of our employees and their dependents who were injured, not covered by the employees' Blue Cross scheme, would be borne by the company and that full base salaries and wages would be guaranteed to them during both hospitalization and convalescence; and, further, that all who suffered permanent injuries preventing reemployment would receive individual and liberal consideration beyond compensation for which we are legally liable.

Our hastily established housing group has made temporary repairs to the homes of 148 employees, and more are being cared for as rapidly as material becomes available. We are surveying all housing damage and other losses suffered by our people, and our Texas division officers are instructed to do all possible to alleviate hardship.

We arranged to pay for the transportation of the remains of employees whom we had moved into the area and for the transportation of their families and household goods to their former homes, if they desired. We also guaranteed widows of those we had moved into Texas City against any loss of the equities they had acquired in their homes, in the event they desired to move away.

Hourly employees who are able to work were guaranteed their wages through April 27. Thereafter, we hope to find employment for most of them in the work of clearing the site and reconstruction.

To provide for the cost of these payments which are beyond our legal liabilities and to reward outstanding cases of heroism, our board of directors has appropriated $500,000. All of our legal liabilities will be discharged by our insurance companies. We hope our shareholders will approve the use of this part of their profits to alleviate the misfortunes of the men, women, and bereaved families of those who worked for them.

But the contribution Monsanto as a company is offering is not the whole story. Monsanto employees are also showing their feeling for the sufferers in the disaster area. Various Monsanto plants have started voluntary collections, a spontaneous personal expression of their sympathy.

At Oak Ridge, where Monsanto operates the Clinton Laboratories, a number of the employees are giving the equivalent to a day's pay. At Trenton, Mich., donations have been coming in with cooperation of the union. Seattle and Vancouver employees of Monsanto's western division are contributing. The phosphate division sales office at Birmingham, Ala., the western division sales office at San Francisco, Calif., the main office at St. Louis, Mo., and the central research laboratories at Dayton, Ohio, all sent in generous

donations. At Carondelet, Mo., and Anniston, Ala., plans are under way to assist employees of the stricken plant. By no means can this be the entire story for it will be weeks before all the facts are known, all the stories told of sacrifice, sympathy, and understanding of the multitude who gave in the time of need.

Due to the magnitude of the disaster and the anxiety for news, some erroneous statements were circulated. We should like to correct some of them.

The ammonium nitrate aboard the *Grandcamp* did not originate in any Monsanto plant; Monsanto does not manufacture ammonium nitrate. Nor was it being loaded at our dock, nor was it destined for any of our plants. We do not use it.

Our Texas City plant did not use or manufacture any explosives. Several inflammable products such as benzol and propane constituted its raw materials. It manufactured monomeric styrene and polystyrene; the former is inflammable but the latter will only support combustion like wood—the distinction between an explosive and an inflammable material being that the former can be detonated on impact and the latter bursts into flame when ignited.

There were no major explosions in our Texas City plant. None of the minor ones, described by our surviving staff as puffs, was great enough to cause any damage outside our plant area. The main fires in our plant were in the storage tanks and tank cars of benzol, propane, and ethyl benzene, an intermediate in the manufacture of styrene.

Our Texas City operation was not considered a hazardous one—no more so than oil refining, which it resembled. It carried the same insurance rates as oil refineries.

An irresponsible criticism of the plant's design by an employee of a contractor who had been engaged in its construction received wide publicity. Unfortunately, a repudiation of his statement by the president of that company was not widely publicized. There were no construction faults accountable for even a part of the disaster. In rebuilding, we expect to utilize the same type of construction. No manufacturing plant is designed as a fortress, nor could many fortresses withstand a blast such as came from the *Grandcamp*. The plant also contained fire protection approved by our insurance companies; it was adequate to cope with any foreseeable contingency.

There were rumors in financial circles that our insurance coverage was inadequate. The plant and contents were insured for $14,750,000, which covered the plant inventory of approximately $1,000,000 and the depreciated value of its buildings, machinery, and equipment on a 90-percent coinsurance clause. As we have no estimates of reconstruction costs, we do not know how far our insurance receipts will fall short of them. In addition, the plant was covered by $7,500,000 of use and occupancy insurance and $2,500,000 of public liability insurance.

Of course the loss of such an important unit will have an adverse effect on future profits, although use and occupancy insurance will compensate during the coming 12 months in large degree. But the greatest loss will be in the potential profits from several derivatives of styrene which we planned to manufacture and which must now await either the rebuilding of the Texas City plant or supplies of styrene monomer from other sources. We are actively exploring every avenue. We are hopeful of securing a substantial supply but it is not likely that we can purchase enough to carry on with our recent program.

Our plant was the first to produce styrene for the manufacture of synthetic rubber so desperately needed after Pearl Harbor. It is now gone and with it many of the men—chemists and engineers who contribute to perfecting the processes in the laboratory and in the pilot plant stages. Working literally day and night in the dark days of 1942, their ideas and designs took shape in the mass of pipes, apparatus, columns, mortar and bricks at Texas City. The physical part of the men and the plant have gone, but not the products of their minds. This will live on. Based on their contributions and that of others, we will build again at Texas City on their foundations. The results of their work will continue to serve their fellowmen.

The company has many friends. Hundreds of messages of sympathy and offers of assistance poured into our offices from customers, competitors, individuals, and suppliers. Many came from far corners of the earth. All were comforting and appreciated.

I should like to pay tribute to the splendid work of those remarkable organizations, the Red Cross, the Salvation Army, the Volunteers of America, the Boy Scouts of America, the United States Army's medical staff, the staffs of the hospitals in the area, and the officials of both the State of Texas and the city of Texas City, for the way in which they responded to the challenge of the emergency. The manner in which the Monsanto staff overcame the initial shock and established an effective organization to command a most difficult situation, then immediately planned the future, was gratifying in the highest degree.

Sometimes it takes a tragedy to bring forth the better qualities of human beings. Our visit to Texas City made us proud to be Americans and especially so to belong to the exceptionally able group of them making up Monsanto.

EDGAR M. QUEENY.

APRIL 30, 1947.

England's Experiment in Socialism

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Felix Morley from Human Events for April 30, 1947:

SHARING THE WEALTH IN BRITAIN

(By Felix Morley)

Those who would estimate the political future in Great Britain, as a primary determinant of the future of Europe, should be sure at the outset that they appreciate the major political asset of the British Labor Party. Criticism of Prime Minister Attlee's government has greatly increased during the past 3 months. But it is probable that a majority of the electorate would still indorse the "attack on privilege" as it is called, behind which all elements in the Labor party are united.

This attack takes the form of a leveling policy, both financial and social, which can be and is described as democratic. It is facilitated by wartime necessities and precedents, many of which are now regarded in England as permanent. The underlying issue is one of social revolution, both broader and deeper than that nationalization of key industries on which public attention has been disposed to focus.

The effects of the democratic trend on an essentially aristocratic national tradition are apparent to the casual observer. They can be seen throughout the countryside, where scarcely any of the great estates of England's spacious days now remain in private hands. They can be seen in the west end of London, where the big town houses of the gentry are being requisitioned by local government for conversion into flats, or taken over for the ever-growing network of official bureaus.

Statistics, however, frame the visual picture helpfully. And some very cogent figures are to be found in an admirable analysis on National Income and Expenditure of the United Kingdom (Cmd. 7099) released by the wholly nonpolitical Central Statistical Office early this month.

In the fiscal year ending March 31, 1939, the last full year before the outbreak of the recent war, 7,000 British taxpayers retained a net income of £6,000 and over after the payment of income tax. In the fiscal year ending March 31, 1946, the number of individuals retaining net income upward of £6,000 ($24,000 at present exchange) had fallen to 45.

The decline remains precipitous in the case of the number of British taxpayers retaining a net income of £4,000 and over, being from 19,000 to 885 in this case. From this bracket comes most of the investment necessary to make the capitalist system work. And the figures do not represent the whole loss, because in 1939 the purchasing power of the pound was at least one-third above that of the postwar period.

II

Final returns for the fiscal year which ended March 31, 1947, will also show the number of Britishers retaining a net income of over $24,000 at fewer than 50, out of a total population of nearly 50,000,000. And for the current fiscal year the results will be the same.

The budget presented to the House of Commons by the Chancelor of the Exchequer (Dr. Hugh Dalton) on April 15 provides a considerable tax saving for those in the lower income brackets. It continues unaltered the policy of confiscating, by sharply graduated taxation, all individual income, from whatever source, which would leave the recipient a net of more than $24,000 per annum. The coming of peace has made no difference to the Labor Party policy of soak the rich.

There was a time when the British regarded taxation as a scientific method for raising the revenue required by government. That principle has been repudiated by the Labor Party, which frankly regards the income tax as a device for securing a more equitable—or democratic—distribution of individual purchasing power. In the official white paper, already cited, the attention of the reader is called to the change in the distribution of income brought about by taxation.

As significant as the elimination of the wealthy is the temporary improvement in the position of those at the bottom of the income scale. Everyone agrees, with enthusiasm or with reservations, that the unskilled laborer in Britain is better off today than was the case 10 years ago. Here again statistics reinforce the results of observation and inquiry.

In the fiscal year 1939 a total of 2,270,000 Britishers had net incomes, after payment of income tax, of from £250 to £1,000 per annum. In the fiscal year 1946 the number in this class had increased to 5,877,000. Although the taxable basis is now being narrowed the numbers receiving incomes of from $1,000 to $4,000 is still climbing, partly because many of the very poor have been raised to the bottom of this bracket and partly be-

cause many of the middle class are being pressed down into its top.

In nearly 2 years of office the labor government has cut the imposition of the income tax on the poor by from 50 to 100 percent, while purposefully keeping its incidence on the rich at wartime levels. And taxation is not the only agency by which a uniform living standard is being enforced in a country where there was once sharp demarcation between upper, middle, and lower classes.

III

As important as taxation, in the leveling process, are the cost-of-living subsidies which are being progressively stepped up by the labor government. Like the confiscatory income tax, these subsidies were a wartime emergency development which the labor party now endorses as permanent policy. The subsidy is applied to food products of universal consumption, such as bread, tea, eggs, and meat, but to some extent also to utility clothing and shoes. In the fiscal year ending April 1 they cost the taxpayers the huge sum of nearly £400,000,000 and in the current budget they are estimated at £25,000,000 ($1,700,000,000), out of a total anticipated expenditure of £3,181,367,000.

In other words, almost 14 cents of every British tax dollar is being spent to provide essential food and clothing at less than cost. The benefits of the subsidy apply to all, of course. But since most subsidized articles are strictly rationed the effect is to make the Englishman with higher earning capacity pay not only for the Government subvention which he receives, but for that of the relatively untaxed poor as well.

The subsidy policy is credited, along with the rigorous governmental controls, for having kept the working-class cost-of-living index very stable. This index is now only 132, on a basis where costs on September 1, 1939, are measured as 100. But stable prices have restrained, rather than prevented, wages from rising. The latter have moved up an average of 65 percent during the period that the cost of living has increased half that amount.

So there are, to recapitulate, three major lines along which Great Britain is being socialized. They are (1) an income tax policy which is confiscatory for the rich while simultaneously lenient to the poor; (2) a subsidization policy which, combined with strict rationing, provides the bare essentials of life at low cost while insuring that the well-to-do, so far as any remain, can find no outlets for extravagant living; (3) a policy of permitting—though not encouraging—wage increases while constantly stepping up (as in the current budget) the almost numberless sales, profits, transactional and inheritance taxes.

There is no question that the calculated result of all this is a development of social democracy. There is equally no question that this development is strangling the capitalist system in Great Britain.

As the sources of venture capital are drained dry by a socialistic government the average businessman, tied hand and foot by priorities, controls, regulations, and shortages, becomes increasingly pessimistic about the future of free enterprise. He advises his son not to carry on the family undertaking but to get into the civil service, where he may enjoy the curious pleasure of issuing countless governmental directives, as opposed to the ceaseless misery of trying to fulfill them.

IV

The catch, now becoming unconcealably apparent, is that an ever-increasing bureaucracy, pouring out more and more directives, can do little or nothing to meet Britain's primary need of increased production.

The somewhat belated anxiety of the Socialist government in regard to production is exemplified by the publicity campaign planned to stir the workers to greater output. Posters are to be placed in 90,000 places of employment and at 13,000 centers where they will attract a maximum of public attention. They are of striking design, with two constantly repeated slogans: "We're up against it" and "We work—or want."

The Chancelor of the Exchequer summarized the situation equally grimly in his recent budget speech, telling the House of Commons: "We must export or we shall expire." A huge volume of exports is, of course, essential to Great Britain, to obtain funds to purchase food necessary to supplement its limited agricultural output and to buy many essential raw materials. Pending the commercial development of atomic energy, coal remains the only natural resource which Great Britain possesses in really abundant quantity.

There is no doubt that the relative failure of coal production, during the past hard winter, has severely shaken public confidence and seriously frightened Prime Minister Attlee and his Cabinet. Concentrated attention is now being given to the problem of stimulating output, but the fallacy of emphasizing distribution before production still continues. A high official in the Ministry of Fuel told me that he looks forward with grave apprehension to May 1, when the 5-day week becomes mandatory in the nationalized coal mines. Production, now about 15 percent below the 1938 level, may then decline even further.

The magnitude of the production problem, of which coal is only an outstanding instance, will be considered in a subsequent analysis. It is causing many British Socialists to reconsider doctriniare ideas. For the situation no longer permits them to laugh off such warnings as that issued by Winston Churchill on April 18, when he said:

"The prolongation of the present system of denying rewards and sharing miseries will break the mainspring of the country, and, if it is continued, it will only be a question of time before we shall be unable to support our population."

We Can't Feed Europe Forever

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, former President Herbert Hoover has proved to be a prophet. Way back in 1919, as relief director for Europe, he reported that the United States could not meet Europe's economic needs indefinitely. Only a few weeks ago he again restated his previous position which holds good for today.

Mr. Speaker, under leave previously granted, I include the following Associated Press story on this subject which appeared in the Evening Star:

HOOVER'S 1919 REPORT WARNED UNITED STATES COULDN'T AID EUROPE FOREVER

A 28-year-old statement by Herbert Hoover that the Western Hemisphere could not meet Europe's economic needs indefinitely was published last night by the State Department in the latest of a series of historical documents.

Mr. Hoover, then relief director, gave his estimate of the European economic situation in the wake of World War I in a report to the Supreme Economic Council of the Allied and Associated Powers.

"During some short period, it may be possible for the Western Hemisphere, which has retained and even increased its productivity, to supply the deficiencies of Europe," Mr. Hoover advised on July 3, 1919.

"Such deficiencies would have to be supplied in large degree upon credits, but, aside from this, the entire surplus productivity of the Western Hemisphere is totally incapable of meeting the present deficiency in European production if it is long continued.

"CREDITS MUST BE TEMPORARY

"Nor, as a practical fact, could credits be mobilized for this purpose for more than a short period, because all credits must necessarily be simply an advance against the return of commodities in exchange, and credits will break down the instant that the return of commodities become improbable.

"Further, if such credits be obtained in more than temporary purposes, it would result in economic slavery of Europe to the Western Hemisphere, and the ultimate end would be war again.

"The solution, therefore, of the problem, except in purely temporary aspects, does not lie in a stream of commodities on credit from the Western Hemisphere, but lies in a vigorous realization of the actual situation in each country of Europe and a resolute statesmanship based on such a realization.

"The populations of Europe must be brought to a realization that productivity must be instantly increased."

NO ROOM FOR EXPERIMENTS

Mr. Hoover said further that "whatever the economic theory or political cry, it must embrace the maximum individual effort, for there is no margin of surplus productivity in Europe to risk revolutionary experimentation.

"No economic policy will bring food to those stomachs or fuel to those hearths that does not secure the maximum production," he added.

Mr. Hoover's report was contained in a volume on foreign relations of the United States covering the 1919 Peace Conference.

Does the War Department Want the Reserve?

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. TEAGUE. Mr. Speaker, I believe it is essential that we maintain an active reserve program within our national defense system in order to properly maintain our national security. Those reservists who before 1941 were active in maintaining their military proficiency proved to be the backbone of the tremendous fighting forces we were able to muster and send to foreign battlefields. They, along with the other elements and components of our armed services, played an important part in winning World War II.

I sincerely hope that during these postwar years the War Department and the Reservists will cooperate in formulating a

policy which will provide this country with the security it so sorely needs. I believe a frank discussion of their differences will result in the reserve component being used to the proper advantage in our national defense program.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Reserve officers' magazine of May 1947 entitled "Does the War Department Want the Reserve?":

DOES THE WAR DEPARTMENT WANT THE RESERVE?

"We just don't give a damn!"

This remark, unvarnished as it is, was made by a representative of the War Department during a recess of a congressional committee weighing the proposed retirement bill for civilian components. The officer had reference to War Department position in standing alone in face of the combined agreement of the Navy Department, the Reserve Officers Association, National Guard Association, and other reserve organizations on a retirement system for reservists. The statement of this officer unconsciously reflected the War Department attitude, long standing, toward the reserve component. It is worthy of comment, to say the least; and ROA is more than ready—and willing—to lead the discussion.

For many years the relationship of the War Department with the Reserve has been that similar to a foster father in a confused state attempting to arrive at a decision as to whether the child is worthy of adoption. From all outward appearances this has been one of an attitude of mind. On countless occasions, especially during the active-duty days of World War II, this frame of mind as reflected by the Regular officer proved anything but encouraging to the civilian soldier.

It seems opportune in this day and age that a definite conclusion be attained by the War Department as to whether the Reserve is necessary to national security. If so, some constructive action along with some revised thinking should be the order of the day.

Since its reactivation a main project for ROA has been a battle for the establishment of an effective and functioning organized reserve of value to the Nation and national security. The Reserve has found it necessary to push its own program with little assistance from sidelines, and until the War Department revises its present trend of thinking there is no questioning the present and future impotency of the ORC.

For the record it will be stated that the Reserve stands ready, willing, and able on any occasion to assist the War Department in obtaining whatever is necessary for national security. No expression of appreciation is asked or expected for what is acknowledged as a patriotic duty. However, if the War Department recognizes the Reserve as a vital cog in the wheel of security, it must take immediate steps to advance the training and equipment program of the civilian component.

To bring the case down to bed rock let's get at some facts:

1. Excuses emanating from the War Department concerning the plight of appropriations for the fiscal year 1947 have run rampant. Records, meanwhile, indicate that the amount appropriated to the Reserve ($56,000,000) will not be utilized during the current fiscal year. Furthermore, of a War Department budget of $6,765,507,100 for 1948 the amount originally earmarked for ORC training was the same unsatisfactory amount (8/10ths of 1 percent) as that of 1947. Now, to add insult to injury the WD has, with full disregard of the Reserve, proposed to transfer $30,000,000 from the total ORC appropriation ($56,000,000) to "Finance service, Army" for Regular Army pay purposes. This amount has been frozen by the WD, no part being spent for the Reserve during the fiscal year, with the net result that the $56,000,000 appropriated by Congress last year has in effect been cut by the WD to $26,000,000. It is interesting to note that the total amount proposed to be transferred from present appropriations by the WD amounts to approximately 10 percent of the $8,458,357,150, the WD figure for 1947, while the cut in the Reserve portion of this appropriation is close to 54 percent. Assuming all this money is expended for training purposes during the coming fiscal year, the percentage of Reserves to receive training compared with the total number eligible is infinitesimal.

2. Lack of farsighted planning has resulted in a release of many military installations which could have been utilized profitably for Reserve training and the storage of equipment.

3. To date no promotion policy for inactive Reservists has been announced by the War Department and conspicuous by its absence is a policy with reference to the requirements for an officer to remain active.

4. Treatment accorded Reserve officers appearing before Army retiring boards has resulted in a bitterness and resentment against the War Department not soon to be forgotten. Officers suffering from wounds or sickness and appearing before these military tribunals have without hesitation compared the boards similar in attitude and procedure with that of a general court martial. This is not only supported by documentary evidence but with sworn testimony of Reserve officers unfortunate enough to be assigned as board members with Regulars.

5. While the law specifically states that both retired Regular and retired Reserve officers are in all respects entitled to receive the same compensations, the War Department has consistently refused the retired Reserve officer the right and privilege of purchasing at a post exchange or commissary, which is contrary to the spirit of the law and the intent of Congress.

6. In several instances Organized Reserve Corps headquarters have been moved from central locations to outlying areas without regard for the convenience and necessities of Reserve personnel. This action has proved detrimental to those officers contributing time and effort to maintaining their status in the ORC.

Now the time is at hand when the War Department must give more than lip service to the Reserve. It must recognize that in all wars in which this Nation has been engaged a civilian army with a sprinkling of Regulars has been required to obtain a military victory. Should this country become embroiled in another war, it would again require the civilian-soldier to carry the burden in combat.

Only through the adoption of a more realistic and cooperative attitude toward the problems of the Reserve can the War Department meet its responsibility for maintaining national security. Meanwhile, ROA is moved in a spirit of responsible citizenship to air a situation that is redolent with national danger.

Reorganization of the Chinese Government—China's Liberals Get Their Chance

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 23, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an illuminating article on the recent reorganization of the Chinese Government written by one of the very best informed and soundest students of China. Dr. Price was born in China and has taught there more than 20 years. He speaks the language perfectly, knows personally and in many instances intimately most of the leaders of China of all parties.

So much of what has come out of China in the last few years has been superficial, primarily journalistic, or inspired propaganda with a purpose, that it is a pleasure to read something from one who knows what he is talking about.

The following article is from the Christian Century of May 14, 1947:

CHINA'S LIBERALS GET THEIR CHANCE

(By Frank Wilson Price)

China's liberals are moving into a key position. They have won strong representation in the new coalition government at Nanking. Their influence as a middle-of-the-road progressive group between the extreme conservatives of the Kuomintang and the Communist insurgents is steadily growing. They are working for a unified, democratic, modernized, and prosperous China, independent in its foreign policy but cooperating fully with the United Nations.

It was to the liberals in the various political parties and without party ties that General Marshall appealed so earnestly when he left China last January. "The solution of the situation, as I see it," he said, "would be the assumption of leadership by the liberals in the Government and minority parties, a splendid group of men, but who as yet lack the political power to exercise a controlling influence. Successful action on their part under the leadership of Generalissimo Chiang Kai-shek would, I believe, lead to unity through good government."

THE LIBERALS ARE CHINA'S HOPE

General Marshall's mission to China is commonly described as a failure. It is true that he failed to achieve his immediate objective of mediation between the National Government and the Communists. But his success in strengthening the liberal and democratic forces outside the Communist Party has not been fully appreciated. The liberals are the men and women who will ultimately bring about a Chinese solution of China's problems. The question is whether they have enough power and influence at present to effect much-needed political reforms to avert a serious collapse in the national economy, to inspire a tired national government with new ideas and fresh morale, and to provide a positive, constructive answer to the Communist challenge. That they have been given a new chance to try cannot be denied.

The past 6 months have been in some ways the most discouraging period for China since VJ-day. After nearly 3 years of Kuomintang-Communist negotiations, a complete break occurred. Hopes raised in the early months of American mediation were shattered. On January 24 the national government made its final peace offer to the Communists. Only when this was flatly turned down with counterdemands which General Marshall, himself, said, "The Government could not be expected to accept," and the Communists declared that "there is no more mediation; the only way out is to fight"—only then did Nanking send the Communist representatives back to Yenan and reluctantly order an all-out military campaign. On March 19 national troops captured the Communist capital and the armed struggle continues fiercely in those regions of north China—about one-fifth the area of all China—where the Government is trying to restore railway communications and to dislodge the rebels. The Government believes that victory is es-

sential to recovery and a satisfactory agreement with the Communists; the Communists hope to prolong the conflict by guerrilla warfare until the National Government collapses economically or the international situation turns in their favor.

AMERICAN PRESTIGE GOES DOWN AND UP

Within 6 months American prestige in China reached a new low, owing to widespread anti-American agitation fanned by leftist elements over the marine rape case in Peiping and in opposition to the continued presence of 10,000 marines in north China. Since the job of repatriating 3,000,000 Japanese was done and the truce teams were only marking time, the United States Government wisely announced on January 29 that it would withdraw all American troops within 90 days and discontinue its futile peace efforts. This move, together with the departure of Communist leaders from national territory, has effectively silenced much critism against America and has restored considerably the prestige which the American Government enjoyed at the end of the war.

Paralleling the loss of American influence in China was a sharp decline in the prestige of the Chinese National Government in this country, owing to unfavorable reports from China, the wide sale of Thunder Out of China (a brilliantly written but far from objective record of China's part in the war), and leftist attacks on Chiang Kai-shek's China's Destiny. Henry Wallace's phrase, "Selective use of the truth that is the last word in propaganda," well describes some recent American writing about the situation in China.

Although changes in China must ordinarily be measured over years and decades rather than weeks and months, there have been many indications in the half-year just gone of new and more hopeful trends. This sounds paradoxical in view of the discouragement mentioned, but it will not be surprising to those who have studied undercurrents as well as surface storms in China. In this dark period China has made real progress on the painful road to political unification, constitutional democracy, better government and social welfare. For this she can thank her courageous liberals, public opinion and also President Chiang Kai-shek.

THE NEW GOVERNMENT

The newly organized transition government does not include Communists or representatives of the Democratic League, both these groups refusing to join. (The Democratic League, however, has just announced that it will present candidates for the autumn election.) But it does include members of the Kuomintang, the Young China party and the Democratic Socialist party, together with a number of eminent non-partisans. The highest organ of the state, the state council, now has 29 members, of whom 17 are Kuomintang, 8 are members of the two other political parties and 4 are independents. President Chiang is responsible to this council. Originally a state council of 40 was planned, in which the Communists were to have 9 seats and the Democratic League 4. The Communists last October demanded 10 seats so that they and the leftist Democratic League together might have 14 and therefore wield a veto power in the council. The government refused. This is an example of the many technical points on which negotiations broke down.

STATE COUNCIL IS PROGRESSIVE

Not only is this the first multi-party government since the Kuomintang came to power, but the composition of the new state council is definitely liberal. The Kuomintang has contributed its outstanding progressives. The two minor parties have furnished schclarly and respected men, who, however, have as yet had little political experience. Among the independents are 2 men of superior attainments and unimpeachable character: Wang Yun-wu, former manager of the Commercial Press, and K. P. Chen, a banker who was highly praised by Dr. Lauchlin Currie, economic adviser to President Roosevelt.

The new cabinet is made up of 15 Kuomintang ministers and 9 ministers representing minor political parties and nonpartisan groups. The important posts of economic affairs and agriculture-forestry are held by Young China Party leaders. The liberal trend is evident also in the cabinet. Only three of the Kuomintang ministers probably belong to the C. C. clique, the reactionary group led by the two Chen brothers. Wang Shih-chieh, Minister of Foreign Affairs, O. K. Yui, of Finance, Pai Chung-hsi, of National Defense, and Y. T. Tsur, of Health—to mention only a few—are the finest type of public servants in China, thoroughly capable and honest. Neither of the Chen brothers is on the state council or in the cabinet. Gen. Ho Yin-ching, former Minister of War and for many years a bitter enemy of the Communists, is on a trip to the United States. Dr. H. H. Kung has retired from public life.

PRESIDENT, VICE PRESIDENT, PREMIER

At the head of the coalition government are President Chiang Kai-shek, Vice President Sun Fo (son of Dr. Sun Yat-sen and author of China Looks Forward), and the new president of the executive yuan, or Premier, Chang Chun. These are all Progressives and, as it happens, all Christians. Chang Chun, although an early military associate of Chiang Kai-shek, has been a civilian official for 20 years. His administration of Szechwan Province during the war was distinguished by wise judgment, steady reforms, and absolute integrity. Sun Fo's critical attitude to many government policies and liberal outlook are well known. He has been an ardent advocate of Sino-Soviet friendship and of conciliatory measures toward the Chinese Communists.

Chiang Kai-shek has been pictured so often by his enemies as a ruthless dictator that the truth about him has a hard time in some quarters. The fact is that President Chiang led the fight of Kuomintang liberals and minor party liberals for constitutional democracy. I know his liberalism from personal acquaintance with him for nearly 20 years and careful study of all his speeches and writings. A notable comment on Chiang Kai-shek's progressive outlook was made by Gen. A. C. Wedemeyer, who saw the generalissimo hundreds of times during the war: "I had frequent, practically daily, contacts with him under the most trying conditions. I can attest to his unselfish devotion to the Chinese people and his earnest desire to promote a democratic way of life within China."

The Kuomintang has filled a need in China during the difficult transition from old empire to modern republic. It led the revolution against the Manchu dynasty and brought about the overthrow of the warlords in 1927. It guided the nation through a decade of growing national unity and strength and then through 8 years of bitter resistance against Japanese aggression. The notable achievements of the Kuomintang must be placed alongside its weaknesses and failures. Today, after 20 years of power—a briefer period than the rule of the Communist Party in Russia—it is voluntarily relinquishing its control to a coalition of all but Communist Parties. Its own liberals are now showing a surprising new vitality and adaptability to changed conditions.

This does not mean that the political and military reactionaries are dead. Now that the Kuomintang must seek its own support and go into the political arena with other parties, the reactionaries will fight all the harder for their vested interests. Narrow-minded conservatives who have been kept out of the coalition government are moving into the inner councils of the party. But I am convinced that the progressive wing of the Kuomintang is ready to fight as hard as ever for its principles, even if it has to break away and form a new party.

THE NEW CONSTITUTION

The present government is an interim one until the new constitution goes into effect on December 25 of this year and a new government is elected. Is this constitution, adopted last December by all groups except the Communists, a democratic instrument? Of the 1,744 delegates to the national assembly 48 percent were independents, 42 percent Kuomintang, and 10 percent representatives of minor parties. By a tremendous majority, Lincoln's phrase, "Government of, by and for the people," was included in the constitution's preamble along with Dr. Sun Yat-sen's San Min Chu I, or "three principles of the people." Unqualified support of the United Nations is written into the constitution Civil rights are guaranteed. The national assembly, elected on the basis of territorial and professional representation, is to be the supreme organ of the people and will elect the president, who cannot serve more than two 6-year terms. The legislative yuan, elected also by the people for 3 years, will be the legislative body. Many significant changes were made in the prewar draft constitution, based largely upon proposals from the Political Consultative Council of February 1946 in which the Communists were represented. Dr. Hu Shih, China's illustrious scholar-liberal and former ambassador at Washington, led the fight of the liberals for these changes and was backed strongly by President Chiang Kai-shek.

General Marshall called the new constitution a "democratic constitution which in all major respects is in accordance with the principles laid down by the all-party conference." Ambassador J. Leighton Stuart described it as a "most democratic instrument" ushering in the birth of a new China. Only time can tell how well it will work Amendments will no doubt be made, but it is a good beginning and a foundation upon which to build. Critics will watch to see how the elections for the National Assembly and the Legislative Yuan are conducted this autumn and how well the government that takes over on December 25 will function. Present indications are that an even more liberal government than the interim one will be elected.

SECRET POLICE DISBANDED

The coalition government has promised to protect civil rights guaranteed in the constitution and has already dissolved several secret-service organizations. This is vital to the success of the liberal cause, since both during and after the war special service bands and gangsters instigated by reactionary elements made inexcusable attacks upon the lives of several prominent progressives simply because they were suspected of being pro-Communist or antireactionary. The appointment of Dr. Hollington Tong as director of the government bureau of information with ministerial rank augurs well for a liberal censorship. Wartime foreign correspondents in Chungking all paid high tributes to "Holly" Tong, who as vice minister of information in the Kuomintang was their chief contact man with the Government. His present position gives him much larger influence since the information bureau is no longer under Kuomintang control but is a department of the coalition government.

Will the new government have the strength and the courage to root corruption out of public service? Graft, corruption and nepotism are evils with a long history in China. Ambassador Stuart declared at a Washington birthday dinner in China this year, "The real enemies of China are illiteracy, poverty, disease, the exploitation of public office for private gain, and narrow, ruthless, partisan

bigotry." His Chinese listeners accepted this as true. War-made inflation, soaring prices, economic insecurity have intensified the temptations for public officials, most of whom are badly underpaid. Often a man at the head of a government agency is honest, but overlooks graft and favoritism among his subordinates. We must admit all these facts and yet be careful also to check on exaggerated reports of graft from biased sources and to give full credit for reforms already achieved. For example, many stories of graft in the use of UNRRA funds and supplies have been denied by responsible officials and neutral observers but continue to be circulated.

GOVERNMENT EFFICIENCY IMPROVING

My own impression is that government administration on all levels, from central government down to "hsien" government and village administration, is now vastly superior to what it was in the warlord years between 1911 and 1927, and that slow but steady advance has been made in the 20 years of national government administration. The light of the press and of public opinion beats with increasing fierceness on men in public life. Criticism of the administration of Formosa brought about a thorough investigation by the national government, and a new governor, Dr. Wei Tao-ming, recently Chinese ambassador to the United States, has just been appointed. Sweeping changes are called for in some other provinces and government agencies. The number of outstanding administrators is growing. I have in mind men like Mayor K. C. Wu, of Shanghai, Gov. Chang Chih-chung, of Sinkiang province; Director Liu Kung-yun of the alien property administration, and many others. Better county magistrates are being appointed. Methods of accounting and auditing have been improved. It is increasingly difficult for an official to embezzle public funds. The ways of squeeze are legion but the liberals will, I am confident, make a determined effort to combat the evil.

Even President Chiang's severest critics admit that he has been personally incorruptible in financial matters. But he has often lacked the wholehearted support of the men about him in carrying out reform measures. Today, he has that support in much greater measure from his state council and cabinet, and an elected legislature within a year will certainly demand stricter enforcement of the anticorruption law and more severe prosecution of grafters. Unless the national government can win the confidence of the people by a fair, efficient, and honest administration, or a resolute effort to establish such an administration, its days are numbered.

China's liberals now have a chance, a unique chance, to build a new political democracy and a cooperative economic order upon past foundations—traditional village self-government, the strain of liberal thought in China's cultural history, a casteless social democracy that in many ways puts American society to shame, and the lessons learned in the struggles, the successes, and failures of recent decades. If they can lead China forward now the whole world will breathe more easily. If they fail, because of unresolved internal strife or because of international developments, the whole world will suffer.

The Guam Congress

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article from the December 1946 issue of the pamphlet Pacific Affairs, as written by Roy E. James, and entitled "The Guam Congress."

I feel that this article contains much data that is useful and informative in the consideration of several bills now pending before the Congress and having to do with the granting of a government for Guam, as Commander Roy E. James, U. S. N. R., now Acting Chief of the Pacific Branch, Division of Territories of the Department of the Interior, has had vast experience in the administration of the naval government of Guam. During his service in the Navy he was judge of the military government of the Summary Provost Court and also was associate justice of the court of appeals which is the highest court in the island of Guam. I believe that this article is valuable in providing the historical background and the present effectiveness of the Congress of Guam.

The article follows:

THE GUAM CONGRESS

The United States wishes to be regarded as a champion of the economic, social and political welfare of dependent peoples.[1] United States leadership at San Francisco was largely responsible for the establishment of the United Nations trusteeship system. Similarly, American leadership played a large part in the adoption of the Declaration Regarding Non-Self-Governing Territories (ch. XI of the United Nations Charter) and the resolution of the General Assembly in London reaffirming the obligations of member nations to peoples of non-self-governing territories. The obvious conclusion has been that the United States is proud of its record in the administration of is territories and possessions and is offering that record to world scrutiny as an example to other nations.

The record in respect to Guam has evoked charges of autocracy, neglect, discrimination and persecution as well as of stringent political repression.[2] Any of these charges is serious, but considerations of space restrict the scope of the present note to an examination of the last one, namely, the charge that the United States naval government has restrained political development in Guam.

At the close of the Spanish-American War the island of Guam was ceded to the United States by the Treaty of Paris, 1898. In order to establish and maintain law and order in the new possession until such time as Congress should provide a form of local government, President McKinley, by Executive order dated December 23, 1898, directed the Navy to govern the island. To this date Congress has failed to provide a form of government for Guam, with the result that for almost 50 years the civilian population of Guam—Chamorros, Americans and foreigners—has been governed by officers of the United States Navy.

The naval governors, left largely to their own devices and unrestricted by legislative enactment or Executive order, have administered the affairs of the island in a manner reflecting their naval training and experience. The early governors faced their task with a determination to maintain law and order ("discipline") as they understood it, and at the same time strove to reduce the poverty of the people. While they did not consider the people qualified to participate in their own government, the governors nevertheless relied on the advice and counsel of local elders. For many years a native priest, Padre Jose Palomo, advised the governors in civil affairs and thus became unofficially the people's voice in their government.

In 1917[3] the naval governor of Guam, Capt. Roy C. Smith, United States Navy, created the First Guam Congress and empowered it to consider and recommend to the governor measures for the improvement of the island and the welfare of its inhabitants. The congress contained both Guamanians and Americans. It was composed of the various commissioners, deputy commissioners, and other prominent men of the districts appointed by the governor. Certain naval and Marine Corps officers were appointed members ex officio and attended the meetings as representatives of the governor. The congress elected its chairman. Members held office during the pleasure of the governor and were subject to removal at his will. They served without compensation.

The First Guam Congress was not a legislative body. It could initiate discussion on any matter raised by the members and, if so minded, could make recommendations to the governor, but the actual legislation was prepared and promulgated by the governor. The congress functioned as a sort of advisory council on such matters as the governor might care to submit to it for consideration. It had no authority whatever with respect to taxation or the appropriation and expenditure of local tax and customs receipts. It was indeed nothing more than a gathering of local personages, selected and appointed by the governor, who met on the first Saturday of each month to discuss matters of local interest.

The idea of the congress was, nevertheless, well received by the people. Although in the past they had at times been called together to receive orders from the Spanish or American governors, it had never been the practice to allow discussion and debate on political or economic matters related to local government. Neither the Spanish nor the American governors had been greatly concerned with the views of the people. The first few sessions of the congress discussed many matters and, according to Governor Smith, "made some valuable recommendations."[4] Later governors found the congress of material assistance in acquainting them with popular attitudes toward subjects of local interest. A number of recommendations of the congress were adopted by governors and promulgated as law; but many others were overruled, ignored, or made the occasion for a stern rebuke.

In the following years the congress found it increasingly difficult to consider and make recommendations on the larger matters affecting the economic and social progress of the island. As it gradually became apparent that initiative on matters of government above the village level—for example, civil liberties, budgets, taxes, etc.—was not desired, the congress tended to act only on matters pleasing to the governor, thus confining its discussions to village matters. During the late 1920's certain governors disregarded

[1] The opinions and assertions contained in the following note are those of the author and are not to be construed as official or reflecting the views of the Navy Department or the naval service at large.

[2] Harold L. Ickes, The Navy at Its Worst, Collier's, August 31, 1946. See also the editorial Pacific Islands, New York Times, September 3, 1946.

[3] The first session of the Guam Congress convened in Agaña, the capital of Guam, on February 3, 1917. Meetings were held thereafter on the first Saturday of each month.

[4] In par. 184 of his report to the Secretary of the Navy for the fiscal year 1917, Governor Smith, in commenting on the Guam Congress, wrote as follows: "The idea has been well received by the inhabitants. They meet and discuss with interest all matters affecting the island and have made some valuable recommendations. It makes them feel that they are taking a part in their own government and stimulates interest in public affairs. It promises to be of value in promoting discussion and spreading knowledge of the needs of the island and awakening interest in its improvement."

the congress entirely. By 1930, when it had completely lost its value, Gov. Willis W. Bradley, Jr., captain, United States Navy, decided to reorganize the congress and to place it on a representative basis in accordance with the general scheme of the Congress of the United States. Thus the first Guam congress came to an end.

A general election, the first in the history of Guam, was held on March 7, 1931. The people elected 16 members to a house of council for 4-year terms and 27 members to a house of assembly for 2-year terms. Although this was an entirely new experience for the people, it was carried out without disorder or confusion. They took great interest in all matters pertaining to the registration and the election. In the words of Capt. Edmund S. Root, United States Navy, Governor Bradley's successor: "The people demonstrated that they may be depended upon to investigate quite thoroughly the qualifications of candidates and to vote in accordance with their personal convictions."

The second Guam Congress met in Agaña on April 4, 1931. The 27 members of the house of assembly elected a chairman from their membership. The chairman of the house of council was elected by the members from outside their membership and served a 4-year term. Ad interim vacancies in the membership of both houses were filled by appointment of the Governor. Appointed members served until the next regular biennial election. As in the case of the first Guam Congress, the members received no compensation for their services. They were immune from arrest during attendance at a session of the congress and were guaranteed immunity for remarks made in either house.

This second Guam Congress, like its predecessor, was not vested with legislative powers. It was an advisory body of elected representatives of the people, empowered to consider questions pertaining to the welfare of Guam. It could recommend to the Governor such measures as it deemed desirable, but the Governor's action on such recommendations was final. There was no appeal to higher authority and no means of securing reconsideration in the event of a veto.

The Governor maintained contact with the congress through an executive committee of six members, three from each house, which sat with him in conference once a month for the purpose of laying before him the recommendations of the congress. Very often the Governor acted at once on the recommendation, approving, disapproving, or returning it for further consideration. If his decision was favorable, a governor's order was promulgated, thus enacting a new law.

The Governor levied taxes, prescribed customs duties, and fixed license fees. He determined the time, the place, and the manner of payment of taxes, fees, and all public levies. He prescribed the penalties for nonpayment, granted waivers, and issued exemptions at will. He exercised complete control over the moneys in the treasury of the naval government of Guam.[5] In his annual report to the Secretary of the Navy he reported the amounts spent and indicated the purposes for which such expenditures had been made, but there was no check as to the propriety of the purposes for which local revenues had been used.

Under military government, which lasted from August 12, 1944, after the recapture of the island from the Japanese, until May 30, 1946, the people of Guam were denied the right of assembly.[6] Meetings were allowed only for certain religious purposes, including baptisms, weddings, and funerals, but processions and parades were prohibited, and it was a punishable offense to promote or attend any public meeting, theatrical, moving picture, or other representation or performance, any public assembly or other public gathering, whether indoors or out, or any parade or demonstration for which a permit had not been granted by the military government. In the process of outlawing gatherings of any kind, this order also abolished the Guam Congress.

With the end of the Pacific war, military government gradually relaxed its enforcement of the no-assembly order, but it was not until May 1, 1946, that the Guam Congress was again permitted to meet. At its first meeting a member delivered a strongly worded speech calling for a satisfactory determination of the civil rights and political status of the people of Guam as provided for in the Treaty of Paris of December 10, 1898.[7] A bill of rights was read to the congress by another member and appended to the record as an exhibit.

By order of the Naval Governor of Guam, an election was held on July 15, 1946. A new Guam Congress, comprising 13 members of the house of council, one from each municipality, and 33 members of the house of assembly, one for each 1,000 inhabitants of the island, was elected from the different districts. All citizens of the island, male and female, 21 years of age and over, were eligible for participation in the voting upon registering in their respective communities. Registration boards composed entirely of Guamanians sat in the various municipalities and handled the registration free from supervision by the naval government. Election boards, also composed entirely of Guamanians, counted the ballots and certified the results together with the ballots to the Governor.

Although there were no political parties or burning issues, there was intense rivalry, particularly between the young and the old. There was much discussion of the Governor's declaration that "the Guam Congress shall play a more important role in the determining of the laws, economic development, and welfare of Guam and its citizens than ever before." Candidates and voters realized that the Governor had not promised them local self-government. He had held out to them a hope for a greater share in local government, and they were anxious to show him and the other Americans on Guam that they could hold an election in the American manner.

The new congress, like those preceding it, serves as an advisory body. When the Governor has legislation under consideration, he may consult the congress or not, as he sees fit; if he does so, he may accept or disregard its recommendations. The Governor remains the legislative power in Guam; he alone can prescribe, amend, or revoke laws. In this respect he functions practically without restraint from any quarter and can make his legislation retroactive, ex post facto, or in the nature of an attainder, if he so desires.

And yet, the naval governors have placed Guam on the road to self-government. They have at times accepted the advice of the people of Guam on matters of civil administration, much as they accept the advice of their naval subordinates, but they have not delegated to either the responsibility for governing Guam. In their desire to give the people of Guam a voice but not a real part in the government of Guam, the governors have striven vainly to achieve an impossibility—a democratic government in which the governed do not participate. They have, however, taught the Guamanians how to conduct elections in a democratic manner and how to meet in congress for discussion of local economic, political, and social matters. Many who know Guam feel that the people have received adequate training and are now ready to play a more active role.

ROY E. JAMES.

WASHINGTON, *September 1946.*

[5] In 1920 a governor, finding the treasury empty, established a budget system. Some later governors utilized a budget board, comprising mostly naval officers, to assist in the preparation of the annual budget. The various government departments, including the congress, submitted their estimates to the board, which then set up a budget for the governor's approval.

[6] U. S. Navy Military Government of Guam Proclamation No. 3, art. IV.

[7] The second paragraph of art. IX of the Treaty of Paris, ratified by the United States on February 6, 1899, reads in full as follows: "The civil rights and the political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by the Congress."

Conemaugh Dam

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. KELLEY. Mr. Speaker, I have been urging the Committee on Appropriations to give favorable consideration to the allotment of the full funds requested by the Army engineers for the continuation of the construction of the Conemaugh Dam. I am impelled to do this by my knowledge of what has happened through the years to the people who live on the shores of the Conemaugh River, which borders my district, Westmoreland County, Pa.

In recent weeks I have had many petitions and letters from the people living along the ravaged shores of these streams who have suffered the loss of their property, their positions, their business, and who have lost members of their families in the heavy floods in years past. Those floods took their toll, too, in the destruction of mines and mills. They all urge most emphatically that the Congress and the Appropriations Committee look with favor on this proposed relief.

I am not speaking now of the Pittsburgh area which has suffered enormous loss, but for my own people. I do not know how this Government can afford to overlook the urgency of this request. The engineers have asked for $5,212,475 to carry on the project in the next fiscal year. Much work has already been done and much money expended, and now is no time to relinquish the job. I am hopeful that when all the facts are presented to the Appropriations Committee the necessity for the continuation of this work will be evident.

Industry-Wide Bargaining Curtails Production

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 21, 1947

Mr. HOFFMAN. Mr. Speaker, while the other body is insisting that there shall

be industry-wide bargaining and that employers and employees, bargaining through their representatives, shall not be permitted to enter into a contract which will enable them to meet competition, instances continue to pile up which show how workingmen throughout the country in the smaller cities are being sold by international unions into what Lewis, Green, and Murray so oratorically term involuntary servitude.

Typical of the situation is the following letter just received.

WEST PENN MACHINE SHOPS, INC.,
Pittsburgh, Pa., May 20, 1947.

Representative C. E. HOFFMAN,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE HOFFMAN: I would like to tell you a story which will illustrate our reasons for favoring the Ball amendment requiring the National Labor Relations Board to certify the local unions as bargaining agents under the National Labor Relations Act rather than an international organization.

Our shop has been organized by the United Steelworkers of America since June 1943, at which time the union won an election by vote which showed a small majority in their favor. We subsequently signed an agreement with this union for a 1-year period with a 30-day notice required for reopening of that agreement at the expiration of 1 year.

The agreement was to run until March 31, 1946. However, it was canceled by the United Steelworkers and they called the steel strike on January 21, 1946. During this steel strike we attempted to negotiate with the United Steelworkers on a plant level basis but were continually informed by the international representatives that they had no authority to settle with any fabricator or anyone else having a United Steelworker contract on any terms other than those in the "big steel" agreement. In fact, the district director of District 17 of the United Steelworkers went so far as to tell the writer that our company would either grant an 18½ cent per hour wage increase or go out of business.

Due to the fact that we had a considerable amount of temporary business on hand on which we wished to continue working overtime, our shop had been working on a 55-hour week schedule with 62½ hours' pay continuously from the end of the war to the time the steel strike was called on January 21, 1946, rather than employ a number of new people on a temporary basis.

With this thought in mind we offered the union an agreement calling for 15 cents per hour wage increase with a 48-hour week, giving them 52 hours' pay, with a guaranty that they would receive the other 3½ cents per hour when and if we reduced our schedule to a 40-hour week. The international representatives refused to accept this settlement, even though a great majority of the members of the union were in favor of this settlement.

After the strike had continued for 6 weeks we were finally forced to agree to the 18½ cents and returned to work on a 40-hour-week basis.

In December 1946, when the discussions began of renegotiating with Big Steel, the local union committee in our plant requested that we start negotiations in an effort to avert any work stoppage in 1947; a request to which the company readily agreed, and arranged to start negotiations in January 1947, although our agreement at that time was not scheduled to expire until March 1, 1947.

At the beginning we were informed by the international representatives of the United Steelworkers that we were not allowed to negotiate an agreement until after a "pattern" had been established in the basic steel industry. We objected very much to this, because we felt that the wishes of the majority of employees within our own plant should have some bearing on the relationship between the company and the international union.

We also objected to being included in the same category as Big Steel, since we do not make any steel at all. We are a machine shop and are caught in the middle on increases of this kind inasmuch as we have to pay the increased prices of steel and other equipment which we fabricate and at the same time pay a comparable increase in our own labor cost and attempt to sell our products in a competitive market.

After some time, however, we were "permitted" by the international union to negotiate on a new agreement.

Soon after the consummation of the Big Steel agreement we reached an agreement which was satisfactory to the local committee and to our own employees. This agreement, however, was not approved by the international office and this action by them made such an impression on the local committee that they went to the local press and complained bitterly about the international's action in overruling their desires and those of the employees in the plant. This story appeared on page 5 of the Pittsburgh Press on Sunday, May 11, 1947.

On Monday, May 12, 1947, the local committee polled the employees of our shop on the question and the results showed 137 votes in favor of settling on that agreement, with 10 opposed. The 5 members of the local committee had previously indicated that they were also in favor of the settlement, making a total of 142 in favor and 10 opposed to the settlement offered by the company.

Following this action, the international representatives agreed that they would approve the settlement provided the company included a union-shop clause. Inasmuch as our shop had been on an open-shop basis in the past and our relationships with the international union officers in our particular district had been such that we felt it extremely undesirable to sign an agreement of this kind, we declined their proposal.

Last Friday about 4:30 in the afternoon, the district office advised us that they had scheduled a strike at our plant on Monday, May 19; this in spite of the fact that the local committee had expressed themselves as opposed to a strike and it is our firm belief that 100 percent of our employees were also opposed to striking. This was indicated by the fact that this morning at 7 o'clock when our shop was scheduled to begin work, we found the entrance barred by "outside pickets" under the direction of the staff representative from the district office. These pickets first barred anyone from entering the plant. However, after some discussion, they agreed to allow the shop superintendent and assistant with two maintenance men and the switchboard operator to enter the plant. They refused admittance to all other officials, to all office employees and to the officials and employees of four other companies and corporations who operate on the same premises as ourselves.

We, of course, are "small potatoes" and fully realize the futility of attempting to fight an organization as large and powerful as the United Steelworkers, especially when they seem to have so much support in the Government. However, we are sincere in our belief that there are certain principles in which the American people believe and we bitterly protest the conditions which allow such high-handed operations by the United Steelworkers or any other organization, whether it be business, labor, or what not.

We will greatly appreciate any services you may render in Washington which will illustrate to the American people, and especially to the small groups of workers who are organized throughout the country in the little plants who are being overridden by the larger organizations, the intention of the Congress to render justice to the meek and lowly on an equal basis with the large and powerful organizations of all types.

Sincerely yours,

R. B. RUSSELL,
Personnel Director.

Mr. Speaker, to my untrained mind, it would appear that, when Congress passes legislation such as the Wagner Act, which makes possible the actions referred to, which makes possible extortion and racketeering by gangsters who infiltrate into unions, we morally share the guilt of those indulging in these reprehensible practices.

Pending Labor Legislation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, May 23 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the talk that I am to deliver at 4 o'clock today over the ABC national network, on the subject A Pro-American Labor Law.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, I am grateful to the American Broadcasting Co. for the opportunity to speak to you this afternoon about the labor bill now pending before the Congress.

My purpose at this time is to submit to you the facts regarding this legislation. I hope to throw some light on this subject. I have faith that the American people are eager to have facts, to have the light. We recall the motto, "Give light, and the people will find their own way."

The American people are finding their own way to a just and equitable labor law, I believe, a law in the interest of labor and all others concerned with this problem. Labor is entitled to a fair law. Honest labor is the salvation of America. We recall the words of the Book of Books, "To rejoice in one's labor, this is the gift of God."

NEED TO CONSIDER ISSUES

Unfortunately, in connection with this bill, there has been a considerable amount of name-calling, of unfounded accusations, of smears in recent days. As usual, the great mass of the American people has given no weight to this discussion of personalities, but are more concerned with the issues involved.

Let us, therefore, now discuss the issues. Let us without citing personalities, without discussing individuals, consider the facts.

As you know, the House of Representatives passed the labor bill by a resounding vote of 308 to 107. The Senate passed a slightly different version of the same bill by a vote of 68 to 24. Because of the difference between the two versions, the bill went to conference for ironing out of the differences. Then the legislation is to return to both

Houses for final approval and submission to the President.

WHY THIS LEGISLATION IS PRO-AMERICAN

I want to present to you, as the American jury, the reasons why I regard this legislation as pro-American, propublic. It is up to you to decide in the court of public opinion.

There is nothing in this bill, I beleve, that any honest union man should fear. This bill is designed to protect the honest rank and file of American labor—the 99 percent of sound, law-abiding, hard-working, American working people. It is designed to protect them against the racketeering abuses of bad men who would use labor for their own selfish purposes, dictatorial labor bosses, communistic-inclined labor chiefs, and others, who would crucify the public interest and the interests of labor and management.

RESULTS OF STRIKE CHAOS

Already we have seen the results of their activities. We have had a railway strike, coal strikes, a steel strike, auto strike, electrical strike, telephone strike, and every other sort of strike. Production of goods has fallen and the menace of inflation has come closer, with prices rising, cutting down the value of the working man's dollar and every other citizen's dollar. Whole communities have been ripped asunder by strikes. Vital public services have been paralyzed. National defense has been threatened.

The laboring man has lost countless pay envelopes in needless work stoppages. Management has lost profits. Investors have lost dividends. The public has lost the economic current of production as well as the peace of mind of countless communities.

FAILURE OF LABOR TO MAKE SUGGESTIONS

We in Congress implored the leaders of labor to come forward with their constructive suggestions. We asked them to cite specific ways and means by which they would correct these conditions. They offered no suggestions, only a stand-pat negative policy. All they could do was to denounce every effort toward constructive labor legislation as antilabor.

Now we have prepared this pro-American bill in order to remedy the situation. Let me ask you the following questions. From the answers you can come to your own conclusions as to the merits of this legislation.

PROVISIONS OF BILL

First. Do you believe that a union should have the right to break its contract and cause untold harm without being liable to damages? If you believe that unions should respect their contracts and should be held liable for violations, the same as you and I, then you should support this bill, for that is one of its provisions.

Second. Do you believe that labor should be free to use all sorts of intimidation, assault, "goon-squad" tactics without violating the law? If you believe that labor's unfair practices should be defined just as management's unfair practices are presently defined, then you should support this bill, for that is another of the bill's provisions.

Third. Do you believe that the Attorney General of the United States should have the right to seek a Federal court injunction to prevent strikes that peril the national health or safety? If you believe that our Government should have the right to appeal to our courts to prevent such ruinous strikes, then you should support this bill.

UNION'S REPORTS

Fourth. Do you believe that America's unions which each year collect hundreds of millions of dollars from working men and women should be required to file a detailed report, listing their officers and their compensation as well as other financial details? If you believe that the spotlight of publicity and adequate information should be on unions just as they are on corporations, then you should support this bill. We know of countless instances where labor has been bled by crooked union bosses who make rackets of unions. That condition must be corrected.

Fifth. Do you believe that a union should have the right to boycott an employer simply because he uses materials produced in part by another union? Do you believe that a union should be able to close down an employer's plant simply because the union has a dispute with a rival union about which one has jurisdiction? If you believe that these so-called secondary boycotts and jurisdictional strikes should be outlawed, then you should support this bill.
